Colonial and its management will watch with interest every improvement in the art of flying as applicable to commercial air transportation but we are determined to do everything in our power to continue to merit the confidence of the flying public and to carry into the years ahead our unequaled achievement of safety in the air, which we commemorate today in marking the completion of 20 years of totally safe flying. There have been many improvements in the science of flying since we started to achieve this record, but those who are familiar with us recognize that we have maintained our safety record and continued, at the same time, to give the service and safety which the public expect.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reduced Postal Service" from one of the newspapers in St. Joseph, Mo.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDUCED POSTAL SERVICE

One delivery route in six in St. Joseph will be eliminated as the result of Postmaster General Donaldson's heavy-handed crackdown on postal service, it appeared from reports yesterday at the post office here. Undoubtedly some savings will be made by the sharp cuts ordered in service, which feature but one daily delivery in residential areas.

Back of the loud protests which have been made over curtailment of postal service there seems to be the feeling that the move was designed to force larger appropriations for the Post Office Department from Congress. Two bills to get the Department more money now are before the lawmakers. One is designed to raise postal rates enough to bring in $600,000,000 more a year. The House cut this to $100,000,000, and the revised bill now is pending in the Senate. The other is the post-office appropriation, which the House Appropriations Committee cut by $25,000,000.

It is probable that Mr. Donaldson hopes the service reductions will put his Department's business on a firmer financial footing. But the only estimate so far of what the savings will be comes from an unidentified official who guesses them at $30,000,000. That is hardly a dent in the $500,000,000 cut the House gave the postal-rate bill; nor does it bulk very large against the $550,000,000 deficit that turned up at the end of the last fiscal year.

Probably the place the reduction in service will carry most weight is in the impact on voters, nearly all of whom will be directly affected, and outraged voters have a habit of writing to their Congressmen, who just happen not to have taken final action on the requests of the Post Office Department. Whether Mr. Donaldson's order represents a political maneuver or not, there will be many who will regard his action as autocratic, especially as he did not announce his intended move sufficiently in advance to give communities an opportunity to adjust themselves to the new conditions.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Postal Cuts," from the Worcester Telegram.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL CUTS

It certainly may be questioned whether the drastic cuts announced in the United States Postal Service represent a sincere concern for governmental economy or are politically and somewhat ingeniously designed to make such economy so painful and inconvenient for the general public that it will stop its rising clamor of demands for Uncle Sam to "stop spending."

No taxpaying American, perhaps, should look an economy gift horse too closely in the face, but this abrupt and sudden decision for economy where the public is certain to feel some immediately bad effects must cause a more than casual look. The timing of these drastic postal service economies has come just when considerable public support had been won to the cause of economy in Government, both by the publicizing of the Hoover report and by the continued attacks of those who fear the result of continued Federal deficit financing. In effect, the Post Office is saying, "So you wanted some economy, well here it is." And the results, unfortunately, may be enough to make many people cry "Uncle" in their economy demands—something the Administration would very much like to see happen before the congressional elections.

The public will feel this economy drive in the curtailment of mail deliveries not alone in purely residential districts, but in areas where business and residential districts are mixed. It will feel the results in shortened hours at the post office windows, and in earlier pickups from street mail boxes at night. People will find important mail delayed, and the post office will blame the public for demanding lower taxes and budget reductions in Washington.

Real economy, gained through efficiency of operation, cannot be scorned by Americans who want just that in all their governmental departments. The type of economy that Postmaster General Donaldson has imposed can be questioned, for he is taking away from the public services which it pays well for in both direct revenues to the Post Office Department and in taxes. His cuts have gone beyond those recommended recently by the House Appropriations Committee which, in fact, did reduce the over-all Post Office budget to $2,207,500,000 from the $2,235,607,000 requested by Donaldson. Mr. Donaldson's reaction to this is seen in the announced postal cuts.

Mr. Donaldson's concern for economy would have been more impressive and would have seemed more sincere if he had only called for a revamping of his whole Department along more economical lines. The Department's bookkeeping and cost-acounting system is the same one that was established in 1836, and there has been no basis of establishing costs anyway. The services to other Government departments contribute greatly to its deficit. In a single year, for instance, the Post Office handled 2,000,000,000 pieces of mail free for the Government, including some 18,000,000 pieces of registered mail. It has been handling free of charge savings-bond sales, documentary stamps, civil service exam notices, and migratory bird stamps.

The public feels that good postal service is a thing to which it is entitled; postal service is not supposed to support itself at all, but to be a public service. It expects efficient operation, and applauds any genuine efforts to achieve that. Mr. Donaldson cannot be applauded on that score yet.

One Hundred and Fifty Million of Us

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. DONOHUE. Mr. Speaker, I should like to direct my colleagues' attention to a very timely and thought-provoking editorial which appeared in the May 7 issue of the Worcester (Mass.) Sunday Telegram.

The concise, vivid description of the fruitful meaning inherent in our exciting, modern population growth presents a healthy, optimistic note to dispel the gloom too frequently, and unwarrantedly, dispensed by our current prophets of doom.

The article follows:

ONE HUNDRED AND FIFTY MILLION OF US

One of these days the one hundred and fifty millionth person will arrive in the

United States, either a newborn baby or an immigrant landing in what he hopes will be his land of opportunity. There will be no fanfare to greet this important personage, but his coming will mark a tremendous forward step in the population growth of the country and presage a tremendous economic surge for the future.

On the basis of early returns from the official United States census, the time has come to welcome this one hundred and fifty millionth person. The figure represents a growth of 19,000,000 people in the last decade—quite a few persons when thought of in terms of needed new homes, automobiles, refrigerators and television sets.

The gigantic size of the American population is staggering even the experts who had spent the last decade trying to foresee how many Americans there would be in 1950. For, as it happens, the population growth is a full 6 years ahead of the estimates of the Census Bureau itself. Experts in the Government said 3 years ago that the one hundred and fifty millionth person would arrive sometime after 1955. A life insurance company predicted in 1931 that this figure would not be reached until 1970.

According to sociologists, the various predictions were way off the beam because even the best of statisticians didn't count on the wartime resurgence of the American birth rate. This rate jumped 18.9 per thousand population in 1940 to a high of 27.9 in 1947. At the same time, immigration stepped up, too, in recent years, and the death rate went down.

All of this has added up to headaches for school superintendents trying to figure how to jam all these new children into crowded classrooms, but it is an exciting prospect for most of us to be living in such a dynamically growing country. Those gloomy souls who saw the end of our frontiers in the 1930's just didn't figure on this frontier—population growth. In the figures may be a promise of greater than ever prosperity ahead.

Statement of Harry H. Cook, President, American Flint Glass Workers' Union

EXTENSION OF REMARKS
OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT PRESENTED BY HARRY H. COOK, PRESIDENT, AMERICAN FLINT GLASS WORKERS' UNION, TO THE HOUSE COMMITTEE ON EDUCATION AND LABOR, STEED SUBCOMMITTEE ON IMPORTS AND EMPLOYMENT, MAY 4, 1950

Mr. Chairman and gentlemen of the committee, I appear for and represent the officers and members of the American Flint Glass Workers' Union of North America. Our organization was formed in 1878 and I am pleased to make the statement to you that we are one of the oldest labor organizations in the United States and that the industry in which our members are employed and must depend upon for their livelihood is one of our country's oldest industries with its first factory at Jamestown, Va., in 1608. We are affiliated with the American Federation of Labor.

I wish the committee to know that I have been a worker in the glass industry for the past 57 years, starting at the age of 10. I worked in glassware factories as a skilled craftsman for many years. For the past 34 years I have represented the workers in these factories as one of their international officers; the past 10 years as international president.

While business generally is reasonably good, we find the American hand-made glassware industry in a serious condition and rapidly reaching the point of catastrophe because of the damaging influence and effects of the importation of glassware produced by cheap labor in countries embraced by the Marshall plan and also behind the so-called iron curtain.

Imports need not be injurious but can in fact be very harmful. It is not only a matter of quantity but particularly one of prices. If we had competitive parity with imports, so that our domestic products would not be undersold in our own market, we would not face the constant threat to our wage standards that now confront us.

The facts are that the extremely low wages paid in other countries, such as Japan and Czechoslovakia, not offset by lower productivity, gives these countries a great price advantage in this market. This advantage is not based on greater efficiency of the foreign producers, as some people would have you believe; nor is it based on greater skill of the foreign workmen. I am sure that we can match them in both these respects, but we cannot match their prices without sacrificing something that is the pride of America, namely, the high living standard that makes this country stand out alone over the rest of the world.

This high standard of living makes us vulnerable to the onslaught of low-wage producers abroad. This is to say, we cannot hope to compete on a wholly unequal wage basis. The only possible result of being forced to meet this competition is unemployment, joblessness, poor working conditions and a gradual decline to the economic level of these foreign competitors.

We are delighted, Mr. Chairman, to have this opportunity of appearing before a committee that is interested in the employment angle of import competition. We have been coming down here for years and we might as well have saved our breath. We have simply been told in effect that if we cannot meet the competition that faces us we might as well face the music instead. The prevailing theory in the State Department seems to be that if an American industry cannot compete with imports the fault lies with the American industry.

We are held to be inefficient, uneconomic, or to be marginal producers if we cannot meet the abominable wages paid in competing countries. Mr. Chairman, the foregoing is an unfortunate theory and to describe our glassware industry in this way is worse yet. The workers in our glassware industry are well paid. They are skillful artisans and we need offer no apologies to any workers anywhere else in the world. We do not believe that we represent the workers of an industry that might as well be discarded, the State Department to the contrary notwithstanding.

Until a year ago the glassware industry (pressed and blown branch) was getting along very well. However, Czech, Japanese, and German glass tableware has given us more and more trouble. Today there is acute danger of shut-downs and lay-offs. The question is how far this must go before relief can be had, if any.

Few, if any, of our American hand-production glass plants are operating more than 50 percent of normal capacity today. Many are operating far below 50 percent, and some are about to close indefinitely. Many of these plants are in small communities which depend upon them to furnish employment and to support the needs of such communities. In speaking for the more than 35,000 workers, I also presume to speak for the many hand-made glassware factories that constitute the industry as a whole representing a heavy and vital financial investment.

Our workers are trained in glassmaking and not as production-line workers in automobile factories or as steelworkers, or electrical workers. In the handicraft part of our industry individual skill still counts. Our workers retain the close connection between workman and final product, the lack of which psychologists consider as one of the great drawbacks of modern industry.

We are told by high authority in our Government that if the American glassware industry cannot survive the onslaught of importation they should engage in new business and that the displaced glassworkers will be afforded some kind of Federal unemployment relief while training for new kinds of work. Why should the American glassware industry be sacrificed and why should our highly skilled glassworkers be forced, and the thousands of other workers in the industry be forced to depend upon extended Federal unemployment relief?

Our Government, through its social-security regulations, has repeatedly stated that a worker has the right to choose the kind of work he desires to do. Surely our people would, by the proposed arrangement, be deprived of this freedom and be forced to accept employment which they do not choose to accept. Our people are good Americans and splendid citizens.

They should have the right to choose their place of employment and should not be expected to submit to being moved like common cattle to other places of employment through governmental regulations as a matter of expediency. The State Department propagandists condemn the Russians for uprooting humanity by their transfers of large groups of people to new areas of employment yet they propose to force our good American glass workers to sell their homes, take their children out of schools and move into strange communities and accept employment contrary to their wishes.

Are we in America all to become production-line workers, or are we to retain smaller industries in smaller communities scattered throughout the United States? Shall we no longer produce anything that will be worth possessing a generation or a hundred years later? Are we to succumb completely to machinery and be deprived of all the arts of handicraft production?

This is precisely what will happen if we cannot have proper protection in industries that still offer opportunity for handicraft labor. Apparently we are to be forced to go to Europe or anywhere but the United States if we are to find any articles that embody individual skill, artistry and craftsmanship. In the United States only machine-made products, which have no lasting artistic value, are to be produced.

We greatly deplore this attitude in those who have the power to say whether we will or will not survive. It almost looks as if they were more concerned about the welfare of foreign producers than about the well-being of our own. There is a very stubborn insistence upon further duty reductions despite the fact that we should find some remedy for cuts already made, where these have gone too far.

The terms of trade treaties negotiated under the Trade Agreements Act have never afforded adequate protection to the American glassware industry. It is more difficult now because foreign countries are determined to expand their prewar export trade and are coming into a position to do so. We have been told of the relief to be gained under the escape clause in the Reciprocal Trade Agreements Act. Unfortunately this would afford no help in the present situation. Immediate remedial action on foreign-made

UNIVERSITY OF MICHIGAN LIBRARIES

glassware is an absolute necessity if the American glassware industry and the wage and other standards of living of the American glass workers are to be preserved.

The wage rates in Czechoslovakia range from an average of 20 cents for unskilled workers to an average of 40 cents for skilled workers per hour in the glass industry. The rates in Japan are still lower, reaching down as far as 10 cents. The rates in Germany are higher than in Czechoslovakia but are still very low compared with our own rates. Swedish wages are higher than those in Germany where average rates range from 36 to 45 cents per hour. This compares with an average of about $1.35 per hour in this country.

Even if our workers were twice as productive as the European, we would still be at a competitive disadvantage. In those of our factories where handwork still predominates we have little advantage, if any, over the Europeans, in productivity.

In terms of quantity, imports are not extremely heavy. The 1949 imports amounted to slightly over $5,500,000, foreign invoice value. At our wholesale prices this would amount to roughly $10,000,000.

According to the Census of Manufactures of 1947, employment in the pressed and blown glassware industry amounted to 42,170 persons; but no breakdown is given which would show how many of these are in the hand-made division of the industry. Hand-made articles amounted to about a half of the machine-made product in tableware and kitchenware classification. However, in employment the two are probably more nearly equal.

The effect of imports, since the lush post-war market has disappeared, is to create pressure on wages, hours, and employment. It also affects the question of old-age pensions. I can tell you that wagewise we are definitely in competition with the low rates prevailing abroad. Unless this wage gap is bridged or unless some other limit is placed on imports the hand-made glass factories face extreme difficulties and eventual extinction.

We hope that you can do something to focus the spotlight on the nature of wage competition that will bring home to the public this fact: We can no more compete with 25- and 30-cent-an-hour wages in Europe and hold up our standards than we could compete with sweatshop wages in this country when they were still in existence. The employer who wants to pay decent wages can continue to do so only if he can hold his market against his substandard competitors. Otherwise he either goes out of business or lowers his standards. The latter is what we want to avoid.

We assure your committee of our appreciation of the opportunity you have made possible for us to appear before you and present this present serious problem of a great American industry and a splendid American labor organization.

Curtailment of Postal Service

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "False Economy," from the Chicago Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALSE ECONOMY

The post office is a utility. If it were privately owned and managed, the Government from President Truman down would be screaming imprecations over the wholesale firings and sharp cuts in service projected by Postmaster General Donaldson.

The nature of the reductions is such as to plant the suspicion that the main idea is to generate a public outcry against the whole idea of Government economy.

For months supporters of the Hoover report have been trying to prod administration leaders in Congress into the reforms which were recommended. The heavy-handed economies now ordered are another instance of how the department clings to outmoded methods.

The streamlined business system advocated by the Hoover Commission experts would have sought the remedy in greater efficiency, increased revenue through more and better service, and by ending the hidden costs which drain the Department's funds but return no benefit to the users of its service.

The Hoover studies developed that the post office does not know what it costs to provide its various classes of service. It is estimated that handling of a penny postcard costs 2½ cents. These are mainly used by business. There is no good reason why this service, along with registered mail, money orders, insured mail, and the like, should not be self-supporting.

For another example, there has been practically no attempt to install the mechanical devices, and utilize the modern principles of materials handling, by which private business has been able to cut costs and give better service. The Department's antiquated vehicles seen on Chicago streets offer another tip to the grievously high maintenance costs.

The investigating experts found a woeful lack of employee-training programs. Furthermore, political appointment of top officials reduces the incentive of workers to improve themselves in the hope of advancement.

And why should users of the mails pay the subsidies which it is deemed expedient to pay the airlines for carrying mail? It is wise to promote aircraft development, but this should be a charge against the taxpayers.

There could be no objection to pruning unneeded employees from the Post Office, and the great expansion in its personnel would indicate that there are some. But to carve all the savings directly out of service is a harsh and backward step. The one good thing that may be said for it is that it will educate a lot of people concerning the Fair Dealer's pretensions that bureaucrats can always do it better.

We, the People, and the World Civil War

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. JAVITS. Mr. Speaker, Prof. Max Ascoli, in a thoughtful editorial appended hereto, marking the first anniversary of the Reporter, a biweekly news commentary which in its initial year has earned much-deserved national attention, gives another name—and a provocative one—to what we now term the "cold war." The "world civil war," as Professor Ascoli has called it, has passed the stage, he points out, where the responsibility is mainly in the hands of governments. The responsibility, he now points out, lies directly in the hands of our people, who are called on to be "practitioners of freedom," to daily live as we would have the world live. Professor Ascoli asks us to keep in mind that dollar aid is only one part of our struggle in the "world civil war." He ably states his conclusion, as follows:

Freedom is the patrimony of the people, and the government is only the instrument for the preservation of this patrimony. The business of defending freedom in this country and in the world is primarily the people's business. Only if we, the people, don't do our part will we lose this civil war. And only if we lose or are about to lose the civil war will the enemy make war on us.

The editorial follows:

THE WORLD CIVIL WAR

(By Max Ascoli)

We are in the midst of a world civil war, launched by a remorseless enemy against all the institutions that give purpose and direction to the conduct of human affairs. Over the years, political and economic crises, wars, and depressions, have been putting an increasing and sometimes unendurable stress on the ties that bind people into a democracy. Our enemies—at the same time the products and carriers of unrest—have become expert at shocking the nervous system of a democracy into a condition first of spasm, then of paralysis. They are confident that by tirelessly drumming up a sense of tension and danger, as they are trying to do in Berlin, they can make a civil population snap, and then even the bravest of men give in. When that moment comes, the Communists are ready to replace the complexities of democracy with the discipline of the herd.

This civil war is not a conflict of ideologies or of national interest. It is an attack by slaves—sometimes self-made slaves—on all men who, with various degrees of deliberation, want to exert a measure of control over their own destiny. In the East, our enemies are now enjoying an extraordinary opportunity: New nations as yet untrained to rule themselves are trying to adopt the pattern of free institutions that is sorely tested everywhere in the world.

International communism, while holding political power in a cluster of nations, is agitating for civil war everywhere else in the world. That is why we in the West have had to reach the conclusion that peaceful coexistence with Soviet Russia is an extraordinarily difficult goal. For whatever peace settlement we might reach the Russian Government would use against us in the world civil war. This is practically what Secretary Acheson has been saying in his recent speeches: That Soviet Russia erases with its left hand any signature it affixes with its right.

INCURABLE LAWBREAKERS

The Russian leaders cannot help breaking pacts. Like all other holders of power, they want to consolidate it and enjoy some peace. In fact, they have been trying to do it repeatedly. Having conquered a mostly agricultural nation, they first attempted to develop its economy according to the Marxist pattern: They tried to establish various types of controlled capitalism that were supposed to evolve into socialism. At the end of the last war, they tried—probably earnestly—to set up mixed economies in the nations of eastern Europe that were to become a meeting ground between east and west. But they cannot control themselves: Whenever they encounter difficulties that may give rise to opposing political programs and

parties, they have to subject their people to purges, mass deportations, and murders. Actually, the Communist dictators are slaves themselves. The irresponsible, unchallengeable power they have extorted from their people does not allow them to be responsible contracting parties to international agreements.

After the devastation of the last war, the Russian Communists now need peace, but it is extremely doubtful whether they can afford to have peaceful relations with the world. They are following a runaway course, and it is difficult to imagine any man—even Stalin—putting on the brakes. The rulers of Soviet Rusisa could enter into constructive negotiations with the Western World only if they accepted full responsibility for all their weapons of international civil war, and agreed to negotiate about their political as well as their military armaments. The acceptance of responsibility for international communism would shake the foundations on which their power rests. This is their business. We cannot settle for less.

THE AMERICAN POSTURE

At this stage of the conflict the Communists know that only by destroying our country can they achieve world domination, but they also know that the Stalinist methods of subversion are of little use here. They must rely mainly on the spontaneous disruption of our economic and political structure which, according to the Marxist theory of history, is bound to come. In fact, ours is the only country that is left free to verify the Marxist laws of history—the exception which should prove the inevitability of a process that nearly everywhere else communism has had to set in motion deliberately through internal subversion and armed intervention.

The enemy has no choice but to trust us, alone among the people of the world, to bring about our own doom. He is waiting for our depression, he rejoices whenever he sees how easily, even without an effective Communist Party, we become prey to hysteria. He approves of our press when it conducts trial by headline, free from any statute of limitations and from any rule against multiple jeopardy. He is heartened whenever he sees how ready we are to pour our economic and military resources into every country in which he decides to start a civil war. And he is certainly grateful to the Americans who make up for the strong Communist Party we haven't got by mobilizing ghosts and robbing graves.

Our Government is defending itself with a sort of shy, harassed, and sometimes belated wisdom. It has been working effectively to contain Russia and build up strength that Russia will have to acknowledge and respect. There is a more thorough understanding of public affairs now in our Government, particularly in the State Department, and in the great economic agencies like the ECA, a greater concentration of skillful, devoted people, than there was at any time during the last war. But the surprising thing is that our Government leaders have been leery of publicizing the global pattern of our foreign policy. In this issue of the Reporter, Harold Graves shows how well-rounded and consistent this policy is becoming. The deeds of our Government leaders seem to be wiser than their words.

It is strange and somewhat ominous that the Communists have taken it upon themselves to express the people's universal craving for peace. It is strange to see how many Americans still consider the conflict as a pure clash of power politics, and look either toward a crude division of the world or the establishment of a string of neutral states between our power and Russia's. Certain other people think that only the threat of war, if not war itself, could stop this paralyzing structural disease that is communism.

WE THE PEOPLE

The responsibility for the confusion and hesitancy inside and outside the Government lies primarily with ourselves, the people. No government can successfully fight a civil war without the aroused and organized support of its citizens—certainly not a civil war of this kind, world-wide in scope. This is the crux of what Mr. Acheson said so compellingly to the American Society of Newspaper Editors.

We expect our Government leaders not only to conduct the political affairs of the Nation wisely, but to formuate the ideas, the beliefs, that should sustain our faith. We expect the men who, in our democratic society, have assumed some shreds of the kingly function of government to be philosopher-kings. We want them to be at the same time political philosophers, policy makers, and policy executives. We constantly ask for governmental or presidential leadership. It is certainly the function of Government to lead. But we had better decide what kind of leaders we want our statesmen to be, orchestra leaders or cheer leaders. Surely we can do something more than cheer or clap at inspiring orations.

We are in an infinitely better position to defend ourselves than any other nation, for, like the two world wars, the civil war on which our existence depends has not touched our soil. The attack can be thrown back once and forever only if we make the texture of our society more compact, the role of intelligence more deliberate, the discussion of issues more open. It can be won inside our western societies, rather than by throwing bombs on the miserable populations that communism has enslaved.

DOLLARS ARE NOT ENOUGH

At long last the time for the people to do their part is coming. If, to close what is called the dollar gap, foreign products are to be thrown into the American market, many sections of our economy are going to be dislocated. It will hurt. Factories may have to be closed, people thrown out of their jobs; and local communities, trade unions, chambers of commerce, will have to pool their energies and inventiveness, to cushion the shocks and solve the problems of reemployment and retraining. Europeans will have to do the same thing, if, as another article in this issue of the Reporter points out, what is called integration is ever to approach reality.

Many lessons have been driven home to us in these last few years; first of all that the money given by the citizens to the Federal Government, and spent by the Government for defense or foreign relief, is not enough to defeat communism. There are at least a billion people in the non-Communist world who need our assistance. Should we double the number of dollars we are now giving away, that still would only mean about 3 cents more a day for each of them—hardly enough to dissuade even the most wretched beggar from becoming a Communist. Even if we give away everything we produce in a year, it would only amount to about 60 cents a day in goods for each person needing help.

The only gifts that will make any real difference are those whose effects are multiplied by the uses to which they are put—gifts that the receiving governments will utilize to make basic reforms in productive techniques or social organization so as to release the latent energies of their peoples. If we stipulate conditions of performance, however, they will have to be reciprocal: conditions that we demand and conditions that we are ready to live up to. We cannot ask the other nations to put their houses in order if in our own house we cringe behind tariff barriers and subsidized exports. We can give an example of how the people's productive energies may be released by letting every one of our citizens, no matter what his race, color, or creed, go as high as his intelligence and character can take him.

In the countries we undertake to help, we must show that we can put brakes on the development of industrialism, handle its wheels so that the least possible disruption of life is imposed on human beings. We must show that we can short-cut or by-pass stages of development, like colonialism or imperialism, that Marxism considers inevitable. To defend ourselves against communism we must keep our economic system creative and resilient. A point can easily be reached where huge government expenses for armament, foreign assistance, and internal welfare can wreck the economic structure of the Nation—something that the Russians would not dislike.

PRACTITIONERS OF FREEDOM

We cannot ask our Government to tell us what jobs we have to assume and what ideas we have to follow if we want to do our part in winning the civil war. Governments are not made to produce ideas, and when Government spokesmen venture into that realm their statements are likely to be opaque and stilted. This is true even of such an exceptionally high-minded and cultured a man as Mr. Acheson when he defines a free society as one that "values the individual as an end in himself." The foreign individual who speaks English and has business contacts with Americans may be glad to be told that he is an end in himself, but the poor peasant in southern Italy is likely to think that Mr. Acheson, too, stopped at Eboli.

It is the function of our political thinkers to help the Government by providing clear, ringing ideas that will give hope to our friends and put fear in the hearts of our enemies. In the same way, it is the function of our business and labor leaders to keep our economy not only viable but expanding and free. Efforts of this kind have been made in the past—by the Committee for Economic Development, for instance, in preparing the business community for the shock of reconversion to peace. Far more strenuous efforts now have to be made by all the productive forces of the Nation, on both a community and a national level.

There are a large number of organizations in this country that provide our citizens with information on foreign, domestic, and economic affairs. They are doing good work. But it is most important not only to clarify the issues but to shape the policies on which the people can take a stand. It is imperative, for instance, in dealing with the nations on our side, to establish a sharp distinction between our allies and our cobelligerents. An aroused, informed public opinion can make it easier for our Government representatives to limit their commitments toward regimes that can produce no other document of their worthiness than an anti-Communist affidavit.

Our Government leaders cannot easily keep up a name-calling contest with the Russians, but private groups can more freely undertake the job of denouncing Communist lies to the people of the whole world. Only private groups and individuals can actually show the spontaneous power of men and women united for freedom. We haven't much to gain by making sermons on freedom to the people of the world unless we back our propaganda and make it powerful by showing that we are skillful practitioners of freedom.

In this work that the people must do by themselves to support their Government, a very great role can be played by the American press. The present situation is almost incredibly different from the one that prevailed between the two world wars, for we are no longer a spectator, but the protagonist nation. The business of the press at the present time is to provide something more

UNIVERSITY OF MICHIGAN LIBRARIES

than news and entertainment—promiscuous information or lonely "think pieces" sandwiched between bloated news and cheesecake. The American reader needs focal reporting on the basic issue of our day, which is victory in the world civil war. For the American press is the instrument of vision of the American people. Sometimes one is taken by the fear that the cataracts are coming down, and that the area of vision is being reduced and dimmed. The most popular media of the American press make so few demands on the memory of their readers as to become agents of national amnesia. We need memory, on the contrary, for we need to feel part of that tradition of freedom that has made our country and has given it its unique role in the present world.

Freedom is the patrimony of the people, and the government is only the instrument for the preservation of this patrimony. The business of defending freedom in this country and in the world is primarily the people's business. Only if we the people don't do our part will we lose this civil war. And only if we lose or are about to lose the civil war will the enemy make war on us.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Public Service Cut," published in the Altoona (Pa.) Tribune of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC SERVICE CUT

It is ironical indeed that the public's cries for economy in government are being answered by cuts in two departments which certainly are among the most important in government: the Department of Defense and the Postoffice Department.

Postmaster General Jesse M. Donaldson has directed that mail deliveries be cut to one a day. He has further ordered cost reductions in the Department that cannot fail to have a serious effect upon the public service rendered by the Department.

Often those in Government who oppose economy moves for political reasons at once attack critics of such slashes as the Postoffice and Defense cuts by asserting, "You called for economy, and when you get it you holler."

Of course, the answer is that economy can be achieved in Government without affecting either public service of a necessary kind or the national defense. Thousands of bureaus duplicate efforts. The Federal bureaucracy is so vast, so expensive, that no one man knows all its purposes, its costs, or its work.

The Hoover Commission has shown where savings can be effected without loss of vital services. But the professional payrollers scream when the economy ax looms.

Now Postmaster Donaldson proposes a reduction program that will not save the taxpayers any money in practical terms. But it will cost them vital service. The Postal Department probably is the only Department which provides the average American with any real service for his money. It is generally the only Department at least with which he has any contact, that serves him directly. His other contacts with Government cost him money.

The proposed post office economy program would require mail carriers to work straight through from morning to night with only a half-hour break for lunch—to eat wherever they happen to be on their route. If there is no lunchroom handy they either do without or carry their lunch, in addition to the heavy load of mail and magazines they must carry.

Thousands of postal employees will be out of jobs, which is ironic, too, because the Postal Department gives real service, has a hard job to do, needs more employees to do it right, and Government is hiring thousands of new employees for various jobs every month, and probably none nearly so essential.

It would seem that Mr. Donaldson is going to cut the post office progress right back to where it was 25 or 50 years ago. One mail delivery a day may mean no delivery for many people. In fact, carriers say it is possible that some areas might not have a mail delivery for several days.

Mr. Donaldson moves us back to the days of the Pony Express, while the administration and State Department waste the public funds by scattering them far and wide over the earth.

In these days of a vast bureaucracy in Washington, the Federal free mail alone becomes a burden for carriers. Pension checks, notices, Government regulations by the bale for business and private individuals, all are carried free.

The burden upon the Department is increasing. Of course, it is a problem for Congress, and Mr. Donaldson's move obviously is primarily a pressure move against Congress because it failed to give him the appropriation he asked.

But, this is an ill-advised pressure move, for it damages the reputation and prestige of one of the few Government departments which produces a straight job of service for the people.

The Hoover Commission has recommended changes to put the department on a self-sustaining basis, and it has complimented the department upon its service.

It has suggested that the Post Office Department be permitted to set rates for insured and registered mail, money orders, postal notes, postal cards, special delivery and c. o. d. mail which would make each self-supporting. The Commission estimated this would save $113,000,000 a year.

It suggested that the costly air-mail subsidies be paid by open appropriation from tax funds instead of from postal funds, so the cost will be apparent. The Department loses money on every air mail delivery.

The Commission also suggested that the Department keep its own accounts, under the Comptroller General's division.

These are common-sense proposals. To cut the service as drastically as Mr. Donaldson has ordered is not common sense.

Italian Government Honors Civic Leaders in Dunkirk and Fredonia, N. Y.

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. REED of New York. Mr. Speaker, the city of Dunkirk, N. Y., my home community, has never failed to meet its civic responsibility either in times of war or in times of peace. The generosity of the citizens of Dunkirk, N. Y., has become a permanent and cherished tradition that, translated into action, has enriched and ennobled those in need of its bounty both here and abroad.

The civic leaders in Dunkirk and Fredonia who have been so beautifully and signally honored by the Italian Government are rich indeed when wealth is measured by an unfailing yardstick, "That no man is worth more than he contributes to the social, civic, and spiritual growth of the community in which he lives."

The article published in the Evening Observer, Monday, May 1, 1950, which I am extending under unanimous consent heretofore granted tells the story of a most worthy civic achievement:

ITALIAN REPUBLIC HONORS DUNKIRK-FREDONIA AREA BY SOLIDARITY AWARDS

In a program recorded for broadcast in 23 languages by the Voice of America, five representatives of the Dunkirk-Fredonia community were yesterday awarded the Gold Star of Italian Solidarity.

Those who were selected for the honor, as representatives of the people and institutions of the two communities, were:

Mayor Walter F. Murray.

Former Mayor Harry F. Salhoff of Fredonia.

The Very Reverend Leslie F. Chard, president of the Dunkirk Society.

Miss Katherine Drago, corresponding secretary of the Dunkirk Society.

Wallace A. Brennan, editor of the Observer.

OFFICIAL THANKS

The occasion was Italy's official thanks for the Dunkirk to Anzio campaign of thanksgiving 1947 in which the Dunkirk-Fredonia community sent gifts valued at $200,000 to Anzio, Italy, and for the later gift of an ambulance to the Anzio-Nettuno Hospital.

About 150 attended the dinner served in Acquavia Post under arrangements made by Chairman Nelson Currier and Industrial Commissioner Roman Wiate. Philip LoGuidice presided. City officials, members of the common council, and members of the Fredonia board of trustees attended.

The medals, which are the only decoration of any kind issued by the present Italian Government, were voted by the Italian Parliament. The presentations were made by James Battistoni, regent of the Italian consular agency of Buffalo. He was accompanied to Dunkirk by Angelo Cordero of Buffalo, a recipient of the star in that city, Miss Alda Fontano of the consul's office, and Alphonse Papplardo of the newspaper, Il Progresso.

MISS DRAGO RESPONDS

Miss Drago, who had visited Anzio recently, made the general response for the local recipients, showing how the gifts had been used in the Anzio-Nettuno community.

Mr. Battistoni read messages from the Italian Ambassador, Signor Alberto Tarchiani, and from the consul general, Dr. Aldo M. Mazio. He said:

"Greetings and salutation to all of you from the Italian Ambassador, Signor Alberto Tarchiani, and from the consul general of Italy, Dr. Aldo M. Mazio.

"Once again I have the great pleasure to be with you and this time to do honor to five distinguished leaders of your esteemed Dunkirk Society, a group of men and women who have done so much and so well to help the European victims of infamous dictatorships and war.

"GRATEFUL REPUBLIC

"I am really happy that Dr. Aldo M. Mazio, the Italian consul general of Italy, has

reserved for me the pleasure of conferring to the leaders of your society the Star of Italian Solidarity and I am honored and pleased to extend to all of you the gratitude of the President of the Italian Republic, and the gratitude of the Government of Italy and of the Italian people, for your wonderful assistance and your valuable contribution to the reconstruction of Anzio and Nettuno.

"When one observes and studies the criminal doings of past and present dictatorships one shudders at the thought of so much of man's inhumanity to man and when war as horrible as the last one is being fought, and brothers kill brothers, one comes near to losing faith in what we call civilization. But, fortunately, one has the opportunity to come in contact with groups of people like you, so ready and so generously willing to extend the helping hand to human beings many thousand miles away; then one discovers and he is reassured that there is still much good in humanity yet.

"I was in Italy 4 months in 1946 and the situation there, at that time, was really heart-breaking, but as everyone that has been in Italy recently can testify, the country of my birth has made great progress in the last 4 years. The wonderful accomplished recovery is due in great part to the moral support and the material help that Italy received from the United States, from every city, large and small, and from men and women like yourselves.

"This symbol, the Star of the Italian Solidarity that I am about to confer to five of your leaders, has a special significance, not only as a token of gratitude toward benefactors like all of you here today, but also as a renewed tie between Italy and the generous American people.

"Ladies and gentlemen, in the name of the Italian Government, in the name of democratic Italy, I have the honor and the immense pleasure to confer the Star of the Italian Solidarity to the Honorable Walter F. Murray, mayor of Dunkirk; to the Honorable Harry F. Sahloff, mayor of Fredonia; to Very Rev. Canon Leslie F. Chard, president, Dunkirk Society; to Wallace A. Brennan; and last but not least, to Miss Katherine E. Drago, secretary of the Dunkirk Society.

"Long live America!

"Long live Italy!"

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Post Office Economy," from the Detroit News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POST OFFICE ECONOMY

The layman, who has mail delivered to him by carrier, and who buys stamps at the post office, but has little knowledge of what goes on behind the barred windows, sees the effect of Postmaster General Donaldson's order as this simply: The same volume of mail to be handled by fewer employees.

That apparently will require greater efficiency in the mail service; and this, to the rank and file of postal employees, means speed-up.

But to the higher-ups, the directing personnel, it may mean less of speed-up and more efficiency studies.

Now the Post Office Department is already noted for efficiency studies. It is at them constantly. It demands long and detailed reports from post offices, and presumably these are used in arriving at decisions for improving the service without adding to its cost. But it is not apparent that these studies have succeeded in saving money. The expense of the mails continues to mount in higher ratio than the postal rates. It can be argued that without these efficiency studies the cost would be still greater, but the average citizen has no means of judging whether that is true.

One complaint in the postal service is the constantly shifting personnel. This is especially marked in an industrial community like Detroit, where a fairly large number of persons regard the post office as a sort of sheet anchor. They pass the civil service examination; they get their names on the rolls; in case of vacancies they are called in and offered employment. But if meanwhile they have obtained other jobs at better pay, and there is good prospect of the continuance of these jobs, they turn down the call. Nevertheless, they remain on the eligible roll; and if they are thrown out of work by a strike, or are dismissed, they are eager for postal jobs at which they work until something better comes up.

A situation of this sort is not conductive to either economy or efficiency. Anything smacking of speed-up is likely to make it worse. The real remedy would be to pay wages competitive with those offered by industry, in an attempt to make the personnel more nearly permanent. That would increase costs, it can be argued. But would it? There seems to be a large amount of waste in the present set-up, which might be cut down by giving employees more incentives.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Frank Ray in regard to the proposed curtailment of postal service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIMELY—ACCURATE—INTERESTING

(By Frank Ray)

Only the most brilliant minds of Congress could have planned this great economy slash on the Post Office.

What a great saving will be made by the dismissal of more than 10,000 usefully employed people.

One little item, however, has been overlooked. How much will really be saved in public funds when most of these people must resort to relief rolls and unemployment compensation? The taxpayer will then be paying these same people for remaining idle.

There are enough funds to feed and support the people who were our enemies only a few years ago. Germany and Japan have no difficulty getting appropriations from Congress, and nothing frightens our Congressmen more than the spectre of unemployment—in Japan and Germany.

Also, billions are available to keep the munitions makers busy. After all there will soon be a war to fight. Won't there always be wars?

But funds for the postal system, our most vital and useful Government service: that comes under the heading of necessities-we-can-do-without.

The Post Office shows a deficit because it is a servant of the privileged few who use it as their personal valet.

Congressmen pour tons of mail into the postal system. They don't pay one cent for the service.

And mail-order houses send back-breaking catalogues through the mail for less postage than it costs you to mail a 2-ounce letter.

Advertisers enjoy the privilege of cheap mail. Giant circulars are carried for post card rates.

By firing the men and women who are needed to keep our postal system functioning efficiently we solve nothing. By putting the postal rates on a realistic basis we will take the free-riders out of the mails, and then this wonderful Government service will be seen and appreciated for the great work it really accomplishes.

Watches and War

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Elmira Sunday Telegram of April 30, 1950:

WATCHES AND WAR—WATCHMAKERS WANT TARIFF, NOT SUBSIDY

(By William E. Hill)

During a war all nations are dependent upon watchmakers for their delicate mechanisms, such as aircraft instruments, chronometers, clocks, compasses, fire control watches, jewel bearings, navigation instruments, tachometers, time-delay devices, time fuzes, etc.

You cannot set off an A-bomb or an H-bomb unless you have precision workers to make the fuzes. Watch workers require from 2 to 10 years to train.

Prior to World War II Great Britain had allowed her watchmaking industry to decline, and during the war Switzerland was surrounded by the Axis Powers and so could not supply any precision instruments to the Allies but did make them for Germany. This left the United States as the only source of precision instruments for all of the Allies. Our three manufacturers of jeweled watches, Elgin, Hamilton, and Waltham, stopped making watches for the trade and from December 1941, to August 1945, were employed 100 percent of their capacity in Government work.

Since World War II Great Britain decided that for security reasons they must encourage and protect their clock and watch manufacturers. On October 16, 1945, the government established a credit of about $1,300,000 with a provision made to increase this sum if it should be needed. From 1946 to 1949 subsidies were given amounting to $1,630,000. The government also established a National Horological College at London at a cost of approximately a million dollars.

UNIVERSITY OF MICHIGAN LIBRARIES

This college provides for the training of technicians that would be needed in case of war and was opened in 1947.

About 70 firms are now producing clocks and watches and 12 of them can be classed as big. About 21,000 men and 14,000 women are now employed in making clocks and watches. The policy of Great Britain is to encourage export of clocks and watches and to discourage imports. To achieve export goals and meet foreign competition, some manufacturers have reduced export prices below cost. In 1948 the exports amounted to $5,346,840.

Switzerland is said to be working for world control of the watch market, and the elimination of American competition. Switzerland not only subsidizes their watchmaking industry but has established a joint central Government research, and also trains engineers and toolmakers.

The United States Tariff Act of 1930 provided a schedule of duties on watches which fairly well reflected, at that time, the difference in the cost of production of watch movements here and abroad. In 1935 the reciprocal trade agreement with Switzerland reduced the tariff rates by about 34 percent on the average. During World War II, while our watchmakers were all busy making controls for guided missiles and other war material, the Swiss were supplying our trade with watches up to about 9,000,000 in 1 year. By 1946 the Swiss supplied 86 percent of the jeweled watches sold in America.

The main cost of a watch movement is the labor. Our watchmakers received about two and one-half times as much per hour as the Swiss watchmakers. This and the low duty on watch movements is the reason that the cost of Swiss jeweled watch movements in this country is more than $4 less than the manufacturing cost of our cheapest jeweled watch movement.

The United States market has been flooded by an estimated 100,000,000 foreign-made watches during the past 10 years, so that at the close of the last war, when Elgin, Hamilton, and Waltham again were able to make watches for the trade, there was no backlog of orders and they had to compete with foreign-made watches that could sell for what it cost the American manufacturers to make their watches and still make a profit. The logical result has been that since the reciprocal trade agreement went into force in 1936, over 10,000 mechanics formerly employed in the watchmaking industry have gone into other trades.

In 1948 the Waltham Watch Co. had a deficit of $1,610,000 and on February 3, 1950, they closed their plant and laid off the remaining employees, 1,231. The Elgin Watch Co. has reduced its working hours and closed one of its plants. Early this month the Hamilton Watch Co. stockholders authorized increase in corporate indebtedness to four and one-half million dollars, and R. M. Kant, president, told stockholders that "the watch market continues to be in a badly unsettled condition" and that firm's first quarter sales and earnings "will make a poor comparison with the same period a year ago." The percent of profit, compared with sales of Elgin, Hamilton, and Waltham Watch Companies combined, in 1940 was 90.53 percent and in 1947 it was 3.72 percent.

If the Elgin and Hamilton Watch Companies are forced to close due to foreign competition, would we be able to buy foreign-made watches at the price we now pay for them? If world war III catches us with no watch-manufacturing companies that make jeweled watch movements, where will we get the precision instruments to set off our bombs? Switzerland would be surrounded and we might not be able to get any through from Great Britain.

Our watchmakers do not want to be subsidized by their Government but they do want a tariff that will enable them to compete with foreign-made watch movements on an even cost basis.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Postal Order," published in the Springfield (Mass.) Union of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE POSTAL ORDER

It is hard to believe that so drastic a Nation-wide curtailment of postal services as has been ordered into effect by Postmaster General Jesse M. Donaldson would be forced by action of the House Appropriations Committee in pruning the $1,786,000,000 post-office budget by $24,921,000.

In stating that the order would go into effect immediately, even before final action has been taken on the budget, Mr. Donaldson seems to be acting with indecent and suspicious haste. It may not be pure coincidence that a detailed program for a readjustment of the services was in readiness to launch on such short notice.

The Post Office Department is in a particularly favorable position for applying a familiar device of the various departments which are about, or fear they are about, to feel the ax. There is not a community that is not affected by layoffs of personnel and curtailed postal services. By raising a howl from those affected, there would, of course, be great propaganda value for restoration of the full amount of the budget.

It is an old trick that has been tried many times before and that will be tried again. It is most effective where the cut can be made to hurt most. But there is no reason to believe that these proposed readjustments in the postal services are necessary. Economies are. Budgets are not sacrosanct, especially the post-office budget.

There is good reason to doubt that layoffs and greatly curtailed services are necessary because of the slicing of $24,921,000 from the budget. There must be good reason behind the increasing demands for reduction in costs of the postal service, where increased efficiency would cancel out the budget cut.

Why Retain Our American Free Business System?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by one of my constituents and friends, Mr. W. H. Feldmann, president of the Electric Machinery Manufacturing Co., of Minneapolis, to the employees of the company he is leaving to accept a well-deserved promotion. His letter illustrates the kind of relations a president ought to have with his men, sharing with them his deepest concerns about the things that are necessary to maintain and improve our lives in this country, and in return welcoming their views and concerns. The letter follows:

ELECTRIC MACHINERY
MANUFACTURING CO.,
April 19, 1950.

To: All EM employees.
From: W. H. Feldmann.

DEAR FELLOW EM EMPLOYEES: Business is better for us. Orders received in February and March were 40 percent above the average of November to January. The S and R divisions got the greatest benefit, although all divisions, except two-pole generator, now have a reasonable workload for the next 3 months.

As a result, we have been able to call back 50 men and women which, I assure you, gives us a great deal of satisfaction.

This is my last letter to you. On May 1 I leave the company to accept the position of vice president in charge of sales of our parent company, Worthington. This means moving to New Jersey and cutting direct ties with EM and my friends in its employ with whom I have worked, suffered, worried and thrilled for 28 years. I will, however, have just as much interest in and responsibility for orders for EM as for Worthington.

In this last letter I ask your indulgence in reading my strong feelings about a subject which is of vital importance to all of us, our American free business system. There are many who would replace it with a welfare or socialistic state system. Either would, in my opinion, seriously limit our liberties and eventually lower the living standards of all of us. Let me tell you why.

Under our present system, as you well know, we have an absolutely free choice of what we buy with our money. Your wife and mine go downtown, or to our neighborhood centers and say, "I'll take this one, not that one." She is guided entirely by what she thinks gives her the greatest value for her money. The manufacturers and retailers, who provide—and inform her about—their greater values, get more and more orders, expand their businesses and employ more people. Those who, by high costs and indifferences, offer inferior values are soon called on by the county sheriff. Incidentally, the sheriff is one of America's greatest benefactors. He either opens the minds of or eliminates from our business system the weak, the inefficient and the lazy who would give us less for our hard-earned money and thus lower our standard of living.

On the contrary, the welfare or socialistic state does not weed out the weak and reward the strong. Political considerations govern. Government control, no matter how well intended, cannot possibly provide the needed and immediate corrections our free business system does automatically through the millions of people who say each hour of the day, "I'll take this one, not that one."

And this is aside from the question of our personal freedom. It is the most important thing in the world to us. I hope it will not be necessary for us to lose our freedom before we fully realize this. The inability of many British workmen to change jobs, to move, or to buy what they want is not an unusual situation. It is the inevitable result of a state-controlled system.

It was Woodrow Wilson who said, "Liberty has never come from the Government;

it has always come from the subjects of it. The history of liberty is a history of limitation of governmental power, not the increase of it."

So let's keep our system. And keep on improving it as we have constantly done since 1730, especially in the last 50 years. It has and always will provide, through the constant, terrific pressure to get lower costs and think up new and better products, more things to divide. So much more that even our lowest-paid worker at EM and elsewhere has more things to enjoy than he would get under state management. It will little profit him for the higher paid EM employees to be pulled down nearer to his living standard, if his own is also reduced. Especially when, in the process, he loses his liberty and his country is weakened.

What is true of the products our wives buy is equally true of the products we make at EM. Just as soon as the coil tapers at General Electric or Westinghouse turn out higher quality work at equal or lower cost than do Betty Selinsky and her sister tapers, we start down hill. But when all the members of our sales, engineering, manufacturing and administrative departments do a better job than competitors in quality and costs, and also cooperate effectively, we will have a bigger and stronger company with more security and more things to enjoy for all of us.

Recently Mr. Charles E. Wilson, president of General Motors, told me, "Economic progress and social progress are twins. They are, in fact, Siamese twins, for if one dies, the other dies too." So let's continue our social progress by insuring our economic progress.

I bespeak for Dick Olson, our new president, the loyalty, cooperation and friendship you have always extended to me.

With every good wish for you and yours. Good-bye.

WALTHER FELDMANN.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled Truman-Style Post Office, from the Pampa Daily News, of Pampa, Tex.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN-STYLE POST OFFICE

Postmaster General Donaldson, on the plea that economy is necessary to keep within his budget, has ordered a radical reduction in mail service to the public.

There will be only one daily residential delivery in cities, instead of two. Saturday deliveries to business houses will be curtailed, and smaller post offices will be closed on Saturday where possible. A number of classifications of night work will be stopped.

By these economies, which in the instance of householders, the most numerous of all recipients of postal service, amount to cutting their service in half, Mr. Donaldson hopes to eliminate 13,000 postal employees by July 1. This would reduce employment in the department to 504,000 persons. At the end of the war there were only 403,000 post office employes. The demonstration of economy is not impressive, to put it mildly.

This is not the first time that the Post Office Department has tried to punish the public because Congress refused to give it all the money it asked. Similar tactics were used in 1947 and resulted in demands in the Senate that postmasters who deliberately overspent their appropriations be sent to jail.

The Hoover Commission criticized the Post Office Department as one of the most inefficient in the Government. It has not changed its fundamental plan of operation since 1836. The Commission made 27 recommendations for improving post-office efficiency, and not one of them even hinted at saving money by curtailing public service.

Fundamentally, the Commission reported, the department should be taken out of politics and run as a business instead of a Government bureau. So operated, the Commission said, it could run at a profit instead of piling up annual deficits.

Mr. Truman sent a reorganization plan containing an excessively watered down version of the Hoover recommendations to Congress last year, and it became effective when Congress failed to veto it. It was so weak, however, that in January Robert L. Johnson, head of the National Citizens' Committee backing the Hoover report, pleaded with Congress to enact a real post-office reorganization bill.

Mr. Truman has used the Hoover report to date only to cloak his petty political moves, such as his own salary raise and the attempt to kill the Taft-Hartley act by abolishing the powers of the general counsel of the Labor Relations Board—a step which the Hoover Commission did not sanction. He has no use for the genuinely useful reforms recommended by the Commission, because they would prevent his exploitation of Government service for political purposes. He'd rather beat post office customers over the head than give them economical and efficient service.

After Formosa, Hong Kong?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clyde Farnsworth from the Washington Daily News of May 1, 1950:

AFTER FORMOSA, HONG KONG?

(By Clyde Farnsworth)

HONG KONG, May 1.—When and if the Chinese Reds and their Russian big brothers take Formosa, the "liberation" of Hong Kong will be the next order of business.

According to the present line being laid down for the Chinese Communist political workers, Britain will be required to surrender that crown colony—not merely the leased territory but also the ceded territory of the Kowloon Peninsula, Hong Kong Island, and other insular bits. Either that or the Reds will take it "by any means needed."

Disclosure of this policy, circulated thus far only for internal consumption by the Chinese Communist Party, was made by a newcomer from Hankow who credited it to a General Tang, identified as a political commissar for the Communists' most powerful field army, that of Gen. Lin Pao.

General Tang was said to have laid down this line in a recent lecture to political workers in the Hankow headquarters of the Fourth Field Army. The informant from Hankow also claimed to have discussed the matter personally with the Red commissar.

"HIGHER AND HIGHER

"The prestige of the Chinese people's government is growing higher and higher," General Tang was quoted. "We cannot establish relations with Britain until after the liberation of Formosa.

"Then we will liberate Hong Kong, Kowloon, and the leased territories. When Formosa is in our hands the British will recognize that they must withdraw. The people's government will not be satisfied with Kowloon or the new territories (on the mainland) but must have both Kowloon and Hong Kong."

MIGHT RECOGNIZE BRITAIN

"If the British are not wise enough to recognize this inevitability, the people's government will take this territory by any means needed. On the other hand if the British are wise enough to give all of it up, the people's government will recognize Britain."

The last was a reference to the long stymied efforts of London to establish diplomatic relations with the Peiping regime following British recognition last January 6 of that regime as the legal government of China.

Britain has recognized the Chinese Communists, but the Communists haven't recognized Britain.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "That Cut in Mail Service," published in the Jackson (Miss.) Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT CUT IN MAIL SERVICE

Postmaster General Jesse M. Donaldson's action in ordering a cut in home and small business mail deliveries to one a day seems hard to justify on grounds of economy. In fact, it looks more like a spectacular play to scare Congress into providing extra funds than a desirable move.

There's no question that the post office deficit is rising. But in most districts the mailmen are already carrying maximum loads, and the only way the second delivery can be eliminated without permitting the mail to pile up at the post office is to shorten the route or put two men on the job at the same time. That would cut service without reducing costs in the least and might even increase them.

Meanwhile, of course, the real causes of the Post Office Department's predicament are to go unsolved. The post office is to go on subsidizing the commercial airlines; giving free mail service to Congress and the Government and providing a dumping ground for politicians who want postmasterships and whatever gravy may be obtained thereby.

As the Hoover report revealed, the Post Office is overladen with wasteful red tape and duplicated activities which should be eliminated. Then, if further economies are

UNIVERSITY OF MICHIGAN LIBRARIES

necessary and if money can really be saved by such a step, judicious service cuts might be warranted. But in any case, the haphazard firing of a few $50-a-week carriers, mostly veterans—that's where the saving comes in slashing mail deliveries—will not be the answer.

Firing 10,000 employees is actually an almost infinitesimal stroke against a postal deficit running to $500,000,000 a year. But the act is vivid; everybody will feel the difference. And to the aggrieved mailmen and politicians and even to the householders reduced to dreadful plight of merely one mail delivery, Mr. Donaldson can sit back and ask: Well, what's the alternative?

The question is far from rhetorical. The Postmaster General, if pressed, could give the answer. Reorganize the Post Office as a business institution, make the rates self-sustaining, cut out the political fat. The Hoover Commission spelled out a detailed program of reorganization many months ago which would reduce the annual deficit by more than $200,000,000. Administrative reform, alteration of an inefficient accounting system, elimination of political traffic in postmasters are among the key points. On principle there is no opposition, but Congress stands still. These are savings of the first magnitude, designed to quicken the whole Post Office into new and greater efficiency, and without the painful accompaniment of wholesale discharges.

Mr. Donaldson may have a subtle purpose of directing attention to the Hoover recommendations. At any rate he has violently impressed governmental economy on the public consciousness. But it should be remembered that the slashes in postal service are only a drop in the bucket compared to what Congress could acomplish by putting the Post Office on its own. Only public opinion can win that battle.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a carrier's protest of delivery cuts, published in the Sea Cliff News of Sea Cliff, N. Y., of April 21, 1950.

There being no objection, the protest was ordered to be printed in the RECORD, as follows:

CARRIERS PROTEST DELIVERY CUTS

(EDITOR'S NOTE.—William T. Klein, 157 Brown Street, Sea Cliff, is trustee for the Long Island district of the National Association of Letter Carriers, and secretary of the Sea Cliff branch.)

The National Association of Letter Carriers has vigorously protested the instructions issued by the Post Office Department under date of April 18. A copy of our release to the press, and the letter sent to every Member of Congress, are quoted as follows:

"The order is contained in the Postal Bulletin of April 18, directing all postmasters to curtail virtually every type of postal service, amount to a rape of the postal service.

"Congress and the general public should meet this challenge head-on by stating in the most unequivocal terms that the United States Post Office belongs to the American people everywhere."

The National Association of Letter Carriers sent the following letter to all Members of Congress today:

Hon. OLIN D. JOHNSTON,
United States Senate,
Washington, D. C.

DEAR SENATOR JOHNSON: We are seriously alarmed over the instructions contained in the Postal Bulletin of Tuesday, April 18. Having spent the greater part of our lives in the postal service, and representing 102,000 letter carriers, we feel that the orders contained in the Postal Bulletin of April 18 will result in irreparable damage and destruction of our fine postal system. It will make the great postal service—the Government function closest to the lives of the American people—a second-rate inferior Government agency.

We have always been mighty proud of the fact that the postal service rendered excellent necessary service. Delivery of mail Nationwide is restricted to one delivery a day in residential districts and services greatly reduced in business districts. Parcel-post deliveries are to be cut in half in business areas. Weekly magazines, such as Time, United States News, Newsweek, and all others that have become an important part of American life will no longer receive expeditious handling. The prompt mail delivery that the American people have been receiving will not be available.

Postmasters have been ordered to discontinue directory service on all ordinary mail, other than perishable matter and parcels of obvious value. This order contains many other provisions, every one of them seriously restricting the fine delivery now being afforded the American people and imperiling the postal service itself.

These orders will result in tremendous money losses to American business and great inconvenience to the general public. Postal employees, particularly low-paid substitutes, will suffer greatly because of the reduction in the number of trips.

We appeal to you as a Member of Congress to take immediate corrective action against this devastating, ill-advised, and unnecessary order issued by the Post Office Department under date of Tuesday, April 18.

W. C. DOHERTY,
President,
D. R. SULLIVAN,
Vice President,
JEROME J. KEATING,
Secretary,
R. B. KREMERS,
Assistant Secretary.

To combat the grave emergency created by the drastic curtailment order, President William C. Doherty has issued a call for a conference to be held in the city of Washington, commencing May 15, 1950, at the Washington Hotel. All branches are invited to send representatives to this conference.

We Shall Carry On

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. RODINO. Mr. Speaker, Generoso Pope has passed on. He had dedicated his life to many exalted and noble tasks—all in the interest of his fellow man. He never forgot the Italy from whence he sprung, and sought in every way possible to help in its era of reconstruction on democratic principles. He was truly a great American who had learned the meaning of democracy and sought to help others participate in the blessings which flow from a true democracy.

His passing was untimely for the noble purposes he sought to attain were not fully and completely realized. However, his sons—imbued and instilled with that same spirit will take up the task where "Gene" left off. I am confident they can carry on. And I wish them Godspeed.

Under leave to extend my remarks in the RECORD, I include herein the following editorial which appeared in Il Progresso, Sunday, May 7, 1950:

WE SHALL CARRY ON

The untimely passing of our beloved father poses many questions, the foremost of which is: "What are the Pope brothers going to do?" It is with the deepest humility and the fullest realization of the task which confronts us that we answer: "We shall carry on."

The path which we are determined to follow was clearly defined by our father, not merely because it led to the goals he set for us, but because we firmly believe in the principles which motivated his every action. And we have believed in them from our early youth when he taught us many valuable lessons which he himself had learned in the school of hard knocks. It was then we learned of his great love for little people. It was then that he taught us that the greatest blessing we could earn was to help our fellow man.

Our father's life story is a saga of true Americanism. Accomplishments such as his were possible only in a democracy such as ours. Like millions of others before him, he came here as a poor immigrant boy. He took the fullest advantage of the opportunities and blessings of American liberty, and in return he dedicated himself to the service of his country by aiding all the causes which would make our freedom invincible and our national progress second to none. And so, with the passing of the years, he attained success. Yet he never forgot his humble beginnings. We, his sons, were schooled in his philosophy—a deep-rooted feeling of kinship for his fellow man and a constant desire to be of service to humanity.

That is why we will never forget his teachings. We shall always hold dear the memory of his ideals and we shall ever cherish the thought that often he clung to his ideals despite difficulties and great hardships.

His credo is our credo. In advocating and fighting for what we believe is right we shall not yield an inch. We have the utmost faith in America. Having been closely associated with him in all his work, we know exactly what he expected of us and, with the fullest realization of our responsibilities, we shall, with vigor and energy, see to it that Il Progresso continues as a beacon light and effective instrument in the service of our people.

Fully realizing the debt civilized mankind owes to the people of Italy for their countless contributions to human enlightenment and culture, Il Progresso shall never be remiss in its positive and forceful undertakings to help assure the Italian people international justice, equitable treatment and their rightful place of honor and dignity in the comity of great nations.

We shall be ever on the alert against international injustices and spare no efforts to have America lead the nations of the world in restoring to the Italian people the position, prestige, and rights which are justly theirs.

We know that the success of all the campaigns waged by Il Progresso in the name of justice and fair play for Americans of

Italian origin and for the people of Italy; campaigns for tolerance and against all forms of discrimination based on race, color, and religion; our campaigns for education and scholarship, for human liberty and decency everywhere; our constant efforts to strengthen the traditional ties of friendship which bind the people of America to the people of Italy, was made possible because of the confidence of the people in our father and the staunch support they gave him. Because of the inspiration he has been to us and because of our firm belief in his work, we are certain that we can successfully carry on this vital work if we prove ourselves worthy of this same confidence and support.

We are mindful of the many problems which confront our people and it is in their interest, and theirs alone, that we shall dedicate ourselves wholeheartedly. Their struggles shall be our struggles. Their aspirations shall be our principal concern and our mission, with their cooperation, must not and will not fail.

We take this occasion to express our warmest thanks and appreciation to that multitude of friends who have so touchingly shown their esteem and love for our father and shared with us our sorrow upon his passing.

We stand united and shall not permit nor countenance subtle attempts to swerve us from our singleness of purpose. We shall carry on with fullest faith and unshakable determination to be worthy of the great and inspiring heritage which is ours. This we pledge to the readers of Il Progresso. This we assure the people of our city, State, and Nation. This is our message to the people of Italy.

FORTUNE POPE.
ANTHONY POPE.
GENEROSO POPE, Jr.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Restricted Mail Service," from the Marion Chronicle, of Marion, Ind., of April 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RESTRICTED MAIL SERVICE

Postmaster General Donaldson's order restricting postal service may be regarded as an effort to reduce the annually increasing deficits arising from the operation of the mail service. It also is an effort to force certain users of services which Donaldson says are operated at a loss into those that he claims are operated at a profit. The latter may serve to increase the revenues but how much nobody can predict with any accuracy. But savings from the curtailment of services probably will be negligible. In any event, curtailment of service is not a very good way to secure additional net revenue. Such curtailment usually is accompanied by a reduction in the intake, although the post office, being a Government monopoly, may be an exception to the general rule.

The Postmaster General commented on the post-office situation that existed in 1939 compared to that in 1949, as follows: "During that period, the revenue increased 110.72 percent; the number of pieces of mail handled, 64.7 percent; the weight of the mails increased more than 104.73 percent; while the increase in employees was less than 48.43 percent." That usually would be taken to be the picture of a flourishing business, but instead it has produced annually increasing deficits.

These, according to the statement of the Postmaster General, are due largely to increased salaries, fixed by Congress. Additional costs for transportation by rail and air since July 1945 approximate $125,000,000. The total increase of all expenses in the same interval approximates $900,000,000, according to the Postmaster General's statement.

The economies suggested by Donaldson can be no more than trifling when stacked up against the forecast deficit.

The American people are interested in governmental economy. However, inferior service is a poor way of achieving it, as we have stated. The Hoover Commission proposed a much better answer. One of them would take the post office out of politics. This has been bottled up by a Senate committee for more than a year, as has another which in the words of the Hoover Commission, would provide the Department with flexibility in management, simplification in budgeting, accounting, and auditing. It may be that Donaldson's orders are an oblique way of obtaining the required action which is so long overdue. But the Citizens' Committee for Reorganization warns, "only a strong display of public interest addressed to the entire Congress, can get this needed action."

Address of Welcome to Newly Naturalized Citizens

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a living and inspiring address of welcome to newly naturalized citizens made on May 1, 1950, in Boston, Mass., by the Honorable William T. McCarthy, United States district judge of the district of Massachusetts.

Now, ladies and gentlemen, you have been signally honored by the great sovereignty of the United States today because, not only have you received the insignia of solid American citizenship, but you have received it on a day dedicated to the saintly men and women who gave to us our civilization—and I mean the kind of a civilization that we have in the United States of America—who have given to us a form of government predicated upon a Godlike philosophy that goes back over the centuries, and which had its inspiration for our present-day era in a little stable in Bethlehem.

This is, in a way, Mother's Day; but I rather feel the kind of men who run our Government must have had in mind a series of consoling factors. Here we are in this courtroom, a part of a golden treasury of a life that is so strikingly disproportionate to the kind of life that liberty-loving men and women now have in foreign lands. Today we kneel at the footstool of the loveliest lady in the world, who gave to American women the priceless heritage of American womanhood—living in a community life where the dignity of the home is recognized; living in a community life where all steeples point heavenward; living in a community life where men who hold public office hold it with the consent of the governed. And contrast that to the ambitions of irresponsible, autocratic, racketeering leaders, representing all the diabolical agencies in those persecuted lands, ready to overthrow, to wipe out the ideals and the principles which have helped to invest you today with the priceless emblem of American citizenship. May your lives and the lives of the fearless men and women, Godlike men and women, Godlike leaders in those foreign countries, continue in the preservation of the ideals which we love so much here.

There was a distinguished churchman who spoke at the University of Kansas on Saturday. He addressed 700 persons, and he was introduced at that Kansas University dinner by the Kansas Governor, Harry H. Woodring, and he spoke as follows—and I quote:

"If we are to endure as a nation of free, strong-hearted men, we must, in unity, stand sentinel against the potent, growing dangers of faithless, traitorous Communists and Communist sympathizers who are using their freedom to destroy our freedom."

Just think of what that means—who are using the freedoms that were given to us by God himself through an earthly medium, our founding fathers, who, under His inspiration, gave to us a form of government which has stood for over 170 years. And they try to change our way of life, and they are encouraged by a lot of godless men and women who are allowed to teach in universities and in law schools—yes, and in medical schools too. And then this distinguished churchman went on to say—"They are the host of traitorous men and women who, living beneath the protection of our American flag, enjoy the priceless privilege of being citizens of our Republic, while their own allegiance is actually pledged to an emblem representing a theory of government opposed to everything for which Old Glory stands."

Now, I am talking right from my heart. I think of the wise men—soldiers, martyrs, statesmen—who under the guidance and with the inspiration of God gave us our way of life in the form of our Constitution and the Declaration of Independence; who from time to time in the exercise of their wisdom, realizing that there were 13 States, realizing that those States under our Constitution were separate entities, but realizing also that if this Government was to be a great nation it had to be a nation checked by a central government and so they gave us a series of amendments to the Constitution. And as they came along these amendments were a perfect picture of the development and growth of the natural order, and the natural order is nothing more or less than an order upon which nations go ahead under the guidance of Almighty God.

They gave us what is called by lawyers and judges the "due process clause" of the Constitution. It is a clause of the Constitution that was passed for the specific purpose of preventing "jungle law." It was passed for the specific purpose of checking the States so that you would not have a government by might. And yet there are men who should know better that advocate the complete obliteration of due process. And I speak of these things because I think of the boys and girls who will make up the civilization of the tomorrows; and I speak of these things because I want you to become active, potent factors in your community lives. I want you to see to it that there is a demonstration of public appreciation and public worship—that these ideals be translated into acts which indicate a sturdy Americanism; that you participate in the election processes; that you recognize that this country of ours is a panorama where the two principles called "the Fatherhood of God and the Brotherhood

UNIVERSITY OF MICHIGAN LIBRARIES

of Man" are the beacon lights and the milestones and the yardsticks for your conduct—men and women kneeling obediently before the power and the majesty of a Supreme Being—men and women responsive to the kind of discipline that the natural order intended should be the beacon light.

That is the kind of a message that I want to give you on loyalty day. That is the kind of a message that I think every American should give. You exemplars of the democratic way of life, and you should send forth to a world torn apart by strife and turmoil the message of the kind of happiness and hope and good will and peace that the great men and women over the one-hundred-and-seventy odd years of this country's existence intended this Government to be. And you should remember that these attributes are founded not upon the words of men but upon the power and the influence of the great Master of Men and the prophecies that have come down through the centuries.

You are surely having a rendezvous with destiny; and let your beacon lights, and, I mean by that, let your conduct, let your loyalty to your institutions in this country be such as will make this country a better country to live in. Let us have during this whole month a devotion as citizens to a word which is the loveliest of all words—to a word which spells sacrifice, cooperation, and yes, martyrdom to the causes which mean so much to the civilization of tomorrow. If this country is going to be saved, and it will be saved by the grace of God, it will be done through the influence and example of the lovable, saintly mother of God or by the inspiration that men and women get kneeling at the golden footstool of the mother who has long since died but who still lives as an example and as a milestone by which men and women can expect this country to be an abode of peace where men are to live and let live.

That is my message to you, ladies and gentlemen, this morning; and I hope that Heaven will shower upon all of you its choicest blessings, and I hope you will pray every day that you will retain the inspiration to be fine American citizens—to be loyal American citizens—to be able to subscribe to these guiding principles that mean so much for the civilization of the tomorrow. This is the perfect picture of the development and growth of the natural law. That is God's method, that is the American method, and it is not the communistic method.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reducing Mail Service," from the Daily Press, of Atlantic City, N. J.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDUCING MAIL SERVICE

Ever since the announcement was made that Postmaster General Jesse M. Donaldson had ordered drastic curtailment in mail delivery service we have been waiting for a statement that the order had been rescinded.

It had the appearance of an attention-calling move on the political checkerboard in Washington, to be followed by other moves in Congress that would bring a happy ending to the argument.

Now that the effective date, May 1, is almost here and the order seems to be sticking, we are disappointed and a little sore.

The idea seems nonsensical. In addition to throwing many men out of work, it will be a distinct inconvenience to many business people, not to mention the individual.

It seems like saving money the hard way, in a manner that will bring pain to a great many people.

If Uncle Sam was really up against it, there might be some merit to the plan, but he shows no evidence of being thrifty when it comes to buying potatoes that are later destroyed, or eggs that are gotten rid of eventually at a great loss.

The letter carrier has always epitomized the hard-working, diligent, and faithful employee, the Government worker we most often see. Unless somebody in Washington can come up with a very convincing argument to the contrary, we will string along with the mailman in believing it is a dirty deal.

Detour Ahead

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. CRAWFORD. Mr. Speaker, the defense program of the United States, together with the internal life of our people, is so completely dominated by steel and steel products that I feel we can well afford to pay some attention to the observations made by the president of the United States Steel Corp. only a few weeks ago. Therefore, I submit for the RECORD, and without further comment, a portion of his remarks before the Baltimore Association of Commerce, Baltimore, Md., April 21, 1950:

DETOUR AHEAD

(By Benjamin F. Fairless)

Gentlemen, I am about to deliver a critical speech, and at the outset I want to make it clear that I am neither attacking nor defending either political party as such. Neither am I attacking nor defending any individual or individuals of either political party. I am, however, attacking anyone who, in my opinion, is attempting to destroy the free competitive American industrial system which has made our country the greatest on earth. I offer this statement for clarification purposes only and it is not in any way to be construed as an apology for what I am about to say.

This visit to the Free State of Maryland is a pleasure which I have been promising myself for a long time. In fact, I had planned to be with you months ago, but unfortunately I hit a detour and wound up in a notorious suburb of yours, over near Bladensburg—a placed called Washington, I believe.

I guess that's what always happens to people these days when they start heading for a free State. Some traffic cop shunts them off on a rough and bumpy road they did not want to travel, and they end up at an unhappy destination they never wanted to reach at all.

It is about detours that I want to talk to you today—and about Washington. I had expected, of course to talk about the steel business, and some day I hope to get back to Pittsburgh long enough to find out what's happened to it. But during the past few months, I have been specializing in our National Capital, and our National Capital has certainly been specializing in me. Up to now, as you know, I've spent most of my time in O'MAHONEY's dog house; but next week I move to EMANUEL's cellar.

So it is a pleasant relief indeed to escape for a few hours and to enjoy your hospitality here in Baltimore.

I have already spent a most interesting morning. Mr. Charles E. McManus took me over to the Crown Cork & Seal Co. to see the fine new cold-reducing mill they have installed there. To me there is something really beautiful about machines like that. They have majesty, dignity, and grace of motion; and I never cease to be fascinated by the miracles they perform.

The magician who first produced a live rabbit from a silk hat had a great deal of ingenuity and skill, and people of every age still marvel at the trick; but to me it is not nearly as mystifying or as breath-taking as the process by which modern American industry produces even such seemingly simple things as bottle caps.

My visit to this plant today, however, was not merely a pleasure, it was definitely a matter of business as well—not that I am thinking of going into the bottle-closing business; and not that Crown is a customer of ours, either. They are not. They buy their steel from one of our rivals. I hate to say that, because I know what a shock it will be to some of our Washington critics who insist that there is no competition in the steel industry. Apparently they never heard of Bethlehem—or a couple of hundred other competitors of ours who are doing very nicely, thank you. You know, sometimes I wish these critics could join our sales force for a few weeks and try to sell a little steel. I think they would find out for themselves what competition really is.

When I say that my visit was a matter of business, I mean that I think it is part of my job—and the biggest part of my job, perhaps—to know how American industry produces and engineers the millions of intricate things that it turns out—to study the ingenious processes that it has devised and to see how it meets and solves the hundreds of operating problems that it has to face.

I do not believe that any man who has not seen these things for himself can hope to understand our American industrial machine. I do not see how he can hope to discuss our American enterprise system intelligently, factually, or even honestly.

If you happen to detect a note of feeling in my voice as I say that, it is because of my recent experiences in Washington. From the time it was organized 50 years ago, United States Steel has been subjected to almost constant investigation by various agencies of the Government and for the past 10 years and more, I myself, have been on the business end of most of these investigations. Gentlemen, I have been through so many congressional inquisitions that no self-respecting skeleton would hide in my closet on a bet.

So far this year, Senator O'MAHONEY has already had me on the griddle once, and Congressman CELLER starts dissecting me next week. After that, O'MAHONEY wants me back again, it seems; and Representative MACY is proposing that I become the permanent victim of a continuing investigation. I shall never know why.

What with the TNEC report, the voluminous records which we file regularly with various Government agencies, the frequent congressional inquiries we have faced, the proceedings before the Federal Trade Com-

mission, and the evidence we have presented in numerous court actions, I don't suppose there is a single statistic about United States Steel which could possibly be of any real interest or significance to anyone, that is not already a matter of public record. And yet to this day, most of our inquisitors remain blissfully ignorant of the most important fact of all—how steel is made.

Among all the members of all the public bodies we have faced in the past dozen years, I don't suppose that more than two or three, at the outside, have even been inside a steel plant, or have ever seen for themselves what a gigantic operation steel making is. Yet, until he has seen these things for himself, I do not believe that anyone has any right to tell anybody how big a steel company should be; for any views he may hold on the subject can hardly be regarded as the reasoned opinion of a qualified and competent authority.

During the hearings next week, I intend to invite Mr. CELLER and the members of his committee to visit our steel plants. I hope most earnestly that they will accept that invitation; for, by doing so, I believe they could add richly to public knowledge and public understanding of this whole controversial issue of bigness.

I am aware, however, that such action by them would constitute a radical departure from established congressional practice as I have seen it. So far as I can discover from personal experience, congressional investigations of businessmen follow a standardized pattern that has been in vogue in America since the old days of the western frontier, when the established procedure was to shoot first and ask questions afterward.

Nowadays, the chairman sends you a letter inviting you to appear before his committee on a certain date. Then he starts issuing a barrage of statements to the newspapers telling the world what a dangerous and nefarious character you are. When you no longer have a friend left in the world the hearing begins, and the chairman starts out by reading a statement in which he finds you guilty and pronounces sentence upon you. Then he announces that the committee will proceed to a full and impartial investigation of the facts, which seems to be a great waste of everybody's time, because when the evidence has been fully presented the chairman ignores it completely, writes a report setting forth all of his preconceived notions, and quotes at length from his opening statement to prove he was right all the time.

Throughout the proceedings, of course, there is a great deal of talk about the public interest, but I cannot help wondering what public interest a committee is serving when it conceals, distorts, and openly misstates the facts—the basic, all-important facts—which the American people must have if they are to plan their economic future intelligently and wisely.

Now, gentlemen, I am not an alarmist. I don't run around crying "wolf." I never see bogeys under the bed—and seldom see them on a golf course these days. But I am gravely and sincerely disturbed by what I have seen in Washington.

In my opinion, our American economic system is in deadlier peril today than it has ever been in my lifetime. I say that knowing that it has always defended itself successfully against its enemies abroad, but I honestly do not know how it can be protected against its self-styled friends in Washington who would literally hack it to death on the pretext of saving its immortal soul. I am convinced that if these misguided planners and politically ambitious officeholders have their way, three of our most precious liberties—freedom of opportunity, freedom of initiative, and freedom of enterprise—will vanish from this earth.

I have always had great faith in the plain, cracker-barrel common sense of the American people, and so long as they are permitted to know the facts, I have no fear that they will ever allow their economic system to be engulfed by foreign isms and ideologies.

I do not fear communism because every passing day proves its utter failure. The American people know that if communism were really working successfully there would be no need for police-state oppression, phony trials, and slave-labor camps behind the iron curtain.

I do not fear fascism because it has killed the three great nations which adopted it. The American people want no part of any economic system that feeds only upon war and conquest.

I do not fear outright socialism because, in Europe today, socialism itself is living on the dole, and America is the only country on earth that is able to foot the bill for it. No American taxpayer is likely to fall for that kind of an economic system, at least until he has found some other nation that is rich enough and generous enough to indulge him in his folly.

But when somebody in Washington starts telling me how much he loves the free-enterprise system and how he proposes to save it from itself, I shake in my very shoes. I wonder why it is that these self-appointed saviors of our national welfare always seem to miss the point—the one magnificent lesson that should be apparent to anyone who looks about for him at the world today.

The point is, gentlemen, that our American system of free competitive enterprise is the only one left in the world that is not controlled by power-hungry politicians; and whether you call it the Square Deal, the Fair Deal, the New Deal, or just plain Federal regulation, the fact remains that once the dead hand of politics gets its convulsive grip on American business and industry, free competition will be strangled and our economic system will be no different—and no more successful—than those noble experiments which are crumbling into dust in Europe.

Of one thing I am convinced—the American people will never knowingly travel that foreign road to economic disaster. They have built the most magnificent industrial machine this world has ever seen, and they are certainly not going to wreck it that way as long as the road itself is clearly marked by signposts which honestly reveal its destination.

But in Washington today there are theorists and bureaucrats and economists and Congressmen who are switching the signs. They are trying to take down all the honest guideposts and put up others reading "Detour—To Utopia."

To my way of thinking, gentlemen, that is nothing less than economic murder; and it is hard for me to believe that all of these signpost jugglers are so innocent and so credulous that they can sincerely suppose they are pointing the way to salvation.

We are all riding in the same machine, and we are all going to end up in the same place, whether we like it or not. So I think it might be wise indeed to examine the signposts closely. Now it seems to me that the most dangerous deception which has been practiced upon us is the fallacy that our whole economy can be divided into two parts, labeled "big" and "little" business. This deception has been used so long and has become so familiar to us that we have begun to accept it, unthinkingly and without question.

Because some statistician has arbitrarily drawn an entirely imaginary line between companies employing more or less than 500 persons, we argue about big business and little business as though they were two hostile armies warring against each other. And so we fall into the trap that Washington has set for us, by creating class distinction in the industrial world.

How silly that concept is, if we stop to analyze it. There are 4,000,000 individual business units in this country and they are all part and parcel of one great industrial machine. They are very much like the parts of that cold reducing mill I was watching this morning. Some of them were big and some of them were little. There were tiny electrical contacts and huge steel rolls that weighed several tons each. Some parts ran at high speed, while others ran slower; but all of them were intricately fitted together, and each had a particular job to do. So this mechanical giant went grinding along, rolling the hard, tough steel into strips, as smoothly and as easily as grandmother used to roll pie crust.

But of what use would that machine be to anybody if our Washington theorists once went to work on it? Our economists would cut it up into half-a-dozen pieces because it is so big. Our statisticians would sort out all the parts into neat piles according to size. Some Members of Congress would pass a law decreeing that all the parts must be the same size, or that all must run at exactly the same speed. And in the end, there would be no machine at all. All the parts—the big parts and the little parts—would be junk.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Making Economy Felt," from the Herald-Journal, of Syracuse, N. Y., of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKING ECONOMY FELT

It was certainly with no feeling of pleasure that the public read of the planned curtailment in mail delivery. No part of Government service touches so intimately the lives of the great mass of the population. The people follow with a deeply personal interest the various moves made from time to time to facilitate the handling of mail and have felt that each step toward efficiency has been a contribution toward making life more worth the living.

It was to be expected that the sweeping order issued would be regarded in some quarters as a move to bring pressure on Congress for higher rates. The fact that the rate bill is still pending in Congress lends color to that theory.

However, the defenders of the change can retort that the way to economize is to economize, and that, to use an ancient metaphor, they cannot make bricks without straw—the straw in this case not being hay, but some millions of dollars.

The public has always regarded a deficit in the Post Office Department more tolerantly than one anywhere else, because that Department serves everyone and everybody shares in its benefits.

UNIVERSITY OF MICHIGAN LIBRARIES

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Familiar Pattern" from the St. Joseph News-Press of St. Joseph, Mo., of April 19, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FAMILIAR PATTERN

Postmaster General Jesse M. Donaldson has ordered one mail-delivery service daily in residential sections. In issuing this ultimatum the gentleman is following a pattern familiar in bureaucratic politics. Every agency seeking to focus attention upon its retrenchment due to limited operational funds invariably strikes at the point most noticeable to the public. Donaldson is taking his move of economy into the home of each taxpayer by whacking off one delivery of mail.

The Veterans' Administration invariably follows this procedure when it slashes for economy's sake. It will close the office of some consultant in the field upon whom its members rely for advice rather than reducing the army of personnel who catalog and file the tons of triplicate forms that pour into its headquarters.

It is not the single delivery of mail that perplexes us on the Postmaster General's directive. After all, country folks have gotten along just fine on one delivery a day for years. We think that the city people will bear up just as nobly. Our bewilderment arises over the predicament of the postal carrier. By making one round daily his time is less. Does this mean that his pay diminishes and thereby saves in operational expenses? If the pay isn't less, then wherein lurks the saving?

The burden of the postal carrier is doubled because the bulk of the mail will remain the same, although it will be carried over the route but once a day. Certainly Jesse Donaldson should be familiar with the weight of the postman's satchel because he started his career 42 years ago as a letter carrier in Shelbyville, Ill. We fail to see how adding to the carrier's burden lessens the postal cost.

For a Job Well Done

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. RODINO. Mr. Speaker, today, without faith to guide and encourage us, one may lose sight of human values. In a world where the dignity of man is challenged by godless forces it is basic that we do not lose faith in man, in our country, and in God. We can bolster our faith by keeping strong the spiritual ties which bind us to God. By our daily actions, our deeds and our thoughts, our simple prayers, each in our own way, each according to our own religious teachings, respecting man's dignity, respecting another's faith, and religion, we give meaning to democracy.

The Newark Evening News, published in my district, has been cited for its outstanding service in the field of religious activities. I congratulate the News and its religious news editor, Miss Vance.

It is a distinct privilege to have been given leave through unanimous consent to insert in the RECORD the following editorial which appeared in the Sunday, May 7, 1950, issue of that paper:

RELIGIOUS NEWS

The Newark News takes pride in the fact that it is one of three newspapers to receive an award of merit from the National Religious Publicity Council. The other recipients are the New York Times and the Providence Journal. Miss Margaret A. Vance, religious news editor, whose work in this field is notable, accepted the award on behalf of the News.

In the terms of the award, the News is commended "in recognition of outstanding service rendered to organized religion through the pursuit of impartial journalism, and as a testimonial to its continued efforts in behalf of all faiths to advance the spiritual life of the Nation."

That is a citation which the News will continue to strive to deserve. The News was the first metropolitan paper in the East to have a church page. Through the years it has published religious news, both on the church page and on the general news pages, as an important part of the chronicle of our times. It has been both a privilege and an obligation to do so.

Religious news is now, more than ever, of wide interest and significance, for the spiritual life of man, in a deteriorating world, shines with values that are true and permanent.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bidding for Trouble," from the Shawnee News-Star, of Shawnee, Okla.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIDDING FOR TROUBLE

It's an old trick that Postmaster General Jesse M. Donaldson is using.

Congress has denied increased postal rates. It has refused increased appropriations for the postal department. Therefore, Donaldson figures he'll let the public lobby for him.

By cutting mail service drastically—more drastically than necessary—Donaldson apparently believes the chorus of squawks from an indignant citizenry will bring the lawmakers to terms.

No doubt the complaints will achieve Donaldson's purpose in part, at least. Economy that cripples an essential function of Government will not take well with the people. However, Congress cannot relish being put on the political spot in such fashion, hundreds of thousands of postal workers cannot enjoy the bombshell which threatens their jobs, the public will not think too kindly of an administrator who creates an upheaval to win his way. So, although Donaldson may get some part of the appropriations asked, he'll also acquire a stigma that will make him a political undesirable.

There have been other high-handed Postmasters General in the history of the mail service. But Donaldson is making a real bid for the reputation of most unpopular.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Making Economy Unpopular," published in the Bridgeport Evening Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKING ECONOMY UNPOPULAR

One way to make economy unpopular as a national policy is to apply it most drastically in the department where it will do the most harm, hurt the most people, and produce the most resentment. That is the method chosen by the Truman administration in proposing drastic cuts in our postal service.

The cuts in the postal service would result in the laying off of thousands of trained postal workers. Naturally, that is hard on them. The accompanying reduction in service would annoy every citizen of the United States and in some cases might seriously injure businesses which depend on the prompt delivery of mail.

There is no excuse for this sort of thing. The postal service today is good, but any change should be for the better, not for the worse. There is still room for improvement in the speed and frequency of mail delivery. Mr. Truman proposes to move in just the opposite direction.

Notice that the favorite, politically managed alphabetical Fair Deal agencies are not to be cut. We are to continue to pour money down the sewer, but we are to cut an essential Government service—one of the services about which there is no controversy. We are to continue to pamper those services of an experimental nature whose value is accompanied by a big question mark, and to hurt the one service that everybody uses, everybody needs, and everybody wants to see improved.

We predict that the proposed cut will not go through. Or that if it does go through Congress will quickly recall it. But in the meantime, the avid money spenders in Washington will have accomplished part of their purpose—to throw a cloud of disfavor over the whole question of economy.

Mr. Hoover's Proposal

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune of April 29, 1950:

MR. HOOVER'S PROPOSAL

If the United Nations is to be reorganized without the Communist nations, as proposal by former President Herbert Hoover, it will be up to the United States to do the job.

Would the United States have much help in thus reorganizing the UN? Would such a move seriously injure the Soviet power? Would it materially enhance the peace, security, and freedom of the United States and other non-Soviet nations?

Despite our great respect for Mr. Hoover's experience and wisdom in world affairs, we are not persuaded that adoption of his proposal at this time would produce affirmative answers to those vital questions.

It is quite possible that an attempt of this sort would increase rather than decrease the isolation of the American people in the cold war about which Mr. Hoover rightly showed deep concern in his speech Thursday night.

A demand on our part that nations join us in formally excluding Russia and its satellites from the UN might play into Russia's hands more than strengthen our hand in the cold war. It would certainly help Russia increase its domination over Communist China. There is much reason to believe that the last thing Russia wishes is admission of Communist China to the UN despite its pretensions to the contrary.

It is easier for the Kremlin to dominate a Chinese government which has no ties with the non-Soviet world than one which deals on a position of nominal equality with other sovereign states in a world organization or in the customary diplomatic relations.

Soviet behavior in other areas is comprehensible only as part of a policy of widening the cleavage between people under Communist domination and the rest of the world. While Communist spokesmen use the UN for propandaga purposes, the Kremlin currently appears to be more eager to shield its subjects from democratic influences than participate in the UN for antidemocratic propaganda purposes.

A disconcertingly large number of people in non-Soviet countries are not sufficiently persuaded of our worth as an ally or are too afraid of incurring Communist wrath to be willing to join us in such a UN reorganization at the present time. Our insistence on being counted for or against us would not win over such fence-sitters.

Considerations of this sort and first-hand experience in the UN have persuaded a fellow Republican, John Foster Dulles, to take a different view than that of Mr. Hoover. In his newly published book, War or Peace, Dulles says, "I have now come to believe that the UN will best serve the cause of peace if its assembly is representative of what the world actually is, and not merely representative of the parts we like. Therefore, we ought to be willing that all the nations should be members without attempting to appraise closely those which are 'good' and those which are 'bad.'"

Such a UN is much less than is required to preserve peace with freedom and justice. It must be supplemented by coperation between those countries which are determined to preserve their freedom at any cost. To the extent that such cooperation between the United States and other like-minded nations can be maintained within the UN, it should be so done. But if the UN does not permit such necessary cooperation it should be organized outside UN. Survival in freedom and security is the paramount consideration. The UN in its present form is not the be-all of our collective security. But it should not be necessary to risk destroying the UN by purging it of Communists in order to aline with us those who are willing to go as far as we are willing to go in defense of freedom with security. The Atlantic and Rio Pacts show the possibilities in this direction.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Asking for Trouble," from the Durham Sun, of Durham, N. C., for April 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASKING FOR TROUBLE

The Postmaster General's current scare campaign, directed against the House Appropriations Committee, may or may not frighten the Congressmen; but it is apt to get the Postmaster General and the administration in some hot water.

First reaction of many Americans is that Mr. Donaldson's virtual sabotage of mail service is not a sincere move. They doubt he intends to carry it out. It is a tactic designed to force more money out of Congress, hence out of the people. That such is the case seems corroborated by a concerted leaping of all postal employees to the firing line. Someone has inspired them.

Actually, Postmaster General Donaldson had better not carry out his projected program. What the country needs and expects is more mail service, not less; and on a more economical basis.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Postal Penny Pinching," published in the Boston Traveler of April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL PENNY PINCHING

We feel like screaming: How can people be so stupid?

Costs have been rising in the Post Office Department as they have everywhere else. So what? That's no reason to rush off the deep end.

Here we have a fiscal problem which should be solved through fiscal means. Either the rates must be raised as the Postmaster General proposed, or some form of subsidy must be provided. The third absolutely unbelievable alternative—but the one chosen by the Postmaster—is to smash the postal service to smithereens.

Over the years the civilized world has come to take postal service for granted. No one remembers that the daily mail is the backbone of any communications system without which no nation could possibly survive. Not that the United States has ever been famous for really good postal service anyway. Several European capitals, notably London, far outshine us in that field. But suddenly, we who pride ourselves on our modernity have reverted to colonial customs. Cutting back mail service is like wiring a skyscraper with the latest devices and then saying you can't afford the bulbs. Demented.

If the slash sticks, all mail, including first class, will most likely be delayed 24 hours. What this will mean to business, to Government, to ordinary human relations is incalculable.

This type of administrative mismanagement confirms the worst fears of the "agins." We cannot allocate the blame for this mess with any accuracy. Both Congress and the Post Office Department appear culpable—with Congress well in the lead. But if government—meaning the combined legislative and executive—can't even manage the Post Office Department decently, why on earth should anybody believe it could manage anything like a general health insurance program? Let the Democrats who voted against postal rate rises or subsidies think that over.

The Republicans are always harping on efficiency. This curtailment can't help but slow the whole tempo of American economic life. Where were they on voting day?

The hue and cry has started locally already. We hope it mounts to a deafening crescendo. The cutback must be rescinded before it has time to do real harm.

The Post Office is easy, gentlemen. How could you have muffed it so colossally?

Voice of America

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Honorable Edward W. Barrett, Assistant Secretary of State:

APRIL 10, 1950.

The Honorable EDITH NOURSE ROGERS,
House of Representatives.

MY DEAR MRS. ROGERS: I am very favorably impressed and am interested in pursuing your suggestion for a domestic Voice of America hour as reported in the CONGRESSIONAL RECORD for February 23 and March 2, 1950. I

UNIVERSITY OF MICHIGAN LIBRARIES

have discussed your idea with various officials of the Department, all of whom feel that it has considerable merit.

The Department's role in such a project would be limited to one of cooperation only, due to legislative restrictions on the use of funds allocated to the International Broadcasting Division. The initiative and responsibility for such a program would have to come from private radio networks.

Any domestic network interested in presenting a documentary program on international broadcasts could obtain, from the Foreign Broadcast Information Service, reports of what official foreign radio broadcasts are saying about the United States and also obtain from the Department what the United States is broadcasting to foreign countries. You will be interested to learn that the American Broadcasting Co. already has communicated with the Department's International Broadcasting Division with a view to producing a program on the Voice of America.

Basic Voice of America scripts are available to Members of Congress and the press at all times. English versions of foreign language scripts, translated on a rotating basis, are available for inspection at the Library of Congress.

I thought you would like to know that your suggestion has received much consideration and that there is a strong likelihood that it will develop into a program on some domestic network. Your interest in the Department's international information services is greatly appreciated.

Sincerely yours,

EDWARD W. BARRETT,
Assistant Secretary.

The False Charge of Socialism

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release entitled "The False Charge of Socialism":

THE FALSE CHARGE OF SOCIALISM

Not the Democrats; not the rank and file of the Republicans, but the leaders of the Republican Party, in their greed for political power and monopolistic control, are instrumental in spreading spurious propaganda, false accusations, and deception over our great Nation today with harbored hopes that they can cause the masses of our people to contract a severe case of jitters.

The Republican leaders and many of their big-business allies are devoting inestimable energy to wolf cries of "socialism" given inception by the Democratic Party. Nothing could be farther from the truth. Under socialism the government owns businesses and there are no large profits and no huge bonuses. In a private enterprise there can be profits and bonuses. In recent years, under Democratic regime, the program of the Federal Government has produced a climate under which our private economy can thrive, profit, and bonuses can be sizable, if you please.

The private enterprise system is doing far better under the present Democratic administration than ever before in our history. If you don't think so, take a look at the following extracts from the records of 1949 and early 1950:

1. Chrysler paid $2,581,000 bonuses to 229 top executives.

2. General Motors bonuses of $7,500,000 went to 61 executives in 1949.

3. DuPont officials receive $2,696,680.

4. New York (Associated Press): "United States Steel hiked dividends on its common stock from 50 cents to 65 cents. Profit for 1949 was set at $5.39 per share."

5. New York (Capital Times): "General Motors Corp. earned more profits last year—over $600,000,000—than any other company ever made in a similar period." Report by Albert P. Sloan, Jr., chairman of the board.

6. Special to the Christian Science Monitor, Washington: "United States dividend payments set record in 1949. United States corporations paid out the biggest total cash dividends in history—$6,495,800,000. This was 7 percent above 1948."

7. New York (Associated Press): "Bethlehem Co. had a net record of $99,200,000—equals $9.68 a share in 1949."

8. Milwaukee Journal: "The Northwestern Mutual Life Insurance Co. passed the new high of six billion at end of 1949. Reference had to President Fitzgerald's report."

9. The Wall Street Journal, whose editors fly into a rage every time the words "welfare state" are mentioned, reports: "The Nation's electric utilities will report total earnings for 1949 in the neighborhood of $778,000,000, the largest single year's profits in the industry's history."

10. Detroit, Mich. (Associated Press): "The Nation's automobile industry built 6,238,088 motor vehicles in 1949. The Automobile Manufacturers' Association said the volume topped the industry's two best previous years—1929 by 16 percent, and 1948 by 18 percent."

11. New York (United Press): "Stocks climb to new highs in brisk trade February 4, 1950. Industrial shares advanced for the eighth consecutive day on the stock market Friday."

12. New York (Associated Press): "General Motors nets record $212,887,765 during first quarter of 1950."

If space permitted, I could exhibit an endless chain of evidence further proving the present governmental program is not sapping the lifeblood of free enterprise as many would gladly make you believe. No free enterprise can long exist under any name if we neglect the general welfare of the masses of our people, which is the source of our buying power so necessary to consume the products from our farms and industry. That was adequately proven during the deplorable depression.

If anything the strong and liberal arm of Government has been too nice in helping big enterprise to be prosperous and it is high time that we give like assistance to small business and small industries to prevent the big enterprises from exploiting and liquidating the smaller ones. There is nothing wrong with the bigness of industries and businesses but, unless they be kept under reasonable restraint, they can do irreparable damage to the free-enterprise system. The natural-gas bill, which the President vetoed, predicated an attempt by the big gas and oil companies to escape restraint at the expense of the American consumer.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who's Lobbying Now?" from the Times-Herald of Washington, D. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO'S LOBBYING NOW?

Postmaster General Donaldson's announcement that he is cutting the residential mail deliveries to one a day as an economy move is the most feeble coverup attempted by the administration for many a day.

It is estimated that the only savings will be the salaries of 10,000 postal employees who will lose their jobs. Most of these are substitutes. This is a peanut operation compared with the $140,000,000 annual savings that could be accomplished if the Hoover Commission's recommendation for reorganizing the Department were carried out.

WHAT'S THE IDEA?

Thus, suspicion that the move is a thinly veiled attempt to force Congress to agree to Donaldson's demand for a $600,000,000 a year increase in postal rates is well founded. The House has cut this request to $100,000,000 and the Postmaster General has ordered the delivery reduction in advance of the Senate action.

Can it be that Donaldson figures the home owners and housewives will complain so loudly over the reduced service that he'll get the increases he wants? Or is he attempting to convince the American public that government economy is just a pinchpenny aggravating scheme that's not worth trying?

If he had any such ideas he certainly hasn't fooled some Members of Congress. Hardly had the order been announced when Senator WILEY, Republican, of Wisconsin, said:

"I urge my colleagues in the Senate and House of Representatives to take immediate action and request a withdrawal of the outrageous order just issued by the Postmaster General curtailing mail deliveries to residential sections and making other changes in postal rules.

"I believe that there is a deep suspicion among the American people that this drastic Postmaster General edict has been timed with Congress' review of the 1951 fiscal year budget—as a means of putting pressure on the Congress."

TAXPAYERS ARE TIRED

"Fifty million tired taxpayers have been hit in the mail box by this ruling, and I, for one think it is disgusting because, from reports which I have received from my people, there is need for more mail service, rather than less mail service."

On the House side Representative SADLAK, Republican, of Connecticut, also blasted the Donaldson order.

"The Post Office Department's curtailment of service is a slick maneuver that is intended to deceive the public into thinking that the Truman administration wants to save money," SADLAK said.

"Time after time, congressional committees and outside engineering experts have recommended modernizing the Department's operations and have shown exactly how to do it while protecting the legitimate interests of the postal employees and the public. Instead of putting these reforms into effect, Mr. Donaldson is now busily engaged in covering up his own failures."

Now that Donaldson's petty political plan has been exposed in the House and Senate, the way is open for Congress to achieve some real economy in the Post Office Department by carrying out the recommendations of the Hoover Commission.

WIPE OUT POLITICS

Legislation now pending would take politics out of the Department's administration by wiping out appointment of the 22,000 postmasters on a patronage basis. They

would be selected under civil-service rules. Another bill provides for new budgeting, accounting, and auditing systems. It is estimated that these reforms would result in cutting the annual $500,000,000 post office deficit in half, which is certainly a more sensible way to approach the problem than Donaldson's picayune proposal.

Address of Gov. John S. Battle, of Virginia, at Dedication of Patrick Henry School, Martinsville, Va.

EXTENSION OF REMARKS
OF
HON. THOMAS B. STANLEY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. STANLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. John S. Battle, Governor of Virginia:

I wish to express my appreciation to the citizens of Martinsville for the invitation to participate in these ceremonies tonight dedicating Patrick Henry School.

It can be stated without qualification that this is one of the finest and most complete school buildings in Virginia. Of equal interest to us citizens and taxpayers is the fact that it is one of the most reasonably priced products we have obtained in the school-building field in recent years. For a total cost of $427,000 this community has obtained a building accommodating 660 pupils, containing 22 primary and elementary classrooms, an auditorium seating 600, a library, cafeteria, and all other modern facilities needed for the comfort and proper training of young school pupils.

I congratulate Martinsville on this splendid addition to its educational plant. I know the parents, as well as the pupils enrolled here, are immensely proud of this building and I think I can say on behalf of friends of education throughout the Commonwealth that they also are pleased to know that you are enjoying the benefits of this structure.

You will recall the action of the recent general assembly by which $45,000,000 was appropriated to assist in school building construction in Virginia. This enactment, which I heartily recommended, was in recognition of the urgent need for enlarged and improved school buildings in many sections of the State. Many localities, such as Martinsville, already have undertaken major projects for the relief of crowded schoolrooms. Many others have been unable to meet their needs from their own resources and the funds appropriated by the general assembly will help bring into being equal educational opportunity for school pupils throughout Virginia.

We all recognize that school buildings alone do not make an education, but certainly they constitute an essential factor in providing an adequate educational program for our children. With adequate buildings and able, conscientious teaching staffs, Virginia will move forward with apologies to none for the type of training it affords the boys and girls who are to take their places as responsible citizens in the future.

I am glad to report that necessary regulations governing the distribution of the $30,000,000 available for school buildings prior to July 1, 1951 have now been drafted and approved, and the machinery has been set in motion to permit early grants to the various localities which will be in need of this aid. As I have stated on numerous occasions heretofore, the appropriation of this State fund should encourage the localities to exert their best effort to provide sufficient classroom and related facilities to overcome the shortages accruing from the war and postwar periods. I sincerely trust and believe that the localities will do their part to bring about a lasting solution of this problem.

The executive and legislative departments, in recommending and adopting this program, have not sought to invade the field of local responsibility and local control. They have acted to meet a specific emergency and have clearly defined the nature of the emergency in order that the localities and public generally may fully understand that this in no sense constitutes a permanent policy adopted on the part of the State to take over school-building construction, which always in Virginia has been regarded as primarily a local responsibility.

The general assembly, at the session of 1950, adopted as one of its primary goals a public school system second to none in the fundamentals of sound education. It took many steps to strengthen and improve our program of public education. In addition to the $45,000,000 in grants for school buildings, it provided for transfer of $11,000,000 from the sinking fund to the State literary fund in order to make this additional amount available for loans to the localities for school construction. This, incidentally, in no wise affected the status of Virginia as a debt-free State, which in effect it is. Prior to the new legislation, Virginia had sinking fund investments sufficient to pay off the State bonds when they mature. Under the recent change by the general assembly, the net effect is to allow this money to work for our public schools, pending the arrival of the time when these bonds, which are not now callable, mature and can be paid off.

It is perhaps repetitious to recite the various other enactments by the recent general assembly pertaining to the public schools, but I find in my visits about the State that many people are unaware of the tremendous increases voted for the operation of the school system and what this means to the educational program. The general assembly appropriated approximately $78,000,000 for the next 2 years to the operation of our public school system, primarily teachers' salaries and teacher retirement benefits. This is an increase of about $13,000,000 over the current 2 years and is the largest increase approved by any previous session of the legislature. The $78,000,000 is of course in addition to the $45,000,000 appropriated for school buildings.

The expansion of the State school fund will mean a minimum salary for properly certified teachers of approximately $2,000 a year. We need look back to the salaries of only a few years ago to see what this means to the teaching personnel. Retirement allowances also have been substantially increased, and the program of teacher scholarships has been enlarged for the benefit of those who wish to enter the teaching profession, and those teachers who are endeavoring to complete their degree work.

The general assembly also has given attention to the program of instruction in order that no effort be spared to advance the cause of public education in Virginia.

With the support of the citizens of Virginia, which means the people of each locality and their governing boards, Virginia faces an era of unprecedented progress in public education. It often has been said that the teachers are the key to any sound school program. I am in wholehearted accord with this view. I realize that neither buildings nor salaries accomplish in themselves the fundamental goal of developing young people who are prepared, upon reaching maturity, to accept the responsibility of citizenship and discharge their obligations in a manner which will redound to the benefit of their communities, their State, and their country.

This can be achieved only with the combined cooperation of teachers who are imbued with the desire to make a tangible and worth while contribution to society, parents who are eager and ready to fulfill their obligations in the home; and public officials and citizens generally who are interested in seeing their governmental services operate for the common good. I regard our teachers in Virginia as unexcelled. I am confident that they recognize and appreciate the effort which has been made by the Commonwealth and the localities to make their profession more attractive financially and to relieve, insofar as practicable within our budgetary resources, the concern that they naturally have regarding the time when they arrive at the termination of their active teaching careers. It is significant that the general assembly has appropriated well over half of all the money in its general fund—the money available for the general operations of the State government—to our public schools. This is indicative of the emphasis which your chosen representatives have placed upon education, despite the heavy demands of many other essential State services.

Because of these great demands on all echelons of government for expanded services and new services, it is imperative that we administer with the utmost care the various activities which are the responsibility of the State and the localities. I am proud of the fact that Virginia has operated on the balanced-budget principle and is not confronted with the very grave problem of deficit financing which is current elsewhere. Sound financial operations, in my judgment, are prerequisites of good government, and I can assure the people of Virginia that it will be my purpose during the 4 years I exercise the prerogatives of governor to conscientiously abide by that principle. Our success as a State government in meeting the essential needs and in holding down expenditures will depend in a large measure upon the support of the taxpayers. We have not yet come to the point where government can operate for any length of time contrary to the wishes of those from whom it derives its authority, and maintain itself as an instrument of the people for the proper administration of their affairs. In other words, the policies of government reflect the attitude and wishes of our citizenship. It is incumbent upon each of us, therefore, to register our desire for the continuation of sound government, if we are in sympathy with the idea of efficient public service and only those expenditures which are designed to meet necessary functions.

It is interesting to note, as I have noted during some 20 years in the General Assembly of Virginia, the great demands made upon the public treasury for various projects and enterprises, without a voice being raised on the other side to question the necessity and propriety of our Government entering into such activities. Your representatives oftentimes are subjected to great pressure from reputable citizens for a particular appropriation, and are accorded no commendation or support if they opposed these measures in order to protect what they sincerely believe are the best interests of Virginia.

I cannot forego this opportunity to mention these truths because I am convinced that the people of Virginia, as a whole, are deeply interested in continuing good government and in maintaining the basic American concept of free enterprise.

It is indeed a great pleasure and privilege to participate in these exercises tonight in connection with the dedication of Patrick Henry School. I know this building will serve a useful purpose for many years to come and that many future leaders in the

UNIVERSITY OF MICHIGAN LIBRARIES

affairs of this city and this State will here receive their elementary education.

This fine building is but another evidence of the great ground swell of sentiment throughout Virginia in the cause of education. Our people realize that now, as never before, our children must be thoroughly trained along sound educational lines; that in this complex and highly competitive life, sound education is necessary for economic survival; without it our children cannot attain that measure of success in life to which they are entitled. I venture to assert that, before many years have passed, buildings similar to this will be accessible to all the children in the Commonwealth and will develop the type of citizens who have made Virginia the proud State it is today and who have made America the citadel of freedom and the beacon of opportunity for people throughout the world.

This is our challenge—this our objective and our high privilege.

The Farm Program

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following interesting commentary on the present agricultural program which might well be thoughtfully considered by Members of Congress:

APRIL 24, 1950.

The Honorable F. R. COUDERT,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have been studying the Farm Act of 1949, relative to the increasing cost of the farm program and its effect upon prices and the consumer.

The general public imagines congressional committees for agriculture concider both farmer and consumer in a broad statesmanlike manner bearing in mind that the former benefited and the latter suffered from farm legislation during the last 10 years. Last summer they believed the committees were arranging to modify price supports in their favor.

It emerges, however, they and later the farm bloc, rushed through a dual-parity scheme, distorting the original concept of farm aid, and making other changes that have added to the program cost and to the consumer's and taxpayer's plight.

A farm program based upon deficit financing must be unsound. Therefore, I urge that as a start, the following be motivated without delay:

1. Insist upon withdrawal of the provision that United States Department of Agriculture may use whichever period makes parity higher, the original 5-year period of 1910–14, or the 10-year moving average, beginning with 1939–49. This was, I understand, imposed high-handedly against the judgment of some farm organizations and without the public having a chance to appreciate its significance.

The level of price supports provided in the 1949 act, as compared with actual farm prices during 1939–49 are actually above those average prices to this extent: Cotton ranging from 1 cent to 5 cents above the average price of cotton during these 10 wartime years, wheat from 15 cents to 45 cents above and corn up to 22 cents above.

2. Revise the basic method of calculating parity in the index numbers of prices received by farmers to make allowance for the increased production per acre on farms and make sure when made that it is shifted similarly into that for the moving 10-year average.

For example, the average yield of corn during the base period 1910–14 (which equals 100 in the calculation) was 28 bushels per acre; during the last five years 1945–49 it was 36. Wheat was 14.2 and 17 bushels per acre; oats 29.3 and 34, and the increase in cotton productivity was great. It can be seen, therefore, that in modern times the farmer has much more to sell from the same land; consequently the index today should be proportionately lower than when calculated from 1910–14 productivity.

3. Insist upon a fair, reasonable, and realistic revision of the components in things the farmer buys, monthly. The higher the index numbers the higher parity ratio; conversely the more the farmer has to sell in relation to his 1910–14 production, the lower parity ratio should be.

(a) Farmers hardly buy automobiles, trucks, tractors, building and fencing material on a monthly basis as the present calculation implies. More likely the large farm cooperatives (who are farming mainly for the subsidies provided by the Government) replace every 3 to 5 years and the small-scale units (where production according to United States Department of Agriculture is mainly for home use) probably not at all.

(b) Revise the present list of food and feed components to modify its effect reasonably. At present it includes, on a wide scale, byproducts of items included in the opposite index—prices received by farmers—such as food, flour, mill feeds, poultry feed, various animal feeds, and meals made from cottonseed, linseed, and soybeans. When this occurs freely the two indexes of prices received and prices paid, become dependent upon each other preventing flexible parity ratio. In recent years this ratio has barely moved from its high point.

CONCLUSION

The taxpayer feels every card has been stacked against him behind his back. I beg you to try to persuade the House Agriculture Committee to restudy the 1949 act objectively relative to its cost in a deficit budget. If it is impossible to have support prices lowered I suggest contesting energetically the composition of parity itself with the aim of revising as above.

The long-term problem of exporting surplus farm products is aggravated by such legislation as the 1949 Farm Act. During last season, exports of wheat were 500,000,000 bushels and 75 percent of that quantity was paid for with dollars furnished by the taxpayer.

Of total cotton exports of 4,750,000 bales, 60 percent was paid for with dollars furnished by the taxpayer. This season a larger percentage of the exports is being paid for by the taxpayer and the higher the support level the larger the amount involved in "giving away" exports. Where is the net gain?

In conclusion I draw your attention to current prices for both the 1950 and 1951 crops of cotton on the New York and New Orleans Exchanges. There the planter has the opportunity to sell at over 31 cents a pound whatever number of bales he estimates his land can produce this year and next, and without the necessity for support loans at the taxpayers cost. This is a great opportunity considering the average price during the 5 years 1935–39 was 8.37 cents a pound.

The object behind this letter is purely constructive, and I hope you will place its contents before any Congressman on the committee who will fight for the taxpayer, the consumer, and the economic integrity of America.

Respectfully yours.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Ogdensburg Journal in opposition to the stand of the Rochester Times-Union urging deferment of the undertaking of the great St. Lawrence seaway and power project:

ROCHESTER PAPER ASKS SEAWAY DELAY AS ECONOMY MOVE

The Rochester Times-Union has long been a strong advocate of the St. Lawrence seaway and power development. This week it urged deferment of the undertaking for reasons of economy.

The Times-Union has been conducting a vigorous campaign for Government economy. The newspaper has decried the colossal cost of Government and the ever-increasing Federal deficits with their ominous possibilities. The Times-Union has received a vote of confidence from its readers in this campaign to cut down Government expenses, as many thousands have filled out coupons appearing in the newspaper asking for reduced expenses in Washington and mailed these in to their Congressmen and Senators.

The Times-Union apparently doesn't realize that the St. Lawrence project will pay its own way. If power is developed alone, as proposed by Governor Dewey, and the New York State Power Authority, the Province of Ontario and the Ontario Hydroelectric Commission, the cost would be in the neighborhood of $450,000,000. This entire cost would be financed from sale of the electricity, and it would not cost the taxpayers a penny.

If the dual navigation and power projects are developed as President Truman wants, the entire cost of the power part of the project will still be self-liquidating. The part charged to navigation would be paid for by toll charges on ships using the canals. Secretary of Commerce Sawyer told the House Public Works Committee this week "it is my opinion that the seaway will, within a very short time after its completion, handle a huge volume of traffic and the tolls from this traffic will be more than adequate to amortize the cost of the navigation facilities."

Staff members of the Department of Commerce and United States Army engineers have studied the question of Seaway traffic for many years. These studies indicate potential traffic for the seaway ranging from 57,000,000 to 84,000,000 tons. At the toll charges suggested, revenue derived from the traffic would range roughly from $37,000,000 to $49,000,000 a year.

Estimates of traffic developed by governmental and private agencies interested in the seaway indicate that it will be self-liquidating by a very large margin. In fact the seaway will be self-liquidating if a little more than a half of the traffic which the Government anticipates should actually materialize.

On the basis of present costs annual charges required to pay for maintenance expenses, pay interest at 2½ percent, and to amortize the investment in approximately 53 years, are in the neighborhood of $19,000,000. The Department of Commerce and Army engineers minimum estimate of toll revenue of some $36,000,000 a year is nearly twice the anticipated annual maintenance

and amortization expenses, and its maximum estimate is more than 2½ times the annual charges which must be met if the project is to be liquidated.

The tremendous demand for low-cost iron ore from the Great Lakes region and the availability of low-cost transportation of that ore to be shipped from Labrador and Venezuela on construction of the seaway will alone insure a volume of traffic which will nearly pay the costs of the project. With the inclusion of domestic American traffic, and Canadian import and export traffic, economists who have long studied the seaway objectively are convinced that toll revenues will probably reach $50,000,000 a year very quickly. Only $19,000,000 a year income from navigation tolls is necessary to liquidate the project.

The sums of $500,000,000 for power alone or $800,000,000 for the dual project are substantial sums we can all agree. In comparison with sums expended for other public purposes, however, they shrink to relatively modest proportions. As against $800,000,000 to complete the dual purpose project, we have been spending upwards of $4,000,000,000 a year for economic aid to other nations, and about $1,500,000,000 a year to support the prices of agricultural products.

In light of our continuing commitments on such a scale for the purposes of international rehabilitation and domestic economic support, the expenditure of $800,000,000 to render useful a magnificent natural resource, one whose utilization can well serve our national security, is modest indeed. Most important of all to those who very rightly ask for Government economy, the St. Lawrence seaway will pay its own way, be self-liquidating. It will give this country a great natural resource by opening the Great Lakes to the seas and in making available the greatest source of cheap hydroelectric power on the North American Continent. In our opinion it is false economy indeed to ask deferment of the St. Lawrence seaway. The seaway will more than pay for itself.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 9 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Postman Rings Once," from the Sherman Democrat, Sherman, Tex.; and also, Mr. President, I ask unanimous consent to have printed in that connection a letter to the editor of that newspaper.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

POSTMAN RINGS ONCE

No one read of Postmaster General Donaldson's order reducing the number of deliveries without awakening to sudden realization that things in Washington must be worse than the public has been led to believe.

Although postal rates have been raised repeatedly and the Department is now doing several times its prewar volume of business, it is costing $1,700,000,000 to run the shebang this year, which, it is estimated, will be $600,000,000 more than receipts. The Postmaster General has asked further drastic increases in rates which Congress is loath to approve.

The drastic curtailment in the postal service ordered by the head of the Postal Department is its own testimonal to bureaucratic incompetence. The Government can no longer get the mail to the people, except on a gigantic RFD basis, although it is tossing billions to Europe, spending hundreds of millions on dam-building projects, and many more billions to buy up butter, wheat, etc., that it doesn't want in the hope the sellers will vote right at the next election.

How the Post Office Department will save money by delivering the same volume of mail in a single delivery, instead of two or three deliveries, daily and by keeping the former number of employees on the pay roll, is something hard to explain.

A cut in mail deliveries at this time helps put a rein on the free flow of commerce. The action is inimical to the American philosophy of the distribution of goods and services in that it offers less service for more money. Now that the postman will be ringing once instead of twice in residential areas, perhaps more attention will be focused on the main problem plaguing the whole Federal Government.

WHY P. O.?

To the NEWS:

What's wrong with our Congress and President? Cutting down on the post office. Of all the departments in our Government, the post office gives more efficient service than any other department. Why cut the department that does more for the public?

Every taxpayer should protest this cut.

LONNIE F. ROBERTS.

DENISON, TEX.

The President's Address at Cheyenne, Wyo.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. HAYDEN. Mr. President, at the request of the senior Senator from Wyoming [Mr. O'MAHONEY], I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered yesterday by the President of the United States at Cheyenne, in the Senator's State.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure to be back here in Cheyenne.

The last time I was here, in June of 1948, you gave me a very fine hat—which I still have. And you most kindly invited me to come back for your famous Frontier Days celebration.

Some day I'd like to come back during Frontier Days. I have been hearing about your celebration for many, many years. But my schedule never seems to come out just right for that purpose.

Nevertheless, the spirit of the frontier is exactly what I want to talk about today.

Some people believe that the American frontier vanished forever when the forty-eighth State came into the Union.

That is nonsense. These are still frontier days.

This Nation has never stopped growing in wealth and strength. It has never stopped finding new horizons of invention, of technology, and of production. It has never stopped blazing trails in finding better ways to use our resources for the well-being of all the people. These are today's frontiers.

And today's frontiers call for the same pioneering vision, the same resourcefulness, the same courage that were displayed by the men and women who challenged our geographical frontiers a century ago.

We proved in war that we have lost none of our strength and courage. We are proving again, since the war, that this country still moves boldly toward the future. Our peacetime production and our standards of living are moving toward new high levels. And we are thinking and planning for steady development and improvement.

Our watchword is not "holding our own."

Our watchwords are "growth," "expansion," and "progress."

This is because there are now, as there have always been, more Americans who look ahead toward the broad horizon than look backward toward times and places left behind.

A steady growth in the standards of living of the American people is a goal well within our ability to attain. There are still some who look upon the goal of an ever-expanding economy as a pipe dream. They still believe in the inevitability of boom and bust.

They are among those living in the past. This country used to have a boom-and-bust economy. You can think back a little over 20 years and recall when the last big bust took place.

But that disaster taught this country a great lesson. We learned from that experience that we cannot leave the forces of a huge and complicated economy to take care of themselves. We learned then that the people had to use their Government as a means of mobilizing the resources of the whole country to restore the economy and start it moving upward again.

That same lesson about the role of Government still applies today. The people, using their Government as an agent, found the means to lick the depression. Now we are employing the same means of well-designed Government programs to help strengthen and steadily expand the national economy.

Earlier today, at Casper, I talked about one kind of governmental activity by which we are creating new frontiers of opportunity every month and every year. This is the conservation and full use of our natural resources.

The opportunities that can be created through the development of our natural resources are immeasurable. Our rivers, our soil, our forests, and our minerals can form the physical base for a steady expansion of real incomes and living standards, if they are developed and used the right way.

This afternoon, I want to talk about another kind of activity through which we can create new frontiers of opportunity.

This is the program to stimulate and strengthen small business which I recommended to the Congress last week.

Small and independent businesses are important to the growth of the economy. They are a constant source of new ideas. They are a constant source of new jobs.

New businesses are also important to the health of the economy. In their effort to grow by serving consumers better, they provide the vigorous competition which is the heart of our private-enterprise system.

Every one of you knows somebody who has had a new idea and has built it into a business. He has not only made money, but his

UNIVERSITY OF MICHIGAN LIBRARIES

business has also provided jobs and income for the whole community in which he lives.

Our country has been made great by the boldness, the daring, and the inventive genius of men like that. Our Nation would suffer a slow decay if men with ideas did not have every opportunity to build new businesses and create new wealth.

The task of economic expansion requires using all the resources of this great Nation. Of the nearly 4,000,000 business concerns in our country, more than 90 percent are usually classified as small. These small concerns provide jobs for over 20,000,000 people—roughly half of private, nonfarm employment. If we are to have an expanding economy, small business must provide its share of the additional jobs needed. In doing so, it will not only create new payrolls for workers; it will also enlarge markets generally for other businessmen and farmers.

We need big business in this country as well as small business, of course. We all benefit from the tremendous output at low cost of large, efficient enterprises. But the stimulus of new and vigorous competitors is necessary to keep old enterprises efficient, and to bring the greatest benefit to consumers and the public.

Since the passage of the Sherman Antitrust Act 60 years ago, we have sought to keep monopoly from stifling the growth of new business. The effectiveness of the antitrust laws has varied over the years with changes in our national administration. Right now, the antitrust laws are being enforced as actively as at any time in history. But at their very best, they are only a limited and negative approach.

We will keep on using the antitrust laws and will enforce them vigorously.

But we must supplement that approach—and we must act soon—with measures which will challenge the power of monopoly, not in the courts but in the market place. The force of vigorous, effective competition is the best way to prevent monopoly. If the man with new ideas has a fair chance to put his product on the market, the buyer will do the rest. We must, therefore, take measures to assist the man with new ideas, the small enterpriser, as he starts out to challenge large, powerful, and established competitors.

The recommendations I have made to the Congress rest upon three simple principles. These are that the small business man needs long-term credit; he needs venture capital; and he needs technical assistance.

These things are needed so that the independent businessman can do more for himself. They do not involve Government controls. They will cost the Federal Government very little.

What they will do is to give the man who wants to be his own boss a better chance to use his own initiative and energy.

In the field of credit, I propose that we should insure bank loans to small businesses, such as drug stores, filling stations, and retail stores. The local banks would decide whether or not to make the loan in each case and would share some of the risk. But on the major part of the loan the bank would be insured against loss. This means that banks will be able to make safely, good loans which they now find too risky.

Thus, bankers would be able to give greater consideration to the human element in deciding whether or not to help a home-town businessman pull through a tight period. They wouldn't have to be quite so hard-boiled in demanding gilt-edged collateral.

You know, a lot of people say, when they find out what kind of collateral they have to put up for a loan at the bank, that if they had that kind of collateral they wouldn't have needed a loan in the first place.

Now, I don't think bankers act like that just because they are mean. It's because they have to be careful. This insurance would make it possible for them to do what they would like to have been doing all the time.

This proposal is similar to the insurance that has been provided for years under title I of the National Housing Act for home improvement loans. In that case it has helped the banks, helped the home owners, and the Government has made money from it. I think it will work just as well for small-business loans.

Furthermore, I propose that special investment companies be set up to make venture capital and long-term loans available to help small businesses expand when they have proved their ability. This would provide a way to pool the savings of people who cannot individually make such investments, but who can, through investment companies, put them to work in growing businesses.

This proposal is generally the same as that incorporated in a bill introduced several months ago by your fellow townsman, and my good friend, Senator JOE O'MAHONEY.

In addition, I propose that the Reconstruction Finance Corporation be given broader authority to handle cases which offer a good chance of success but cannot obtain private financing on reasonable terms.

These credit proposals are designed to make banks and other private sources of funds more effective in meeting the needs of small and growing businesses. They have been proposed by bankers and other private citizens who understand the problems of the small-business man. I hope the Congress will soon enact them.

In the field of technical assistance, small-business men are often at a serious disadvantage. They cannot afford specialists on their payrolls to keep up with the latest developments in accounting and management. They find it difficult to learn about the latest research developments that affect their business.

Under these circumstances, I propose that the Department of Commerce should expand the work it now does in providing technical and research assistance to small business. Thus we would provide independent businessmen with the same kind of research assistance and skilled advice which we have provided successfully to farmers for many years.

At the same time, I propose that we should make the Department of Commerce the central Government agency for small business, as well as other business, just as the Department of Agriculture is the central agency for farm activities. This would mean that the independent businessman could go to one place and obtain the advice and services he needs.

These proposals to help small business to obtain credit, risk capital, and technical assistance should do much to increase effective competition. They should result in more independent enterprises, striving more effectively to provide goods and services the people need. As such, I believe these proposals will contribute to the strength and stable growth of the country.

I suppose it is inevitable that this small-business program will meet with determined opposition. Those who fear the rise of new competitors will not be slow in imagining danger to their privileged positions. They will hide their selfish alarm by attacking what they like to call government interference with the economic system.

But the Government is only an instrument in the hands of the people, an instrument we use to help maintain a free, competitive, and expanding economy. That is the kind of economy all of us want.

More abundance for everyone, without the dismal cycle of boom-and-bust, is something that this Nation can have, and something we must have. To bring it about demands dynamic private enterprise, and it demands dynamic government.

All of us, working together, can build a strong and prosperous America. And keeping our own Nation prosperous and strong is the best assurance that our struggle for prosperity, peace, and freedom in the world will end in victory.

Effect of Imports on Employment in the Glass Industry

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. HAYS of Ohio. Mr. Speaker, I herewith present for the consideration of the Members of Congress a very fine statement on the effect of imports on employment in the American handmade glass industry by Mr. Carl W. Gustkey, president of the Imperial Glass Corp., Bellaire, Ohio, which is one of the important industries in the city of Bellaire in my district.

Mr. Speaker, I voted against the reciprocal-trade agreements because there was no provision in that law for protection of American industry from competition from slave labor from behind the iron curtain. If the policy of the State Department is to be that of putting American industries out of business by allowing cheap importations from Communist countries, then certainly the Congress should take some action to take this power from the State Department.

STATEMENT ON EFFECT OF IMPORTS ON EMPLOYMENT IN THE AMERICAN HAND-MADE GLASS INDUSTRY BEFORE A SUBCOMMITTEE OF THE COMMITTEE ON EDUCATION AND LABOR, HOUSE OF REPRESENTATIVES, CONGRESS OF THE UNITED STATES, WASHINGTON, D. C.

(By C. W. Gustkey, member executive committee, National Labor-Management Council on Foreign Trade; president, Imperial Glass Corp., Bellaire, Ohio, United States of America; chairman, board of governors, American Glassware Association and chairman of its foreign trade committee; treasurer, Glass Crafts of America, May 6, 1950)

PREFACE—SUMMARY—EFFECT OF HAND-MADE GLASS IMPORTATIONS ON AMERICAN WAGE EARNERS

The management of the American handmade glassware companies directly, normally employing about 15,000 union glass factory workers claim herein and offer factual data to support their contentions, that—

1. Imported glassware in 1949 caused these American workmen to lose $4,000,000 in wages, compared to their actual total earnings of about $20,000,000.

2. Importations are to blame for these American workmen at present finding only about 50 percent of 1949 employment. Their 1950 total earnings, based on first 4 months of 1950 already passed, will not exceed $9,000,000. Wage losses in 1950 due to importations may total as much as $12,000,000.

3. Unless such importations are promptly prohibited, within 12 months this industry, its worth-while employment, and product,

its social and economic contributions will be nonexistent.

Mr. Chairman and gentlemen, I appear before you, grateful for your invitation to be here, as a representative of America's oldest industry which commenced in the year 1608 on the mainland, opposite Jamestown Island, in Virginia Colony. Since that year, the orderly expansion of the manufacturing of American glassware has developed with the course of our continental and industrial progress through New England, into the Pittsburgh area and throughout the upper tri-State and Ohio River industrial area until it is today pretty generally spread over the entirety of our Nation.

The company which I head for a livelihood, the Imperial Glass Corp., is located in Bellaire, Ohio, and began operations in 1904. Our employment for some 35 years has averaged in the constant vicinity of 650 skilled people. As chairman of the board of governors of the American Glassware Association, I speak for approximately 85 percent of the manufacturers engaged in this industry throughout all our United States, excluding, of course, structural, architectural, flat, container, laboratory, and scientific glassware. I am fearful that I lack sufficient ability to properly discharge the great responsibility that rests upon my shoulders in appearing before you as the spokesman for this important segment of our American economy, but I will do my best and shall attempt to be brief, factual, and logical, in the hope that I will not alone present a story that will convince you in the course of logic and reason, but that you will find it entering your hearts, and that your minds will be receptive to a complete understanding of, and sympathy for, the tremendous problem facing our industry these current days.

There are over 13,000 skilled persons normally and directly employed in the American handmade glass industry; but, including all office, sales, management, and the employment of various miscellaneous small plants of which there are no factual records available to me at the moment in the classified glassware industry directory, it would be safe to estimate that as of today we employ a total in excess of 15,000 persons.

We in the American handmade glass industry are of the opinion that approximately 38,000 people find indirect but full and resultant employment in the wholesale and retail distribution and sales of our products. This total, I point out to you, as I recall that we claim there are in excess of 15,000 directly employed in the production of our wares. So please assume that our industry gives total employment, normally, (directly and indirectly) to at least 53,000 persons which safely and conservatively represents total income for about 200,000 American citizens (approximately 4 to a family). I respectfully call your attention to exhibit I, attached to this statement, showing in detail the location of the principal factories producing American handmade glassware and those who are cutting and decorating this product. These plants are principally located in California, Illinois, Indiana, Kentucky, Maryland, New Jersey, New York, Ohio, Pennsylvania, and West Virginia. In this exhibit, we give you the approximate normal employment in each of these plants and totals in our enterprises in the various States. Suffice it to say, for the moment, as example, that in Indiana we have a normal employment of 475; in Ohio approximately 2,500; in Pennsylvania about 1,500; in West Virginia about 4,500, etc.

A large percentage of these plants are located in small communities of less than 20,000 inhabitants. I have starred the factory locations (on the exhibit to which I have already called your attention) where plants are located in communities of less than 20,000 persons. Many of these small communities would become ghost towns if the glass plants and decorating companies quit business or were forced out of the economic picture. The merchants, service industries, and professional people are in many instances supported almost entirely by wage payments from glass factory workers. In some of the larger places, severe depression has and would again result if the glass factories closed down. Most of these workers own their own homes in these communities and for them to seek employment elsewhere would result in severe financial loss, family disruption, and social displacement from which they probably would never recover. For example, I would like to inform you that 78 percent of the workers in my own company own their own homes, and that our weekly normal payroll of about $36,000 to $40,000 is by far the largest weekly payroll in our community of Bellaire, Ohio, of approximately 15,000 population.

The important raw materials and the conservatively estimated annual consumption in the manufacturing processes of our product can be summarized as follows:

	Estimated quantities	Estimated value, delivered
	Tons	
Sodium carbonate	18,000	$511,000
Glass sand	60,000	362,000
Lead derivatives	10,000	2,850,000
Potash	10,000	1,636,000
Limestone	10,000	84,000
Various high-priced chemicals and coloring oxides	1,000	2,120,000
Special refractories	6,000	1,188,000
Cartons and packing materials		3,000,000
Gas, coal, oil, and electricity		2,000,000
Total		13,751,000

And we must not forget that this American craft industry we are discussing annually expends in excess of $750,000 for national advertising of products to consumers in American national magazines and for printing catalogs, selling aids such as countercards, display pieces, and like assistance for consumer selling by retailers everywhere. This expenditure to an important extent, can be translated into substantial earnings by American labor, for we are all familiar with the high labor costs involving the printed arts.

We will further say that these raw materials and supplies come largely from the central West as that is the location of most of the glass plants and the suppliers have naturally and properly so, from an economic standpoint, attempted to serve this industry from the same geographical location in which the consuming factories are located. It is impossible for me to give you an estimate of the number of people employed in these supply industries; for our hand-made glass producers, as a part of the general glassware industry of America, take only a portion of the output from these supply producers of these chemicals, sand, minerals, refractories, cartons, packing materials, and fuel. What percentage of the total produced, we in our industry consume, is a figure I cannot suggest to you with any truthfulness or even near accuracy. But, gentlemen, you must agree that the quantities listed and their implied values are substantial and important and represent valuable national employment.

In addition to the just-mentioned values, we estimate that the manufacturing of American hand-made glass, from raw materials to finished product, embodies the usage of about 15,000 railroad cars per year and we submit that when we had this estimated traffic (or transportation load) check a few days ago by an official of the Baltimore & Ohio Railroad Co., it was adequately and sufficiently developed that our estimate was conservative.

Gentlemen, our industry in 1948 produced, successfully merchandised, and sold approximately $35,000,000 worth of hand-made glassware. This was about 99½ percent absorbed by the American retail market, as there is absolutely no opportunity for us to export merchandise, never has been in the last 20 years, and we do not see any opportunity currently or in the foreseeable future, excepting in almost negligible amounts to Canada. In 1949, our industry produced and sold about $30,700,000 worth of merchandise. Note the decline of nearly $5,000,000. These figures I quote were released as of April 28, 1950, by the United States Bureau of Census of the Department of Commerce, in their publication Facts for Industry. In both these years, my own company produced and sold approximately 10 percent of these annual total figures. I'm getting personal again for intended and related reason.

Imported glassware sold in the United States in 1949 had a market value at American factory-price level of approximately $6,000,000. In 1948, the similar total volume was $1,000,000 smaller than in 1949. Note the increase; from nothing at end of war to a gigantic current value. This gives you some little indication of the trend and the dollar value of imported glassware competitive to our own product. I have attached two exhibits dealing with import quantities, sources, and trends. One, entitled "American Glassware Association Analysis, 1949–1948 Imports of Glassware Most Generally Produced by Members of the Association Showing Dollar Totals and the Principal Exporting Countries" dated March 24, 1950. Another, the "American Glassware Association Summary of Annual Imports (past 5 years) of Glassware Most Generally Produced by Members Showing Dollar Totals and Principal Exporting Countries" dated March 30, 1950. This latter exhibit shows the trend of importations by countries, 1945 to 1949, inclusive.

The 1949 analysis and exhibit I have referred to as being dated March 24 shows 1948 and 1949 totals of importations by classifications of merchandise and by countries of origin. Both of these exhibits are based upon United States Department of Commerce figures. General increases are evident in nearly all instances.

Our own occupational forces in Germany and Japan are admittedly and directly competing with us in our own American markets, with our own American tax money as their means, and without hesitation and unashamedly they tell us in detail of their plans for extension of the hand-glass productive capacity in Japan and in occupied Germany to far in excess of prewar levels and ability.

Now, gentlemen, if you will allow me, please, I would again like to become personal and put these import figures on the level of my own company, the Imperial Glass Corp. I have stated to you that we produce approximately 10 percent of the domestic production of American handmade glassware. Had there not been $5,000,000 of competitive importations in 1948, our gross business would have been increased by $500,000 and in 1949 by $600,000 if foreign glass totaling $6,000,000 at the American factory level had not been with us. In other words, last year we would have had $50,000 of business each month that we did not enjoy and our employees at Imperial would have had 390,000 payroll dollars they did not get (about $650 per wage earner on our payroll). Last year our business was off from expectations by approximately this $600,000. This amount of gross business represented the difference between a profit and a loss in our operation and the current result as of the moment is, in our individual factory, that we are operating at about 30 percent of capacity. We have

UNIVERSITY OF MICHIGAN LIBRARIES

no immediate hopes of a betterment of this situation.

For the last 2 years the most important retail buyers in America have been visiting Europe and other foreign countries to purchase glassware and spend their buying appropriations at the attractive, foreign give-away prices based upon the dreadfully low foreign labor rates. I'll have more to say about this trend in purchasing by retail buyers a little later on in my presentation.

Let's talk for a moment now about the comparative wage rates we in the American hand-made glass industry pay in comparison to the rates being paid by our foreign competitors. Exhibit III, which is attached, will point out some relative wage schedules in foreign countries. We have recently been told by the United States Army that new wage rates in the Japanese hand-made glass industry, which are considered there to be very high, are approximately 40 cents an hour, average, for skilled workers, including all fringe payments, such as pensions, residential fuel, house rental allowances, and long severance pay; while in the United States, the current average is at least $1.75 per hour for the same skilled workers, not including any extras such as guaranteed turn pay, overtime, vacations, social security, insurance contributions, pensions, house allowances, residential fuel provisions, liberal severance, et cetera.

The wage exhibit I am now referring to, No. III, deals principally with rates paid in the hand-glass industry in socialistic England, Germany, and Communist Czechoslovakia. These earnings figures are based on United States Department of Commerce reports from our American embassies in these three countries. The average hourly male rate in the glass industry in England in June of last year was 44½ cents; Germany, 45½ cents; the average hourly rate of both men and women in Czechoslovakia in the hand-made glass industry was 36 cents. We are comparing these foreign, competitive hourly rates to the hourly rate of $1.75 currently paid in our United States industry in support of our American way-of-life. What a destructive contrast.

The amazingly low wages paid in these three countries—prior to deflation of currencies—as recorded in my exhibit III shows the difficulties which manufacturers of hand-made glassware in the United States have to overcome in order to maintain a fair share of our own American domestic market. When it is realized that approximately 65 percent of the cost of our domestic finished product is labor, it can be readily seen that with European wages averaging fully two-thirds less than our American wages there is little chance of meeting the low-priced European competition based on these ridiculously low wage scales. This is conclusive evidence that foreign nations need not be favored any more by our Government cutting tariffs, for they already have such an immeasurable advantage in their very, very low labor costs. In fact, their costs indicate they can well afford to be faced with duties entirely sufficient to give American producers a fair break, and still have us at great handicap. Why the two great American parent unions, the American Federation of Labor and the CIO, continue to back the present United States trade policy, with no restrictions in it for safeguarding their members who are engaged in the production of glass, pottery, lace, gloves, and many other American craft-produced items, is a mystery to those of us laboring in their behalf. To encourage the sale of imports in this country, as the present Federal administration is now doing, gives support to maintaining low wage scales in Europe and will eventually lead to tearing down the wage scales in this country and bankruptcy of the industries which must compete with ruinous European import prices.

By such action, encouragement is also lent to the actual, currently existent condition where American manufacturers of these competitive products cannot further raise wages, provide pensions, finance adequate holidays, vacations, sick benefits, and insurance, let alone break even and keep their heads above water. The only inevitable result and industrial relief from today's situation is an immediate and extensive reduction in the American rate of pay and wages, and, before too long, the absolute disappearance of employment in the proud, three-and-a-half-century old, skilled trade known as the makers of American hand-crafted glassware.

While we American manufacturers claim, and we believe impartial authority would admit, that we have higher quality than the imported article, we admit that to the ultimate consumer there is an apparent higher quality in imports because of the false but alleged romanticism of foreign source and of the ridiculously low retail prices which come about because of the serious low wage advantage. There are no shortages in our American hand-made-glass industry as to capacity or as to ability. Factories that exist in this country can produce all the hand-made glassware all of North America can absorb, and in so doing we can offer steady employment, increasing employment, and the security that modern wage earners demand. At even cost, up to and at the retail level, the American industry will out-design, out-sell, out-service, and out-perform the imported sources and the imported product.

At the end of this statement I attach another and concluding exhibit which we in the industry believe to be a true condensation and summary of the glassware classifications and tariff discussions which will take place in Torquay, England, beginning September 28, 1950. Many, many of our important articles of manufacture are on the docket for consideration at this conference. It appears that we are once again just as certain as winter becomes spring and summer becomes fall to suffer further in international negotiations. We also attach a cumulative list of tariff-duty changes on glassware articles and we asterisk the items which are publicly and officially declared to be on the Torquay list. We submit to you that if we suffer further tariff cuts and damage our industry is a gone goose. Yea, we further submit, in all sincerity and emphatically, that all relief possible under so-called escape clauses now in existence will not alter the situation.

May I now extemporize from my prepared statement for a brief moment. First, I have here some glass samples I want to submit to you. Second, I have current and most recent information from major American producers of hand-made glassware I would like to submit to you informally. On both subjects—(1) these samples and (2) this current operating information which has just today come into my hands—I would like the privilege of promptly preparing a supplemental statement so as to make these two matters a permanent part of the record. I would like, with your permission, to proceed quickly and informally to cover these matters and then to return to my brief for final concluding thoughts.

Submission of foreign samples priced and domestic comparisons.

Ads on imported glass by prominent American retailers and trends of domestic purchases by those same firms.

Various individual current factory operating facts in our American industry.

We feel the effect of this disastrous, discouraging, and unfair competition from foreign-source merchandise throughout our entire field of production. We feel it pretty generally geographically. There was a time when the competition from imported merchandise was confined to the great metropolitan retail markets such as New York, Philadelphia, Washington, Chicago, San Francisco, Los Angeles. This is not the case since the last war. The importers and foreign manufacturers have studied our American merchandising methods and our distribution methods (at the suggestion of and with the aid of our own governmental agencies) and have publicly announced their plans to compete with us in their own and our American trade journals and in their propaganda to prospective consumers here in America. They have sales organizations today in our Nation which cover all of our 48 States and our entire market. They have regional sales campaign offices in the South, the Southwest, the Midwest, the far West, the Northwest, and they are reaching for every dollar they can secure from the American consumer.

The average worker in the hand-made glassware industry of America is highly skilled. He is considerably over 50 years of age. Well over half of our active workers must of necessity serve long apprenticeships; for instance, 4 years to become a glass blower. And many of our so-called unskilled operations require a vast know-how and cannot be obtained readily by so-called common labor taken at random from our community. Because of the long years they have been employed in this highly skilled craft and because of their advanced ages, our workmen have never and will not in the future find ready employment in other trades or in other jobs.

If they are deprived of working in a glass plant, they usually try to form a little cooperative and work for themselves for whatever they can get out of it in the way of wages; as they say, just to keep their hands in the trade and to wait for better times. Such a condition will literally break asunder our skilled and established working units and cause their utter disappearance. Our union, the American Flint Glass Workers' Union (one of America's oldest craft unions), will no longer find justifiable existence and our individual companies will go out of business.

Gentlemen, I repeat—last year America consumed nearly $6,000,000 worth of foreign hand-made glass at American factory level prices (at least $12,000,000 at American retail price levels). Those factory wage earners directly engaged in the United States domestic industry lost 65 cents for each one of those $6,000,000—or total wages lost to them in 1949 of $3,900,000. Actual earnings of our American hand crafters of glass in 1949 were about $20,000,000.

And what about the capital we here in America have invested to provide these jobs? Again you must forgive me for referring to my own factory, but it certainly is of value for you to know that in our own plant our capital investment stands today at approximately $3,500 for every employee of our group of about 600. And I'll say that figure is a fair, average one, for our national industry. Is this investment in time, skill, in money, in heartache, in management, in struggle, in ability, to be utterly disregarded and thrown aside as at the same time we condemn those who labor in our industry to a future as uncertain as words could describe?

Somebody said the other day that the stockholders in our industry would have to find their liquidating benefits from other use of the physical plants than as glass factories.

Most of you gentlemen (particularly those of you from Pennsylvania, West Virginia, Ohio, Indiana, Texas, and California) are familiar with the physical construction of a glass factory, and know it is not at all suited for ready adaptation to other types of industry. Our production equipment cannot be used for anything else other than the manufacturing of hand-made glass. Mr. Steelman from the White House, recently in a letter to Congressman STAGGERS, of West Virginia, quoted in an editorial in the Morgantown Dominion newspaper of Morgantown, W. Va. (which editorial I attach to my statement as an exhibit) said words which would

indicate that in Washington it is felt there is absolutely no hope for the future of the American hand-made glass industry and suggested that Mr. STAGGERS and his associated, interested citizens in his own congressional district take immediate steps for future employment elsewhere of those now engaged in the glass business. Gentlemen, is this an official governmental pronouncement sealing the destiny of our industry? Are we to accept it as such? If so, the condition arises as a direct result of untoward governmental action and as such our employees, our employers and the owners in our industry are entitled to full, fair, adequate and prompt indemnity for we have not given permission to anyone to confiscate, destroy, or give away our livelihood and property.

A conservative estimate, gentlemen based on facts I have just read to you from various prime producers in our American industry, is that right now the rate of current operations throughout our trade in all its factory units is no greater than 50 percent of 1949 activity. This being so, the year's production will be in the vicinity of only $15,000,000 as compared to $30,000,000 in 1949 and $34,000,000 in 1948. Estimated total wages will be only $9,750,000 for all of 1950, as compared to $20,000,000 in 1949 and $22,000,000 plus, in 1948. Continued operations at such a level for the rest of 1950 will cause individual worker distress of magnitude and bankrupt our entire industry.

The general level of the retail business in America is good, as is the general level of employment. Reliable sources report 1949 retail sales of china and glass to be only slightly below 1948, and currently to be only under 1949 by a very small percentage. Yes, American hand-glass producers are bad off. I submit that the greatest single cause is the importation of cheap-labor-cost foreign-made glassware with which it is impossible to compete, plus the devilish and horrible foreign competitive advantages arising through a manufacturing system which does not have to show a profit, which does not have to give a whoop about costs and their relationship to prices and which exists today only because of the fact that our Government has set it up in business and keeps it in business.

Gentlemen, you have been patient and courteous, I fervently pray you are discerning and courageous. You and the American Congress must wholeheartedly and at once act to save this, America's oldest craft industry, if it is not be traded or given clear away and be gone forever. A prompt, complete and thorough prohibition of hand-glass imports is the only answer. No other treatment will save this industry. Smiles, joviality, promises, preachments will be to no avail. We implore your best consideration, your prompt action, for only to the Congress of the United States can we look for succor. All other governmental streets are closed or stenciled "dead end" to us. Is it necessary to condemn our own American hand-glass industry to complete dissolution to save the rest of the world?

Confusion in Our Government

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. DONDERO. Mr. Speaker, the President has declared that Senators MCCARTHY, BRIDGES, and WHERRY were assets of the Kremlin. In connection with that statement of who is an asset to Russia and how the prestige of our Government was injured abroad, let us look at what happened here in Washington last week.

On May 3, the chairman of the Senate Committee on Armed Services, Senator TYDINGS, delivered an address before the Rotarians of Washington, saying among other things that war may break at any time.

On the same day Secretary of Defense Louis Johnson and George F. Kennan, spokesman for the Department of State, appeared before the Committee on Armed Services of the House of Representatives and pleaded for an extension of the draft. Gen. Omar N. Bradley, chairman of the Joint Chiefs of Staff, had similarly testified before the committee on the previous day.

These three men based their requests on the greatly deteriorated international situation which they described as the worst since the war. Incidentally, and in connection therewith, they had obtained an increase of $350,000,000 over and above the present budget for national defense.

The next day, and less than 24 hours after these statements were made by highly authorized officials of our Government, the President told his press conference that the international situation was not particularly concerning and that it was not as bad as in 1946. He also said that he expected to reduce the 1952 and 1953 national defense appropriations.

The President, as Commander in Chief, has all lines of information available to him. He receives every day a thorough briefing of world conditions. Surely that information, which comes from State and defense departments, cannot be at variance with information presented to the House Committee by Johnson, Bradley, and Kennan.

The President's statement, transmitted to the people of this country and the world, caused utmost confusion. Our people were confronted with these conflicting views all within 24 hours and do not know whom to believe.

What is worse, our allies in western Europe were dismayed. For the last 2 months there have been repeated suggestions from western Europe military commands that their weak forces be bolstered by additional American ground forces. President Truman's statement about reductions is considered by these Europeans as an indication that such reinforcements will not be forthcoming. That eventuality worries them more than the charges against possible communism in the American Government.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the sixteenth article by Mr. Frank C. Waldrop on the infiltration of communism in our country.

BIGGEST STORY

(By Frank C. Waldrop)

The primitive American Communists of 40 years ago called themselves by many names. They had no formed system of thought, no organized political machinery and no spectacular leadership.

Least of all did they have a disciplined corps of spies and administrators working with them inside the colleges and Government offices of the United States of America.

They were what the Moscow-trained modern types have since contemptuously called native radicals and were mainly just confused and rattled by the upsurge of American industry and expansion following the United States Civil War.

Few of them were much attracted by the scientific socialism of Karl Marx, beyond occasional agreement with his picture of a world free of want and trouble. Which, after all, is an ideal not invented by Marx.

But as fresh waves of immigrants came over from Europe, an occasional one was caught up in the thread of imported hates and intrigues that some of the new arrivals did not shed.

It is a peculiar thing, this looking backward. After all, America has been settled and developed by fugitives from Europe and all that's in it. Our ancestors came here not to carry on the fruitless conflicts of the past but to forget them and build the New World.

Work on that New World was well in progress 40 years ago when a well-to-do Russian farmer's son became so intolerable to the government of Czar Nicholas II through his propagandizing for revolt that he was utterly banished and exiled.

Those are chilling words. They raise the idea of misery and horror. But, in fact, this banished revolutionary named Lev Davidovitch Bronstein, who called himself Leon Trotsky, suffered comfortably.

First the Czar's police tried to lose him in the frontier country of Siberia. But soon he was back. Local jails only give him time to think up new tacks for the Czar's chair. So, finally, he was kicked over the border.

You can compare the terrors and oppressions of czarist times with the present peace under Stalin from this: Trotsky in Europe immediately became a correspondent for Russian newspapers and magazines, wrote books that were widely read back home, and at regular intervals his friends and family came over to meet him in the wineshops of old Vienna.

Have you made any dates along the edge of the iron curtain lately with anybody from the other side?

When the war of 1914–18 broke out, Trotsky was in Germany, so he took off for New York City, traveling by easy stages all around Europe.

In his autobiography Trotsky claims that President Woodrow Wilson stole the famous Fourteen Points for peace that lie now between the pages of the story of things past from the proofs of a book Trotsky had sent to a New York publisher.

And certainly somebody worked into Wilson's mind the germ seeds of world government which first took shape as the old League of Nations, then came back with Roosevelt as the United Nations.

Now, somewhat more baggy in the knees and with its shirt tail flapping in the breeze, here it is again, joining college girls and moldy old political has-beens under such banners as Union Now and World Federalists.

Trotsky later wrote of his American years: "My only profession in New York was that of a professional revolutionary."

UNIVERSITY OF MICHIGAN LIBRARIES

And he added:

"• • • in those days my profession was no more reprehensible than that of a bootlegger."

Days of American innocence.

Little did we dream that one day soon Trotsky would be commanding armies in the field at war; that he would next be stripped of the power and glory; that he would again flee to the New World. And yet that the long arm of Stalin would reach him and knock out his brains even as he sat correcting proofs on his record of Stalin's rise from bank robber to czar.

Or that the dignified United States publishing house of Harper & Bro., with the best grace it could muster, would actually withhold that amazing story from publication because F. D. Roosevelt had the United States of America then deeply entangled in Stalin's influence.

Yet all these things happened, and so many, many more, that even the most severe editing of this running account cannot but mention them.

Let it be noted then, merely that Trotsky in New York saw a fertile field in which to work. He later wrote:

"In the United States there is a large class of successful and semi-successful doctors, lawyers, dentists, engineers and the like who divide their precious hours of rest between concerts by European celebrities and the American Socialist party."

He didn't think them much and even called one of their leaders, Morris Hillquitt, a "Babbitt of the Babbitts." But Trotsky builded more poisonously here than he knew.

Secretly they admired him and in their minds they followed him when the czar's government fell and Alexander Kerensky, the head of the temporary government, let Trotsky come home.

Incredible, fantastic, but still the foolish Kerensky let Trotsky come home. Once there, he joined at once with the poison flea, Lenin, to destroy Kerensky.

Extension of Old Age and Retirement Benefits of Social Security Act to Sugar Workers Favored by Hawaiian Planters

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present herewith the text of a statement presented to the Senate Committee on Finance on March 22 by Ernest W. Greene, vice president of the Hawaiian Sugar Planters' Association. His statement follows:

BEFORE THE COMMITTEE ON FINANCE, UNITED STATES SENATE, IN THE MATTER OF SOCIAL SECURITY ACT REVISION

(Statement of Ernest W. Greene, vice president, Hawaiian Sugar Planters' Association, March 22, 1950)

I am Ernest W. Greene, vice president of the Hawaiian Sugar Planters' Association, of which all of the producers of sugar in Hawaii are members.

The executive committee of the association, on March 13, 1950, unanimously adopted a resolution as follows:

"Whereas the Committee on Finance of the United States Senate is presently conducting hearings on proposed amendments of the Social Security Act, and consideration is being given by said committee to proposals for the extension of the coverage of said act to include persons not now receiving benefits provided by the act: Now, therefore, be it

"*Resolved*, That this committee express to the Committee on Finance of the United States Senate the position of the sugar plantation companies of Hawaii in favor of the extension of the coverage provisions of the Social Security Act in order to entitle agricultural labor to the same old-age and retirement benefits now received by other persons covered by the act."

The production of sugarcane and the processing of raw sugar therefrom is necessarily a large-scale operation under the conditions which exist in Hawaii. Persons employed by sugar producers are engaged in year-round employment in every phase of the farming and harvesting of sugarcane, transporting such sugarcane to the sugarmill on the plantation farm, and processing it into raw sugar.

About one-half of the employees of sugar producers are employed in employment which is covered by the present Social Security Act. The other half are employed in employment which is defined by the act as agricultural and, therefore, they are exempt from such coverage. Exemption in this instance means that many thousands of the persons employed in producing sugar do not participate in the benefits of social-security legislation.

The sugar producers of Hawaii urge that the Committee on Finance amend the Social Security Act to extend to employees employed in agriculture the old-age and retirement benefits which are now received by persons who are covered by the act.

We believe that coverage of agricultural workers will accomplish simple justice by affording to such workers the security which is now enjoyed by other workers who are employed in employment which is so classified as to be covered.

Mail Subsidies

EXTENSION OF REMARKS

OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. WALSH. Mr. Speaker, I recently called attention to a scandalous situation existing in the Post Office Department having to do with subsidy payments made the railroads for transporting mail. Perhaps I should say payments to the railroads for not transporting mail, since they carry only about half of the mail they are paid to transport.

For this fantastic situation we have the word of Postmaster General Donaldson himself. In my statement of April 21, appearing at pages A2902 and A2903 of the CONGRESSIONAL RECORD of that day, I quoted Mr. Donaldson's testimony to that effect in hearings before the House Post Office and Civil Service Committee.

I am struck by the fact that in his order of April 17 reducing drastically the postal service furnished the American public, the Postmaster General did not complain about this condition. If the Postmaster General is interested in economy, he should economize wherever possible, without diminishing the service for which the American public is paying.

The Postmaster General at least pays lip service to this principle. In his order of April 17, he states as follows:

This Department is exerting every effort to provide for the public the best possible postal service at the least possible cost. We are taking advantage of every known device or program that is suitable in the operation of the postal service, to improve the service, better the working conditions of the postal people, and reduce the operating costs.

This, gentlemen, is what is known in law as a self-serving statement. I question its accuracy. Laying off thousands of letter carriers by ordering the loads on the backs of the remainder doubled can hardly be described as "bettering the working conditions of the postal people." And it is no improvement in the postal service to cut mail deliveries in half.

I fail to see how Mr. Donaldson can accomplish what he claims to seek by his order. If the postal service was operated efficiently before—and here again Mr. Donaldson says it was—this order does not make sense. It simply will not work.

I also fail to see why the Postmaster General did not instead correct the scandalous railroad situation which he himself has admitted to exist. He pays approximately $250,000,000 annually to railroads for transporting mail; but he receives only half the service he pays for. Instead of seeking to double the load of the letter carrier, I assert the Postmaster General should have cut in half the payments made to railroads. He would save much more, and would only be doing his duty.

But Mr. Donaldson did not do this. In fact, he denied that it could be done. In this same order of April 17, he said:

About 96 percent of all expenditures in the operation of the postal service is for salaries and transportation costs. We in the Department have no control over either. Salaries are fixed by the Congress, and transportation rates are fixed by the Interstate Commerce Commission and the Civil Aeronautics Board.

There are those who disagree with this statement, and believe that the Postmaster General is not as helpless as he claims to be. The General Accounting Office for one does not have its sympathies actively aroused at the spectacle of the Postmaster General pathetically pleading that his transportation costs are beyond his control; in effect, that he must order and pay for twice the amount of railroad service he needs.

I have reference to a report of the General Accounting Office, filed only a few days ago with the Senate Post Office and Civil Service Committee, and entitled, "Report on Study Made of the Round Trip Provisions of the Railway Mail Pay Act of 1916."

That report is 37 pages long, and contains 24 exhibits. It is most difficult but interesting reading. Much is said; but it appears that even more was left unsaid, because the General Accounting Office did not attempt to report completely on the transportation of mail by railroad. Had the report been intended to cover that subject completely, I am confident that a situation of extreme gravity would have been presented.

The Railway Mail Pay Act of 1916 which governs the transportation of mail by railroad companies contains what is known as the "round trip" provision. That section of the law (39 U. S. Code 535) requires the Post Office Department to pay at the same rate for the return of a mail-storage car as was paid for its full out-bound movement, provided the car is not used by the railroad for other traffic on the return run. Suppose the Department ships 50 carloads of parcel post from Chicago to Los Angeles, and uses only 30 of these cars to return parcel post originating in Los Angeles to Chicago. The remaining 20 cars, if hauled back empty, without being put to other use by the railroads, must be paid for at the full rate.

There is before the Senate Post Office and Civil Service Committee a bill, S. 1596, offered to repeal this provision. That committee asked for the General Accounting Office Report to aid it in passing judgment on this bill.

As I said before, many interesting facts are revealed by the GAO report. Among them is the fact that the Post Office Department has permitted the railroads to abuse this provision of law in such a way as to increase greatly the amount of empty space paid for. While some empty returns must under the law be paid for, this has been turned into a racket by the railroads with Post Office Department approval.

It stands to reason that this must be a racket. According to Postmaster General Donaldson, only half the space paid for is used. Not all cars carrying mail from Chicago to Los Angeles must be returned empty. The people in Los Angeles can write as well as read. It is a fair assumption that in a random moment some citizen of that fair city must feel the stir of a literary impulse, and write a letter to a friend in Chicago. Parcel post must be mailed east as well as west. There must be other traffic than mail which the railroads could use to fill the cars.

Some reason for the tremendous empty space paid for is given at page 2 of the GAO report, which states:

> The study has indicated that cars carrying full pay loads out do not return promptly, but are often directed to other use for the carrier's convenience and substitute cars are returned, making it possible for the railroads to realize a greater income. The propriety of this practice is a possible question since the act (39 U. S. C. 535) does not appear to anticipate such substitution.
>
> The substitution of cars further complicates the administration of the round-trip provisions.
>
> Many substitute cars are returned in freight trains and the trip is paid for at passenger rates.
>
> The operation of the round-trip provisions has resulted in numerous complex agreements, which assure the railroads full payment for all returned deadhead cars and empty space. In some instances the return movement is in advance of the out-bound loaded movement.

What this boils down to is the fact that the Post Office Department has done what it can to pay the railroads as much money for the empty return of cars as possible. It has allowed them to substitute other cars for those in which the mail was carried in the out-bound movement. It has even gone so far as to defy the laws of nature as well as those of this Congress by agreeing that the return movement can precede rather than follow the initial movement. You and I must go somewhere before we can return; Postmaster General Donaldson has hit upon a way to reverse this natural time order in the case of postal cars—when to do so means increased payments to the railroads.

In my statement of April 21, I quoted testimony given under oath by the General Superintendent of the Railway Mail Service of the Post Office Department. He testified that the determining factor of his decision regarding railway mail service was the financial benefits that were accruing to the railroad, and that has been one of the policies of the Department. Mr. Hardy appears to be an honest man, on the witness stand. Yet, Mr. Donaldson states that transportation costs are expenses over which he has no control. If that is so, why does he enter into agreements permitting substitute cars to be returned, which, according to the GAO, are for the carrier's convenience * * * making it possible for the railroads to realize a greater income. Why does he permit substitute cars to be returned in freight trains, and pay for the trip at passenger rates? Why does he enter into numerous complex agreements which assure the railroads full payment for all returned deadhead cars and empty space? Is he working for the railroads or the Post Office Department?

An agreement of the kind referred to is found in exhibit No. 6 accompanying the GAO report. The Santa Fe Railroad found itself faced with operating difficulties if it could not claim credit for empty return of mail cars from the west coast in advance of the arrival of the cars from east to west. In other words, this railroad wanted to use its cars as it saw fit, and still claim every cent possible for deadhead cars. To this request the Department agreed. By virtue of its policy of aiding the railroads financially wherever possible, it made sure that the Santa Fe could handle all other traffic and squeeze the last possible dollar from the Post Office Department. The Deputy Second Assistant Postmaster General agreed in writing, as follows:

> It is also our understanding of the space rules that the round-trip provision was written into law for the purpose of allowing railroads to claim deadhead pay for cars used in the initial movement for mail when these deadhead cars could not be used for other traffic. Therefore, we feel that the deadhead claims should be observed carefully in all instances, in order to operate within the intent of our understanding of the law. Regardless, you may advise Mr. McNulty that we will allow deadhead pay for cars operated in train 8, in advance of the initial movement and if all space needed in train 8 is furnished for the handling of mail.

Note carefully this letter. It states the author's view of the purpose of the law; it then piously admonishes compliance with the law, and proceeds to approve a departure from the law. What is behind this? Does the author wish it understood that he is aware that he is giving something away, and, if so, why? Perhaps the answer is found in other testimony of John Hardy, general superintendent of the railway mail service, quoted in my statement of April 21. I quote this again:

> Well, all large railroads have what is known as managers of the mail and express traffic. The majority of those employees are former employees of the Post Office Department, railway mail service.

It would be interesting to compare the salaries of these graduates from the railway mail service with the sums available to them in the postal service.

The Postmaster General entered the Post Office Department in Washington as Deputy Second Assistant Postmaster General, the branch of the Department handling railway mail transportation. A full investigation should be made of these conditions. I ask and call upon the Comptroller General to institute such a general investigation; and simultaneously I urge prompt and affirmative action on House Resolution 547, introduced by me on April 21.

Effect of Imports on Employment in the Glass Industry

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. HAYS of Ohio. Mr. Speaker, I herewith present for the consideration of the Members of Congress the statement by Mr. Harry H. Cook, president of the American Flint Glass Workers' Union, on his appearance before the Subcommittee on Imports and Employment of the House Committee on Education and Labor.

There is no question that imports of glass and pottery from slave-labor countries such as Czechoslovakia and other iron-curtain nations are having a crippling effect in the glass and pottery business in this country. Unless the Congress takes some action to limit this importation, these industries are faced with extinction. To allow these industries to be squeezed out by this kind of competition it not only un-American but absolutely stupid and certainly undesirable.

STATEMENT PRESENTED BY MR. HARRY H. COOK, PRESIDENT, AMERICAN FLINT GLASS WORKERS' UNION, TO THE HOUSE COMMITTEE ON EDUCATION AND LABOR, STEED SUBCOMMITTEE ON IMPORTS AND EMPLOYMENT, MAY 6, 1950

Mr. Chairman and gentlemen of the committee:

I appear for and represent the officers and members of the American Flint Glass Workers' Union of North America. Our organization was formed in 1878 and I am pleased to make the statement to you that we are one of the oldest labor organizations in the United States and that the industry in which our members are employed and must depend upon for their livelihood is one of our country's oldest industries with its first factory at Jamestown, Va., in 1608. We are affiliated with the American Federation of Labor.

UNIVERSITY OF MICHIGAN LIBRARIES

I wish the committee to know that I have been a worker in the glass industry for the past 57 years, starting at the age of 10. I worked in glassware factories as a skilled craftsman for many years. For the past 34 years I have represented the workers in these industries as one of their international officers; the past 10 years as international president.

While business generally is reasonably good, we find the American hand-made glassware industry in a serious condition and rapidly reaching the point of catastrophe because of the damaging influence and effects of the importation of glassware produced by cheap labor in countries embraced by the Marshall plan and also behind the so-called iron curtain.

Imports need not be injurious but can in fact be very harmful. It is not only a matter of quantity but particularly one of prices. If we had competitive parity with imports, so that our domestic products would not be undersold in our own market, we would not face the constant threat to our wage standards that now confront us.

The facts are that the extremely low wages paid in other countries, such as Japan and Czechoslovakia, not offset by lower productivity, gives these countries a great price advantage in this market. This advantage is not based on greater efficiency of the foreign producers, as some people would have you believe; nor is it based on greater skill of the foreign workmen. I am sure that we can match them in both these respects, but we cannot match their prices without sacrificing something that is the pride of America, namely, the high living standard that makes this country stand out alone over the rest of the world.

This high standard of living makes us vulnerable to the onslaught of low-wage producers abroad. This is to say, we cannot hope to compete on a wholly unequal wage basis. The only possible result of being forced to meet this competition is unemployment, joblessness, poor working conditions and a gradual decline to the economic level of these foreign competitors.

We are delighted, Mr. Chairman, to have this opportunity of appearing before a committee that is interested in the employment angle of import competition. We have been coming down here for years and we might as well have saved our breath. We have simply been told in effect that if we cannot meet the competition that faces us we might as well face the music instead. The prevailing theory in the State Department seems to be that if an American industry cannot compete with imports the fault lies with the American industry.

We are held to be inefficient, uneconomic, or to be marginal producers if we cannot meet the abominable wages paid in competing countries. Mr. Chairman, the foregoing is an unfortunate theory and to describe our glassware industry in this way is worse yet. The workers in our glassware industry are well paid. They are skillful artisans and we need offer no apologies to any workers anywhere else in the world. We do not believe that we represent the workers of an industry that might as well be discarded, the State Department to the contrary notwithstanding.

Until a year ago the glassware industry (pressed and blown branch) was getting along very well. However, Czech, Japanese, and German glass tableware has given us more and more trouble. Today there is acute danger of shutdowns and layoffs. The question is how far this must go before relief can be had, if any.

Few, if any, of our American hand-production glass plants are operating more than 50 percent of normal capacity today. Many are operating far below 50 percent and some are about to close indefinitely. Many of these plants are in small communities which depend upon them to furnish employment and to support the needs of such communities. In speaking for the more than 35,000 workers, I also presume to speak for the many hand-made glassware factories that constitute the industry as a whole representing a heavy and vital financial investment.

Our workers are trained in glassmaking and not as production-line workers in automobile factories or as steelworkers, or electrical workers. In the handicraft part of our industry individual skill still counts. Our workers retain the close connection between workman and final product, the lack of which psychologists consider as one of the great drawbacks of modern industry.

We are told by high authority in our Government that if the American glassware industry cannot survive the onslaught of importation they should engage in new business and that the displaced glassworkers will be afforded some kind of Federal unemployment relief while training for new kinds of work. Why should the American glassware industry be sacrificed and why should our highly skilled glassworkers be forced, and the thousands of other workers in the industry be forced, to depend upon extended Federal unemployment relief?

Our Government, through its social security regulations, has repeatedly stated that a worker has the right to choose the kind of work he desires to do. Surely our people would, by the proposed arrangement, be deprived of this freedom and be forced to accept employment which they do not choose to accept. Our people are good Americans and splendid citizens. They should have the right to choose their place of employment and should not be expected to submit to being moved like common cattle to other places of employment through governmental regulations as a matter of expediency. The State Department propagandists condemn the Russians for uprooting humanity by their transfers of large groups of people to new areas of employment yet they propose to force our good American glass workers to sell their homes, take their children out of schools and move into strange communities and accept employment contrary to their wishes.

Are we in America all to become production-line workers, or are we to retain smaller industries in smaller communities scattered throughout the United States? Shall we no longer produce anything that will be worth possessing a generation or a hundred years later? Are we to succumb completely to machinery and be deprived of all the arts of handicraft production?

This is precisely what will happen if we cannot have proper protection in industries that still offer opportunity for handicraft labor. Apparently we are to be forced to go to Europe or anywhere but the United States if we are to find any articles that embody individual skill, artistry, and craftsmanship. In the United States only machine-made products, which have no lasting artistic value, are to be produced.

We greatly deplore this attitude in those who have the power to say whether we will or will not survive. It almost looks as if they were more concerned about the welfare of foreign producers than about the well-being of our own. There is a very stubborn insistence upon further duty reductions despite the fact that we should find some remedy for cuts already made, where these have gone too far.

The terms of trade treaties negotiated under the Trade Agreements Act have never afforded adequate protection to the American glassware industry. It is more difficult now because foreign countries are determined to expand their prewar export trade and are coming into a position to do so. We have been told of the relief to be gained under the escape clause in the Reciprocal Trade Agreements Act. Unfortunately this would afford no help in the present situation. Immediate remedial action on foreign-made glassware is an absolute necessity if the American glassware industry and the wage and other standards of living of the American glassworkers are to be preserved.

The wage rates in Czechoslovakia range from an average of 20 cents for unskilled workers to an average of 40 cents for skilled workers per hour in the glass industry. The rates in Japan are still lower, reaching down as far as 10 cents. The rates in Germany are higher than in Czechoslovakia but are still very low compared with our own rates. Swedish wages are higher than those in Germany, where average rates range from 36 to 45 cents per hour. This compares with an average of about $1.35 per hour in this country.

Even if our workers were twice as productive as the European, we would still be at a competitive advantage. In those of our factories where hand work still predominates we have little advantage, if any, over the Europeans, in productivity.

In terms of quantity imports are not extremely heavy. The 1949 imports amounted to slightly over $5,500,000, foreign invoice value. At our wholesale prices this would amount to roughly $10,000,000.

According to the Census of Manufactures of 1947, employment in the pressed- and blown-glassware industry amounted to 42,170 persons; but no breakdown is given which would show how many of these are in the hand-made division of the industry. Handmade articles amounted to about a half of the machine-made product in tableware and kitchenware classification. However, in employment the two are probably more nearly equal.

The effect of imports since the lush postwar market has disappeared is to create pressure on wages, hours, and employment. It also affects the question of old-age pensions. I can tell you that wage-wise we are definitely in competition with the low rates prevailing abroad. Unless this wage gap is bridged or unless some other limit is placed on imports the hand-made-glass factories face extreme difficulties and eventual extinction.

We hope that you can do something to focus the spotlight on the nature of wage competition that will bring home to the public this fact: We can no more compete with 25- and 30-cent-an-hour wages in Europe and hold up our standards than we could compete with sweatshop wages in this country when they were still in existence. The employer who wants to pay decent wages can continue to do so only if he can hold his market against his substandard competitors. Otherwise he either goes out of business or lowers his standards. The latter is what we want to avoid.

We assure your committee of our appreciation of the opportunity you have made possible for us to appear before you and present this present serious problem of a great American industry and a splendid American labor organization.

Address by Senator Chavez at Albuquerque, N. Mex.

EXTENSION OF REMARKS
OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. CHAVEZ. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an

address delivered by me at Albuquerque, N. Mex., last Wednesday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. DENNIS CHAVEZ, UNITED STATES SENATOR, CHAIRMAN, SENATE COMMITTEE ON PUBLIC WORKS, JEMEZ GROUND-BREAKING CEREMONIES AT STATE FAIR GROUNDS, ALBUQUERQUE, N. MEX., MAY 3, 1950

Judge Bratton, distinguished guests, fellow New Mexicans, ladies and gentlemen: This day makes history for the State of New Mexico, but especially the Middle Rio Grande Valley. The event that we celebrate is as important as the original trip taken by the lieutenants of Coronado in marching up the Jemez River to Jemez in the sixteenth century.

Everyone should be happy in New Mexico today. I am. I have lived for this day when we could put into effect the efforts of many years of work by a creative citizenship of this valley and we will start the actual construction of the Middle Rio Grande project.

For years I have envisioned the time when the Rio Grande would be harnessed for its entire path through New Mexico. I have looked forward to the day when we could restore farming in the valley to its productiveness of yesteryear. I have longed for the time when all of the communities from Pena Blanca to San Marcial would be free from fear of floods and when our water resources could be used for the benefit of mankind and not for destruction. I look forward into the future when the dams we will build up the stream will be generating power for the benefit of the people. Power—the golden touch which will bring prosperity to northern New Mexico. From this day onward we go forward. It is a historical moment.

With humility I wish to say that I am proud of having fathered the Middle Rio Grande project as you see it today. I recall the trials and tribulations when the local Middle Rio Grande Project was initiated, the hardships bringing about the program that has been made up to now.

For the benefit of those who don't know about the trials and tribulations which the people of the valley underwent, let me briefly review its history. For centuries the tireless waters of the river have brought floods and heartaches to the valley, destroying property, crops, homes, and at times destroying people. But until there was a greater density of population and until there was a greater investment in property, the floods were considered unimportant. Growing numbers of livestock gradually denuded the grasslands. Water ran off more rapidly on bare ground than off the lush when nature reigned. Through overgrazing of the ranges, the cutting of timber, and a multitude of human follies, the threats of floods of today was brought about.

Today we are starting to undo the damage. As early as 1828 there was a recorded flood at Tome in New Mexico and El Paso in Texas. There were floods before that, but we do not have accurate historical data.

You all know that we are gathered in the oldest continuously settled area in the United States. In comparison with the valley's history of over 400 years of European white civilization on this very ground, history of the Middle Rio Grande Valley project is short, indeed. After the coming of the railroad, and also about the turn of the century, people began to worry about the flood threats of the Rio Grande. Lives, property, and crops were constantly in danger. Nevertheless, because of an international situation which developed in the last century, there was an embargo on the construction of reservoirs in the basin. The Elephant Butte Reservoir, which is the lifeblood of the lower Rio Grande Valley in New Mexico and the El Paso section of Texas was built and placed in operation in 1916, but not until a treaty had been agreed to with Mexico which guaranteed that Republic a certain amount of water from the reservoir; the complete embargo for construction was not lifted until 1925. That is as far back as we can reach to find our people really working to eliminate the constant threats of floods by the Rio Grande in this portion of the valley. In 1927 the State legislature enacted a law authorizing formation of conservancy districts, and in August of 1928 came the official plans for the Middle Rio Grande Conservancy District. Flood control was one of the purposes of the district. It took courage by the people of the valley to create a local district and to get into debt to the extent of $11,000,000 in order to protect its people and property. Bonds were issued. Bonds had to be sold. The market wasn't so good and the district was having quite a time. I'm going to let you into a secret. Senator Bratton, our honorable chairman of this meeting; the late Senator Cutting, and I, as your Representative in Congress, finally prevailed upon the Reconstruction Finance Corporation to buy the bonds which made it possible for the district to conclude its work.

But while there was this paving of the way which first furnished us with basic thoughts for the future, actually not too much could be done. The work was too vast. The Federal Government had a tremendous interest in the old river. Water was dear to the States of Colorado, Texas, and New Mexico, each trying to take care of its own, and sometimes little more than its own. Long series of conferences as between the States followed. Finally, in 1938, the Rio Grande compact was approved by Congress, after ratification by the States of Colorado, Texas, and New Mexico. It was designed to permit the construction and operation of reservoirs above Elephant Butte. The Soil Conservation Service came into play with a report on soil and water in the valley watershed in Colorado and New Mexico. Even unpublished flood-control projects were made by the Department of Agriculture in 1940. It was about that time that I came to the conclusion that if we were to have actual flood control and an intelligent, thought-out plan for good construction, the Army engineers should be brought into the project—the Army engineers who had started this type of work from as far back as 1854 on the Sacramento River.

Senator Josiah Bailey, of North Carolina, at my request signed an order authorizing the United States Corps of Engineers to make a survey of the problem and report as soon as possible. Remember that up to that time the only actual Government agency that had to do with the Rio Grande was the Bureau of Reclamation of the Department of Interior. To further advance the work of the Army engineers, legislation was introduced—legislation that I sponsored.

My good friend, Senator Bailey, at the proper time brought out and reported the bill and it became the law. That was all very good, but what would actually count would be to get construction work going to carry out what was recommended in the reports pertaining to the surveys.

In 1936 Congress passed the Reorganization Act. By said act there was created a Committee on Public Works which took over the functions of rivers and harbors and flood control, public buildings and public roads, formerly a duty of the Committee on Commerce. The Reorganization Act first came into play during the Eightieth Congress. It became my good fortune to be assigned to said committee, which was then headed by Senator Revercomb of the State of West Virginia.

The survey report of the Corps of Engineers, Albuquerque district office was submitted September 7, 1947, to the Chief Engineer in Washington. In the 4 years between the time that that survey was authorized, the middle Rio Grande project had gone through surveys and conferences on the problems; many plans of improvement; the Rio Grande compact was studied. They were also under the close scrutiny of the Governors of Colorado and Texas. They were all studied by the other Federal agencies—the International Boundary Commission, and so forth. The study and conferences by the States continued until April 5, 1948, at which time the Chief of the Army Engineers submitted the plan to the Congress.

On April 28, 1948, Senator Hatch, now Judge Hatch, and I joined in introducing S. 2571, to authorize the Chief of Engineers project and that of the Bureau of Reclamation for the Middle Rio Grande Valley. After that was introduced, the engineers and technicians for Colorado, Texas, and New Mexico got busy and walked up and down the halls of the Senate Office Building and they never had been busier—meetings here and meetings there, conferences with Members of Congress, discussing the project.

New Mexico's patience and the fact that we had a good, solid, sound project formed the combination which triumphed. Oscar Love, Fred Wilson, Hubert Ball, John Patrick Murphy, Phil Maestas, of Espanola, J. C. Crespin, and Holm Bursum, of Cocorro, Joe Tondre, of Los Lunas, Mayor A. F. Apodaca, of Bernalillo, and many others did a lot of fine effective work in diminishing the Colorado and Texas opposition.

Again on May 17, 1948, Senator Hatch and I joined in introducing an amendment in the nature of a substitute to our original bill, the substitute meeting the objections of Colorado and Texas. On June 9, 1948, the substitute bill was reported to the Senate by the Committee on Public Works. The bill passed and became Public Law 858 of the Eightieth Congress when it was signed by President Truman on June 30, 1948.

Let me divert for the moment while I tell you the following: I consider the Public Works Committees of the Congress as nonpartisan committees. They are construction committees and partisan politics do not have anything to say in discussing matters of life and death of American citizens. Public Law 858 was passed by a Republican Congress and signed by a Democratic President because it was good.

The law authorized the appropriation of $3,500,000 to be expended by the Department of the Army for the partial accomplishment of the comprehensive plan for the Rio Grande Basin and what we are starting today is in keeping with that authority. We are starting a partial accomplishment of the comprehensive plan for the Rio Grande Basin.

I have stated heretofore that the valley has been settled for practically 400 years. People living in many communities are the descendants of ancestors of 350 or 400 years ago. They have been here through the centuries. It has always been my thought since working in the interests of the valley that it was the duty of legislators to protect those people in their rights so that they could get some benefits and be the recipients of the great program brought about by the expenditures of Federal money. I want them to save their little land; I want them to save their property; I do not want the advantage of what is being done today to go to speculators whose only interest in the valley is to make a profit out of the hardships and the work of others and for that reason I had inserted in Public Law 858 the following language, which is the law of the land:

"The Secretary of the Interior, in entering into a contract or contracts for the repayment of the reimbursable construction costs of the Middle Rio Grande project, now estimated at approximately $18,000,000, shall

UNIVERSITY OF MICHIGAN LIBRARIES

vary that amount to reflect changes in the estimates of those costs occurring prior to the date of the contract or contracts and in so doing may, if need be, extend the repayment period beyond 40 years to permit payment of costs in excess of the present estimate.

"Subject to the limitations of authorizations approved from time to time for prosecution of this plan, approval is granted to the Secretary of the Interior to acquire, on behalf of the United States Senate, by purchase or donation, agricultural lands owned by the State of New Mexico within the Middle Rio Grande project and to develop those lands substantially in the manner outlined in the report of the Bureau of Reclamation referred to above. Lands so acquired shall be resold or leased by the Secretary to actual settlers for agricultural purposes under rules and regulations prescribed by him which rules and reglations shall set out the prices and terms of such sales and leases, the qualifications required of purchasers and lessees, and other matters relating to the disposition and use of these lands, and shall provide a preferred right to purchase or lease any tract of land to otherwise qualified persons of the following classes in the order hereby set out, purchasers in any class being preferred to lessees in that or any other class:

"(1) The former owner or owners of such tracts, if his or their title thereto was divested by reason of sale for taxes to the State of New Mexico.

"(2) Honorably discharged veterans of World War II who are the sons or daughters of the former owner or owners of such tract, if the title of said former owner or owners was divested by reason of sale for taxes to the State of New Mexico.

"(3) The sons or daughters of the former owner or owners of such tract other than those referred to in (2) if the title of said former owner was divested by reason of sale for taxes to the State of New Mexico.

"(4) Honorably discharged veterans of World War II and other than those referred to in (2).

"(5) Persons othe: than those referred to in the clauses above. Any deed executed by the Secretary in favor of any person described under (4) or (5) shall provide that any persons described under (1), (2), or (3) shall have the right to purchase any land conveyed by such deed, within a period of 10 years after the execution thereof, by (a) paying to the owner the amount or amounts actually paid by him as consideration for such deed and for the actual cost of improvements on such land plus interest at the rate of 6 percent per annum on such amount or amounts, and (b) assuming any obligations of the owner to the Secretary with respect to such land. Any lease executed by the Secretary under the provisions of this section to any person described under (4) or (5) shall, by its terms, expire not later than 5 years after the date of its execution. The preferred rights provided for by this section to purchase or lease any lands shall continue to be applicable until such land is finally disposed of by the Secretary; but the right of any lessee or purchaser to enter into possession shall be subject to any rights under any prior lease executed by the Secretary. Moneys accruing from the sale or lease of such lands shall be covered into the reclamation fund in the Treasury."

Yes, sir, the good citizens who lost their all around San Marcial and Clyde and Valverde during the floods of 1928 are the ones that I want to protect. I want to see the owners of land around Socorro, La Joya, Veguita, Belen, Jarales, Los Lunas, my home town of Los Chavez, and all the communities and citizens from Pena Blanca to San Marcial to receive some of these benefits. That's why I lose my temper and get annoyed with the heartlessness and the selfishness of the State tax commission that would sell out that class of people. I ask all of you people who are listening to me that I know believe in fair play and decency to help me in this behalf. Why shouldn't the father of a boy who is buried in Guam, Okinawa, Anzio, or Luxemburg be protected in his rights? Why shouldn't that type of boy who was fortunate enough to come back, notwithstanding his sufferings in behalf of the Stars and Stripes, be protected in his rights? Why shouldn't his sister be protected in her rights? I know you will help because I know you're decent. Of course, the speculator and the selfish and the greedy are always with us, but thank God they are in the minority, and even now, if there are any around, probably feel ashamed.

The people of the valley owe a debt of gratitude to the tireless efforts of many Federal Government agencies in bringing about the project, but none more so than the United States Corps of Engineers and the Reclamation Bureau. Each has its work to do but said work will be correlated only to the best advantage. I know the work of the Army engineers. I know its personnel and I, for one, want to give thanks for the help and cooperation that the Corps has given me throughout the years in my efforts to be of some help to the State. From the days of General Markham and Capt. Lucius Clay, now General Clay, continuing with Generals Reber, Reybold, Wheeler, and Pick, we have had cooperation. Even in the days of Conchas Dam construction, Capt. Hans Kramer was advising and cooperating. Colonels Stratton, Rosenberg, Killian, and now McNutt, have unselfishly given their time and energy to be of help to the people of the valley.

I can say the same thing for the Reclamation Bureau. From the days of Dr. Mead, of John Page, Harry Bashore, and Mike Strauss we have had the thought and cooperation and the efforts and energy of the Reclamation Bureau to be of help. Assistant Director of Reclamation Wesley Nelson, who was regional director at Amarillo, Tex., devoted many and many a day in trying to help solve the problem, and right here in our city with the Reclamation Bureau we have John Mutes, a New Mexico boy from the Merino Valley in Colfax and Taos Counties, handling the work of that Bureau faithfully, honestly, energetically, and intelligently. I can vision the day when the work of those two Bureaus will be completed, when the Rio Grande Floodway will be concluded, Jemez and Chamita Dams actual facts, and it is not an idle dream that after the proper studies and understandings as between the States, the Chifio Dam in Taos County will be a fact.

Since preparing the statement made up until now, there have been further developments; further progress has been made in order to carry out the comprehensive plan for the basin. When the omnibus flood-control bill was up for consideration in the House of Representatives, that body allowed the authorization of $34,000,000 for flood control work. When the Senate Committee on Public Works considered the House bill we were able to prevail upon the said committee that the House amount should be increased by $5,000,000 to the Army engineers and that an additional $30,179,000 should be authorized for the program to be prosecuted by the Reclamation Bureau of the Department of the Interior. The Senate approved that, but being that there was a difference between the House amount and the Senate amount the matter had to go to conference and only last Wednesday night that conference was concluded and I am happy to announce that the conferees agreed on the full amount of $69,179,000 authorized. So you see, great progress has been made because no appropriation above $3,500,000 could have been made without further authorization, which is now an actual fact.

Ladies and gentlemen, I am thankful for the occasion. I am thankful to the people of the State who gave me the opportunity to be of service, which I shall continue to do until my trust in this respect is ended.

Curtailment of Mail Service

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Mr. George Sokolsky entitled "These Days."

THESE DAYS

(By George Sokolsky)

I received a letter from the postmaster telling me all about the reduction of the mail service. It is a mimeographed letter and takes two pages and an envelope. It must have gone to lots of folks and it must have cost a good deal of money. It was an unnecessary expenditure because I had read it all in the newspapers. That is where most of the bad news appears.

What the Post Office is trying to say is that its inefficiencies having caught up with it, it hopes to solve the problem by becoming less efficient. A privately owned business would have to go into bankruptcy under such management.

The Hoover Commission had prepared a detailed plan for making the Post Office an efficient operation. This plan had been worked out by competent men after thorough study. However, most of the plans of the Hoover Commission have been sidetracked.

President Truman is for them, but also against them. He is for them in private conversations; he is against them when it comes to legislative action. In fact, nearly everybody in Congress is for them up to the vote.

We shall survive getting our mail once a day instead of twice. We shall also survive getting the mail in the afternoon instead of the first thing each morning. But it will only prove that the American standard of living is receding.

I shall look at our very filthy streets and at no police being around when you need them, and at all sorts of break-downs of public efforts and say to myself: "Standards of living are going down."

For the standard of living of a people is to be measured as much by what one gets for the taxes he pays as by any other yardstick. The Post Office used to be the example par excellence of communal effort. In fact, the Socialists used to say that if a nation can run a post office so well, it can run the railroads and about everything else.

But the fact is that the Post Office constantly costs more money and gives less service. We used to put a 2-cent stamp on an envelope and it traveled swiftly, in the horse-and-buggy days, everywhere in this country.

Now we put a 3-cent stamp on the envelope and accept casual handling. If you want to see, in a big city like New York, some real slow motion, put a special-delivery stamp on the envelope and telephone to find out when it arrived.

All this is just lowering the standard of living. Or maybe it is due to a lowered tone. Now, Harry Truman's homely attitudes have a great appeal to me, because I like the little people of the earth.

Stuffed shirts bore me as they must most of you. But does Harry Truman have to wear that funny outfit when he goes to Florida? Every time I look at his picture down there—cap with the long visor, funny colored shirt, and the cane—I think of sports at an Atlantic City convention walking the boardwalk of an evening to see what's around.

I just can't help thinking of that. It does not mean that he isn't a good guy maybe, but the tone is wrong.

So maybe he sets the tone and by now it has worked its way down to everybody in government. Tone is a standard of living.

There used to be a homely phrase, "high toned." We don't use it anymore. We no longer say "that is a high-toned family," by which we meant that they were well set up, acting according to the traditions of the race, fine looking.

Sometimes you have the feeling about high toned when you see the oldsters, but in our generation we level down.

And that is exactly what our post office is doing. It is leveling down. Maybe the next reform will be mail delivery every other day or come to the post office to get it.

Maybe they will set up some self-service machinery so that you can grab your own, like a cafeteria. Anything can happen when the standard of living goes down. And it can go awfully low.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper release of mine, dated May 8, 1950, entitled "Happenings in Washington." The statement applies particularly to program No. 24.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON—PROGRAM NO. 24

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

I want to speak to you about something going on in Washington that's important to the livelihood of everyone in our State.

I want to talk to you about your jobs—how they are being affected by the tariffs we have now and the tariffs to come.

Most of you know where I stand. For the others I'll make my position clear now.

I believe that the best guaranty of security for the United States is a good job at good wages for every American worker.

I believe that every American should be gainfully employed at a wage scale sufficient to maintain the American standard of living.

I believe in the expansion of the purchasing power of the American dollar so as to maintain a growing market for the products of industry and the products of our farms.

That's what I've always fought for. That's what I'm fighting for now. That's what I intend to keep on fighting for.

You can't have good jobs or good wages if the goods we produce must compete with commodities made by people who get only a fraction of your wages. And when enough of those goods, produced by cheap labor, are dumped on our shores, then you don't have any job at all.

For more than 15 years, we have operated under a so-called reciprocal trade system. Under that system our tariffs have been falling lower and lower and lower. Today they are lower than at any other time in 50 years.

The protection formerly given to the American worker is being wiped out, slowly but surely.

Nevertheless, the State Department announced, just the other day, that we are about to make still further and deeper tariff cuts.

Beginning September 28, the State Department announced, conferences will be held in England for the purpose of discussing tariff concessions on 2,500 items.

Seventeen nations in South America, Central America, Europe, Asia and Africa will take part. One of them is the Federal Republic of western Germany.

You may be sure that the outcome of the conferences will be a further flood of cheap labor imports to compete with goods produced by our workers and our farmers.

How does that affect Pennsylvania? I'm going to tell you.

But first let me say something else to the millions of workers in our State, particularly those who have jobs in manufacturing plants.

If there is any question in your minds that these tariff reductions endanger your jobs—well, just ask your unions.

I've been hearing from union leaders. From the United Mine Workers, from the A. F. of L., and from the CIO. Your unions, too, are worried about your jobs. As long ago as 1947 and 1948 I was hearing from the leaders of locals of glass and pottery workers in western Pennsylvania crying out for protection for the jobs of their members.

Let's consider a few specific items, and I'm talking now directly to the skilled watchmakers of Lancaster, Pa.

In the middle of the 1930's, the United States was producing about 53 percent of the fine watches sold in this country—the high quality, jeweled watches.

That was before the reciprocal trade agreements began to go into effect.

Today about 85 percent of our jeweled watches and watch movements are imported.

Today the Hamilton watch factory and the Elgin plants in the Midwest are the last two jeweled watch companies operating in the United States. There was a third until recently when the Waltham Watch Co. went broke under the pressure of foreign competition. Hundreds of highly skilled American craftsmen lost their jobs.

That is what happens to the well paid American worker when the bars are dropped.

But that's not all. The fine watch industry is important to our national defense. It builds up a reservoir of skilled men who can work on precision instruments that are vital to modern warfare.

In the last war, Germany drew heavily on the skilled Swiss watchmakers for such work. Switzerland furnished the bulk of the precision instruments for the German war machine.

We were able to furnish our own.

But what will happen if the cold war should turn into a hot war? What will happen if the Red army sweeps across Europe?

Well, I expect the neutral Swiss will make precision instruments and sell them to the Russians. They'd have no other market.

But what would happen to us? How would we obtain the necessary precision instruments?

If you don't know the answer, I suggest you ask the State Department.

Yes, the jobs of our watchmakers and the skills needed to defend our country are being lost. They are pawns in this foreign policy game played by the State Department.

The folks of western Pennsylvania hardly need to be told what has been happening to the china and pottery and glass industries. Men laid off. Men working part time.

I've heard from the unions out there and I know. Their jobs, too, have been made pawns in this game.

And now they announce that in September, they are going to cut still more the tariffs on textiles, pottery, glass, china, chemicals, rayon, paper, leather goods, clocks, fish products, wines, and dairy products.

I wonder how many more Pennsylvania jobs will be lost in that fancy shuffle. I wonder how many Pennsylvania factories will be forced to post notices that they will be able to work only 2 or 3 days a week.

In our State thousands of families are dependent upon the mining and preparation of coal for their daily bread and the roof over their heads. Things haven't been too good for the miners. We all know that. There are several reasons for this, and I'm not blaming the reciprocal trade agreements for all of the present unemployment in coal mining.

But I am blaming it for a part of the trouble. I am not alone in that stand. Nor does my support come from rich men who own mines. It comes from labor. It comes from the United Mine Workers, the railroad brotherhoods and the CIO oil workers.

This administration has let so much oil come in from foreign countries that the unions are up in arms. The coal people estimate that, Nation-wide, the heavy importation of cheap oil—as allowed under the trade agreements—will throw 50,000 miners out of work.

The railroads that haul the coal will have fewer jobs for railroad men in our State and in the remainder of the country. An estimate has been made that up to 50,000 railroad men may also lose their jobs.

And still they're going to lower rates more and more, reducing another 2,500 duties in September. I say it is time for everyone in Pennsylvania to think it over.

Eastern Pennsylvania is a leading center of hat manufacturing. That industry is in grave danger. Union officials have warned that the American hat industry is being crushed and the workers are faced with the loss of their jobs. Why?

Because of the imports coming largely from Czechoslovakia behind the iron curtain. Thanks to the sharp cut in tariffs, the import of felts jumped 300 percent last year.

The textile workers in Pennsylvania and in New England, as well as those of other States, are feeling the squeeze which is the consequence of this never-ending game of give-away—I mean give-away of your jobs.

The farmer is feeling the weight. Chester County and Delaware County, in our State, are the Nation's most important producers of mushrooms. Tariffs are being cut down to nothing on fresh and canned mushrooms. They are coming in—in great quantity.

We have millions upon millions of pounds of surplus dried eggs stored away in caves. Yet we are importing dried eggs from China. We have more butter in storage than we know what to do with, but we are importing butter. I hardly need mention the great surplus of potatoes which we are destroying. Yet we are importing potatoes.

The Government has bought up vast quantities of wheat, corn, barley, rye, and other agricultural commodities. But, under the reciprocal trade agreements, we are importing them.

There's trouble ahead for our farmers in that kind of situation. It can't spell anything but trouble. But, in September, the jobs and livelihood of our farmers will be made a pawn again—when the State Department further reduces the tariffs on hundreds of farm commodities.

When I ask here in Washington why we do these things, I get the same kind of answers

UNIVERSITY OF MICHIGAN LIBRARIES

that many of you receive. Our people are told that we are strengthening our friends and allies. With that answer, the State Department seeks to justify its action.

If that is so, I ask—and you have every right to ask—why are the jobs of our people to be sacrificed to imports produced by slave labor in Communist Russia and the other countries behind the iron curtain?

Why are we letting them dump their surpluses into our markets?

Why do we let this slave-labor merchandise undersell the product of the American worker?

Is Russia our friend and ally? Are Bulgaria and Rumania and Czechoslovakia and Poland and Communist China our friends and allies?

Why should we strengthen them?

We have been told that what we are buying from those countries are strategic materials—things we must stock pile for our defense.

The truth is, my fellow Pennsylvanians, we are getting practically no strategic materials from those countries now.

Here are some of the things we have been importing from iron-curtain countries: Furs, shoes, rubber footwear, walnuts, and canned crab meat.

Now I ask you, Is canned Russian crab meat a strategic material?

Are walnuts from Communist-controlled Manchuria a secret weapon?

Will we be unable to defend ourselves in the next war without rubber overshoes from Czechoslovakia?

There has been convincing proof that most of what we get from Russia is turned out by slave labor and dumped in the United States to cause confusion in our markets and hurt our labor. We have a law in this country that we may bar goods produced by foreign slave labor.

I say we should invoke that law to protect the jobs of our people.

The Russians buy no frills from us. They don't let our manufacturers or our farmers dump surpluses in their country. They don't buy anything which will result in unemployment for their people.

Why, then, do we allow the United States to be made a dumping ground for the iron curtain countries? Why do we allow that kind of competition?

And remember, we are going to get more of it if the State Department further drops our tariffs.

These trade agreements are not the only concern of our workers this year.

The Senate Foreign Relations Committee has begun hearings to determine whether the Senate should ratify the International Trade Organization charter. It is interesting that only two of the other 55 countries that took part in drafting the charter, have so far ratified it.

The ITO, among other things, would force further tariff reductions among the countries, and would establish rules to govern and limit some types of tariffs.

Of course, there is one invisible but ever present factor. We have learned from the reciprocal trade agreements, that other nations do not reciprocate. In case after case, other countries have withdrawn their concessions to us. Nevertheless, they continue to enjoy the full benefits of our concessions.

I fear that the same situation would develop under an ITO and still more Pennsylvania jobs would be lost.

I am strongly in favor of helping the free nations that are in need of assistance to restore stability and to raise their standards of living.

Whether all of its objectives are achieved or not the outpouring of American wealth and resources under the Marshall plan will be recorded as the greatest humanitarian effort in world history.

But I do not believe that the American worker, in addition to being burdened with high direct and hidden taxes, should be deprived of his job to bolster a foreign policy which has not distinguished itself with outstanding success in the past.

I repeat, the best guarantee of security is a good job at good wages.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Reply to Harold E. Stassen by Senator Humphrey

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a reply to Harold E. Stassen by the junior Senator from Minnesota [Mr. HUMPHREY], broadcast over the radio last night through the facilities of the American Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPLY TO HAROLD E. STASSEN

(Radio address by Senator HUBERT H. HUMPHREY over American Broadcasting Co., May 9, 1950)

Last week those of you who were listening to this network were subjected to a most extraordinary attack on the President of the United States. Some of you have been sympathetic to the criticism of Mr. Truman's policies. Some of you may have shut off the radio. But I am sure that those who continued listening were shocked at the type of attack which was made.

I, myself, was deeply shocked. And personally embarrassed. I come from the State of Minnesota of which I am justly proud. I am privileged to serve as a United States Senator from that State. So it was especially difficult for me to realize that the slashing irresponsible attack poured out over the air came from a man who at one time had been the Governor of my State—Mr. Harold Stassen.

As a citizen and elected representative from Minnesota I wish to set the record straight.

Mr. Stassen in no way spoke for the millions of Americans who respect and admire their President. Nor did he speak for those Americans, who, at times, feel compelled to constructively criticize the President and his policies. He in no way spoke for the 3,000,000 citizens of Minnesota, the overwhelming majority of whom cast their vote for President Truman in 1948, just as they have supported the New Deal and the Fair Deal in every election since 1932. To be sure, the President has his political critics in Minnesota, but I am proud to say that that criticism comes with good taste and with good manners. Effective and constructive criticism is essential to the preservation of democracy. Irresponsible and reckless criticism is destructive of democracy.

But Mr. Stassen did not criticize—he vilified. Distasteful as his methods were, and in his case under the circumstances strangely reminiscent of the fox and the sour grapes, the false charges of Mr. Stassen could easily be dismissed as the bitter voice of an ambitious but unsuccessful candidate for the office of President. We could have ignored these charges except for one thing. Mr. Stassen represents a pattern of political conduct and political strategy which the disgruntled Republican Party is trying to design out of the rags and tatters of their despair. For 18 long years they have tried every political trick in the book to win the support of the American people. Yes, tricks they have used—not program; trickery—not leadership. Their political sideshow has been repudiated. Having nothing of their own to offer the people of this country, in desperation they have decided to try to tear down what Mr. Truman has offered. Mind you, they offer no real alternative. They do not offer a constructive program.

This attack was timed by the Republican leadership to discredit our President at the very moment that he was going to the people to make a direct report. The partisans of privilege do not want a President who speaks plainly and honestly to the American people. The representatives of privilege fear the democratic example of a President being with and speaking directly to the people.

Yes, the Republican leadership well remembers that when President Truman last went to the people in that memorable campaign of 1948 the people came by the thousands to hear his message. That message was the program of the Democratic Party. The people accepted that message. They believed in their President. They demonstrated their belief and their faith in him by their votes. That message was the program of the Democratic Party. The people accepted that message. They believed in their President. They demonstrated their belief and their faith in him by their votes.

Yes, in 1948 President Truman went to the people and said, "I believe in the people of this country and I believe in the principles on which this country was founded. I believe in their right to work and to be healthy and to live decently. I believe that as a free people we have an additional responsibility to the rest of the world, and that, as a democratic nation, we can and must help the other democratic nations of the world to prevent the aggression of communism."

But the President didn't stop there. He told the people exactly what he proposed to do to make this possible. He spoke of housing legislation, of strengthening the Social Security Act, of increasing the minimum wage, of providing health legislation, and of enacting laws giving all citizens an equal opportunity to work.

Since then the President has stood by his word. It is this which annoys, disturbs, and confounds the opposition. Could it be because of the President's integrity, his courage, his program, and his identity with the people that Mr. Stassen calls him, "the worst President ever to occupy the White House"?

In his first message to the Eighty-first Congress, Mr. Truman presented a complete program which would carry out his pledges.

In the field of foreign policy, he reemphasized the importance of an aggressive, constructive program of economic assistance to the democratic nations of Europe in their struggle against communism. He proposed a bold new program to help the underdeveloped and underprivileged areas of the world, so that they, too, might become strong and able partners with us in the fight for freedom.

The President sent to the Congress a series of measures to guarantee basic civil rights, and equality of opportunity to all people.

He proposed the repeal of the Taft-Hartley law and the establishment of a fair standard of labor-management relations vital to a free economy.

He outlined to Congress a comprehensive slum-clearance and housing program that met the needs of our low-income families, farmers, our middle-income groups and veterans.

The President requested of the Congress enactment of a broad health program. He had promised the people he would try to give them basic economic security, and true to his word, he sent to the Congress a bill raising the amount of monthly allowance for old-age insurance and expanding its coverage to include many people who now receive no insurance at all.

Yes, Mr. Truman is fulfilling his promises. He has fought for his program. He has presented to the Congress realistic proposals. Here we have a President who understands the practical, everyday needs of the American people.

Despite the bitter opposition of the Republican party and their Dixiecrat friends in the Congress, real progress has been made. We have a new housing act which will help clean out some of the worst slums in the Nation and relieve the serious housing shortage.

We have a new minimum wage law providing for 75 cents an hour. We have moved forward in improving the Nation's health. We have provided for the farmer—grain storage and price supports.

Under the constant prodding of the President, we have begun the difficult process of reorganizing and modernizing the governmental machinery.

And, before this Congress adjourns we shall do much more.

But, some parts of the Fair Deal program have not been carried out. And who do you suppose is responsible? Not the President, who outlined the program. Not the supporters of the Fair Deal, who voted for these proposals. Not at all.

It is the members of the party to which Mr. Stassen and Mr. Gabrielson belong who have blocked good legislation—with the help of their Dixiecrat allies. It was this coalition, repudiated in the last election, that blocked repeal of the Taft-Hartley Act and has successfully resisted the enactment of basic civil-rights legislation. It was this coalition which defeated a proposal for middle-income housing. It is this unrepresentative coalition that defeats the will of the American people.

Now, a word about our foreign policy. First, I wish to pay tribute to the leadership of that distinguished Republican Senator from Michigan, ARTHUR VANDENBERG, for his magnificent efforts in attempting to breathe into the Republican Party an understanding of its obligations in the field of international affairs. I also pay honor to those who have joined with him in fulfilling the obligations of a bipartisan foreign policy.

But, the Republican Party policy-makers, from its national chairman to its Senate leaders from Nebraska and Ohio, are leading the Republican Party back into isolationism. Oh, yes, they are unwilling to say they are isolationists—they just say they are economizers. With the world on fire, they think it is important to save on water or to keep half of the fire-fighting equipment safely tucked away in the firehouse.

The efforts to scuttle the Marshall plan come from the Republican leadership. The insults to our neighbors and allies come from that same leadership. The efforts to weaken the reciprocal trade program come from the Republican leadership. The recent unsuccessful attempt in the United States Senate to defeat the important point 4 program of assistance to the underprivileged and underdeveloped nations came from the Republican side.

The same Republican leadership that has initiated and encouraged an irresponsible and unsubstantiated attack on the State Department, would, by their votes and their actions, scuttle our most effective weapon against world communism—the Marshall plan.

This is their official record.

What is the program of the Republican Party? What constructive proposals are they offering the people? A careful analysis will reveal there is no program. There are no proposals. But there surely is a campaign strategy.

It is imperative that every American identify this Republican strategy for what it really is—a strategy to deceive, to confuse, to bewilder, and to frighten the American people. We have seen this strategy unfold itself under the guise of such terms as welfare state, statism, socialism, regimentation, and communism. These scare words have been hurled about with reckless irresponsibility. This is but the beginning of a frenzied effort to stampede the American people into a state of confusion and fear.

They are unwilling to clarify the issues. The Republican leadership is unwilling to tell the American people for what it truly stands. Well, let me tell you.

What the Republican Party really opposes is a program to provide a decent minimum of economic security for the American people. This is what they mean when they cry, "welfare state and socialism." What the Republican leadership really opposes is a constructive program to increase the living standards of the American people through the cooperative efforts of a government of the people working with the people. This is what they mean when they shout regimentation and statism. Yes, what the Republican leadership really opposes is a program to strengthen the democratic nations in Europe and Asia in their struggle against world communism.

Well, our President is on the road again taking the issues to the people, calming their fears, and reaffirming their faith.

The President will have the opportunity again to warn the people in these dangerous moments of the world that American democracy has grave responsibilities. He will speak in the spirit of Franklin Roosevelt, who, in the dark days of 1938, cautioned us with this following message:

"We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

Our President and the Fair Deal program are committed to the welfare of the people, for we know that as a nation we are only as strong as the people.

More on McCarthy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Burlington Free Press in a recent editorial comments on the McCarthy charges against the State Department. Mr. Pat Dunn, the editor, very clearly calls the turn on this situation. I agree with the thesis of the editorial in question and I am extending it as part of my remarks at this point:

MORE ON MCCARTHY

"Politics makes strange bedfellows," is a saying that is as old and as true as most things in our finite world. And don't they, though?

Segments of our daily press are trumpeting right in chorus with the Commie rag, the Daily Worker, that MCCARTHY is doing the country's foreign relations "irreparable harm" and his "unfounded accusations" are destroying American prestige abroad. Many of the phrases used in the editorial columns of the Red rag and of these great "independent" dailies are interchangeable and seem to be lifted, one from the other.

We are astounded at the slavish devotion to so silly a cause of great dailies such as Milwaukee's biggest paper. Hating MCCARTHY since he opened his political career, they now lead a chorus in condemning his work and his investigative actions.

Perhaps the metropolitan press has grown too big and too lofty and too far out of touch with the little people? They may echo the sentiments of the international set and of the present regime, but we give them odds they are off base 3 feet, in the opinion of most little people.

Damage to American prestige was done, we repeat, by the type of diplomatic representative the Roosevelt-Truman regime has employed. Some 90 individuals of a certain type suddenly kicked out of the State Department, employed there Lord knows how long—perhaps these, apparently the best the country could dig up to represent them before other nations, are what gave Hitler the idea ours was a degenerate nation. And then, the sudden gymnastics of the State Department in switching to the Marshal Tito faction in Yugoslavia and letting this vicious vindictive Communist give the business to our wartime ally in that nation. And now, China, where Chiang is a bum and not the great war year fighter for four freedoms. For our money, the whole four freedoms had a phony ring from the start as long as Communist Stalin was a subscriber thereto.

The great trust of our State Department in Russia through these years, if not indicating a betrayal, at the kindest, indicates an ignorance not in keeping with so-called leaders in our Government.

Great Campaign of Truth

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial from the Christian Science Monitor entitled "Great Campaign of Truth," which was reprinted as a public service by the International Latex Corp. in the New York Herald Tribune on April 27, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Editorial from the Christian Science Monitor]

GREAT CAMPAIGN OF TRUTH

President Truman is displaying a gratifying awareness that the struggle with Soviet imperialism is basically mental. Real gains for the free peoples will begin to appear as the attitude he expressed in his excellent speech to the American Society of Newspaper Editors is carried into action. Mr. Truman said that he had already directed the Secretary of State to plan a more effective national effort to use the great power of truth in working for peace.

The Soviet system does not even have the interest in truth which caused Pilate to

UNIVERSITY OF MICHIGAN LIBRARIES

ask, "What is truth?" It denies the whole concept of objective and permanent truth, and sets up instead a party line—defined from day to day by the Politburo. It is carrying on a vast offensive of suggestion, misrepresenting, and vilifying the free nations, particularly the United States. To deal with this aggression Mr. Truman calls for a great campaign of truth to be heard round the world.

He wisely recognizes that government can and should do only a part of this job. But that part can be vastly improved and extended. On its educational and information program the United States is spending less than $40,000,000 a year, compared with $15,000,000,000 for arms and $4,000,000,000 for economic aid abroad. Recently the House Appropriations Committee cut the funds for these purposes. Does this sound as if the American people yet understood the real nature of the struggle for the minds and loyalties of men?

Some competent observers believe that Russia is winning the war of ideas. Almost anyone who has been abroad in recent months has seen instances where American information and propaganda is outmatched by Soviet money, fanaticism, and effrontery. For instance, millions of "neutrals" were fed Moscow's bald "protest" about an American plane invading Russian territory and shooting at Soviet planes. Washington's sharp answer will be accepted by many, but it should have come faster and with more supporting evidence.

It is becoming harder and harder to pierce the iron curtain. The satellites are closing down American information services. Russia is spending huge sums trying to jam the Voice of America broadcasts. Senator BENTON has urged a world-wide network capable of putting America's story into every radio receiver in the world. He also urges documentary movies for at least one-fourth of the earth's population each month. These are ideas well worth exploring.

Much of the job must be done by private agencies—newspapers, magazines, radio, and movies. These are often given more credence than official information. They, too, need improvement. Too many times commercialized sensationalism or partisanship gives a distorted picture of America. Some movies are particularly damaging, even those which are useful at home in showing up abuses and injustices. Possibly one answer would be in a semipublic, nonprofit agency designed to tell democracy's story but avoid an official line.

Fundamentally, our hope lies in the power of truth. Our part is to seek it, adhere to it, and trust it. As we come to understand better that absolute truth is nothing less than God, the disposition to do that should be increased. We should then be less dogmatic, less ready to follow the Russians in taking a party line from one source, more willing to give unorthodox views a hearing. We should then listen more eagerly for truth and insist that it be strictly adhered to in presenting America's story to the world.

Acheson Persuaded To Stay

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column appearing in this morning's Washington Post by that eminent and fair-minded columnist, Mr. Marquis Childs. I regard this article as an eloquent expression of why it is so difficult to keep able men in key Government positions, and it is likewise testimony to the selfless devotion to duty of our distinguished Secretary of State in the face of almost incredible assaults upon his character.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HATE CHORUS—ACHESON PERSUADED TO STAY

(By Marquis Childs)

It is a strange commentary on the times that on one side of the stage in the present drama of foreign policy—war or peace—is the same cast of characters that played the same role in the years immediately preceding World War II. They might be called the hate chorus.

They are a weird blend of ex-this and ex-that; of chi-chi individuals who cling to the social label and very important Republicans. In 1938 and beyond they were in America First and they hated Roosevelt.

This time they consider the President beneath their contempt. Their hate and their malice are concentrated on Secretary of State Dean Acheson.

At a charming little dinner party given by a soloist in the hate chorus recently, Acheson's resignation was gleefully predicted even down to the number of days preceding the date on which he would be forced out of office. The prophet in this instance was one of the oddest characters in the group who has since been removed from the payroll of the Central Intelligence Agency; the last being an eventuality that may have been hastened by the fact his name was on one of Senator MCCARTHY's lists.

How much this prophecy derived from wishful thinking, compounded with psychopathology of a complicated nature, probably only a good psychiatrist could determine. But, in actual fact, the event this crew have so worked for and longed for came closer to happening than they could have known.

Not long before he left for the series of European conferences now in progress Acheson called on the President. The prolonged and nagging quarrel in Congress with all its savagery had deeply depressed him. He had a heartsick feeling that perhaps his usefulness was at an end.

While it has been for the most part outside the scope of the news, Acheson has in recent months been under a great personal strain in addition to everything else. One of his two daughters, Mrs. William P. Bundy, has been undergoing a series of major operations in connection with a grave illness.

This may have been one of the reasons why, as he told the President, he felt he could not and should not continue as Secretary of State. The President's response was immediate and unequivocal. He replied that whatever Acheson's personal wishes might be, he could not resign.

The President went on to say that he understood Acheson's feelings very well. To serve in high office in times like these was to take personal abuse of an unprecedented nature. But under the circumstances there was no choice but to go on. It was a duty not merely to people here at home but to free people everywhere.

You've got to stay here, Dean, and fight both the Communists and the Republicans, the President is reported to have said in conclusion.

The President was in a fighting mood and he conveyed to his Secretary of State something of this same fiery determination. Acheson left for Paris feeling better about the struggle to maintain some unity of policy at home and the struggle to maintain some unity of purpose among the western allies in Europe.

There was, of course, not a little politics behind the President's pep talk. He well knows that Acheson's resignation, no matter what the real motives, would be taken by the McCarthy-Wherry-Taft wing of the Republican Party as a victory and everything would be done to make it appear as a confession of guilt.

Between the President and his Secretary of State it seemed to be settled that there would be no change—certainly not before the elections of November 7. This means that there is not likely to be any change in or expansion of policy. And it is just here that one comes to the crux of the tragedy.

The policy being pursued today is not big enough or bold enough in relation to the threat of total war; a threat that seems to grow more real and more imminent with each day that passes. Both in theory and in practice the policy of containing communism through strength is inadequate. The policy of strength should be related to a far-reaching peace offensive carried to all peoples everywhere.

Perhaps no course whatsoever can avert destruction. But if there were an all-out effort to avert it, then at least there would be the satisfaction on the day it happened that everything humanly possible had been done on our side to prevent it.

Truman at Lincoln

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, there appeared in the Washington Post this morning an editorial which I think is very good. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 10, 1950]

TRUMAN AT LINCOLN

It is significant that President Truman elected to give the first major speech of his "nonpolitical" tour at Lincoln, Nebr. That is in the area where farmers have begun to grumble about price declines, and it is not far from the region where blowing dust and insects have seriously damaged the winter wheat crop. Mr. Truman's remarks thus can be taken as a preview of the administration's campaign to retain the farm vote. Not surprisingly at all, that campaign is based on the something-for-everybody formula of the Brannan plan. Evidently the administration is relying on price declines to bring farmer pressure on legislators who so far have refused to take the plan seriously.

A lot of nonsense has been written about the Brannan plan, and the President had a point in decrying the charges of regimentation. Any governmental program necessitates some controls, and it is the lack of

sufficient controls that has in part been responsible for the disgraceful potato glut. Nevertheless, it is undeniable that the Brannan plan would bring more direct dependence on the Government for farm income. That may not be regimentation, but it is scarcely the way to bring about greater control by farmers of their own destinies—a point Mr. Truman dwells upon. Moreover, the more governmental control there is, the more disastrous can be the effects of misjudgment—and that is where the possibility of ruinous cost comes in.

Most interesting is the President's reference, with apparent alarm, to the fact that farm prices have fallen 20 percent in the last 2 years. It is quite true that if farm prices were to plummet, it would be difficult to stave off a depression in the rest of the economy. Nevertheless, Mr. Truman speaks of price declines as if the highs of 2 years ago were normal. In point of fact, they were all-time highs occasioned by tremendous foreign demand, and what has taken place since is largely healthy readjustment.

It is on this point that the Brannan plan runs into perhaps its greatest difficulty in light of technological advances, new seeds and fertilizers and changes in farm patterns, many farm products are simply not worth even what they cost today. Yet under the Brannan plan many of the support levels would be even higher than under the present system. In other words, instead of bringing flexibility in supports, the Brannan plan would compound the rigidity by giving permanency to overvaluations. Consumption of perishables might be stimulated by lower prices to consumers—made up by Government payments to farmers charged against the taxpayers—and some overproduction might be checked by quotas. But it is hard to see how the shifts in production, better soil conservation and stimulus to more efficient farming the President talks about could be attained under a system which would make it more profitable for inefficient marginal producers to stay in business.

Should President Take a Hand in Congressional Contests?—Minnesota Poll

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, there appeared in the Minneapolis Tribune on May 7, 1950, what we call the Minnesota poll. I think this would be of some interest to all Members of Congress. For that reason I ask unanimous consent to have it printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of May 7, 1950]

MINNESOTA POLL—56 PERCENT SAY PRESIDENT SHOULDN'T TAKE ANY PART IN CONGRESSIONAL RACES

A majority of Minnesota voters think President Truman, who leaves today on a 9-day, 16-State speaking tour, should take no part in congressional election contests, the Minnesota poll finds in a State-wide survey. Fifty-six percent say the President should adopt a hands-off policy toward such contests.

But 39 percent contend that, as head of his party, "the President has a duty to help elect as many members of his party to Congress as possible." The remaining 5 percent are undecided or offer different answers.

Democrats call the President's scheduled tour nonpolitical in character but Republicans assert it will be a political mission. Observers point out that the President's route will take him through congressional districts in which Republican Congressmen are in the majority.

Views of Minnesotans on the question whether the President should or should not use his influence in congressional races were obtained in a survey in which a representative cross section of the State's men and women 21 years of age and older was questioned.

Interviewers, calling attention to the President's tour, handed each person a card bearing two statements and asked:

"With which of them do you most agree?"

The statements were:

Statement A: "As head of his party, the President has a duty to help elect as many members of his party to Congress as possible; therefore he should help them in their election campaigns."

Statement B: "Because he is President, he should not take any part in congressional election campaigns in the various States."

These are the results:

	Percent
Choose statement A	39
Choose statement B	56
Other answers	2
No opinion	3
	100

People who give other answers say "as President, he can do anything he wants to," or "both parties have always done it and I suppose he has the same right, regardless of how we feel about it," or "he should not be called upon to do this as he has enough to do now."

Democratic-Farmer-Laborites are inclined to favor the position that the President should help to elect as many members of his party to Congress as possible, but Republicans and independent voters differ:

	Democratic Farmer Laborites	Republicans	Independents
	Percent	Percent	Percent
Statement A	50	26	35
Statement B	47	69	58
Other answers	2	2½	1
No opinion	1	2½	6
Total	100	100	100

A Faribault farm woman thinks that if he got more Congressmen elected who agreed with him, he would get more done. A Duluth man comments that he has to have someone to help him. And a Minneapolis man believes that his speaking would not influence the vote just because he is President.

But another Minneapolis resident thinks the President should not participate in congressional campaigns, saying, "Let the people decide on candidates without the influence of the President." A LaSalle man says, "This is a democracy; the people should make their own decisions." A Worthington man thinks he should stay in the White House where he belongs.

Majorities of the city, town, and farm people interviewed in the study indicate they think the President should not campaign for congressional candidates.

Respectful but Despairing Plea to Mr. Truman

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. BEALL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial from the Baltimore Sun, Baltimore, Md., of May 9, 1950:

RESPECTFUL BUT DESPAIRING PLEA TO MR. TRUMAN

Those whose memories go back 2 years will remember that Mr. Truman's last campaign tour was a great political success. When it started, the President faced almost certain defeat. When it ended, the tide had turned and victory was in sight.

The only trouble with the tour was that it was so expensive to the taxpayers. Mr. Truman had to make so many promises to the various pressure groups that making good on them has given the country a succession of enormous deficits. The famous dollar gap of Europe is small compared to the dollar gap which Mr. Truman has presented to the United States.

Now Mr. Truman is off on another tour. He is going to visit those States where the outlook in November is least hopeful for his party. He will be tempted to bring those States into line by promising them more money out of the public till.

Is it too much to ask the President to restrain his generous impulses? Already he has brought the country to the point where people are beginning to ask questions about the value of the dollar. A few more billion-dollar promises and national bankruptcy will be in sight.

Fifty-five Thousand Communists Aided by 500,000 Fellow Travelers Seek To Destroy the United States

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, last week the Grand Lodge of Masons presented a grand lodge medal for distinguished achievement to that outstanding American, Mr. J. Edgar Hoover, director of the Federal Bureau of Investigation. As part of my remarks, I am including an extract from an address given by Mr. Hoover on that occasion. There can be no doubt that J. Edgar Hoover has first-hand knowledge about communism and Communists in this country. The extract in question appears in the current issue of the United States News and World Report.

FIFTY-FIVE THOUSAND COMMUNISTS

(By J. Edgar Hoover, Director of the FBI)

The times demand candid and forthright words. Communists have been and are today at work within the very gates of America. There are few walks in American life

UNIVERSITY OF MICHIGAN LIBRARIES

which they do not traverse. Their allegiance is to Moscow; their hopes are spurred by the writings of Marx and Lenin, not Jefferson, Madison, and Lincoln; their enthusiasm is whetted by expediency and deceit, not tolerance and brotherhood. Atheistic materialism is their idol; the destruction of the God of our fathers their goal. Wherever they may be, they have in common one diabolic ambition: to weaken and to eventually destroy American democracy by stealth and cunning. Theirs is an organization built and supported by dishonor, deceit, and tyranny and a deliberate policy of falsehood. They know that as long as the ideals of common endeavor, mutual respect and tolerance remain alive they can never bring to fruition the Communist world revolution. That is why Communists consider America their No. 1 enemy. A strong America, materially and spiritually, is a constant beacon of light, buoying the hopes and aspirations of millions of men, women, and children crushed under the yoke of Communist tyranny which today controls the destinies of one-third of the peoples of the world.

The Communists possess a well-knit, closely disciplined, destructive force of approximately 55,000 members in the United States. In actual numbers, their membership may not be large, nor have the Communists polled at any time a large number of votes in an election. This has been cited by the ignorant and the apologists and appeasers of communism in our country as minimizing the danger of these subversives in our midst. The actual strength of the Communist movement in the United States is not something that can be accurately stated in just so many figures. It has to be measured largely by the general mass influence of the party and its program. We no longer measure the importance of revolutionary organizations by size. In some places where there are only one or two men, more results are obtained than where they have larger organizations.

But, behind this force of traitorous Communists, constantly gnawing away like termites at the very foundations of American society, stand a half million fellow travelers and sympathizers ready to do the Communist bidding. These individuals, though not identified as Communists, are extremely dangerous to the internal security of this Nation, because as hypocrites and moral swindlers they seek the protection of the freedoms which they constantly seek to destroy. They represent, for the Communist movement, a source of wealth; financial resources; the creation of valuable contacts; levers of social, economic, and political pressures; recruiting grounds for espionage information and agents. Moreover, they do their work anonymously, in "front" organizations, and wherever they can exert the greatest influence, each doing his share to the best of his ability. These individuals are difficult to detect. They are disdainful of the very tolerance which enables them to betray their country. They practice their double-dealing, double-minded, double-tongued, and double-faced tactics on all fronts of our American life, whether it be in politics, in labor, in the press, in radio, in motion pictures, in the schools, or even in some of our churches.

The Communists have their membership concentrated in certain key areas of the United States—primarily in strategic industrial and population centers. This membership is coordinated through a national leadership and a dedication to an alien hate which looks abroad for its direction. If additional personnel, perhaps for a political pressure campaign, for infiltration into a labor union, or for a militant educational program, is needed, National Headquarters of the Communist Party will peremptorily transfer members, temporarily or permanently, into the strategic area.

Communist members, body and soul, are the property of the party. They scorn the standards of American democracy. They function like puppets on a string, ready at a moment's bidding to execute the will of the directing master—the Red "Hitler" at Moscow. The party, thereby, through mobility, central direction, and the disciplined fanaticism of its converts can, at any given moment, achieve power and strength in a limited sector. At times, this pressure is so well organized and expertly supervised that the Communists achieve gains out of all proportion to their numerical strength. That is the secret of Communist success; the tragedy of democratic resistance.

If every American faced the reality of what the fulfillment of the Communist objectives would mean to him—he would be inspired to work harder to protect and preserve the individual liberty and freedom which is part and parcel of our American way of life.

President Truman Again Asks for Action on Statehood for Alaska and Hawaii in This Session of Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a letter addressed by President Truman to Senator JOSEPH C. O'MAHONEY, chairman of the Senate Committee on Interior and Insular Affairs, urging the approval of bills to give statehood to Alaska and Hawaii. The letter follows:

MY DEAR SENATOR O'MAHONEY: I am highly gratified by the thorough and objective consideration which your committee is giving to H. R. 331 and H. R. 49, bills which would enable the Territories of Alaska and Hawaii to take their rightful place as members of the Union. As you know, I have long supported the objectives of these important bills which carry out the pledges made to the people of the two Territories.

I sincerely hope that the Congress, during its present session, will enact legislation granting statehood to Alaska and Hawaii. The need is more urgent today than ever before. By such action, we will not only promote the welfare and development of the two Territories, but also greatly strengthen the security of our Nation as a whole.

It should not be forgotten that most of our present States achieved statehood at a relatively early period of their development. The stimulus of being admitted as full partners in the Union, and the challenge of managing their own affairs were among the most significant factors contributing to their growth and progress.

RESOURCES ARE STRESSED

Very few of our existing States, at the time of their admission to the Union, possessed potential resources, both human and natural, superior to those of Alaska and Hawaii. I am confident that Alaska and Hawaii, like our present States, will grow with statehood and because of statehood.

There is no necessity for me to repeat at this time the arguments for statehood. The many qualified witnesses who have appeared before your committee have, I am sure, presented convincing evidence both as to the need for and the tangible benefits to be derived from statehood.

There is, however, one objection made by opponents of H. R. 311 and H. R. 49 which I believe requires further discussion because it goes beyond the question of statehood and raises a fundamental constitutional issue. I am referring to the objection that Alaska and Hawaii, as States, would be entitled to representation in the Senate of the United States disproportionate to their population.

This argument is not only entirely without merit, but also directly attacks a basic tenet of the constitutional system under which this Nation has grown and prospered. Without the provision for equal representation in the Senate of all States, both great and small, regardless of population, there probably would have been no United States.

NO ISSUES DISCERNED

This was one of the great compromises which the Federalist says was a result not of theory, but of a spirit and amity, and that mutual deference and concession which the peculiarity of our political situation rendered indispensable. There is no justification for denying statehood to Alaska and Hawaii on the basis of an issue which was resolved by the Constitutional Convention in 1787.

America justly takes pride in her record of fulfilling to the letter its obligations to foreign nations. We should be no less scrupulous in carrying out the promises made to our own citizens in Alaska and Hawaii. The case for statehood rests on both legal and moral grounds.

These are troubled times. I know of few better ways in which we can demonstrate to the world our deep faith in democracy and the principle of self-government than by admitting Alaska and Hawaii to the Union as the forty-ninth and fiftieth States.

Very sincerely yours,

HARRY S. TRUMAN.

Attacks on United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach two newspaper accounts of a significant address made in Milwaukee May 5 by George F. Kennan, counselor of the State Department and generally acknowledged to be the author of the policy of containment of Soviet Russia. It is noteworthy that although Mr. Kennan did not mention Senator MCCARTHY'S name in his address, two of the country's most distinguished independent newspapers simultaneously interpreted his remarks as a rebuke to "McCarthyism." The first of the articles is by James Reston, and appeared in the New York Times May 9; the second is an editorial which appeared in the Milwaukee Journal of May 7.

[From the New York Times of May 9, 1950]

KENNAN SAYS UNFAIR ATTACKS IMPERIL UNITED STATES FOREIGN POLICY—THEY ALSO TEND TO CAUSE STATE DEPARTMENT TO KEEP PLANS SECRET, COUNSELOR DECLARES

(By James Reston)

WASHINGTON, May 8.—George Frost Kennan, counselor of the State Department, is that rare Washington creature: a man who

writes his own speeches and does not hesitate to include therein a little history, some objective criticism and one or two ideas.

The net result of this unorthodox approach is that what he writes often has a delayed reaction. He did a piece for Foreign Affairs a couple of years ago under the pseudonym of Mr. X, which was ignored at first and eventually recognized as a detailed and authentic account of the policy of containment toward the Soviet Union.

He later delivered an address before the Academy of Political Science in New York that defined the possibilities and limitations of this country's foreign economic aid policy. This, too, was overlooked at the time, but now stands as the most informative and reliable official document on the subject.

Nevertheless, although he went to Milwaukee last week-end and delivered another reflective essay on United States policy in China and the consequences of McCarthyism, his remarks lost out in competition with other news and were scarcely reported at all in this part of the country.

MAIN POINTS ARE LISTED

Mr. Kennan had a little advice, not only for private citizens but for his colleagues in the Government as well. His main points were as follows:

1. The charges against the State Department should not be ignored. They have disturbed the American people because the people are beset with serious doubts and questions about American foreign policy that have not been answered to their satisfaction.

2. There is generally a great time-lag—as much as 5 or 10 years on the average—between cause and effect in major foreign policy developments. This fact is not generally understood by the people. As a result, they tend to demand results too fast, and they also tend to lay the blame or give credit for current developments to the people who happen to be in office at the moment, even though the real causes go much deeper in time and in complexity.

3. The United States failed to realize in the 1930's that the three totalitarian states that were most dissatisfied with the outcome of the First World War—Germany, Japan, and the Soviet Union—possessed, in combination, a greater military potential than anything that was likely to be mobilized against them.

4. The western allies also failed to face up to the humiliating fact that they won World War II only with the help of the Soviet Union, which was still saturated with hatred for us and determined to encompass our downfall.

5. Instead of recognizing this unhappy state of fact, and drawing from it the bitter lessons which it held for us, we consoled ourselves with the delusion that Moscow would change. We did not fully realize that we were in a situation where the power of the freed world after the war had not really been enhanced and where it would be a hard and dangerous, and wearisome task to restore peace except with Russia's consent and on Russia's terms.

6. Much of the misunderstanding and bitterness in the United States about the victory of the Communists on the Chinese mainland is the result of shallowness and oversimplification of what has been happening in China. Before the war we sentimentalized and patronized the Chinese people, and underestimated their feelings about the historical record of the west in that part of the world. During the war we ignored a great deal of evidence that the Chinese Government would not be able to consolidate its position. And later we gave them much material aid, which they misused and advice which they ignored.

7. It sounds plausible to blame the State Department for what happened in China, but China is not a province of the United States and the State Department did not decide that the Communist Party should be the faction which would have the best morale and discipline and pack the strongest political punch and win the civil war in China.

Mr. Kennan implied that only by direct intervention in China could the United States have changed the course of events, and he added: "I can conceive of no more ghastly and fateful mistake. * * * Nothing would have pleased our enemies more. * * *"

To blame the present state of our relations with the Soviet Union and Communist China on a few contemporary officials was not only an overly simple reading of history, Mr. Kennan concluded, but it created an atmosphere in which it was difficult for the Government to explain policies or to keep good men to administer foreign policy.

"If the atmosphere of public discussion is to be too harsh, too intolerant, too abusive," he said, "this is going to decrease rather than increase the possibilities for a frank and helpful exposition of Government policy to the public at large. * * *

"What I want to urge is only this: that you * * * recognize the profundity of the foreign-policy problems with which we are faced today; and that you do not be misled into the easy conclusion that the dangers and challenges and dilemmas of our world situation are the product of the mistakes or the ill will of any individuals who bear responsibility at this moment for the conduct of foreign affairs."

[From the Milwaukee Journal of May 7, 1950]

KENNAN TELLS OF DAMAGE OF MCCARTHY TACTICS

George F. Kennan returned to his home community Friday to urge the American people to have faith in their State Department, its policies, and its personnel.

If they do not—if they concern themselves with things which are shallow and fleeting and of dubious substance—there is serious danger of losing the cold war, he said.

No one, we are sure, will question Mr. Kennan's qualifications to discuss these matters. He is third in command in the Department of State. He is shortly leaving Government service for a long time. He has devoted his adult life to foreign affairs. He is the author of the policy of containing Russian communism which has engaged us in the cold war. He is an implacable enemy of communism.

The trouble with the American people today is that they are looking for scapegoats, Mr. Kennan indicated—scapegoats to blame for the fact that we are not getting quick results in foreign policy, the cold war is not going entirely our way, the Russians have made some gains, and China has fallen to communism.

It is an easy conclusion, he continued, that our challenges and dilemmas are entirely the product of mistakes, or of the ill will of individuals responsible for the conduct of foreign affairs. It is an easy conclusion that could be disastrous.

Mr. Kennan is not a pessimist about the cold war. He said that the dangers are no greater than they have been. Things have gone well for us in Europe, badly in Asia. The situation in both areas is still fluid, and can turn in our favor or against us.

We have, he indicated, done the best we could—all that was possible and practicable—and have nothing to be discouraged about. He even hinted that there was hope about China, saying: "We are now on the road to a relationship with China which will be expressive of our high regard for the Chinese people but unencumbered by past involvements and illusions."

"I am not a pessimist, but," said Mr. Kennan.

"If the American people take their eyes off the ball, or if they fail to keep in mind the profundity of our problems and the depth in time and space of their origins, if they allow the quiet and sensitive and gifted people to be driven out of the State Department and Government by wild and unfounded charges, then George Kennan can give no promising assurances.

"The responsibilities borne by men who have to conduct foreign affairs are neither light nor easy," he explained. "This country is not rich in men both qualified and available to take these positions. * * * The strains under which they work leave them a very slender margin of physical and spiritual energy to absorb abuse and derision from the people for whom they conceive themselves to be working. * * * The atmosphere of public life does not have to deteriorate much further to produce a situation in which very few of these people will be able to continue with government.

"The margin of safety with which our country moves in the world today is not great enough to permit us to be reckless and wasteful with the talents and the idealism of those people we depend on for the generalship of our peacetime battles," he explained.

Mr. Kennan at no time named Senator MCCARTHY, of Wisconsin, who instituted the campaign against the State Department that is now rocking the country. But it was obviously this campaign that he had in mind when he concluded:

"Perhaps only someone who has lived for many years in totalitarian countries can feel as strongly as I do how vitally important it is to us to preserve the spirit of tolerance and liberality in our relations with each other and the readiness to give the other fellow the benefit of the doubt, where doubt exists. These things lie at the heart of our civilization. They are essential to the preservation of our national identity and to our entire claim of world leadership. If our enemies without can force us to abandon the spirit of tolerance by frightening us with their agents inside our country, then they will have bypassed the Maginot line of our society; they will have seized the citadels from within, and we on the firing line will have been left with nothing to defend."

Mr. Kennan's story was told with a sincerity, a moderation and a simplicity that won him an ovation from his audience of 250 persons. It is regrettable that more Milwaukeeans did not hear him. It would have done much to clarify their thinking about the McCarthy campaign and to bring them to a realization of what a dangerous and irresponsible thing it is.

Stassen's Attack

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. MCCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of May 4, 1950:

STASSEN'S ATTACK

As president of the University of Pennsylvania, Harold E. Stassen is hardly in the proper position to engage in political warfare. But the attack on President Truman's administration which Mr. Stassen unleashed Tuesday night would indicate that Mr. Stassen is holding two jobs, one as a university president and the other as sharpshooter for the Republican Party. Mr. Stassen, of

UNIVERSITY OF MICHIGAN LIBRARIES

course, is entitled to attack Mr. Truman and the Democrats as an individual. Even as the head of one of our large universities he is entitled to criticize the President and the administration. But it would seem that an out-and-out political broadside such as Mr. Stassen fired at the President this week might well have been left to some Republican who is strictly in the business of politics and not part politician and part university president. Mr. Stassen's speech does not compare very favorably either in restraint or content with the speeches that have been made by his fellow educator, General Eisenhower.

Inexperience Blamed for United States Role in Far East

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the personnel of the State Department and the far-eastern policy, printed in the day before yesterday's Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INEXPERIENCE BLAMED FOR UNITED STATES ROLE IN FAR EAST

(Second of four articles on the men who make American far-eastern policy. As a specialist in this field, Mr. Isaacs analyzes a serious personnel problem faced by the State Department and offers some suggestions.)

(By Harold R. Isaacs, special correspondent of the Christian Science Monitor)

WASHINGTON.—It is an arresting and uncomfortable fact that there is not a single man at the top policy-making level of the State Department who can be described as a matured and experienced hand in Far East affairs. This is by no means the whole explanation for American failures in Asia. But it is a significant part of the explanation.

For both Secretary of State Dean Acheson and Dr. Philip C. Jessup, now one of his top policy advisers, Asia lies beyond a horizon dimly seen. Dr. Jessup's recent swift journey across the world could not overcome the deficiencies which he probably would be one of the first to acknowledge. Yet he has had to take part in serious policy decisions based precisely on this deficient background.

It is presumably at the next lower rung in the hierarchy that one might expect to find the riper kind of experience needed to provide the materials for higher judgment. Yet here, too, there is no change in the characteristic pattern.

POLICY PLANNING

High in State Department councils, in an adjacent sort of way, is the Policy Planning Committee. It was headed until recently by George Kennan, whose chief experience has been in Russia, and who is reputed to be a scholarly and thoughtful individual. His capacity for global thinking, however, was never quite able to embrace Asia. Like many others in Washington, he became an involuntary captive of cold-war thinking, and the trouble about Asia is that so much about it cannot be understood in the simplistic terms of the cold war.

One member of this committee is John P. Davies, Jr., who was born in China and served his entire Foreign Service career there, plus 2 years in Moscow. Mr. Davies is probably the ablest and most knowing Far East man in the Department today. But he had the misfortune to tangle with Maj. Gen. Patrick J. Hurley during General Hurley's mission to China late in the war. Mr. Davies was one of that small group of China officials who foresaw the collapse of Generalissimo Chiang Kai-shek and tried to foresee what other political combination might provide a new basis for American policy there.

EXPERT FROZEN OUT

For this reason he has been tarred by Chiang Kai-shek lobbyists and propagandists in this country as one of those responsible for the China debacle. Although he commands respect in the State Department, he has not been able, as a result of this, to hold any post in which he could exert any strong influence on the making of Far East policy. Indeed, it is quite possible that Far East matters are now not even within his purview on his present job.

Over on the operational side, the man who became the first Assistant Secretary of State for Far Eastern Affairs under the recent reorganization was a career diplomat, W. Walton Butterworth. Mr. Butterworth served a tour as a stripling vice consul in Singapore 20 years ago. He went from there to Europe and to a host of jobs far from Asia and Asian affairs. He did his most important work in Spain during the war. He did not see Asia again until 1946, when he went to China with Gen. George C. Marshall. He served there for a year and a half and returned to become America's top Far East official late in 1947. He has a reputation for being able, courageous, shrewd, but not for having a detailed knowledge of Asia.

LONG CAREER

He was recently detached from his other duties to concentrate on the problems of the Japanese peace treaty. His successor as Chief of the Bureau of Far Eastern Affairs is Dean Rusk, former Deputy Under Secretary of State. Mr. Rusk has had a long academic and governmental career in this country, none of it directly concerned with Asia until he went to India as an Army staff officer during the war. He is obviously a man of ability. But in his new job he has to start from scratch, and that, at this stage of the game, is very far back.

The career men who sit at the various geographic desks under Mr. Rusk are usually too far down to have much to do with the making of policy. The business of making a career in Government service often has a way of routinizing and bureaucratizing men and keeping them from capitalizing on any latent ability they might have. The Foreign Service in particular has not been a notable producer of notable men for the high policy-making jobs. The few individuals with outstanding spirit and special attainments who crop up in its ranks every once in a while usually run into obstacles, internal or external, that block their advancement. In a bureaucracy only the safe men normally get ahead, and it is not safe men who can make effective policy for the United States in these times, especially in the Far East.

Some of these officials, like John Allison (northeast Asia) and Philip Sprouse (China) served for many years in their areas. Mr. Sprouse is about to be succeeded by Edmund Clubb, who has also spent his whole career in China. The man who presides over the Office of Southeast Asian Affairs, on the other hand, is William B. Lacy, a Government economist, who had never set foot in Asia until last spring, when he made a fleeting trip there.

Under these regional heads, more junior officials sit in various spots. They conform to the usual law of averages and have varying amounts of knowledge and experience. Every once in a while a junior turns out to be superior to his superiors, and, as everyone knows, this is a dangerous business for the junior. Many a man with a light has to find a bushel to hide under or take the consequences. This is normal bureaucratic routine and it does not make for much vitality in the Government organism as a whole.

Still farther down the line is the Office of Intelligence and Research, where a few of the most knowing and knowledgeable people in the whole State Department can be found. But it is not often that these people have a chance to make any impact on policy. They bring together all the strands of information that come from missions abroad and other sources. These are not always adequate. They try to use such judgment as they have, but whether their findings influence the upper brackets of policymakers is a matter of chance or circumstances. In a few notable instances, their findings have been deliberately ignored and policy decisions made that ran directly counter to their factual conclusions. It is no joke to say that this opens them to the suspicion of being maverick, if not downright subversive.

EUROPEAN SLANT

But all the men who, for good or ill, work in the Far East sections of the State Department suffer from another disability that has little to do with their merits or demerits as individuals. This is the deadweight of the European outlook on Asian affairs. If it were possible to put one's finger on any central factor in the weakness of American Far East policy, one might say it is the failure to see Asian problems in Asian terms. Decisions about Asia are conditioned by, and often subordinated to, European considerations.

This was the decisive factor in all American policy in southeast Asia from 1945 onward. It was all but ruinous in relation to Indonesia. It is still operative in relation to Viet Nam. The recent decision, for example, to support the French Army in Viet Nam was a decision made not by men primarily concerned with Asia but by men primarily concerned with Europe. The factors determining American policy in Viet Nam have much more to do with France than they have to do with Viet Nam. Hence, among the makers of American Far East policy one would have to include American diplomats in Paris and the men who sit in the Western European Division of the State Department. It need surprise no one, therefore, if the results are, from an Asian point of view, ruinous.

Veto of the Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Thomas L. Stokes, which appeared in the Washington Evening Star of April 21, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGENCY IS THE TARGET—CONSUMERS COULD STILL LOSE VICTORY WON IN VETO OF KERR NATURAL-GAS BILL

(By Thomas L. Stokes)

The consuming public won a signal victory that it could see, out in the open, when President Truman recently vetoed the Harris-Kerr-Thomas bill designed to exempt independent natural-gas producers from regulation by the Federal Power Commission.

But the story is not ended. The public still might lose some effects of that victory and that takes us to a part of the Government process often overlooked by the public. That is the commission that administers regulatory laws under our commission form of Government. Such commissions have wide discretion, and can make laws really effective or dilute them.

Involved in this instance is the Federal Power Commission and the 1938 Natural Gas Act over which there has been constant friction within the FPC as to its scope. The Supreme Court held that under that act the FPC could regulate independent producers, but the FPC has approached the issue divided and warily. The purpose of the Harris-Kerr-Thomas bill was to make sure it did not exercise such power by a specific prohibitory statute, a familiar technique in recent years, and that measure squeaked through Congress by close margins under pressure from big oil interests that own the bulk of natural gas reserves.

MOVE TO RECOUP IN AGENCY

Thwarted by the Truman veto, sponsors of that bill now have concentrated on the FPC in an effort to recoup in the administrative agency. They include politically powerful figures, notably Speaker SAM RAYBURN, Democrat, of Texas, to whom the President is beholden for his legislative program, and who took the floor personally to jam the bill through the House by two votes. Another is Senator BOB KERR, Democrat, of Oklahoma, who has considerable influence among oil men—of which he is one—who have been generous with campaign contributions to the Democratic Party.

They want the President to reappoint to the FPC its current Chairman, Nelson Lee Smith, a Republican, who is sympathetic with their position. His term expires June 22.

Chairman Smith was not only for the Harris-Kerr-Thomas bill, and wanted the President to sign it, but in the Eightieth Congress he was for amendments to the 1938 Natural Gas Act which went beyond exemption from regulation of independent producers to include also a new rate-making formula. In that view he was supported by Commissioner Harrington Wimberly, a Democratic member from Oklahoma.

Those who fought the broader Rizley-Moore bill of the Eightieth Congress and the Harris-Kerr-Thomas bill which President Truman vetoed, are hostile to Mr. Smith's reappointment because of his attitude.

COMMISSION DIVIDED

In recent years the Commission has been sharply divided over the extent of natural gas regulation, with continual strife.

When the Rizley-Moore bill was before the Eightieth Congress, the FPC on which there was then a vacancy, divided two and two, with Commissioners Claude L. Draper, Republican, and Leland Olds, a Democrat, opposing it vigorously, and Chairman Smith and Commissioner Wimberly supporting the amendments which were regarded as of about the same effect as the Rizley-Moore bill.

To the vacancy President Truman appointed Burton N. Behling, head of the FPC's natural gas investigation staff. When it was revealed that he sided with Chairman Smith and Commissioner Wimberly on the proposed amendments and thus would break the tie in the Commission in favor of the oil and gas industry position, such a protest arose that the President finally withdrew the nomination. Instead he appointed Thomas C. Buchanan, of Pennsylvania, a Democrat, who had served for several years on Pennsylvania's utility regulating commission.

This gave the strict regulationist faction a temporary edge until the term of Leland Olds expired last year. He was reappointed by the President, but the oil and gas interests, ever watchful on the administrative as on the legislative front, succeeded in defeating his confirmation after a bitter fight. To that vacancy President Truman named his old friend, Mon C. Wallgren, ex-Senator and ex-Governor of Washington, who sided with strict regulationists in support of a veto by the President, which seems again to give the majority to that viewpoint.

However, proponents of regulation are taking no chances and want to prevent Chairman Smith's reappointment and, if that happens, his confirmation by the Senate.

To Save $4,000,000,000 in Taxes

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clarence K. Streit from Freedom and Union for March 1950:

TO SAVE $4,000,000,000 IN TAXES

(By Clarence K. Streit)

ATLANTIC UNION SEEN ALSO AS GIVING LIBERTY 50 PERCENT MORE POWER, YET CUTTING UNITED STATES ARMS BURDEN TWO-THIRDS IN DECADE

How can the burden of taxes be lightened? That is the question more and more every March.

Something can be done in the domestic field, but hardly enough for the taxpayer to feel it. The reason is that 71 cents of each 1951 United States budget dollar goes to pay for past war or present defense against either cold or shooting war. Only 6 cents goes for social welfare, health, security; only 23 cents for all the other peaceful governmental services put together.

If there is to be tax relief the bulk of it must come in the international field, without weakening our defenses, either in the present cold war or in the possible shooting war. None but Communists would want to weaken these defenses. All others would much prefer to make them stronger, but to do this, if at all possible, without increasing the tax burden but lessening it instead.

How can we work this wonder, of strengthening our defenses while lessening the taxation burden?

The establishment of a federal union of the North Atlantic democracies—which resolutions now before Congress would have us explore in company with the other six sponsors of the Atlantic Pact (Canada, Britain, France, the Netherlands, Belgium, and Luxemburg)—would do this in four ways:

1. By giving greater defensive power with no increase in cost; by giving the taxpayer, in short, more for his money;

2. By increasing the national income at the same time, thus lessening the ratio of the tax load to the income of the people who carry the load;

3. By lessening the cost of defense through removing unnecessary and dangerous duplication by the democracies; and

4. By lessening it still more through eliminating excessive defense expenditure and in other ways.

The total effect of these four factors would be, by conservative estimate, to reduce the defense burden of the United States taxpayer $4,000,000,000 a year, while giving him at least 30 percent more defensive power. Moreover, they would reduce his defense burden in 10 years of Atlantic union to one-third of what it is now while increasing his defensive strength by at least 50 percent.

A detailed consideration of each of the four points will show how conservative this estimate is.

First. There can be no doubt that creation of this union of the free would give the United States taxpayer at least 30 percent greater defensive power at no extra cost. Why? The United States is now spending $13,000,000,000 annually on defense, the other six founders of the proposed union are spending a total of $4,000,000,000. The aggregate annual total of the seven is $17,000,000,000. If United States taxpayers continued under union to pay $13,000,000,000 of this $17,000,000,000 bill, they would be getting a $17,000,000,000 union defense force for a cost of only $13,000,000,000, or 30 percent more for their money.

By this calculation, the other democracies would be getting still more for their money, since they are now spending much less on their national defense. Their population and income are not so great as those of the United States, but the Atlantic union defense force would be as much theirs as ours. Just as the citizen of Rhode Island can count on the United States Army to defend him to the same degree as can the New Yorker or Californian or Ohioan, the citizen of the Union in France or Belgium could depend on it as much as those living in North America.

Atlantic federal union by this calculation would give the British eight times more defense for what they now pay in taxes; the French, 15 times more; the Canadians, 43; the Dutch, 76; the Belgians, 97; and the Luxemburgers, 5,666 times more.

But this calculation errs on the conservative side.

Consider all the United States taxpayer would gain—still at no extra cost—in defensive power by the organic union of our naval, air, and atomic arms with the world-dispersed bases now held by the British, French, Dutch, and Belgians. Consider the gain in strength through the fact that the western European territory of the union would itself be an advanced base. This territory, moreover, is the strategic hub of the principal hemisphere of the air age—the hemisphere that has, as Parker Van Zandt has pointed out in July 1947 freedom and union, 90 percent of the land on this planet, 94 percent of its people, 98 percent of its industry.

Ponder, too, how the British, French, Dutch, and Belgians would gain by the organic union of their defensive position and power with the vast industrial arsenal of the United States and Canada—a great citadel with two oceans for moats. Consider how this great rise in their defensive strength at no extra cost would improve their morale, their will to resist any invasion. And then try to calculate how this improvement in their morale would further strengthen the defense of the American taxpayer's individual freedom.

Look at the kind of attack—atomic attack—that alarms people most. The most hopeful practical defense against it is twofold—dispersion and power to retaliate decisively.

UNIVERSITY OF MICHIGAN LIBRARIES

Consider how much more dispersed the vitals of this ocean-scattered union would be than those of any democracy now, how hard it would be for an aggressor to knock out at one surprise blow all its means of dealing a much mightier counterblow.

Consider, too, how much more rapidly the union could develop power in this field through the close combination of European pure science and American technical know-how. It was cooperation between these two that produced the atomic bomb, but since the war, this has fallen away through the recrudescence of nationalism's loyalties and suspicions. Union would develop a far closer cooperation in this field than existed during the war, and at the same time immensely improve—still at no extra cost—security from spies.

Even this much thought shows how much we err on the conservative side when we say the United States taxpayer would gain by Atlantic union 30 percent more defense for his money. It would still be conservative to estimate our gain at 50 percent at least.

Second. If one adds up the national income of each of the seven sponsors of the Atlantic Pact in 1947, the latest year for which these figures are available for them all, the total, as shown in table II, is 283 billion. If the stimulus to production that union gave resulted in a mere increase of 6 percent in this Atlantic union income, it would amount to $17,000,000,000, or the total amount the same countries are now spending on defense.

Suppose the national income of the union rose to no more than by 10 percent, a very modest rise, or by $28,000,000,000. That would make its income $311,000,000,000. Suppose it neither increased nor reduced the $17,000,000,000 figure for defense. Even so, the ratio of the burden of defense to income would have gone down from $1 in $17 to $1 in $19, a reduction of 12 percent.

Among the 13 States, however, the constitution of a Federal Union in 1789 rapidly changed the picture from bust to boom. There are no good figures available on the total income or even on the foreign trade of each of the 13 States before union, but we do know that the value of the foreign trade of the United States quadrupled in the first decade of union.

True, the 13 States had a vast area of undeveloped land, but they were handicapped in developing it by the lack of people, the slowness of transportation, the lack of financial and industrial power. The Atlantic union would have, in its African possessions alone, 10 times more territory to develop than the 13 States had from the Atlantic seaboard to the Mississippi when their Union began. Canada and Alaska could absorb many millions more people, and western Europe could supply more good people now than it could 160 years ago.

The Atlantic union, moreover, would have far swifter means of transportation everywhere than existed then, and the greatest industrial plant the world has ever known. And, instead of beginning with nothing but overdue debts, as did the United States, the Atlantic union would start with practically all the world's gold reserves and financial power.

This would be something quite unprecedented in history—this new republic starting with vast areas rich in undeveloped resources combined with the people most industrially advanced on earth and remarkably equipped with financial, transport, and factory power. It should be noted, too, that this union could be brought about only by mutual agreement of the founding democracies, first, by their delegates in setting up a constitution, and then by their citizens in ratifying it. This would mean that its people had not only tackled great difficulties but overcome them—and would begin their union with all the coverage, vision, and buoyant confidence in themselves and their future that this achievement implies.

Alongside of these factories, the transition difficulties the union would face would seem to be small. It appears reasonable to believe the stage would be set for a period of sound, expansive development, the like of which men have never seen—a period of rapid growth for which "boom" would be too mild and misleading a term.

To be conservative, however, let us estimate that national income of the union would not octuple in the first 10 years, or even quadruple, but would merely double. That would mean a total income of $566,000,000,000. If the cost of its defense remained at $17,000,000,000, the ratio of defense burden to income would then have fallen from $1 in $17 to $1 in $33. It would be only half as heavy as it is now. For the United States taxpayer the ratio fall would be from $1 in $16 to $1 in $31. Coupled with our first point, this would mean that the United States taxpayer would be getting 50 percent more defensive protection at half the present burden.

All this, remember, is estimated on a conservative basis. Moreover, it assumes no reduction whatever in the amount spent on defense. But there is good reason to believe that this figure could be reduced by union. Which brings us to our next point.

Third. Every merger permits economies in removing unnecessary duplication. This would certainly be true of the proposed Atlantic union. At present its proposed founders are maintaining six separate armed establishments (omitting Luxemburg because it is so small). This means six separate defense departments and six independent general staffs, all trying to do the same job, and none able to do it so well, or economically, as would one union defense department and one union general staff. The present duplication is not only expensive but dangerous, particularly when confronting the centralized armed power of Soviet Russia. This is also true of other duplications in the armed forces of these six democracies, as in their atomic plants and competing spy services.

If anyone proposed to save money and yet keep up the defensive power of every part of the United States by dividing its 48 States into 6 sovereign republics and giving each its proportionate share of the existing defense force and budget to handle independently, with no stronger link between them than the Atlantic Pact offers, he would be considered crazy. And he would be crazy.

The illustration shows how incalculable is the gain, both in money and defensive power, that comes from merging six independent defense establishments into one force. But let us be conservative still, and estimate the saving the Atlantic Union would make on this score—with no loss but only gain in defensive power—at merely 10 percent of the present $17,000,000,000 bill. That would be a saving of $1,700,000,000. If the economy were 15 percent, it would total $2,500,000,000 a year. The saving to the United States taxpayer would be respectively $1,300,000,000 and $1,950,000,000.

Fourth. Consider the economies in defense that union would permit, apart from ending duplication. For one example, the union would have about 90 percent of the world's naval tonnage. It would not need to maintain in active service so huge a margin of superiority. As Will Clayton has pointed out, it could retire half of its naval tonnage, and still have 80 percent of the world's active total. If it put on the inactive list two-thirds of its tonnage, it would still retain 75 percent of the world's active total.

Moreover, because of its globe-dispersed bases, the Atlantic union would not need the expensive, long-ranging type of warships and carriers the United States has found necessary, from lack of bases. It could depend more on smaller carriers and warships, cheaper both to build and maintain, less of a risk in battle, and more dangerous to the submarines which form the chief Soviet naval arm.

Similar substantial economies could be gained for the same reasons in the air arm by the union. It could rely much more on medium range bombers than the United States does today. These cost much less to build and operate than 10,000-mile rangers. They can be defended better by fighter planes and can fly lower over enemy territory and bomb more accurately.

There are further savings to be made—again with only gain in power—in standardizing much of the equipment of the Atlantic union defense force. Now, when the forces of western Europe are being rebuilt, it would seem particularly wise to speed this standardizing as only union can speed it.

Not to alarm the admirals and others, let us suppose the union made no drastic economies under our fourth point. Let us estimate this economy at only 10 percent, too. That would mean another $1,700,000,000 saving for the people of the union, $1,300,000,000 of which would go to American taxpayers.

It would still be conservative to estimate the combined saving on the third and fourth points at 25 percent. This would mean a total of $4,250,000,000 a year, of which $3,250,000,000 would be a direct saving for the United States taxpayer.

In fact, the taxpayer would be saved the entire $4,250,000,000. For the $1,000,000,000 economy the European members of the union would enjoy would reduce by $1,000,000,000 the Marshall plan aid they would need for United States taxpayers to furnish.

Nor would this be all the saving the American taxpayer would enjoy. With the greater security and confidence that union would bring to its European members, its great stimulus to business, and its removal of the fear of further devaluations, there would be little need left of further Marshall plan aid to defend the union's European territory in the cold war. Private enterprise, as Will Clayton predicts, would take over most of the job in this area, and much of it in the other Marshall aid countries. The United States taxpayer should save on this score at least another billion dollars, bringing his total saving to $5,250,000,000.

The union might also save about $750,000,000 by funding the present public debt of all its seven members at the same rate of interest as that paid by the United States, which is lower than what the others, except Britain, pay. Result: A total saving up to $6,000,000,000 a year.

By taking over the present debt of each member democracy, along the lines that Alexander Hamilton pioneered so successfully, the union could also insure that an immense amount of private capital would be available in Europe for reconstruction. This would make still less necessary any further taxation of Americans for Marshall aid purposes.

The union could effect still further savings in the cost of diplomacy and in some other governmental services. But these would be small compared to the saving on defense.

In summing it up, let us remain conservative and estimate the total saving to the United States taxpayer on defense not at $6,000,000,000 but at only $4,000,000,000 a year. If we return to our first and second points, and assume that the doubling of the union's national income in 10 years applied equally to the United States part

of it, then we find that this $4,000,000,000 saving would result in the ratio of the defense burden to national income falling from $1 in $16 to $1 in $45.

The short of it is that Atlantic union would not only save the United States taxpayers $4,000,000,000 a year at least, but would give them 50 percent more effective defensive power at only one-third of the real burden they bear today.

ADEQUATE DEFENSE, BALANCED BUDGET

Since Soviet Russia is spending so much more of its national income for war than we are now, some argue that it would be dangerous to make any cut in the arms expenditure of the free. And others argue that the free should spend more, not less, on arms now.

One may answer that Atlantic union would change this picture by the formidable rise in moral as well as general material power that would result, in addition to the great increase in strength union would proverbially bring on the purely military side. But, for the sake of argument, let us assume that it would be wiser for the free to continue spending as much as at present on defense, even to increase that expenditure. In either event union would still lighten the taxpayer's burden. Consider:

No one would argue to continue wasteful expenditure on arms, or expenditure that got less return for the money than could otherwise be had. The $4,000,000,000 thus saved for United States taxpayers by union involves no loss in the armed power of the free. If the free plowed back into arms three-fourths of this economy, they would be increasing their present nonwasteful, effective arms expenditure by $3,000,000,000—and yet they would be spending $1,000,000,000 less than at present.

If they put all their arms economies back into arms, they would still be lightening the taxpayer's burden by (a) giving him more defense for his money, and (b) enjoying the increase in national income that union would bring. And both these factors would remain true if the union decided to spend, say, twenty or twenty-five billion dollars on arms, instead of the total $17,000,000,000 the seven democracies now spend.

If it were wise for the seven when federated to increase their arms bill by half, from seventeen to twenty-five billion dollars, it would be even more necessary for each of the seven, if they did not federate, to increase its arms expenditure even more. But for the American taxpayer, to get without union the benefit of $25,000,000,000 of defense, the United States would have to increase its present expenditure of $13,000,000,000 by levying $12,000,000,000 more in taxes. To get this same $25,000,000,000 of defense through union it would need to add only $6,000,000,000 in taxes to the American's burden, and $2,000,000,000 to the load on the other citizens.

That is, the United States taxpayer, instead of having to pay 100 percent more for defense, would need to pay only 50 percent more. In other words, a 50-percent increase in the arms expenditure of the union would be the equivalent of a 100-percent increase in the same expenditure by the United States as a separate sovereign country.

It follows, therefore, that if it is wise for the free to spend more on arms, then the more they need to spend, the more the United States taxpayer (and the Canadian, British, French taxpayer) will lighten his burden by Atlantic union. Americans get the equivalent of a 100-percent United States increase in arms expenditure at a saving of $6,000,000,000 by Atlantic union—in addition to enjoying all the other savings and advantages in increased power that union brings. The saving to the Canadian and European citizens of the union is still greater.

And with every strong democracy that was added to this nuclear union of seven, the United States taxpayer—and every other taxpayer in this union of the free—would be gaining still greater protection from war while carrying still less of a burden.

Foreword of the May Issue of the Annals of the American Academy of Political and Social Science

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, on Saturday last, through the kindness of Dr. Ernest Minor Patterson, president of the American Academy of Political and Social Science, I was able to examine the galley proofs of the May issue of the annals of the academy. That issue, which will be off the press this coming Wednesday, is devoted entirely to the subject of gambling and law enforcement in the United States. It will contain 17 articles written by eminent authorities on the subject.

As most Senators know, publications of the 61-year-old Academy are noted for the reliability of their contents, and statements found in these publications are cited throughout the United States and abroad as authoritative statements of fact.

I do not want to take the time of the Senate to go into any detail of the contents of the May issue. However, I feel I should tell my colleagues that the high type of factual material it contains should prove extremely valuable to the special committee just established by the Senate for the investigation of organized crime. Separate articles appear on such subjects as bookmaking, slot machines, and the enforcement of gambling laws.

Experts from all over the country prepared the articles, and these experts are among those who most likely will be called to testify before the special committee. I particularly want to call to the attention of the Senate the two excellent articles, one on gambling odds and the other on lotteries, prepared by a local expert who has spent 20 years investigating the subject of gambling. He is Ernest Blanche, Ph. D., chief statistician for the Logistics Division, General Staff, United States Army.

I congratulate the Academy in issuing such a factual and timely publication, and suggest that the May issue of the Annals be placed on the must list of reading for all senatorial offices.

I commend the reading of the publication by Members of the Senate to give them some idea of the problem the special committee named today by the President of the Senate will have.

I ask unanimous consent that the foreword of the May edition of the Annals be printed in the Appendix of the RECORD, together with a list of the articles contained in it, and the authors of those articles.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

FOREWORD

Gambling is a well-nigh universal phenomenon. It occurs among people of all ages and cultures. Nor is it an offspring of modern civilization, for it was encountered in primitive communities. Indeed, many of the forms of gambling, as well as some of its rationalizations, go back to the dawn of history. Even the Hittites of Biblical times were interested in improving the breed of horses, which is the current cliché justifying the "sport of kings" and its concomitant, betting on the races.

American attitudes toward gambling have always been ambivalent in character. Widespread condemnation and participation in gambling go hand in hand. The public press sporadically inveighs against gambling and its attendant evils, yet facilitates it by publishing the data essential to gambling in many forms. Churches condemn gambling, yet profit from raffles and lotteries. Legislatures enact antigambling statutes, yet make it possible for States to participate in moneys wagered at race tracks. Flurries of strict enforcement of gambling statutes alternate with long periods of quasi-official tolerance. The citizen who becomes outraged at revelations of police corruption in connection with gambling nevertheless patronizes the neighborhood bookmaker or the "one-armed bandit."

Moreover, each era has seen a fresh emphasis on some new, or the revival of an old, game of chance or outlet for the gambling instincts of the individual. This generation differs from its predecessors perhaps more in terms of an increased participation in the pastime, rather than in the multiplicity of forms it has assumed. Indeed, we have found an amazing similarity between new and old forms of gambling; the stakes are now astronomical, where once they were moderate; the modern devices now employed disguise only thinly the ancient games our forebears played.

It is extraordinary that, despite such universal participation and interest in gambling, little basic material of an analytical and scientific character has been published concerning this absorbing subject. The literature of gambling is studded with colorful polemics concerning its moral and social features; the shelves of libraries are filled with reports concerning official malfeasance in the enforcement of gambling laws, containing some illuminating chapters on the already well-known aspects of gambling. But nowhere, to our knowledge, has the attempt been made to envisage the problem in all its many-sided forms, and from all its facets. Nobody has attempted to analyze and describe the various forms of gambling, as well as to evaluate their moral, political, social, psychological, and economic implications.

This symposium, therefore, represents the first attempt at an over-all analysis of the problem of gambling. It is by no means complete, for this would have required far more space than was available to us, and other techniques of assembling contributions besides that of voluntary collaboration. Nevertheless, despite the gaps and limitations of our material, of which we are painfully aware, we believe that the outstanding features of the problem of gambling have been covered objectively. Our contributors have presented data in the various articles contained herein which make it possible to answer some of the basic questions concerning gambling.

UNIVERSITY OF MICHIGAN LIBRARIES

Recent developments have enhanced the timeliness of this volume. During the past few months, gambling has been headline news. At their annual meeting in the fall of 1949, the mayors and city managers of the American Municipal Association discussed the alleged relationship between gambling and organized crime. One result was the launching of a campaign by metropolitan newspapers throughout the country to expose "the nation-wide interlocking operations of well organized crime syndicates heavily financed by the Nation's $15,000,000,000 gambling bill."

On January 5, 1950, United States Senator ESTES KEFAUVER of Tennessee called for a Senate investigation of interstate gambling and racketeering. A few days later, Mayor William O'Dwyer of New York City made his forthright proposal to the legislature (in a message reprinted in this volume) to legalize and regulate certain forms of gambling on sports events. Governor Thomas E. Dewey addressed a public plea (also reprinted herein) opposing this precedent-shattering request. The clergy of the Nation did not remain silent in this controversy, and the Federal Council of Churches stated that it "reaffirms its vigorous opposition to gambling which it considers an invidious menace to personal character and to morality."

These recent developments throw into sharp focus certain basic questions concerning gambling: (1) Does gambling, in any and all of its forms, undermine public morals to such an extent that it must be repressed at all costs? (2) Is gambling primarily an activity conducted by racketeers and underworld characters who are able, through political and other methods, to paralyze local enforcement agencies? (3) Are racketeers in control of gambling using the proceeds from gambling activities to finance other criminal enterprises? (4) Is it possible to control the evils of gambling by legalizing certain of its forms and outlawing others? (5) If gambling is not legalized, how can law-enforcement agencies be strengthened so that gambling statutes can be rigorously enforced, despite widespread public participation in gambling?

We have marshaled the materials contained in this volume for the purpose of furnishing data by means of which questions such as these might be answered. If our readers find our data inconclusive—if they find that our contributors disagree among themselves as to how such questions must be answered—they should not be surprised. The problem of the control of gambling is a complex one, and there are no certainties, no finalities, in this field. All that we hope to accomplish by this volume is to bring about an understanding of the complexities and to stimulate efforts directed toward their solution.

Importation of Hats and Hat Bodies

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I filed with the Tariff Commission for inclusion in the hearings before that body relative to an investigation of the importation of hats and hat bodies. This hearing was conducted yesterday, May 9, 1950.

STATEMENT OF THE HONORABLE JOHN DAVIS LODGE, OF CONNECTICUT, AT THE HEARING BEFORE THE UNITED STATES TARIFF COMMISSION RELATIVE TO AN INVESTIGATION OF THE IMPORTATION OF HATS AND HAT BODIES

As the members of the Tariff Commission must know, the great hat industry of our country is located in Fairfield County, Conn., the district which I have the honor to represent in the Congress of the United States. This industry is centered in Danbury and Norwalk where there is a fine and long tradition for the making of first-class hats.

There is now considerable distress in this industry due principally to the importation of fur felt hats and hat bodies from Czechoslovakia.

It is my understanding that these items are coming into this country pursuant to the agreements reached at the Geneva Convention in 1947 which was prior to the date when Czechoslovakia was dragged behind the iron curtain. In other words, these agreements represented arrangements between two free and independent nations.

Since that time Czechoslovakia has become enslaved. In these circumstances the agreements reached at the Geneva Convention are not only obsolete but they are definitely proving harmful to the people of our own country in the communities which I have mentioned. Furthermore, it is manifestly against our best national interests to assist those forces which are bent upon our destruction. The Kremlin and its satellites are our self-styled enemies. It is high time that our policies and the details of our plans should be brought in line with the realities of the world crisis.

Moreover, these fur felt hats and hat bodies are the product of slave labor and therefore constitute unfair competition. Surely it cannot be part of our national policy to reduce the working men and women of America to a serf status in order to compete successfully with these imports from slave-labor countries.

The labor movement in our country has shown itself understanding and sympathetic with our international obligations and responsibilities. They have been in favor of the Marshall plan from the very beginning. They have been commendably willing to shoulder their share of the burden of foreign aid, conscious of the fact that our national security depends in great part upon the preservation of freedom in other parts of the world. Surely, however, there is no reason why any one segment of our population, any one group of workers should bear the brunt of this effort, even when the imports involved are from free countries. Surely this burden should be spread equally amoug onr people and not handled in a discriminatory fashion. Surely also it is in our best national interest to retain and to stimulate the enthusiasm of our people for the private property, free competitive system.

In these circumstances I think it of the greatest importance that the agreements made under the Geneva Convention with respect to Czechoslovakia should be considered null and void in the light of the present relations existing between the United States and Czechoslovakia.

Indeed, in my opinion, the Tariff Commission and the Committee on Reciprocity Information of the Department of State should seriously consider placing a complete embargo on all items, the manufactured costs of which cannot be ascertained. It is unfair and unwise to expose American industries to competition from items which are subsidized or produced by State monopolies.

Copyright Laws and the State of Israel—Proclamation by the President

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last week the President of the United States issued a formal proclamation extending the protection of the copyright laws to citizens of the new State of Israel in consideration of the extension of the protection of comparable copyright laws to American citizens in Israel. This is another sign of the increasing reciprocity between our two nations. I ask unanimous consent of the Senate to have the President's proclamation and these remarks incident thereto inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

MAY 4, 1950.

COPYRIGHT—ISRAEL

(By the President of the United States of America)

A PROCLAMATION

Whereas under section 9 of title 17 of the United States Code, entitled, "Copyrights," as codified and enacted into positive law by the act of Congress approved July 30, 1947, 61 Stat. 652, provides in part that the copyright secured by such title shall extend to the work of an author or proprietor who is a citizen or subject of a foreign state or nation only:

"(a) When an alien author or proprietor shall be domiciled within the United States at the time of the first publication of his work; or

"(b) When the foreign state or nation of which such author or proprietor is a citizen or subject grants, either by treaty, convention, agreement, or law, to citizens of the United States the benefit of copyright on substantially the same basis as to its own

citizens, or copyright protection, substantially equal to the protection secured to such foreign author under this title or by treaty; or when such foreign state or nation is a party to an international agreement which provides for reciprocity in the granting of copyright, by the terms of which agreement the United States may, at its pleasure, become a party thereto."; and

Whereas section 1 of the said title 17 provides in part as follows:

"Any person entitled thereto, upon complying with the provisions of this title, shall have the exclusive right:

* * * * *

"(e) To perform the copyrighted work publicly for profit if it be a musical composition; * * * *Provided*, That the provisions of this title, so far as they secure copyright controlling the parts of instruments serving to reproduce mechanically the musical work, shall include only compositions published and copyrighted after July 1, 1909, and shall not include the works of a foreign author or composer unless the foreign state or nation of which such author or composer is a citizen or subject grants, either by treaty, convention, agreement, or law, to citizens of the United States similar rights."; and

Whereas section 9 of the said title 17 further provides that "the existence of the reciprocal conditions aforesaid shall be determined by the President of the United States, by proclamation made from time to time, as the purposes of this title may require."; and

Whereas satisfactory official assurances have been received that since May 15, 1948, citizens of the United States have been entitled to obtain copyright protection for their works in Israel which has been accorded substantially on the same basis as to citizens of Israel, including rights similar to those provided by section 1 (e) of the said title 17:

Now, therefore, I, Harry S. Truman, President of the United States of America, do declare and proclaim:

That since May 15, 1948, the conditions specified in sections 9 (b) and 1 (e) of the said title 17 of the United States Code have existed and have been fulfilled with respect to citizens of Israel, and that citizens of Israel are and since May 15, 1948, have been entitled to all the benefits of the said title 17 except those conferred by the provisions embodied in the second paragraph of section 9 (b) thereof regarding the extension of time for fulfilling copyright conditions and formalities.

Provided, That the enjoyment by any work of the rights and benefits conferred by the said title 17 shall be conditioned upon compliance with the requirements and formalities prescribed with respect to such works by the copyright laws of the United States:

And provided further, That the provisions of section 1 (e) of the said title 17, so far as they secure copyright controlling parts of instruments serving to reproduce mechanically the musical work, shall apply only to compositions published after July 1, 1909, and registered for copyright in the United States which have not been reproduced within the United States prior to May 15, 1948, on any contrivance by means of which the work may be mechanically performed.

In witness whereof, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

Done at the city of Washington this 4th day of May in the year of our Lord nineteen hundred and fifty and of the Independence of the United States of America the one hundred and seventy-fourth.

[SEAL] HARRY S. TRUMAN.

By the President:

DEAN ACHESON,
Secretary of State.

Veterans' Administration Administrator Gives Congressman Pertinent Facts and Figures Showing Numerical Participation in Wars, Number of Dependents of Wars, Number of Veterans Under GI Bill, Guaranteed Loans, Insurance Program, Etc.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. DOYLE. Mr. Speaker and my colleagues, my recent trip with the subcommittee of Armed Services Committee to several military hospitals in as many States, has given me a continuing interest in the hospitalization problem as to both military and veterans.

So, in a very enlightening interview I was favored recently in having with Gen. Carl R. Gray, Jr., as early as 7:30 a. m. in the morning, he found time, very cordially, to answer my numerous questions. He also found time that early in the morning at his office, to volunteer for my education and on many facts which I felt would be very useful to my congressional colleagues also.

Following, therefore, is copy of his letter of May 3, 1950, to me transmitting some of the facts and figures which I hope may be as helpful to you, as I have already found them to be to me:

VETERANS' ADMINISTRATION,
Washington, May 3, 1950.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: It is a great pleasure for me to place in this letter the facts and figures which I quoted you this morning when you called at my office. I believe they will show in a very brief way the tremendous ramifications of the Veterans' Administration and give a clear-cut conception of the results evidenced from the laws passed by the Congress which we administer:

Totals, all wars (as of Dec. 31, 1949):	
Participants	24,924,000
Deaths (in service)	934,000
Living veterans	19,022,000
Revolution, 1775–83:	
Participants	395,000
Deaths (in service)	4,000
Living veterans	None.
Last veteran, 1869, age 109.	
Last dependent, 1906, age 92.	
War of 1812 (1812–15):	
Participants	536,000
Deaths (in service)	2,000
Living veterans	None.
Last veteran, 1905, age 105.	
Last dependent, 1946 (age not given).	
Mexican War (1846–48):	
Participants	130,000
Deaths (in service)	13,000
Living veterans	None.
Last veteran, 1929, age 98. On rolls Dec. 31, 1949, 25 widows, 1 child.	
Civil War:	
Participants	2,192,000
Deaths (in service)	364,000
Living veterans	18
Indian wars:	
Participants	106,000
Deaths	1,333
Living veterans	580
Spanish-American War:	
Participants	392,000
Deaths (in service)	11,000
Living veterans	122,000
World War I:	
Participants	4,744,000
Deaths (in service)	131,000
Living veterans	3,553,000
World War II:	
Participants	16,535,000
Deaths (in service)	409,000
Living veterans	15,294,000

Since war ended 6,500,000, or over 40 percent, of all World War II veterans have received some training under GI bill. In addition, 500,000 have been trained under Public Law 16.

Two million two hundred thousand attended colleges, 2,800,000 entered schools below college level, 1,600,000 took on-the-job training, 570,000 took institutional on-farm training, 600,000 took business courses, 400,000 studied engineering, 87,000 took law, 130,000 studied medicine, 170,000 studied teaching. In job training, 34,000 trained for chemists, pharmacists, and social workers, 117,000 entered metalworking, 62,000 took up some phase of printing trade.

Guaranteed loans (as of December 31, 1949):

Number approved:		Number repaid:	
Home	1,700,000	Home	87,000
Farm	55,000	Farm	12,500
Business	115,000	Business	42,000

More than 90 percent of veterans are keeping up payments on loans. Over 141,000 have repaid in full. In past 4½ years VA has had to make good on only seven-tenths of 1 percent loans.

Since VJ-day VA has provided medical treatment to nearly 2,400,000 veteran patients and VA clinics have treated an even greater number. Medical team that cares for veterans has in it 4,200 doctors, 13,000 nurses, 900 dentists, supported by thousands of other trained and specialized workers and volunteers.

In addition, 75,000 doctors and 55,000 dentists cooperated with VA in the home-town treatment plan.

Insurance program: Veterans hold 7,000,000 NSLI policies, $40,000,000,000 worth of protection for families. Some 12,000,000 let $100,000,000,000 worth lapse.

Sincerely yours,

CARL R. GRAY, JR.,
Administrator.

Address of the President at Laramie, Wyo.

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of the President made at Laramie, Wyo., on May 9, 1950:

It is always a pleasure to visit Laramie, a landmark of the old West. It is a particular

UNIVERSITY OF MICHIGAN LIBRARIES

pleasure to speak here at the University of Wyoming, a symbol of the new West.

The West exerts a strong influence on the imagination of Americans. The stirring drama of the opening of the West is a part of our national folklore.

It is a tradition that the West is a country of great distances and of isolated communities, of many days of travel between cities. The tradition has left a deep impression on all Americans.

It had much to do, I think, with the notion that many of us once held that the United States was a vast distance away from foreign neighbors—that our Nation was an isolated community separated by days of travel from other communities on the globe.

You know how the West has shrunk. Distances seem to have been wiped out by a network of rails and highways, and now by the huge airliners that cross the entire Nation in less time than it used to take to cross a single county.

The world's distances have likewise shrunk. To put Laramie in its right perspective, you should erect signposts in the center of town that read like this: one pointing east that says, "London, 30 hours"—one pointing west that says "Shanghai, 44 hours"—one pointing south, "Santiago, 35 hours"—and one pointing north, "Moscow, 45 hours."

"NEIGHBORS OF TERRIBLE TYRANNY"

These are the normal flight times of commercial airliners.

There are military planes that fly even faster.

It took two World Wars to bring home to us the fact that world distances have disappeared. We are next door neighbors now to people in other countries who once were scarcely more than names to us. We have become citizens of a larger community—the whole world.

It is the great problem—and the great challenge of our age—that strangers have become fellow citizens at a time when the world is so deeply divided. We have been forced into a common citizenship with people who do not understand our conceptions of democratic life. We must recognize—whether we like it or not—that we are neighbors with a Government which denies all the values of the American tradition, indeed of all ethical and moral traditions, and which seems to spread its doctrine over the entire earth. We have become neighbors of a new and terrible tyranny.

Tyranny is not new in the world. As long as democracy has existed, tyranny has existed. But never before has it been so difficult for tyranny and democracy to find a basis for peaceful coexistence.

There are two reasons for this. The first reason I have already mentioned—the elimination of distances. Where once we could ignore a far-off tyranny, there no longer are any far-off places. Today, everybody on the globe is our neighbor.

NEED FOR ALERTNESS EMPHASIZED

The second reason is that the new tyranny of Soviet communism is giving no evidence that it is willing to let the free world exist peacefully. Communism has clearly shown its purpose to penetrate free countries, to divide free peoples and confuse them, to subvert their institutions, and to weaken their resistance. This is a method of attack far more subtle than the ancient and direct method of military attack. It requires more understanding, more alertness, and more determination on the part of those who want to preserve their freedom.

How do we meet this overriding problem—the most important one of our time?

I will tell you two things we cannot do.

First, we cannot compromise our own moral and ethical beliefs. We know that this newest form of tyranny is a compound of evils. Communism denies all that we have come to know as democracy. It denies freedom and liberty and human dignity. It denies God. We cannot meet the challenge by any form of compromise with such beliefs.

Second, we cannot isolate ourselves. The leadership of the free world, the hopes of millions of people who have not our strength and our resources, depend on us, but, even if we could forget our friends, we know that there is no salvation even for ourselves in any passive policy of withdrawal. If we permitted communism to engulf the rest of the world and to roll up to our four borders, there would be no peace and no security for us.

We cannot compromise our principles.

We cannot withdraw from the world.

What can we do?

CALLS FOR UNITY OF THE FREE

We can do this: We can, together with other nations of the free world, clearly demonstrate the superiority of the ideals of freedom over the iron hand of tyranny.

We can make clear that democracy and freedom bring to each individual, each day, more of what he wants than any other system of government.

The free world must demonstrate moral superiority. It must demonstrate material superiority.

The free world has the resources to make that demonstration. It has the tremendous advantage that always adheres to the cause of justice, liberty, and respect for human dignity. With leadership, with unity, with steadfastness, that demonstration of moral and material superiority can be made.

As the strength and effectiveness of the system of freedom are made clear over the globe—as the peoples who now stand in doubt turn to democracy—the danger of Communist domination will dwindle and finally disappear. The struggle for peace, security, and stability in world affairs can be won.

This is a long-time project. I know that the American people are impatient. But in this instance, we must be more than patient. The conflict that exists in world affairs will be with us for a long, long time. There is no quick way, no easy way, to end it.

In all our relations with other nations, we are following a consistent and forthright policy to strengthen the cause of freedom and bring about stability and peace in world affairs.

VALUE OF UNITED NATIONS VIEWED

We are working, first of all, for unity among the nations. The foremost expression of our will for unity is our work within the United Nations. The United Nations was created on our soil. Its headquarters are in this country. We have worked unceasingly to make the United Nations, and its affiliated organizations, strong and effective agencies of peace and international cooperation.

We have done our best to settle—through the United Nations—some of the difficulties in the world today. You know the record. You know the vetoes. You know that failures in the United Nations cannot be laid to any lack of good faith on our part or any lack of trying.

In spite of all difficulties, the United Nations has done—and is continuing to do—work of tremendous value in helping the nations of the world to get along with one another and solve their common problems. This work must continue—and it will continue.

As long as I am President, we shall support the United Nations with every means at our command.

Within the larger framework of the United Nations, we have joined the countries of western Europe in a great combined effort to assure their economic recovery and political stability.

VOTE FOR FOREIGN AID CITED

The decisive vote of 60 to 8 by which the Senate a few days ago approved the Foreign Assistance Act of 1950 is a powerful expression of the determination of the American people to carry forward our constructive foreign policy. This action by the Senate, following a large favorable vote by the House of Representatives, assures our partners in western Europe that we will successfully complete the great recovery program that was launched 2 years ago.

To promote international peace and security in vital areas, we joined first with the other republics of North and South America in the treaty of Rio de Janeiro, and then with Canada and 10 European nations in the North Atlantic Treaty. Through the mutual defense assistance program, we have joined with a number of other free nations to strengthen our common military defense against aggression.

In the former enemy countries of Germany and Japan, we have been working to restore them to the society of free nations as rapidly as they can build firm and reliable democratic institutions.

Our efforts in Germany have been delayed by the attempts of the Soviet Union to turn Germany into another Communist satellite. Nevertheless, Western Germany has made great progress along the road toward democracy. We believe that the Germans will continue to build upon these elements in their tradition which are good. We want Germany to become more closely integrated with the free nations of Europe.

TELLS OF PROGRESS IN JAPAN

In Japan, we have also seen encouraging progress. The Japanese people, who have not had the same long familiarity with democratic ideals, are none the less learning the ways of democracy. They are rebuilding their economy along more democratic lines. In one field after another, the Japanese are reestablishing their contracts with the rest of the world in preparation for a resumption of full membership in the international community.

Elsewhere in Asia, we are encouraging the aspirations of the millions of people who are striving to establish new democratic governments. In this part of the world, we have witnessed since the end of the war a tremendous event in history—the birth of a great group of new nations—India, Pakistan, Burma, Ceylon, Indonesia, South Korea, and the Philippines. These new nations are now consolidating their independence and working out their problems of internal security and stability.

We welcome these new countries into the family of nations. We can—and shall—continue to give them support, material as well as moral, in their struggle to maintain their freedom.

The credit of $100,000,000 to the United States of Indonesia is one type of material aid. Another type is the technical assistance we shall make available to underdeveloped countries under the program thus become known as point 4. This was approved by the Senate last week after earlier authorization by the House.

Point 4 provides an example of broad-scale collective action on the part of many countries to bring the benefit of better living conditions to millions of individuals now suffering from ill health, illiteracy, and poverty. The point 4 program is one of the greatest contributions we can make to the cause of freedom.

While our support of the new nations of Asia has been of real benefit to them, we have recently been unable to be of any assistance at all to the people of one vast

area—China. Since the Chinese National Government disintegrated and the Chinese Communists seized control of the mainland, the plight of hundreds of millions of Chinese has been tragic. Their new taskmasters have been heartlessly indifferent to the worst famine which has occurred in China in 100 years.

We have been working for some time on steps which our country might take to feed at least some of these stricken people. The attitude of the present authorities in China has forced the withdrawal of American official representatives from that country. However, there are still a number of American religious, educational, and charitable organizations which have representatives in China who might be able to help out. We are now trying to find a way for the government to get food into the hands of these private agencies for distribution in China.

REPORTS OBSTRUCTION IN CHINA

We do not know whether American private organizations will be permitted by the Chinese Communist authorities to provide this assistance. The Communists so far have tried to deny the existence of a famine. They have rebuffed the efforts of others to discover the facts.

They have even sent to the Soviet Union food which is desperately needed by the Chinese people. Nevertheless, we shall keep on trying to find ways to get some food to the Chinese people.

In Asia, and in the rest of the world, we are trying to do far more than to bring relief to people who are in want. We are working, by every means at our command, to build the kind of world economy in which nations can be self-sustaining over the long run by their own efforts. This is of great importance, because there can never be political stability and peace unless there is a reasonable degree of economic stability and prosperity.

Our world economic policies are aimed at breaking down the barriers to world trade.

We believe that a high level of trade can raise standards of living in our own country and every other country. This is the purpose of our reciprocal trade-agreements program, and it is the purpose of the proposed International Trade Organization.

LOOKS TO A LONG TASK

Our economic policies are also aimed at increasing the international flow of investment capital. The industrial growth of underdeveloped areas will mean more production, better markets, and a stronger world economy.

All our international policies, taken together, form a program designed to strengthen and unite the free world in its resistance to the spread of communism. They are aimed at banding the free countries together in a great demonstration that the free way of life is more rewarding to the individual than any form of tyranny, old or new.

I say again that we have a long task ahead. It may be many years before we can be sure that communism is no longer a threat, that our goals of stability and peace have been attained.

But those goals are clearly within our reach. The non-Communist nations together have two-thirds of the world's people and three-fourths of the world's productive power.

And we have much more than mere quantity or mere strength. We have the greatest attraction of all—human freedom. Our system of life satisfies the most fundamental desire of man—the opportunity to be his own master.

We can have faith that with these qualities, and the help of the Almighty, we will attain a just and lasting peace throughout the world.

The Hand-Out Highway to Dictatorship

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address entitled "The Hand-out Highway to Dictatorship," by H. W. Prentis, Jr. The address as originally delivered was too long to be printed in the Appendix of the RECORD under the rule. Therefore, I have deleted certain portions of it.

The address is primarily directed to church men and business leaders and their responsibility in preaching the gospel of free enterprise.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE HAND-OUT HIGHWAY TO DICTATORSHIP

My subject tonight embodies a figure of speech of great antiquity. Twenty-five centuries ago, Isaiah commemorated the return of his countrymen from their long captivity in Babylon with "The voice of one crying in the wilderness, Prepare ye the way of the Lord."

Highways are always fascinating. They hold the lure of the unknown, the urge to discover what lies beyond the horizon. So tonight we may well ask ourselves where the highway of current national policy is leading us, as it wends its way beside beguiling streams of Government propaganda, between smiling fields of Federal hand-outs, around hairpin turns of preelection promises of Government economy and openhanded postelection spending, uprising mountains of taxes and across the forbidding plateaus of Government deficits. Where is it going? Will it gradually glide down the pleasant slopes of inflation to the green fields of the life abundant? Or will it—God forbid—take us through the dark valley of the shadow of class hatred and economic chaos to the precipice of dictatorship?

* * * * * *

Our highway to freedom in America was pioneered by the Greeks and Romans; engineered by Christianity—especially by our Calvinistic forebears; blueprinted by the eminent political philosophers of the seventeenth and eighteenth centuries in France and England; and finally constructed as an integrated system by the founding fathers of the Republic in 1789. It has brought us as a nation to the richest land of promise that the world has ever seen.

* * * * * *

Sad to relate, however, we Americans seem to have grown tired of paying the price of traveling on freedom's road and instead now seek alluring shortcuts to illusory economic security on the hand-out highway to dictatorship.

GATHERING CLOUDS ON THE ROAD TO FREEDOM

A few years back, whatever clouds there were on our road to freedom seemed quite distant and far removed from the affairs of our everyday existence. Today, that situation has changed. The clouds of collectivism and class consciousness have moved close enough now so that all of us know that they are coming in our direction. * * * The danger of collectivistic infiltration of this Nation is no longer a mere possibility; it is an acknowledged reality. * * * Our problem is no longer that of attempting to keep socialism and communism away from our shores, but rather that of strengthening our defenses against an enemy who has already landed and is now well entrenched in our midst.

* * * * * *

THE TASK OF PRESBYTERIAN MEN

The people of America are slowly awakening to that particular danger—when it bears an unmistakable communistic label. But the greatest danger—the most immediate threat—comes not from open communistic infiltration, but from the relatively unrecoggnized threat of huge, paternalistic, bureaucratic, highly centralized government. The American people do not realize that the so-called welfare state is really the hand-out highway to socialism and dictatorship. The task of us Presbyterian men—and all other Americans who truly love their country—is to make that point clear.

* * * * * *

HAND-OUT STATE UNDERMINES PERSONAL CHARACTER

James Madison, one of the chief authors of the Federal Constitution, said that the whole American system rests "on the capacity of mankind for self-government." The capacity for self-government, in turn, depends now, as it always has, on six elements of personal character: Self-reliance, personal responsibility, individual initiative, thrift, courage, and religious faith. These are the coin in which the toll charges on the highway to freedom must be paid.

Self-government means exactly what it says, namely, ruling ourselves instead of being ordered about by a dictator or a ruling class. Obviously, that type of government cannot exist if the citizen is not willing to do his individual part as a free man. Government, after all, is not something mystical and superhuman. It is simply a group of men and women, just like the rest of us. The more rope we give them, the more they will take; the more of our troubles we make them assume, the more powerful they become, for power is a heady drink. So, eventually, under the socialistic hand-out state, the tables are reversed: Government, which started out as the servant of the people, ultimately becomes their master, and popular self-government disappears. So the first reason why a nation that wants to remain free should beware of the hand-out state is that it insidiously undermines those elements of personal character on which freedom depends.

GOVERNMENT CREATES NO WEALTH

The second reason that we should think hard and long before yielding to the enticements of the hand-out state is, to put it bluntly, the question of the cost of financing its operations. Government itself creates no wealth. Everything that government spends comes from only one source, and that is, from the earnings of its citizens. * * * today millions of our people think that government can create wealth and that they, the citizens, can be the beneficiaries of that magical process with little or no effort on their own part.

* * * * * *

HAND-OUT STATE LEADS TO COMPULSORY ECONOMIC PLANNING

Another factor that must be taken into serious account is the inevitable tendency of the hand-out state gradually to strangle private, competitive business—one of the essential components of popular self-government—and substitute for it compulsory national economic planning and control. Of course, we want all the voluntary planning we can get on the part of industry, labor, agriculture, and government, and the Government itself must and should plan intelligently in respect to such matters as national defense, public health, fiscal policy,

UNIVERSITY OF MICHIGAN LIBRARIES

and foreign relations. But compulsory economic planning of the Nation's economic life is quite a different thing. And wherever it has been attempted, the political freedom and personal freedoms that we now enjoy have ultimately disappeared.

SUCH PLANNING HAS DESTROYED FREEDOM IN RUSSIA AND ENGLAND

Russia has compulsory economic planning and you know how much personal freedom exists there. Germany and Italy put it into effect long before the recent war and you are familiar with the results in those countries. The Labor Government in England is the latest proponent of such planning and already 17 ministries have the power to enter English homes without search warrants where violations of economic regulations are suspected as having taken place. A farmer cannot butcher an animal on his own farm without Government permission. A manufacturer cannot offer a new product without Government sanction. As an eminent British economist recently stated: "The economic life of the citizen is less under his own control than in the days of the Tudors. Even Tudor officialdom is not recorded to have ordered the plowing in of a crop ready for harvest because its sowing had not been sanctioned, nor made it an offense for a man to give a neighbor a pitcher of milk, nor forbidden him to repair his own house with his own hands." Great Britain's troubles today stem in no little part from the stifling of individual initiative and the removing of incentives to work and to venture, which have followed in the train of the compulsory economic planning of the socialistic hand-out state.

* * * * *

COMPULSORY ECONOMIC PLANNING PROPOSALS NOW PENDING IN AMERICA

The advocates of compulsory national economic planning here in the United States are hard at work. Pending in Congress is the so-called economic expansion bill which would exercise authority over manufacturing and mining in much the same way that the Brannan agricultural plan would control the farmer. The heart of the economic expansion bill is the provision to set up production councils. There would be an over-all National Production Council, regional production councils, local production councils, and, finally, individual plant production councils. These production councils would be composed of representatives of government, labor unions, and consumers, along with the manufacturer—the man who owned and operated the plant. Under such circumstances, you can imagine how much influence he would actually have in determining how his plant was run. You may find it hard to take such proposals seriously. But the mere fact that they are now actually pending before committees of Congress is a striking indication of how far the concept of the socialistic hand-out state has already permeated our national thinking. Many things have happened to the American system that no one ever dreamed were possible 15 years ago. And many of them are irrevocable.

* * * * *

BUSINESSMEN HAVE SPECIAL RESPONSIBILITIES

Now if we business and professional men do not arouse the American people to the danger that our freedom faces from the socialistic hand-out state, no one else will. The politician isn't going to do it. The hand-out state is the politician's bonanza. All apparently that you have to do to be elected these days is to find something the people still need, or think they need, and suggest that if you win, you will see that the Government supplies it free. * * * Away back in the first century, the Greek historian Plutarch observed that "the real destroyer of the liberty of any people is he who spreads among them bounties, donations and largesses."

* * * * *

THE CHALLENGE TO THE CHURCH

The church should be in this fight right up to the hilt. For no institution has more at stake. But there seems to be a good deal of muddy thinking on the part of some of our ecclesiastical leaders.

The whole American system of political, economic and civil and religious freedom, is based on a religious principle—the sacredness of the individual soul in the eyes of a sovereign God. With all its imperfections, it has accomplished more for the ordinary man than any other political and economic system that has ever been devised. The overwhelming majority of our ministers are fully aware of the dangers of collectivism, but the statements of some of our church leaders are really astounding. Dr. E. Stanley Jones, for example, says that "Russia has got hold of a higher principle, cooperation, and it is working out in higher results than we can work out of a lower principle, competition." Dr. John C. Bennett, a leader in the Congregational Church, asserts that "Christianity has no stake in the survival of capitalism." The Federal Council of Churches' pronouncement in 1932, entitled "Social Ideals of the Churches," contains this paragraph: "The church's ideal calls for hearty support of the planned economic system in which maximum social values shall be sought. It demands that cooperation shall supplant competition as a fundamental method."

CHRISTIAN EDUCATION SHOULD ENCOURAGE VOLUNTARY SOCIAL STEWARDSHIP

Nothing is more tragic to my way of thinking than to see the American way unwittingly attacked and undermined by good Christian men and women who, in their keen anxiety and praiseworthy zeal to help the unfortunate improve their economic status, fail to realize that the remedies they seek through expanding governmental control, will eventually destroy representative democracy, intellectual freedom and religious liberty itself.

* * * * *

You cannot expect a young married couple who cannot find a medium-priced home to be against Government housing. The young man who is starting out on his own farm is a priori in favor of Government loans, Government subsidies, and a high price support level for the crops he raises. You can hardly expect the laboring man with a family to turn away from what he is told is free hospitalization and free medical care—actually tax-paid, not free.

AMERICANS MUST REALIZE PRICE OF HAND-OUT STATE

* * * The people will turn against the hand-out state only when they can be made to understand the price they will eventually have to pay for whatever immediate benefits they may receive from that type of government. The price is their freedom—and the American people will not sell their freedom at any price if they can be made to realize what they are doing.

* * * * *

WE MUST EXPLAIN HOW BUSINESS BENEFITS US ALL

When we say, "Beware of the socialistic hand-out state," the man on the street is very likely to think that we are only attempting to protect our own selfish interests, because he has been told that taxes on business profits will pay for all the Government subsidies involved. As a matter of fact, the profits of American manufacturers average less than 6 cents on the sales dollar. Hence it's high time to explain American business to the American public.

It is a most compelling and magnetic story. Men working in our American factories are able to buy, with their wages, twice as much as men who work in similar jobs in England, Sweden, Switzerland, and five times as much as in Russia. While we have only one-fourteenth of the total population, we send more young people to high school and college than does all the rest of the world combined. Our national income is equal to that of all the next highest six countries in the world. Our way of life has enabled the American people to create more wealth, to provide more goods and services, than any system the world has ever known. With only 7 percent of the world's people, our Nation produces 40 percent of the world's wealth. We have 85 percent of all the automobiles, 92 percent of the bathtubs, 50 percent of the hospital beds, and 48 percent of all the radios in the world. From the standpoint of distributing this wealth, the American system has brought all of these goods and services within the reach of more people than any system in history.

* * * * *

UNDERSTANDING OF PROFIT-AND-LOSS SYSTEM ESSENTIAL

But we must do more than tell the story. We must give our people an understanding of the principles on which our prosperity and productivity are based, including the profit-and-loss system.

Profit and loss are an essential part of the private, competitive business system that has given us our dynamic economy. The prospect of profit and the fear of loss provide the motivation for private enterprise. In the socialistic hand-out state profits are so reduced by confiscatory taxation that they no longer furnish the incentive that sparks progress. * * * America was built with the profits of private, competitive business, and all profit sooner or later is spent for wages or used up in losing investments and thus returned to consumers in consumption goods.

Only through constant investment of new capital can industry furnish the tools necessary to provide jobs. How can such needed capital be secured? There are only two possible ways: Either from the profits earned by private enterprise plowed back directly into the business, or paid out in dividends and reinvested—or from taxation of that same income by Government. If it comes by the Government route, socialism becomes a fact. Government then becomes responsible for the over-all planning of the nation's economic life and, as I have previously stated, this inevitably leads to the loss of political and personal freedom.

The profit-and-loss system encourages experimentation—the taking of risks on which our mutual progress depends. * * * The profit system, moreover, is a constructive factor in building a man's spirit. It is good to stand on one's own feet and to feel that one has a chance at least to build a business of his own. The profit system promotes such individual responsibility and reinforces one of man's finest instincts—the desire to provide for the financial future of himself and his family.

The profit-and-loss system, furthermore, tends to prevent the freezing of our population into stratified classes. "Shirt sleeves to shirt sleeves in three generations" is true in America as nowhere else in the world. * * * It furnishes the lifeblood for our great private hospitals, colleges, museums, and libraries. It helps support the church and, finally, it is the only system that can build up an economically competent mass of independent citizens without which political freedom and personal freedom cannot long survive. So why should we business and professional men not crusade vigorously for an economic system that has done so much for America?

* * * * *

BUSINESS AND INDUSTRY PROVIDE WIDESPREAD PUBLIC SERVICE

As a part of our whole effort to make the public appreciate the value of the American

economic system we must constantly point out the service that business renders. Stop any man on the street and ask him to pick out a few things that represent his idea of material progress. Let him select anything he wants—the automobile, our air transportation system, radio, television, anything he cares to name. Where did those things come from? Were they spawned by some Government agency? No, indeed. They came from the research laboratories of American business—invented and developed by research workers and engineers whose salaries were paid by private business corporations, employing facilities and materials that again were provided by American business firms.

* * * * *

If there is need to prove that industry can mix altruism with the profit motive, you have only to go into the laboratories of private business and see the record of the great contributions that have been made to our general knowledge as a result of research privately sponsored and financed. Pick up a textbook on any scientific subject—say, some phase of electrical engineering. Where did all of that knowledge come from—all of those scientific facts that are now available for the general good of everyone? Did they come from some Government laboratory? Mark the book, page by page, and paragraph by paragraph, and you'll see the outstanding contributions made by the research laboratories of Westinghouse and General Electric, and so on down a long list of American business firms.

In the field of medicine, where there has been perhaps more Government activity than anywhere else, you'll find an amazing contribution by the privately financed laboratories of Squibb, Merck, Lilly, and Wyeth, and many, many more. Of course, many medical advances have come from research foundations. But where did the research foundations come from? You know as well as I do—from the contributed profits of American business—the same source that has built most of our hospitals, and libraries, and institutions of higher learning.

* * * * *

WE MUST CONVINCE OURSELVES AND OUR FAMILIES

Now let us turn to the other aspect of our task. As in any kind of sales work, whom we sell is as important as what we sell. Whom must we first convince? My answer is, ourselves and our families.

* * * * *

A real danger lies in the subtle but vicious propaganda that the socialistic hand-out state is inevitable; that we are caught up in some great tide of human affairs that makes any other course impossible; that we are living now in a new and different world. Let me say this: Has anything happened that makes freedom less desirable now than it was a generation ago? We fought the First World War to make the world safe for democracy. And all the recent history of this strife-torn world writes a lesson that cries out for more freedom, not less; for greater recognition of the sanctity of individual rights, not less; for more self-determination; for more local control of local affairs; and for less domination by highly centralized national government.

WE MUST REACH OUT INTO OUR COMMUNITIES

When you have won over your associates, then reach out into your community. All of us profess to be shocked by the way collectivistic doctrines have infiltrated so many aspects of our local life. Yet how many of us have been willing to devote enough of our personal time and energy to community matters even to find out what's going on—let alone to raise effective opposition against subversive activities? It's time to correct that situation by taking an active part in community affairs—an outspoken part. You can't sell goods or services without talking—and you can't sell the American way to your assembled neighbors by sitting silently in the back row. Speak out—vigorously and honestly—and without fear that you may offend somebody. If we business and professional men don't win this battle, eventually we won't have any clients or customers. We shall all be servants of the state. So don't be afraid to stand up and be counted. The secret of liberty is courage. Freedom is for the brave.

WE MUST PERSUADE OUR LEADERS

Next, we must convince our leaders—particularly our political leaders—that there are people in America now, millions of people, who don't want to trade their freedom for tax-paid hand-outs, and that there will be still more millions who, with the kind of educational job that I have been talking about, will rally to the cause of the American way.

This is the hardest task of all. But we cannot succeed unless we can get the support of our political leaders. As I pointed out earlier, there is every temptation for the politician to follow the hand-out highway that leads to socialism—and eventual dictatorship—because it seems to be the easy road at the moment to reelection and political power. We must change that situation. We must get into politics and actively support the candidate who really believes in the American way and who has the courage to stand stanchly against the insidious doctrines of the hand-out state now being preached under the guise of humanitarianism. When his courage brings its inevitable reaction from those who want bigger and bigger tax-paid hand-outs, we must see to it that he is not massacred at the polls. We must keep men like that in office. Only in that way can we maintain the right kind of representation in Congress and in our State legislatures. And it is there in the end that the battle will be won or lost.

WE MUST SHOW THE WORLD THAT LIBERTY LIVES ON IN AMERICA

Finally, by precept and example we must convince the world that the concept of a free man, living in a free nation, the master of his own destiny, has not perished from the face of the earth. What, in all our lives, could any of us do more worthy of the best that's in us, than to add our little spark, small though it may be, to keep alive the flame of freedom. If, through our neglect, that flame flickers out upon these shores of ours, where and when will its light be seen again?

"God of the past, our times are in Thy hand;
With us abide.
Lead us by faith to hope's true promised land; Be Thou our guide.
With Thee to bless, the darkness shines as light,
And faith's clear vision changes into sight."

Financing Small-Business Banking's Midcentury Challenge

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. A. Mathson, of San Francisco, Calif.:

FINANCING SMALL-BUSINESS BANKING'S MIDCENTURY CHALLENGE

The challenge to which I refer is that presented by the necessity of finding a way for private banks to supply all the legitimate credit needs of small business, particularly very small business. It is evident that the increasing pressure for solution is going to result in something being done—either the current proposal for an insured loan plan, or perhaps the capital bank program. The real $64 question is, "What can private banking do about it?"

There is no surer way of securing a sympathetic audience than to propose aid to small business. But despite all outside efforts, it is usually the little fellow who helps himself most by supplying the first requisites for success as an entrepeneur: the will-to-win, stick-to-it-iveness, intelligence, and ingenuity.

From my experience, I would say that the best way to help him is to give him what he is entitled to. If he is destined for success on his own, he doesn't want anything more than that. But sometimes he has a hard time getting what he is entitled to when it comes to bank credit, and that is unfortunate in many ways; first for him, of course, but also for the banking fraternity and the public in general.

But what is a small business?

There is where the confusion starts, because the President, the Congress, the Federal Reserve bank, the Department of Labor, the Department of Commerce, the Bureau of Internal Revenue, the SEC, and a number of other authorities have each tried to develop a practical and workable definition. So far, however, no one has come up with a completely satisfactory answer to the question.

The reason is easily understood, as a business that is relatively small within its own field—say a manufacturing plant with 500 employees—is a giant compared to a little machine shop with half a dozen employees, a family-owned grocery store, or a one-man service station.

For this reason, the viewpoint that seems most logical and which has the widest popular acceptance is that taken by the Department of Commerce, which sets up separate definitions for each major business classification. By their standards, a business is small if it is:

A manufacturing plant with less than 100 employees.

A wholesaling operation with annual sales of less than $500,000.

A retail store with annual sales of less than $100,000.

But no matter what definition we use, sooner or later we realize that we must get down to bedrock, to the millions of small enterprises that are collectively the foundation of our whole American way of life. Whether these are one-man shops, partnerships, family enterprises, or small corporations is beside the point—the fact remains that we have several million small-business operations that present us with our midcentury challenge.

I said it was unfortunate for all concerned, directly or indirectly, when a small-business man could not obtain the bank credit to which he was entitled on the merits of his statement, character, experience, and all the other elements essential to a sound credit. Many of you will say with perfectly righteous indignation, "Anyone with those qualifications would get all the credit he was entitled to in our bank."

It is at this point that the conflict of opinion starts, because a great many small-business men obviously do not get the credit to which they think they are entitled from their banks. This is the reason for the continued demand for new and special financing facilities for these small enterprises. It is apparent that their credit needs are a stumbling block to many banks who want to help but

UNIVERSITY OF MICHIGAN LIBRARIES

find that the customary limitations of unsecured commercial accommodations will not provide this class of borrower with the kind of credit he needs.

The several types of credit necessary to accommodate manufacturers, wholesalers, and retailers vary considerably. The small retailer and service business present an especially difficult problem. I am referring here to what Dr. Kaplan, the Brookings Institution economist, agrees are really "tiny business," where sales are considerably less than $100,000 a year. These concerns, however, represent numerically the largest section of small business, and, in my opinion, the one most in need of attention. Manufacturers and wholesalers can generally be taken care of by accounts-receivable financing or commodity loans—all too frequently by finance companies rather than by banks. The tiny retail and service businesses usually have to be treated on a character-loan basis. Such loans are generally considered to be too risky and too expensive to handle. However, that is the real challenge: to find a way to accommodate this large segment of the business economy safely and profitably. It can be done because it has been done, but, strangely enough, primarily by large banks. Here we have a perfect example of the interdependence of big business and little business.

Manufacturers rely on small business, and even on very small or tiny business, for many of the parts required for their finished products. In the case of automobile manufacturers, these suppliers number into the thousands. In the wholesale field—food, for example—the wholesaler depends upon many thousands of small outlets, and to insure their existence he provides them with the latest ideas in efficient merchandising. A notable example of big business sharing its know-how with small business is the completely integrated program of the Reid, Murdoch Division of Consolidated Grocers Corp.

Perhaps as these sound, constructive programs on the part of big business to aid small business become better known, some of the current feeling in certain quarters about the badness of bigness will disappear. At least it is a record of which big business can be justifiably proud, because of its farsightedness in contributing time and effort to maintaining a truly free-enterprise system.

There are many Government officials who are aware of this situation. None, to my knowledge, is better informed or more sincerely interested in helping to improve the economic climate for all business than the gentleman who spoke earlier today—our distinguished Secretary of Commerce. While he was in San Francisco on his recent survey trip, I had the privilege of spending a sufficient amount of time with the Secretary to understand his point of view, his aims, and his objectives. I can assure you gentlemen that the bankers and businessmen of this Nation are most fortunate in that this vital office is held by a man of such preeminent qualifications, possessed of such a forthright spirit; a dyed-in-the-wool American who is absolutely convinced that our system is not the best, but that it will continue to be the best.

I know he is anxious that the solution of the problem be found by private banking, and therefore it may be well to give the insured business-loan proposal a trial. At least it leaves Government agencies out of additional direct lending activities; but we may as well face the fact that the insured-loan plan, while unquestionably good in theory, won't work in practice unless all banks get behind it enthusiastically, which for some will mean a major change in policy.

Dr. Kaplan highlights this situation in his analysis of the various capital bank and insured-loan plans which have been proposed. He says in part: "The financing of capital operations involves different psychology and different methods from those involved in the operation of a commercial bank for depositors. It requires personnel not inhibited by orthodox banking traditions."

The reason I say that bankers must pay heed to Dr. Kaplan's very revealing comment is not hard to see when we examine the record of bank participation in other Government-insured loan plans.

A check of FHA operations made during the last half of 1947, showed that less than 20 percent of our 15,000 commercial banks were originating loans under the title I program. Actually, 67 finance companies accounted for almost one-third of the total dollar volume of loans made during that period, while some 3,000 banks were responsible for the remaining two-thirds—and this after the program had been in operation for over 15 years.

We find an even darker picture in the insured GI business loan field. Here, too, there has been a failure to take advantage of an opportunity, because a recent inquiry as to the number of commercial banks which have made GI business loans revealed that less than 600 banks have made VA-insured business loans.

These are good programs. They will both apparently be on hand for some years to come, and they certainly deserve more banking support than they have received.

It is also apparent that no new program calling for insured loans to small business will succeed unless more adequate bank support is forthcoming.

When my good friend, Walter French, asked me to speak to you, he said he felt that other banks might be helped by the experience our bank has had in dealing with the problems of financing all segments of small business. We are always happy to share any know-how we have acquired in this or any other field, and to this end have provided a large number of banks with forms, advertising material, our experience ratios, and counsel and guidance to the extent that they were desired. Judging by the inquiries we have received, the most interesting part of our whole small-business program seems to be our term loans to small business.

These are capital loans for commercial, industrial, or professional purposes, to individuals, partnerships, or corporations, for a maximum amount of $10,000, with maturities presently running from 1 to 3 years. They are secured or unsecured, depending on the type of business, and each is supported by a modified form of business-loan agreement very similar to the agreements we use for larger term loans in the corporate field. Each term loan calls for a definite program of payments—monthly, quarterly, or semi-annually—from expected profits of operation.

An analysis of some 6,800 of these loans showed that 15 percent of them involved starting a new business, 35 percent related to buying an established business in whole or in part, and 50 percent were concerned with the purchase of equipment, additional inventory, an increase of working capital, or some other phase of the operations of a going concern.

The analysis further showed that a guarantor was involved in 11 percent of the loans; 15 percent were in the GI category; 31 percent were secured, morally at least, by a chattel mortgage on fixtures or equipment; while the remaining 43 percent were completely unsecured, character loans in the strictest sense.

So far as the type of business was concerned, 46 percent were retail, 39 percent were service or professional, 4 percent were wholesale, and 11 percent were manufacturing.

Our statistics go back to April 1945, the date on which we packaged the program and commenced an extensive advertising and promotional campaign on term loans to small business. Such loans have always been available in our institutions, but from the time they were packaged they have been merchandised. The figures show that, from April 1945 to the end of November 1949, we made 26,478 term loans for a total amount of $89,532,603, or an average loan of $3,388. To date, $75,343,019 of this amount, representing 19,451 loans, has been liquidated in full and the gross charge-off, before recovery, is less than ninety-five one hundredths of 1 percent. Recoveries currently approximate 35 percent.

Our own plan, of course, was self-insured. This was a very simple operation. We set up a memorandum reserve of earnings in excess of 7.2 percent per annum calculated against monthly outstandings. Our reserve, as of the end of November 1949, was $1,152,943. Gross charge-offs against it (before recovery, it should be emphasized) totaled $718,811, leaving a memo balance of $434,131.

It has been, I think you will agree, abundantly demonstrated in the past that the fully qualified borrower performs just about as well in bad times as in good times, insofar as his ultimate repayment is concerned. This factor of reliability applies to large and small borrowers alike. So then it seems logical to conclude that in bad times the fully qualified small borrower will show up as well as the large borrower. In order, therefore, to secure the same results, all you have to do is to pick more qualified borrowers from among the small applicants. In this way, you go to more trouble and have a higher cost of acquisition, but this is counterbalanced by a wider spread of risk.

There is no denying that when you are dealing with small and newly established businesses you are operating in an area where losses will result. But here again there is a solution, for if you follow the established banking principle that loan rates must be adequate for the risk and cost involved you will necessarily establish a higher rate on these loans. The little fellow, or, for that matter, any borrower, has no objection to paying his way, because any properly adequate rate on a term loan will cost far less than a partner's share.

We have followed a policy of setting rates on a basis that would provide us with an adequate return for the risk and cost involved. Our Installment Credit Loan Department, 70 percent of whose $100,000,000 volume represents loans and advances to small business, produces a far greater proportion of our gross interest earnings from loans than its share of our total loan portfolio would indicate. Installment credit loans represented 21 percent of our total loans and produced 34 percent of our total gross interest earnings. The over-all loss ratio is extremely low. Since the inception of our time-plan program in 1935 we have made loans of all types, including retail, wholesale, and rediscount financing, for a total of $6,080,101,000.

The retail segment of this amount, which includes our small-business loans, is made up of 7,809,681 loans, totaling $3,013,154,327, or an average loan of $388, on which gross charge-offs in relation to liquidated balances totaled only twenty-eight one-hundredths of 1 percent. After recoveries, the net loss was less than twenty one-hundredths of 1 percent.

Perhaps this record, and the record of other west-coast banks offering a complete banking service, accounts for Secretary Sawyer's observation as reported in the American Banker for December 29:

"Small-business men cite difficulty getting loans, Secretary Sawyer reports."

The article went on to say:

"With the exception of the west coast, small-business men complained of 'difficulty of securing loans,' Charles Sawyer, Secretary of Commerce, reported to the White House today, after a 15,000-mile across-the-Nation survey."

The fact that the west coast has a highly diversified economy, with State-wide branch banking available throughout the territory, would seem to indicate that, were branch banking available in other similarly diversified areas, the same results might be expected.

The record and the figures I have just given show what can be done. How to do it is the problem. In my opinion, it is only necessary that your management, from the very top to the bottom, be convinced of the necessity safety, profitability and desirability of a small loan program. With the policy firmly established, the rest is a matter of suitable personnel trained to handle the operation. Term loans for small business, like all installment loans, should be handled by people with a definite liking for the activity and the occasional trouble involved. And above all, they should have a sales-minded approach because that is absolutely essential to this type of operation.

The remaining necessity for a successful program is an advisory service, because while adequate capital is essential for the sound development of any business, management is still the priceless ingredient. Our investigations and the investigations of many others who have studied the field show that most business difficulties, and particularly those of small firms, are due to the mistakes of inexperienced management. We therefore established an advisory service in 1946 to gather and distribute information on various phases of small business operation.

In addition to preparing our information digests—brief and factual pamphlets on various types of business, for which we have so far received over 200,000 requests—the service cooperates with chambers of commerce and trade associations in promoting the interests of small groups. Continuous contact is also maintained with the United States Department of Commerce, the California State Department of Education, schools, colleges, and universities in order to aid in developing programs to help small business.

These are only a few of the things our Advisory Service is doing, but I think they illustrate the point that it is just as important to help the little fellow with management information as it is to provide him with the financing that he requires. We recommend that you include such a service in your plans and that you advertise it, merchandise it, and get credit for it.

In conclusion, may I say this on behalf of small business: it is here to stay; it has survived and thrived from the earliest days of our country. Wars, booms, depressions—nothing has stifled the desire of millions of Americans to own their own business.

Dun & Bradstreet's records confirm the durability of small business. Back in 1870, their reference book listed the names of 427,000 business firms, 1 for every 91 people in the United States, or 11 firms per 1,000 population. Eighty years have gone by since then. Now, Dun & Bradstreet lists 2,700,000 firms, 1 for every 56 people, or 18 firms for every 1,000 of population. And at least two-thirds of even these listed firms are the small businesses we have been talking about. This is a demonstration of faith, and of the strength of the desire which so many people have for a business of their own. This is part of our national life—it is the very foundation of the system in which we take such pride.

But as bankers we must do more than just admire free enterprise; we must do our part to make it work. There must be a conscientious endeavor to broaden bank services to provide for the needs of all, no matter how small the need may be; from the school saver or 4-H Club member to the largest corporation. We must take care of them all, for they are all part of the great American heritage—freedom.

One of the best ways to broaden bank services is through the medium of the term loan I described which would make it possible for you to serve one of the most vital elements of the American economy—the little fellow who wants to help himself. To operate in this field successfully you need only four things:

1. Diversification.
2. Volume.
3. Adequate rates.
4. An enthusiastic desire to do the job.

Whatever tools in the form of new plans or devices are necessary must be provided and then used by more banks. Banks must provide for all the legitimate credit needs of small business, no matter how small or how specialized. Failure to do this can result only in more direct Government lending.

This is banking's midcentury challenge—we must not fail.

Address of the President at Casper, Wyo.

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of the President made at Casper, Wyo., on May 9 1950:

It's good to be back in Wyoming again.

Seeing this western country and talking to the people out here always reaffirms my faith in the vigor of this Nation and the glowing promise of its future.

This is my first visit to the West since 1948.

As you know, we have settled a number of issues since then. And we've settled them in the old-fashioned American democratic way. One of those issues is of particular importance here in the West. It concerns the policy this Nation is going to follow in developing its great wealth of natural resources.

In this country there have always been two philosophies about the use of natural resources. One philosophy is that our resources should be exploited by a privileged few for their own benefit. This first philosophy holds that if we preserve or develop natural resources for the benefit of all the people, that is "socialism" or some other form of "ism."

The second philosophy holds that our national resources are the cornerstone of a strong, free democracy. As such, they must be used to advance the well-being and the prosperity of all the people. This philosophy holds that it is necessary for democratic government to make sure that our land and water, our forests and our minerals, are used wisely and not exploited for the benefit of a few.

STRESSES NATURAL RESOURCES

You know which of these philosophies I believe in. It is the same one that the great majority of the American people believe in.

I am happy to be able to say that since I was out here in 1948, we have been making progress in strengthening the policy of using our resources for the benefit of all the people. This Congress has been moving forward—not backward.

I am particularly happy to say this to you here in Casper.

Wyoming is a State with tremendous natural resources. Here in Wyoming, the Great Plains of the West, with their abundant agricultural possibilities, rise to meet the high plateaus and mountains, rich in minerals and water power.

Not so long ago this part of the country was considered way out West. That phrase meant something more than physical distance. It expressed the attitude of too many people in important places in the East, toward that real needs of this great region.

This country way out West was a source of low-priced raw materials for the East. It was an area where eastern money could be invested for quick, spectacular profits. The real needs of this western country were not understood or appreciated. Because it was way out West. Too many people, both in and out of Government, just didn't care about the future of this part of the country.

NOTES TRAGIC RESULTS OF WASTE

You know where that spendthrift, careless philosophy led us. Much of the best range land was badly damaged—some almost beyond recovery. Precious topsoils were washed down the rivers. The cream was skimmed off the mineral deposits. The primary emphasis was on quick exploitation of resources. The whole idea was to make money quickly and then move on.

I am sure that you businessmen, farmers, and ranchers remember the tragic results of this philosophy. You are still fighting to recover from the loss and waste of that era. But now the American people are with you. They have renounced the narrow, selfish view of natural resources.

For 17 years, with one brief set-back, you have had a Government that recognizes its responsibility for helping to preserve and develop natural resources. This is a Government that works with you, not against you.

The contrast between the enlightened, democratic approach to the use of our natural resources, and the selfish, antidemocratic approach, is plain here in Wyoming. About 50 miles north of Casper lies Teapot Dome. After 50 miles southwest is the new Kortes Dam.

The name Teapot Dome stands as an everlasting symbol of the greed and privilege that underlay one philosophy about the West. It is not only a reminder that there were selfish or misguided individuals seeking special privileges. There are always such individuals. It is almost a reminder of what can happen in your own front yard when you have the wrong kind of government in Washington.

Kortes Dam is a product of a different philosophy about resources and a different kind of government. High up in a mountain canyon on the North Platte River, this dam is a new source of wealth and strength for the people of the West. This is an example of the right way to use natural resources—for the benefit of all the people.

PICTURES BENEFITS FROM PROJECT

When the Kortes power plant goes into operation this year, its three turbines will add 36,000,000 kilowatts of electricity to our national store of energy. It will be tied into a network of transmission lines, and teamed up with the plant at Seminole Dam 2 miles upstream and with other plants downstream. This development will bring light and power to thousands of homes, farms, and industries in Wyoming, Colorado, and Nebraska.

Furthermore, Kortes Dam is a part of the reclamation work of the Federal Government. The dam is built as part of a project which will bring more water to irrigated lands. The income from the power produced at Kortes will help repay the investment in irrigation work.

The completion of Kortes Dam is thus a step toward developing natural resources for the welfare of the people. But this dam has another significance. It is based upon a recognition of the fact that water and land and forests must be treated together. We can make proper use of our resources only if we base our plans on that fact.

Like many of you here today, I was born and raised in the Missouri Valley. Like you,

UNIVERSITY OF MICHIGAN LIBRARIES

I have seen first-hand the terrible effects of looking at resources separately. When too much sod on the plains was broken to plant crops, when the range land was overgrazed, the result was not only a loss of grassland and soil cover. The result was floods, and dust storms, and a heritage of waste that has had to be slowly and painfully overcome.

Today, we know that soil and forest conservation, flood control and the development of power, navigation, and irrigation, must all be tackled and solved together. We have learned that a great river valley cannot be developed in piecemeal fashion. It is not possible to separate the land from the water. It is foolish to prepare for floods downstream but to pay no attention to soil cover and small creeks upstream.

It has taken years for us to organize our efforts in line with this concept of the interrelationship of all resources. We have met great opposition from selfish or short-sighted people, although I am glad to say that many have gradually been converted to the right viewpoint as the soundness of what we are trying to do has been demonstrated. We still have far to go. But the progress we have made in the last 17 years is tremendous.

Here in the Missouri Valley, which covers one-sixth of the country, work is going forward to develop the land, water and forests. We have embarked on these enterprises in the best democratic tradition. Our success has been possible because of private initiative, coupled with cooperative work by Federal, State and local governments.

You can see the results all about you. The city of Casper lies in the midst of an area containing about half a million acres of irrigated land. Private enterprise and local, State and Federal governments are all playing a part in making irrigation farming more secure and more productive. Not the least part of the success of irrigation farming is due to the national investment in irrigation and power facilities by the Federal Government.

SEES ROLE IN GROWING ECONOMY

That investment is good for the farmer, and it means a more stable economy for the people in town. For the Nation as a whole, the investment in sound reclamation work is part of our broad effort to create a growing economy.

Here in the western part of the Missouri Valley, we have also been working to conserve and improve range lands. For the long run success of livestock ranchers, a well-grassed area and well-watered range is essential.

Before 1934, almost nothing had been done to create that kind of range. Since then much has been done on both private and public lands. We have found better grasses to provide improved cover and more profitable grazing. We have learned to build small ponds and reservoirs, as a defense against drought.

Right here in Natrona County, within the past 10 years, 2,000 stock water ponds have been built. With more watering places cattle and sheep can spread out over the range instead of overgrazing some parts and letting good grass go to waste on other parts.

This range improvement work means a more productive and secure livestock industry. It is important also in another way. Poor management of range lands contributes to floods and allows silt to go down the rivers to fill up the power and irrigation reservoirs. Good management of range lands prevents erosion, helps to hold back floods, and protects our investments in reservoirs.

We should be proud of the work we have been doing on the rangelands, in irrigation, in power development, and all the other parts of our resource work. Green fields, blue reservoirs, clear streams, and shining, new transmission lines tell of the advances we have made in the development and use of our resources. However, some of the most changing tasks still lie ahead.

We need to put more of our land under good conservation practices. We need to build more ponds and reservoirs on the ranges, and dikes to spread water more evenly over the land. Millions of acres need reseeding. We are far from a balanced range program. Through the agricultural conservation program we are making a national investment on private range lands, which is considerably larger per acre than the amount the Government is spending on public range lands. Incidentally, the amount we are spending on the public range lands is less than 1 cent per acre per year.

Another field in which greater effort is needed is the control of insect pests. Here in Wyoming there is a serious plague of grasshoppers. The Federal Government should bear its full share of the cost of overcoming this plague through the excellent Federal-State cooperative program that has been worked out.

In the forest we need to build more roads, so that we can reach the timber and use it.

Along the rivers we need more sound irrigation projects. In addition, we need other works to control and use the waters of the rivers from the small creeks and tributaries in the mountains, all the way down to the mouths of the main streams.

Minerals must be conserved, too, in the sense that we must take out of the ground all that can economically be extracted, and must increase our exploration for new sources.

Furthermore, we need to go ahead rapidly to conserve our limited water supplies. Out here in the West, water has always been relatively scarce, and, as more and more water is put to beneficial use, it is becoming obvious that more needs to be done to assure an adequate supply of good water.

This water problem is not only serious for farmers and for cities and towns. In many parts of the country it is also a serious problem for industries. For example, down south of here in Colorado there are huge reserves of oil shale. In the years to come, we may well need to obtain oil from that shale. It will take a lot of water to do so, however, and there is a real question whether there is enough water for that purpose.

This whole problem of limited water supply and growing water uses, is the reason I appointed a Water Resources Policy Commission earlier this year. I asked some of the best experts I could find to serve on that Commission, including several from Western States. They are making a thorough study of the facts, and should give us some sound recommendations for our future progress.

As we move forward in our use of resources, we must improve the organization of the Federal Government so that its part of the development can be done better and with more effective participation by State and local governments.

PREDICTS CONTINUED PROGRESS

There are still reactionary forces that oppose every forward-looking proposal to develop the resources and increase the prosperity of the West. The philosophy that produced Teapot Dome is not dead.

But these reactionary forces are fighting a losing battle; we have been overcoming their opposition for 17 years. And we are going to go right on beating them.

Those who are opposing us now are the same ones who said the soil-conservation program would regiment the American farmer. A few years back, they asserted that it was socialism for the Government to lend money to farmers to build rural electric lines. They claimed it was a boondoggle to plant shelter belts of trees on the plains.

Now they're for these things. They admit that these programs have been good for the country. All they want to do now is to prevent any further progress.

But their past record is clear and plain. And their new arguments are no better than their old ones.

The American people will continue to go right ahead taking the practical, sensible steps that are needed to build a better future. We are a strong, free people. We know that to continue free and strong we must wisely develop and use the resources with which nature has endowed us.

The money we spend for effective conservation work is a sound investment in better living for ourselves and our children. We will not be dismayed by those who say the cost of such investments is too great. The cost of not making them would be far greater. We cannot afford to slacken our efforts, for this is work which is vital to our future.

Today, more than ever before, we can see how important it is that we take these steps to develop our resources. We are engaged in a world-wide struggle to bring lasting peace to the world.

ASSAILS "CYNICAL IMPERIALISM"

In that struggle we are being opposed by a cynical imperialism which asserts that freedom and democracy are soft and incapable of strong action.

We can prove how false, how hollow, are the claims of communism. But we can prove that only by deeds. We must demonstrate that our free country, along with other free countries, can achieve strength, prosperity, and growing welfare for our people.

To do so we must continue to move forward in our use of natural resources. We must not permit any backsliding toward the old philosophy of private greed and the public be damned. We must continue to look upon our resources as a public trust, to be preserved and increased as the physical basis for a growing future.

In the tremendous conflict that exists in the world today our fundamental strength is our belief in the worth of the individual under God. Our whole democratic tradition rests on our faith that freemen, working together in cooperation, can achieve justice and well-being for themselves and for one another.

In that faith we shall move forward on the path of freedom and peace.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach an article from the CIO News of May 8, Socialized Medicine May Be Bad, But—, by Allan L. Swim. It is a direct, concise statement of a fact too many candidates for political office have been neglecting: Socialized medicine and national health insurance are vastly different things. The administration's national health insurance proposal concerns a system of prepaid financing of

good health services for everybody. Socialized medicine would have the Federal Government take over and operate the Nation's medical facilities and personnel; national health insurance has nothing to do with either.

The article follows:

SOCIALIZED MEDICINE MAY BE BAD, BUT—

(By Allan L. Swim)

Political candidates in some parts of the country have already begun making a campaign issue of "socialized medicine."

Those seeking to capitalize on the issue are going through some strange, contorted reasoning. Their argument goes something like this:

A person who is dissatisfied with present health services and believes national health insurance should be provided is an advocate of socialized medicine. Socialized medicine is state medicine—and anybody who believes state medicine is desirable must certainly be a Communist or at least friendly to communism.

Communists are enemies of democracy and consequently, an advocate of health insurance is an enemy of the American system.

The only thing wrong with such reasoning is that it's completely false!

Opposition to socialized or state-controlled medicine for the United States has been expressed in this column on a number of occasions.

This opposition represents general CIO policy on the subject.

But this column has frequently lauded the idea of national health insurance.

This represents no contradiction—although the American Medical Association would have you believe otherwise.

The AMA has hung a phony tag on health insurance and is conducting a costly propaganda campaign in an effort to convince the people that two entirely different things are the same thing.

Doctors who support the AMA in this campaign and condone its underhanded tactics should be thoroughly ashamed of themselves.

They're reflecting no credit upon themselves as individuals or upon their profession.

Let's take a good look at the health situation and see if we can determine what prompted the AMA to shoot off such large quantities of propaganda fireworks.

Back before the war a number of persons became concerned about the state of the Nation's health and the inability of many of our people to obtain adequate medical and hospital services.

Their advocacy of some form of Government health insurance didn't attract a lot of attention.

Then, with the drafting of millions of men for the armed forces, the Nation got a great shock.

The male citizens of the healthiest Nation on earth turned out to be far from the prized physical specimens many had thought them to be.

The number rejected because of disabilities was appalling.

This, plus sharp increases in the cost of health services, revived and increased the demand that something be done about the situation.

The AMA, sensing the revived interest, embarked on a campaign designed to scare the public into opposition to national health insurance.

The AMA drive has made real headway among those who have never taken the trouble to find out what health insurance actually is.

And there's considerable evidence that many doctors fall into this category. They read in their own journal that health insurance is socialized medicine and that is that.

So, at the twist of a bandage or stab of a hypodermic needle they'll tell their patients that a national insurance plan would lead us down the road to state medicine and to disintegration of the medical profession.

Socialized medicine is government controlled and government administered. It does not allow patients free choice of doctors and denies doctors the right to reject undesirable patients.

National health insurance would merely provide the people with a pay-as-you-go plan under which they could finance medical care. The present right to choose doctors and patients wouldn't be disturbed.

And there's a great difference between the two.

If the people of the Nation want better health services they should make a real effort to get an honest presentation of the facts relating to national health insurance.

They shouldn't be content with slogans and phony tags. They shouldn't be content with the word of the zealots on either side of the fence who make outlandish claims.

They should get the facts—the hard, cold facts—and then act according to their own best judgment.

The Great Politician's 1950 Personal Parade

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the RECORD a revealing editorial from the Rapid City Daily Journal, published in Rapid City, S. Dak. The editorial clearly indicates that calling the President's tax-supported political junket through the country a nonpolitical tour is fooling nobody very seriously, including certainly those riding with the President in his special private train.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GREAT POLITICIAN'S 1950 PERSONAL PARADE

Heralded by Harold Stassen as "the smartest politician and the worst President" that even sat in the White House, Harry Truman will leave his feather-nesting buddies and clowning cronies and start on a stumping tour of the Nation next week. The good fellow and the clever politician, presumably, will be at his best.

His 9-day, 16-State tour will begin May 7. He will deliver eight major political addresses, thinly veiled with suggestions of public business; also 50, maybe more, impromptu talks.

The haberdasher who could not make a go of a small business will demonstrate to the people how he can manage the greatest business on earth with the greatest of ease. Smart politics and off-hand good fellowship does it—nothing more is needed.

In 1948 the Republicans tolerantly watched Harry doing it. This year, having learned a costly lesson, they are going to be more alert—they say. They will follow Harry around, mayhap, or unlimber some big guns. Anyhow, they promise to be on the job and to give tit for tat.

In 1948 the master politician jumped the gun and started his cross-country, grassroots electioneering even before he had been nominated by the Democratic National Convention. He left Washington June 3 for a "nonpolitical" speaking tour of 18 States. This year his excuse will be setting his official seal on a few national dams and letting loose a few of his own.

On his trip 2 years ago he touched off a Republican exlosion by labeling the Eightieth Congress (Republican) as the worst in history. Later he hedged and said "second worst." This time he will put in his best licks to defend his own "Eighty-worst" Congress. He denounced the Taft-Hartley Act last time, and promised to repeal it pronto; thus far, even with his own party-controlled Congress, he hasn't yet been able to keep that promise—or few, very few others that he made.

The master politician made other wide swings-around in 1948 while the Republicans looked bored and talked more so. He made a 15-day tour in September of 18 non-Eastern States, with 150 off-the-cuff back platform talks. He wowed 'em, even as the Nation's neglected and botched critical problems worsened. He "gave 'em hell"—the Republicans—and they just stood aloof and let him go to it.

On this tour Harry promised the people just about the whole book, with unnumbered billions carelessly thrown in on the side. It must be admitted that he did his best about the billions as mounting red ink attests. But he couldn't ride herd on his Democrats—some of them, evidently, were thinking about their country.

He was at it again in October in the Northeastern States. Later in the month in the big cities. But the Republicans were still dead on their feet. "Let the patent medicine man sell his bottled water," they said and contended themselves with sonorous noble sentiments. Remember?

Now we're about to have the smart vendor selling his bottled water from the back of the wagon again. Will the curious crowds be as eager to buy this year?

The States Must Resume Their Responsibilities

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. MARTIN of Iowa. Mr. Speaker, for many years I have observed the constant growth of our Federal bureaucracy, culminating in the vast organization for World War II. Accompanying that growth of these agencies has been a vast increase in powers and activities on the part of the Federal Government and a decrease of powers and activities on the part of the States.

While many aspects of this subject are debatable, one fact of tremendous significance now looms. The Federal activities, especially the armed forces, have created a great pool of experienced administrators available to our States.

An outstanding example of one such selection was the appointment of Rear Adm. Milo F. Draemel, United States Navy, retired, by Gov. James H. Duff, of Pennsylvania, as secretary of forests

UNIVERSITY OF MICHIGAN LIBRARIES

and waters, most favorably commented upon in an editorial of the Saturday Evening Post of April 1, 1950.

The calling of such experienced and able men into the service of the States is certainly commendable and most salutary; also is the Pennsylvania example, thus shown, of accomplishing worthwhile intrastate projects with State funds rather than through the long-established and dangerous policy of procuring Federal appropriations with Federal supervision for such undertakings. It is to be hoped that this instance of wise local effort may mark a beginning of the one practice and the ending of the other, with resulting tendency toward the reestablishment of the authority and independence of the States and Commonwealths as contemplated by the Federal Constitution.

In pursuance of leave granted, the editorial is included as a part of my remarks:

WHY NOT RECRUIT RETIRED EXPERTS FOR STATE JOBS?

Nowadays, as everyone knows, government is very much big business, not only the Federal Government but State and local government too. Like any other big business, government desperately needs a supply of able administrators. Unfortunately, such men are scarce. Even the government executives who would honestly prefer to appoint an able man than a political crony don't know where to look.

At least part of the solution, it seems to us, is fairly simple. A continually replenished reserve of experienced administrators exists in the growing body of men who have been retired from business, industry, and the Military Establishment, not because they were played out, but because increasingly prevalent early-retirement plans call for it. These are men who have risen to positions of importance and responsibility largely by virtue of their success as administrators. Inasmuch as executive ability is something that is not confined to any one particular job, but can be applied equally well in almost any field which requires administration, there is no reason why their abilities cannot be made available to public service.

A notable example of this fact is Milo F. Draemel. Retired from naval service at the customary age of 62, Rear Admiral Draemel was snapped up in 1946 by Temple University, in Philadelphia, and appointed vice president in charge of physical planning. About 6 months later, Pennsylvania's new Governor, James H. Duff, asked Draemel to enter public service. As commandant of the Fourth Naval District, which includes the huge Philadelphia Navy Yard, the admiral had lashed out at the disgraceful condition of the Schuylkill River, an industrial sewer which was befouling his ships as well as menacing public health, inviting floods, and offending the eye and nose of everyone who came near it. Duff felt the same way, and he invited Draemel to come to Harrisburg as secretary of forests and waters and do something about it. Temple gave him an indefinite leave of absence.

During the 3 years that he has been secretary, Draemel has nearly completed what he set out to do. The problem has been to clean about 90 miles of river of the accumulated culm deposits left in it by coal-mining operations, deposits that had turned the water black and had, in many places, all but filled in the river's bed. Draemel and his men studied the problem, planned the attack, and put it into operation. During the past 2 years the Schuylkill clean-up has been one of the biggest engineering projects in the country. As a result of careful planning and able administration, the project will be completed at least 3 months before the scheduled date of June 1951.

Meanwhile, Secretary Draemel has been kept busy with other things too. He has built 2 major flood-control dams and 3 major dike systems and completed 97 lesser related projects on Pennsylvania's rivers. He has developed eight new areas to add to the State's park system, which in 1 month last summer attracted nearly a million tired businessmen and tourists, thus bringing a tidy sum into the treasury. In the realm of reforestation, a triple-barreled program has been set up, designed to retard flooding, prevent soil erosion, and husband subsurface water resources. Draemel's department, in addition to advising private owners of timberland, has provided some 20,000,000 seedlings for replanting in the last year, more than four times the number of seedlings which the department could muster 2 years ago.

In short, Draemel has done, and is doing, a bang-up job, despite the fact that he had never been a secretary of forests and waters before and that Uncle Sam officially considered him too old almost 4 years ago. Nor is Draemel's an isolated case; there are an encouraging number of other men on the retired list now occupying administrative positions in the Pennsylvania State government alone, and many more would doubtless serve both willingly and well if they were asked. Men who have worked all their lives usually find enforced leisure irksome and, since many of them have already made their stake in the world, and often have pensions, the low salaries paid to top Government executives as compared with private business executives aren't going to discourage them.

State-government work probably holds a greater appeal for these men than Washington can make, for local pride and local ties are apt to be firmly fixed by the time a man passes 60. In fact, we can't understand why more State governors and executive-department heads haven't taken advantage of this ready-made pool of qualified administrators.

Thoughts for a New Day

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I would like to insert a very dynamic address delivered by the Reverend Crawford W. Brown D. D., canon of the Washington Episcopal Cathedral in Washington, D. C., on May 9, 1950, at the State convention of the P. E. O. Sisterhood:

THOUGHTS FOR A NEW DAY

Madam President and members of the P. E. O. Sisterhood, I am happy to be with you this afternoon to share with you some thoughts for a new day.

I do not lean to pessimism, neither am I a prophet, nor the son of a prophet. However, I would like to remind you that we are not living in "One World" as suggested by the late Mr. Willkie. We are living in a split world and in a world wherein men have learned to split the atom. Put these two inescapable facts together and the potential danger is apparent. A divided world, with so many split personalities, is today threatened with the destructive force of atomic warfare. Remember too, the United States established a precedent in the unleashing of such furious destruction upon an unsuspecting civilian population. Actually, the bomb fell on America. We have now a most unpleasant skeleton in our national closet and it is a skeleton that will haunt and stalk us for many years.

Specifically, I wish to speak concerning several aspects of our national life. I am a firm believer in the tremendous power of the spiritual forces of the Nation. It has always been true that a nation must be defeated spiritually before it can be defeated either by military attack from other nations or by any form of internal disruption, trickery, or conspiracy. The history of nations, from the days of ancient Israel down to this present hour, proves without question that this is true. A study of the facts available to every person in the land, shows there is now taking place within America, as well as within other lands, a spiritual defeat that may well prepare the way for national destruction.

"It is time we wake up and realize that the hand stretched out to crush our spirit is the hand stretched out to kill America. When we see religious groups pitted one against the other, when religious leaders are sucked into the camp of the enemy, when God is banned from our schools, and the existence of the soul branded a fable by men in the public employ as professors; when morality is sneered at and patriotism looked upon as fit only for fools, then we can see how far we have allowed the destroyer to invade the sanctuary of our spirit. It is time to wake up, Americans; time to realize that we are being softened up for the knock-out blow. If America is not worthy of a terrific effort on our part for her preservation, then none of us deserves America."

The delegates to this convention know to what extent God has been ignored or thrust out to the edges of life. This is God's world, at least so we sing: "This is My Father's World." Such a concept frees us on the one hand from the false assumption that there is no hope, and on the other hand that the world has been wound up and will automatically produce a better and better civilization. We are not worshipers of mere progress. Under God we should guide and control it.

But because God has been ignored or thrust out to the outer edges of life, we as a people are confused, uncertain and face the morrow with a definite sense of insecurity. We are a Nation which possesses these characteristics: Knowledge without character, politics without principles, and a Nation participating in the worship of God without sacrifice.

Mr. Malcom Bingay, well-known editorial writer, plainly declared that which every soul within this Nation should hear and heed. "The blame" said Mr. Bingay, "for most of the world's discord can be placed on our failure to recognize three impulses by which man lives: First, instinct—that something which man shares with the animals, the simple impulse to exist. Second, reason—that something by which he is able to differentiate from the animals, and through which he has plied up through the ages his material wealth. Third, spirit—that indefinable something, transcending both instinct and reason and which permits man, in his loftier moods, to glimpse a possible answer to those eternal questions which have haunted him in his materialistic reasoning. By reason alone he has built up the great cities and civilizations of the earth, only to destroy them. The spirit alone can save man from his ruthless reason. Through reason he can find knowledge, but only through his spirit can he learn wisdom."

There is much in the national life and in the temper of our people which must be

commended. The great heart of America beats with compassion for the forgotten and underprivileged peoples of the world. The tired and worn humanity of the world have found sanctuary here and a new opportunity. Such compassionate concern, coming as it has to full flower in the Marshall plan, the Friendship Train, the Milk Ship, and many other humanitarian enterprises all found their genesis in the rich and fertile soil of the spiritual forces of the Nation.

We are a Nation blessed above all other nations in natural resources, favorable geographical situation, productive capacity, free from the scars of war. The democratic principle of government recognizes the dignity of the individual, the initiative, resourcefulness and free enterprise have reached their highest under this Government which is of the people, by the people, and for the people.

But a change is coming over our land and our people. Something is sadly lacking. That which is lacking is not knowledge but skill, not invention or lack of raw or processed materials. The lack is character. Intelligent men produce the A-bomb, but it takes men of character to use it. Knowledge without character is responsible for our immoralities in the economic, social, and political world.

One hundred years ago Horace Mann prophesied that when schools were established so that all may have free tuition our moral problems would be resolved. He also said we would, under such conditions, have no need for police or jails, for armies or navies. Today we have compulsory education and knowledge has increased in the past century far beyond the dream of the greatest dreamer. Our high learning with our low morals is destroying the world. We have gained control over nature only to lose control over human nature.

Science has not been our savior. Our neon lights still leave us in darkness. Our swift elevators bring us no closer to heaven. Our swift advance in the field of chemistry has only produced a greater international understanding. Actually by our process of civilizing men we have succeeded in making man more savage. Knowledge without character is one of our great national sins. As Nehru said: "Good ends can never be achieved by evil means," and America did not speed the day of international brotherhood by her action at Hiroshima or Nagasaki.

The quality of character so sorely needed today is that which grows out of faith in God. Such a faith must master this hour in which we live or the world is lost. This is our day and our opportunity to add new names to the chapter of faith—a glorious chapter written in the blood of heroic men and women. Only as we dare to write such a new chapter can we hope to perpetuate the triumph of God—and bring about a new day of understanding.

Politics without principle. Here I speak with all charity. I would not for one moment minimize or disregard the constant actions of many courageous leaders of our several States and here in the Nation's Capital. One pays willing and just tribute to these men and women for their faithful leadership and sacrificial service to the Nation. But one must also speak of the leaders who have been placed by the people who, having nobly begun their trust with high ideals, were seen stripped of such ideals by corrupting influences.

"God give us men. A time like this demands strong minds, great hearts, true faith, and ready hands; men whom the lust of office does not kill; men whom the spoils of office cannot buy."

How appropriate is the tall, straight, clean shaft erected to the memory of our first President. Thomas Paine wrote: "The character of George Washington puts all men called kings to shame." He accepted no pay as Commander in Chief, he accepted no remuneration as President. He rendered every possible service in his power. Or we stand before the majestic and inspiring Lincoln Memorial; we read again the words of Gettysburg, or the second inaugural and we are moved. Here indeed was a man who lived above the world—in public duty. One does not forget his words to an officer who, in the throes of Civil War said to Mr. Lincoln, "It is good to know that God is on our side," to which Mr. Lincoln replied: "What I want to know is, are we on God's side." Was there ever a great opportunity for another great statesman to immortalize himself?

Another unhappy aspect of our national life is worship without sacrifice. Here I speak to all of us—and directly. We are all guilty. God gave up His all for us, His dearest possession, His Son. What comparable sacrifice has modern Christianity made? If the cross is the insignia of Christianity, it is certainly not manifested in the lives of our people save as it is worn as a tinkling ornament or to decorate a steeple. All of us are guilty of the sin of worship without sacrifice (Christianity's Open Door, P. E. O. Record, May 1950).

We give so little time for the worship of God that the church is rapidly becoming a 1-hour-a-week institution. The members of our churches are not willing to place their energy, time, and talents at the disposal of the church with the result that it is almost impossible to secure teachers in our Sunday schools, leaders for our young people, and workers in the many and varied organizations necessary to operate the programs of the church. When our income is adequate we make our gifts to God our last consideration, and when we must reduce our outgo because of less income religious support is usually the first to feel such a reduction.

Sin is the product of people, not things. Someone has said, "Not many of us know much about biology, but in alibiology we are experts." And we are. We quickly blame others for the plight of our world—the politician, the minister, the capitalist, the leaders of labor. Men of evil design are elected to high office where they gain prestige and power. We cry out against them for their failures, but we conveniently forget that so many of the good people put them in office by their failure to vote. It is the inertia of good people which troubles a modern world.

Good people must assume their rightful responsibility. The forces of evil are ever on the alert, aggressive, well organized, and ready for action at a moment's notice. The devil never takes a vacation. The responsibility for the home, the church, the city, and the Nation is ours. When a better world is built better people will build it.

Now, what can we do to help correct some of these situations to which I have made all too brief reference? What must the individual possess? Above all, he must have a stanch faith in America, in its institutions, and a deep undergirding faith in God and in the inherent decency of man. Mr. Franklin D. Roosevelt reminded all of us: "This generation of Americans has a rendezvous with destiny."

Terrible as were the last two World Wars there is one thing more terrible: a condition of society which made such things possible. The battles of these two World Wars were but outward manifestations of the inner conflicts which still tear at the heart of mankind. Peace is a state of mind, and the war was raging in many forms in the minds of men long before the first gun sang its song of death in 1914.

We need not blame any other nation or foreign situation for having brought us into two World Wars. We can look into our own hearts and blame ourselves. Yet we call ourselves a Christian people.

We hear much about military preparedness. What of the spiritual preparedness which is infinitely more necessary. We talk of military disarmament, but are we ready to arm spiritually? We will never arm spiritually—or engage in any program of spiritual preparedness until we have faith. Faith must make us do our best today because of our interest and concern for those to come. Many of the blessings we enjoy today are ours because someone else had faith and lived as though it counted. Will the next generation say of us that by faith we have left them a heritage of peace, good will, and one world.

Man is capable of changing his environment by new scientific inventions, but what is more important, he is capable of being changed himself. Change the thought and you change the man.

We must put righteousness before self-interest.

We must seek to discover God's purpose for the world rather than pursue our own.

We can have the abundant life which Christ came to make possible for us.

These thoughts translated into action will bring in a new day.

Twentieth Anniversary of Brooklyn College

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. MULTER. Mr. Speaker, Brooklyn College is celebrating today the twentieth anniversary of its establishment as a separate and independent institution of higher learning. Although the origin of the school dates back several years earlier, it was not until May 10, 1930, that Brooklyn College became a separate entity with its own campus and administration.

Today, on its twentieth anniversary, Brooklyn College numbers more than 17,200 students in its day and evening sessions and its graduate school. It is the largest undergraduate liberal arts college in the country and one of the largest collegiate institutions in New York State and in the country. It has been ably led for more than a decade by an outstanding and dynamic educator, Dr. Harry David Gideonse.

On the occasion of its anniversary, I desire to extend my felicitations and good wishes to Dr. Gideonse, to the entire faculty, and to the student body. The Borough of Brooklyn is proud of Brooklyn College and its great accomplishments in the two decades of its existence. In connection with this anniversary, I am placing in the RECORD an article from the New York Herald Tribune of May 7, 1950, by Robert A. Poteete:

BROOKLYN COLLEGE GETS READY TO COME OF AGE—IT'S ALREADY RICH IN TRADITION ON TWENTIETH ANNIVERSARY

(By Robert A. Poteete)

"It's really ridiculous," a Brooklyn College coed complained. "The attitude of the college toward meetings of the two sexes is childish, but no one dares protest."

UNIVERSITY OF MICHIGAN LIBRARIES

"If the girls want to meet the boys for a good business reason, we can arrange a time in my office," replied Prof. Adele Bildersee, in charge of women students.

That was Brooklyn College—rather its predecessor—of 1926. A World headline proclaimed: "Sexes Segregated in New Institution."

Brooklyn College Center—forerunner of Brooklyn College—opened September 24, 1926, in a loft building at Willoughby and Bridge Streets. It comprised a City College branch for men and a Hunter College branch for women with a total beginning enrollment of 1,200.

This week, Brooklyn College—a separate entity with campus, administration and no segregation of the sexes—will celebrate the twentieth anniversary of its detachment from the collegiate center and the appointment of its first president, Dr. William A. Boylan, on May 10, 1930.

And Professor Bildersee, now director of admissions and dean of students, can look down from her office window on a grassy, 42-acre campus and see boys and girls meeting all the time on spacious lawns, building steps, campus benches, and in a perennial garden.

Brooklyn College's move from the Borough Hall section—where it had overflowed the loft building and spread into various office buildings—proved no exception to the controversy that raged for 14 years before the Collegiate Center was opened. Out of the proposals that boomed from speakers' stands and filled newspaper columns, a site was selected in the Flatbush section of Brooklyn on what had been a golf course.

In October 1937 Brooklyn College moved to its new campus, which, by city real estate standards, is unusually commodious. Dr. Boylan retired because of ill health in 1938, and was succeeded by a temporary head, Mario E. Cosenza.

On October 18, 1939, Brooklyn College administration was put in the hands of a dynamic Dutchman, Harry David Gideonse, who had developed the National Broadcasting Co.'s national program of educational discussion and the University of Chicago's Round Table broadcasts. After graduation from Columbia University, Dr. Gideonse directed international student work at Geneva University, Switzerland. In the thirties he taught at Rutgers University and at the University of Chicago.

An outspoken student of international affairs, Dr. Gideonse brought a concept of social cohesion to the Brooklyn institution.

Brooklyn College was ingrown, Dr. Gideonse thought—almost all its students were drawn from one city, which made for lack of perspective. So the new president set about hiring faculty members with broad experience in institutions across the country.

A second step the new president took was to encourage extracurricular activity. The 225 active student organizations on the campus attest to his success in this program. Day and night students publish separate weekly newspapers and quarterly literary magazines, the senior class publishes a yearbook and the college has extensive athletic, dramatic, debating, and other specialized activities.

Dr. Gideonse's third step is an experiment in the integration of courses in liberal arts. It is in its first year.

The five large buildings on the Flatbush site are a far cry from the segregated beginning of Brooklyn College in a loft building next to an elevated track. Its faculty—482 teaching personnel, 16 administrative officers, and 81 administration staff members—approaches the size of the original enrollment.

The college has granted more than 23,000 degrees—including 260 master's degrees granted since the graduate division opened in 1935. A class of more than 1,500 will receive degrees in June.

More than 17,200 students are enrolled at present in the graduate, day, and evening sessions.

It's a proud school, from the administrative official who boasts that Brooklyn College is "probably the only college its size that fields completely amateur sports teams" (a fact sometimes deplored by students), to the student journalists who assert in their publications—at every available opportunity—that Brooklyn College is the largest undergraduate liberal arts college in the country.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include in the RECORD an article by John Day, of the Courier-Journal of Louisville, Ky., in the struggle for home rule in the District of Columbia:

HOME RULE FOR THE DISTRICT OF COLUMBIA

(By John F. Day)

WASHINGTON, April 22.—One day this week, a man dressed like Paul Revere rode a horse down Pennsylvania Avenue and along other principal Washington streets. He carried a sign which read, "Taxation without representation is still tyranny."

The one hundred and seventy-fifth anniversary of Revere's ride was being used to dramatize the fight for home rule in the District of Columbia. That fight doesn't date back quite as far as the midnight ride, but it's hoary enough. The District has been voteless since 1874, when Congress revoked the self-government privileges residents had exercised from 1802. The struggle to regain them has been going on ever since, and Democratic Party platforms have contained home-rule planks since 1892.

PERTINENT QUESTIONS

Most people are aware that Washington is a Federal city run by Congress under power given it by the Constitution. The clause pertaining to that says: "(The Congress) shall exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may, by cession by particular States, and the acceptance of Congress, become the seat of Government of the United States."

But most people are surprised when they are asked, as the Central Suffrage Conference frequently does ask, do you know:

That the capital of the world's greatest democracy is not governed democratically?

That the citizens of the District of Columbia (close to a million) have no representation in their National Government? That they have no control over their municipal government?

That Congressmen, busy with national problems, spend more than 3,000 man-hours yearly on District housekeeping problems that an elected city council could handle?

That citizens of the District pay more taxes than those of 25 States?

That they pay almost 90 percent of the expenses of the National Capital?

That they have nothing to say about the assessing or spending of the taxes they pay?

The city of Washington was specifically described, established, and chartered as a corporate entity by an act of Congress approved May 3, 1802. From then until 1871, it had an elective council and mayor. In that year, Congress repealed the charter and established a new local government consisting of a governor and council appointed by the President with the concurrence of the Senate. From 1871 to 1874, the District also had an elective delegate (nonvoting) to the House of Representatives.

JOHNSON WAS LEADER

In 1874, Congress substituted government by three Commissioners appointed by the President and approved by the Senate, and at the same time eliminated the delegate to the House. Four years later, the Commissioner system was made permanent.

During the days of World War I and later, there was a vigorous debate as to whether the city of Washington legally existed. Principal supporter of a contention that it didn't was Representative Ben Johnson of Kentucky, chairman for many years of the House District Committee. (He is now living in retirement at Bardstown.)

Johnson held that the act of 1878 failed to provide for the continuation within the District of a city of Washington. He carried his point with President Wilson, who departed from the "done at the city of Washington" form used by his predecessors and concluded his proclamations, "done in the District of Columbia."

But during the Harding administration, lawyers and historians opposing Johnson gathered forces and cited various acts of Congress from 1871 on mentioning the city of Washington and thus legally recognizing its existence. Harding returned to the older form, and all the Presidents since then have used it.

NEGROES ARE FACTOR

But whether living in a legally existing city or not, Washingtonians still have no vote for either municipal or national officials.

Why?

No matter how many reasons may be given, the basic one is this:

The large number of Negroes living in Washington.

Last year, the Senate passed by voice vote the Auchincloss-Kefauver bill, which was introduced with bipartisan support. (Platforms of both parties in 1948 called for District home rule.) It provides for an 11-person city council, nine to be elected by the citizens and two to be appointed by the President. It also provides for selection of a city manager. Congress would retain the right to review all legislation passed by the council.

The House District Committee, whose chairman is JOHN MCMILLAN, of South Carolina, has bottled up the bill. Representative KENNEDY, Democrat, of Massachusetts, started a discharge petition which now has 178 signatures. It requires 218 to bring the bill to the House floor. If it should ever get there, the bill probably would pass. But the chance of getting the remaining signatures looks slim.

Only one Kentuckian has signed the petition, CARL PERKINS, Democrat, from Hindman. Seven Indianans have signed. They are all Democrats: DENTON, of Evansville; NOLAND, of Bloomington; JACOBS, of Indianapolis; MADDEN, of Gary; KRUSE, of Fort Wayne; CROOK, of South Bend; and WALSH, of Anderson.

Supporters of the legislation point out that at present Washington has nine bosses: the District Commissioners, the Bureau of

the Budget, House Appropriations Committee, Senate Appropriations Committee, House District Committee, Senate District Committee, conference committee on District appropriation bills, the whole Congress, and the President.

They also make these points:

1. The home-rule charter would become effective only after approval of a majority of District voters in a referendum.

2. The people of Washington are fully capable of local self-government, since they have an occupational acquaintance with public affairs and are better educated, on an average, than citizens of other American cities.

3. Taxation without representation is incompatible with American traditions.

4. Congress would maintain its control over Washington as the Nation's Capital through it veto powers over the city council's actions.

5. Polls show that both the people of Washington and the people of the Nation think the District should have home rule.

BILL SUPPORTED

Organizations representing a cross-section of the District residents are working for the Kefauver bill. They include the Junior League, the American Association of University Women, the American Veterans Committee, the CIO, the Americans for Democratic Action, Washington Federation of Churches, the League of Women Voters, Democratic Central Committee, Young Republicans of District of Columbia, and Young Democrats of District of Columbia.

Most of the opposition is centered in the Washington Board of Trade. It takes many specific exceptions to the Kefauver bill, but the contentions it uses most effectively are:

1. The Negroes would control the city. (Negroes compose about 28 percent of the population of Washington.)

2. The proposed legislation would mean carpetbagger and riffraff rule.

3. Dual voting would be possible. "Registered voters in other places could vote in the District if they lived here 1 year. This means that thousands upon thousands of people voting and giving primary allegiance elsewhere would vote in the District. This group might well be the deciding factor in any election or referendum. The board of trade does not believe this provision is conducive to good government or fair to permanent citizens."

NOT REAL HOME RULE

4. The solid citizen of Washington doesn't want this legislation because outsiders who come here for a few years can put the District into debt, enjoy the fruits, and then go back to their home States and leave the permanent citizens to pay the piper.

5. The majority of people in the Nation want Washington to remain a Federal city rather than become a home-rule city.

The board of trade and some citizens associations which join with it also say the Kefauver bill would not provide real home rule anyhow, because residents still would not be able to vote for President and Vice President or have representation in Congress. That is quite true. It takes a constitutional amendment to provide that form of suffrage. Such an amendment is proposed in a resolution sponsored by Senator NEELY (Democrat, West Virginia) and pending before the Senate Judiciary Committee.

The board of trade says it favors this resolution, and so do supporters of the Kefauver bill.

But the board of trade forces say the case for national representation would be jeopardized by granting local suffrage to District citizens. Supporters of the Kefauver bill say quite the opposite is true—that evidence of a responsible electorate would help in securing the constitutional amendment necessary to grant national representation and voting for the District.

Administration Farm Plan

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include questions and answers on the administration farm plan, published in the April 1950 issue of the Spotlight:

Why is a farm program by the Government necessary? The interests of our farmers and those of other economic groups are inseparable. When the farmer's income falls, he is unable to buy the products of industry; profits fall off; wages are cut; city residents are less able to buy farm products; the spiral continues downward; this is the history of all major depressions. A change of 10 percent in total farm income, upward or downward, equals a change of 1,000,000 jobs in industrial employment. The farm is much more susceptible to cyclical fluctuations than any other unit of the economy.

Is the farm-support principle accepted only by the Democratic Party? No, although the Democratic administration first used farm-price supports in the 1930's to restore the Nation's farm economy, Republicans have supported the parity payment system in recent years.

Why is a change in the farm program made necessary at this time? Farm income has fallen 22 percent in the past 2 years; prices paid by farmers are down only 5 percent. This gap is causing a serious decline in farm purchasing power. A depression spiral may set in if this situation is not altered soon. Furthermore, there are numerous flaws in the present system which should be corrected.

What are the major flaws in the present farm plan? (1) Basic commodities producing only one-fourth of farm income are covered by price supports. (2) The Government is forced to purchase enormous amounts of potatoes and eggs and take them off the market keeping retail prices at artificially high levels. (3) The housewife pays twice for the support of farm prices—once in taxes, again in high prices at the grocery store for products which are not permitted to sell at normal market levels. This causes dissatisfaction and may result in attempts to kill the entire farm price-support program. (4) The farmer's freedom to utilize his land as he may think best is restricted: while some commodities are supported, and others are not, the farmer has an economic incentive to follow farm practices which may not be wisest (since he will concentrate on those commodities which are supported, even though he knows his land is better suited for other products).

What is the basic principle of the administration farm program? Farm income must be maintained at not less than $28,000,000,000 or the entire economy will suffer. Farm products (including perishables) accounting for three-fourths of farm income would be covered by the new program.

How would it work for the farmer? Farmers would sell at the open market. Prices would be determined by the law of supply and demand. If prices fell below the support level, farmers would receive a production payment equal to the difference between the average market price and the support level. If market price exceeds support price, of course, there would be no Government payment.

How are standards for support-price levels determined? We seek such prices as will return to farmers as much buying power as they had in a 10-year modern moving base period.

What are the advantages of the administration plan? Farmers would receive broader, more secure, and more direct income supports. Consumers would have the benefit of entire supplies of meat, milk, poultry products, and other perishables at normal market prices. This would encourage consumption, and lower the food budget.

The program would take the Government out of buying, processing, shipping, storing, and disposing of perishables and return these operations to normal channels of trade.

What about controls for the farmers? No new kinds of control are recommended. The same kind of marketing agreements and acreage allotments that were used to pull farmers out of the Hoover depression will continue to be used wherever desirable. Observance of soil-conservation practices will be required.

Would the costs of the program be staggering as Republicans like to charge? No. The administration farm program for perishables would cost taxpayers no more than the current purchase-type programs and would save consumers many dollars at the grocery store. For example, consumer savings on pork alone next year could be as much as $25 per family. The 1949 potato support program will cost the Government at least $80,000,000 while under the Brannan plan, potatoes would cost the Government only about $33,000,000 and at the same time retail prices for potatoes would drop.

United Nations International Children's Emergency Fund

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SEGRETERIA DI STATO DI SUA SANTITA,
Dal Vaticano, November 4, 1949.

Mrs. BETTY JACOB,
UNICEF, Paris.

DEAR MRS. JACOB: I was pleased to have an opportunity, in the course of your recent visit to Rome, to discuss with you the work of the United Nations International Children's Emergency Fund and to learn of the success which has attended your efforts and those of your colleagues.

As I told you at that time, you may be assured of the abiding sympathy of the Holy See with this humanitarian undertaking and of our interest in your project for the continuation of a supply program which you say would insure for the needy children of the world a further measure of succor and assistance.

With the expression of my sentiments of esteem and consideration, I remain,

Very sincerely yours,

G. B. MONTINI, *Substi.*

UNIVERSITY OF MICHIGAN LIBRARIES

Poland's Present Plight

EXTENSION OF REMARKS
OF

HON. W. KINGSLAND MACY
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address made by me at Polish Hall, Southampton, Long Island, N. Y., last Sunday afternoon, May 7, 1950:

Your invitation to address you on this occasion commemorating the adoption of the Polish Constitution does me much honor. Even an indifferent speaker can deliver a rousing speech on the Fourth of July when he is thrilled as a lover of liberty by the meaning of that great day, and thus it is that while I am no great speaker, I humbly hope that something of the inspiration I felt when I reviewed the great event on May 3, 1793, when freedom-loving men adopted the Constitution of Poland and abolished the veto power, will carry through into my words today and serve to stir the unquenchable fire for true freedom that burns forever in Polish breasts.

We of America have only to turn our eyes east to where the iron curtain is draped like a corpse's shroud over a still-living Poland to realize how terrifying a life-in-death existence can be without freedom. We have only to look at proud Poland, subject to a master who is not a free man but a slave devoid of the most rudimentary concept of liberty, to draw back horrified. We have only to remember what Poland was and what her people hoped her destined to be, to realize that without freedom, all is nothing.

Should Russia, and this is fanciful, pave every street in Poland and fill every Polish stomach with the finest of foods, so long as men must walk those streets in regimented boots and the granaries of freedom remain empty, Poland must be an object to excite sympathy. No gain could compare with her loss and her loss must not be ours and to that end we must guard our freedom.

Americans whose ancestral background is identified in time through blood and history with Poland can be counted on to be vigilant, and valiant, too, for who can take lightly the boast of the Poles that 17 percent of the men in our armed forces in World War II were of Polish birth or extraction? Certainly not we where so many of these boys were our own Suffolk boys whose parents and brothers won honors in our schools, enriched our farmlands and aided economy, and made good citizens.

We cannot but be proud of the part Polish youth played in the war and which of us can forget the legions of Polish fliers who defended London from the German blitz, shot out of the air over England 25 percent of the Nazi fliers brought down. These Polish, following flight from their own country, volunteered, as you well know, in England, France, and Belgium for service with the Allies. They paid dearly for their courage, as did the great General Sikorski who recruited them and later died tragically in a plane crash.

And what man or woman with Polish blood in their veins can forget that great exploit of the Polish troops in Italy when they took Mount Cassino from which our own gallant American boys had been repeatedly driven back?

What of the tremendous toll of Polish men and women in the Warsaw uprising against the Nazis in 1944, an uprising urged by Russia, under promise of support—support that never materialized? Many thousand Poles died but Russia did nothing.

Nor can we forget the frightful drama of consistent injustice to Poland found in the nefarious betrayal of her and her people at the Yalta sell-out to Stalin. Poland was sold out at Yalta and Tehran—and at Potsdam—the latter virtually as the first official act of President Truman. You all know that. I'm not telling you things you don't know. But, it's worth repeating, "again, and again, and again" to the end that the American people may know the treason and diabolical cruelty and treachery imposed upon Poland and her people by the late Mr. Roosevelt.

I say it is time for the Polish debacle to be exposed in all its savagery—and I say the full story of Poland's martyrdom has not been completely told. It should be told. It must be told. Senators TAFT, WHERRY, and BRIDGES have done much to expose parts of the rape of Poland and I deplored it publicly years ago. But much more remains to be said of what has happened on both sides of the iron curtain.

What of the 3,000,000 Poles made prisoner by the Russian Communists and hurried off to Siberia—whisked away and never heard from again? What of the cruel blow struck free Poland by President Truman when, at Potsdam, he extended—by agreement, under war-conferred powers given by a reluctant Congress during hostilities—recognition to the Communist government of Poland? Mr. Truman knew, as thousands of less-informed men and women knew—that in granting this recognition, he, Truman, sounded Poland's death knell. You may be charitable and say, "The President was tricked by the Russians." If that's his alibi, his statesmanship is a menace to the world, and certainly to the American people. And it can be added, his quality of statesmanship and knowledge of it is reflected in that of Secretary of State Acheson, and other Democratic Secretaries of State who preceded Acheson.

You here know much of what goes on in Poland today. But the great rank and file of American people do not know and on April 30th, Mayor Joseph Mruk, of Buffalo, whose name as an outstanding Polish leader is undoubtedly well known to you, deplored this lack of knowledge. He issued a number of stirring statements at that time. "I challenge the Secretary of State or any other Government official to deny them" he said, and his indictments were as follows:

"I charge that in Poland today any single utterance or action construed as anti-Communist will result, if overheard, or observed, in the sudden disappearance of the alleged 'traitor'—and inevitably subsequent vanishing of members of his family—and other relatives as well. I charge these people are summarily executed—or die a lingering death.

"I charge that in Poland today English is no longer taught in the schools, as it was under Paderewski and Gen. Jan Pilsudski, former Premier of Poland. Russian is now being taught in place of English. And I charge that the United States is made the incessant target of derogatory propaganda throughout Poland, although this propaganda has not yet been extended to teaching in the schools. The reason—Polish teachers have not yet been fully 'converted' to the new era—nor do they 'see'—except under the figurative lash of Russian-trained administrators, the doubtful benefits of Soviet 'freedom'."

Mayor Mruk's indictments went on:

"I charge that the Catholics of Poland are being denied opportunity to attend mass on Sundays by and through the subterfuge of the government holding Communist demonstrations throughout Poland each Sunday—almost from dawn to early afternoon, and Poles are expected—yes, 'strongly urged'—to attend these 'demonstrations.' Further, I charge that while not actively persecuted—thus far, at least—the Catholic priests of Poland must combat a war of nerves—must withstand implied threats, and battle unendingly in an effort to inculcate some measure of religion into the minds of the children, already subject to growing Communist indoctrination in the schools.

"I charge that complete censorship of mail prevails in Poland—Communist censorship—applying both to mail going in and out of that country.

"I charge that alleged duties imposed on relief packages sent to Poland make it almost impossible for the people in Poland to pay these penalties—and that's what the charges are—penalties. Only duties on used clothing—if ragged enough—are within the reach of Poland's people—and new clothing is, of course, just a dream. A skimpy 3 yards of material, for example, carries a stiff fee, but duties covering 4 yards are prohibitive."

Mayor Mruk's words are freighted with bitter anger, and well they may be. In speaking as president of the National Republican Club in 1946, I was puzzled about the indifference to the Tehran, Yalta, and Potsdam debacles and what I then called "the curious tenderness of many of our elected and appointed officials."

I said: "My recollection tells me that Russia was perfectly content to sit down with the Nazis and divide Poland. Russia was not suspicious of the matériel supplied so bounteously by the United States. Now it is patent that the present Polish Government like the states surrounding Russia, is completely under Soviet domination. Vast numbers of the brave Polish people who stood in the way of the full fury of the Nazi machine blitz, and who contributed mightily to affording the Allies opposing Germany the opportunity to gird themselves for battle, seem to want nothing of the present Polish Government. To the average American this does not look fair and just.

"The sheer impudence of the Communistic movement in this country has been so brazen that, had our people not been so bedeviled and bewildered by super-emergency regulation, they would have thrown its supporters out long since as I believe they will shortly when the full facts are known. The left-wing groups represent a species with which up to now we have had little experience in this country. They have taken advantage of our sportsmanship and predilection for free and untrammeled exercise of the franchise to gang up and endeavor to destroy our form of government. Theirs is not a constructive operation within its framework but one that is diabolically destructive. They use all the techniques familiar to the dictator movements abroad over the past two decades. They seek to create dissension by promising the people what they know to be economically impossible, and while pretending to be nondiscriminatory racially, they are actually inciting every possible race prejudice and hatred, or in other words they are the expert conditioners who would prepare the way for overthrow of the Government. The pattern is nothing new. It is simply 'create dissension and take over'."

As Mayor Mruk pointed out, Poland successfully fought the Tartars, Turks, and Swedes. The armies led by Jan Sobieski triumphed over Turks and Tartars in the seventeenth century—but it remained for the New Deal, aided by Hopkins and Hiss, and the Truman administration, to walk Poland into the death trap of patriotic, economic, and administrative extinction, and as he

said, "The tragedy of Poland should haunt forever—decent, brave men and women who gave so much—clung to their tradition—who fought two wars in the belief they were fighting for world freedom. These, too, were betrayed, as was Poland."

Maragon Affair Leaves Bad Odor

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 10 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I take this opportunity of calling the attention of my colleagues and the country to the editorial I am asking to have printed in the Appendix of the RECORD. The editorial is entitled "Maragon Affair Leaves Bad Odor." It ably amplifies the theme suggested in its title.

It is especially significant that this editorial is from the Mitchell Republic, published out in Mitchell, S. Dak., under the able direction of W. R. Ronald, who said recently in a signed editorial that he was trying to be the consistent editor of a Fair Deal newspaper. The Mitchell Republic is the largest and most important newspaper supporting the Truman administration in South Dakota.

So far as I can recall, this paper has not had a kind thing to say about me in its editorial columns for many years. Nonetheless I recognize it as one of our important and influential newspapers, and when even the Mitchell Republic bemoans the Maragon-Vaughan activities in the White House, it would, indeed, appear a more satisfactory corrective is required than has thus far been developed.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MARAGON AFFAIR LEAVES BAD ODOR

Small-time operator John Maragon, who apparently had delusions of granduer, has been sentenced to serve 8 months to 2 years in jail for lying to a Senate committee investigating the 5-percenter racket.

The conviction and sentencing of Maragon may be a satisfying climax, to some persons, of the 5-percenter inquiry. As a matter of fact, however, Maragon has been cast in the role of a sacrificial goat.

Suggesting that Maragon is taking the rap for someone else, the Milwaukee Journal says:

"The rap for whom? For Harry Vaughan, the military aide to the President?

"It was Harry Vaughan who permitted John Maragon to hang around the White House, using his office and his telephone, and even his name, according to testimony before the Senate committee. Without Harry Vaughan, John Maragon would have been as nothing in Washington, without stature or influence. He would have had no way to pressure governmental favors for friends, or for outfits like the Verley Co., the Allied Molasses Co., and others that paid him money.

"An interesting situation, indeed, Maragon doesn't talk, protecting Vaughan, his crony. Vaughan doesn't talk, protecting Maragon, his crony. Neither side in the trial subpenas Vaughan, thus protecting everybody. And President Truman, as he has said repeatedly, stands back of Vaughan."

The entire picture is an unpleasant one, with an extremely fishy odor. The small fry caught, on a perjury count, was strictly peanuts in Washington's influence industry. But apparently everyone in official capacity is satisfied that what has been done represents a major accomplishment in the interests of cleaning up the 5 percenters.

Actually the entire affair is, as the Milwaukee paper says "one that shouldn't make Americans very proud of their government at the top level."

Tremendous Cost of St. Lawrence Seaway Cannot Be Justified

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. VAN ZANDT. Mr. Speaker, during the last several weeks we have heard much about the necessity of the St. Lawrence seaway because of the alleged diminishing supply of iron ore on the Mesabi Range in Minnesota, and a new deposit of ore in Labrador.

A letter written by Mr. W. Sykes, chairman of the executive committee, Inland Steel Co., Chicago, Ill., dated April 25, was read into the record at the hearings being held by the House Public Works Committee on May 3. This letter clearly refutes the statement that the St. Lawrence seaway must be constructed without delay so that ore deposits in Labrador can be made available to the steel industry.

Mr. Sykes in his letter points out that the steel industry of this country can bring ore from Venezuela and deliver it to the Pittsburgh and Youngstown districts at a cost comparable to the ores they are now mining on the Mesabi Range.

The following excerpts from Mr. Sykes' letter is of particular interest:

With reference to your letter of April 21 regarding the development of taconite, the work is being carried on actively at this time. A number of interests, including the steel corporation and the Pickands Mather Co., are building or have built pilot plants and from these full-scale experiments it is expected that plants of commercial size will be developed within the next few years.

However, the development of taconite is not of great urgency because, with the development of the ore properties of the Steel Corp. in Venezuela, the demand for these higher-cost ores will be greatly diminished.

I am informed that the steel corporation studies indicate that they can bring ore from Venezuela and deliver it into the Pittsburgh and Youngstown districts at a cost comparable to the ores which they are now mining on the Mesabi Range. This means, of course, that the demand for Mesabi Range ore will be diminished and a greater time will elapse before there is any great urgency in the development of the low-grade iron-bearing materials.

As I visualize the situation, there will be a gradual exhaustion of the easily mined open-pit ores, a gradual increase in the higher-cost ores from underground mines, and then a gradual building of plants to beneficiate the taconites, so that an economic balance will be established with gradually increasing cost of the ore.

I see no urgency or great need to bring Labrador ore to the Middle West for a very long time to come, and the tremendous cost of developing the St. Lawrence waterway cannot be justified on the necessity of making Labrador ores available to maintain our steel-making capacity in the Middle West.

Defense Expenditures

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Assistant Secretary of Defense Marx Leva before the annual meeting of the Chamber of Commerce of the United States, Washington, D. C., May 2, 1950:

DEFENSE EXPENDITURES

I feel sure that all of you will recall the case of Mr. Jones, who was introduced by a toastmaster who said: "Mr. Jones will now give us his address." Mr. Jones thereupon stood up, said "My address is 2700 Connecticut Avenue NW.," and then sat down.

Since our toastmaster has just stated that I will speak on "defense expenditures," perhaps I should follow the good example of Mr. Jones, say "Defense expenditures this year will be $12,300,000,000," and then sit down.

If I were to quit talking after such a simple and factually correct statement, it might be a very good thing from the standpoint of the audience—and I am certain that it would be an excellent thing from the standpoint of the speaker. But since neither the audience nor the speaker is to have such an easy way out, I would like to turn now to a discussion of the complex and confusing subject that is bound up within those two simple words, "defense expenditures."

Just in case we should have a question-and-answer period later on, I have taken the precaution of asking Assistant Secretary of Defense McNeil, our comptroller, to accompany me to this luncheon. Over a long period of association, I have found that the field to which you are addressing yourselves today is a field on which Assistant Secretary McNeil is better informed than almost any other person in the Federal Government.

At the very outset of my remarks today, I should like to discuss for a moment the economy program of the Department of Defense—and I should like, in particular, to discuss the interrelation between the economy program and the level of defense expenditures.

Briefly stated, we would be spending approximately a billion and a half more than we are spending this year, if it were not for the economy program. The details behind this figure of $1,500,000,000—or $1,592,000,000, to be exact—are contained in Secretary of Defense Johnson's semiannual report, as submitted to the Congress a few days ago. In chapter IV of his semiannual report, Secretary Johnson discussed the economy program in considerable detail, in order

UNIVERSITY OF MICHIGAN LIBRARIES

to make it clear that this program was an essential and continuing part of the policies he intends to carry out, as Secretary of Defense. Both in the semiannual report and in his testimony before the House and Senate Appropriations Committees last week, Secretary Johnson stressed the fact that the economy program, which has been misinterpreted and misconstrued in some quarters, is one of the principal tools used by the Department of Defense in channeling funds into the combatant forces where such funds can be used to give us added strength, and away from such wasteful expenditures as unnecessary overhead, costly duplication, and unwarranted overlaps.

In connection with our economy program, there is a point which I should like to stress. The point to which I refer can be summarized as follows: An economy program in the Department of Defense is important for two reasons:

First, it is important because of the urgent necessity of maintaining a healthy national economy, and in order to maintain such an economy it is essential that military expenditures must be held to the lowest level compatible with our national security.

Second, it is important because of the equally urgent necessity of making savings wherever possible in order to assure that money which otherwise would go into excessive overhead and waste can be used, as I have just mentioned, to increase our combat effectiveness.

In other words, savings are important in and of themselves, because each dollar that we refrain from spending means a healthier national economy; but savings are equally important as a source of money with which we can buy more planes, more antiaircraft and antitank equipment, and more ships.

By way of illustration of the use of savings for increased combat effectiveness, I should like to call your attention to an announcement which was made a few days ago with regard to Marine aviation. This announcement stated that arrangements have just been completed under which Marine aviation, during the fiscal year beginning next July 1, will include 16 Marine air-combat squadrons, instead of the 12 squadrons contemplated when the budget was submitted to Congress last January—the key point in the announcement being the fact that the additional four squadrons that are to be maintained will not require any additional appropriations, but will be financed by means of economies elsewhere in the budget.

This particular illustration, I think, points up the situation to which Secretary Johnson has referred on a number of occasions when he has said that our task in the Department of Defense is the task of transforming fat into muscle. The four additional Marine air-combat squadrons will give us muscle that has real meaning. Similarly, Admiral Sherman recently announced that the Navy will maintain seven large aircraft carriers during the next fiscal year, instead of the six large carriers contemplated at the time that the budget was submitted to Congress last January. In his announcement of this development, Admiral Sherman pointed out that the additional carrier was to be maintained out of economies effected elsewhere in the naval budget.

Additional illustrations applicable to the Army and the Air Force are set out in Secretary Johnson's semiannual report, and in the interest of saving your time, I will not repeat them here. I will be glad to send over copies of chapter IV of the report later in the day, however, for as many of you as may be interested.

All that I have been saying up to this point has been largely by way of preamble. In everything that we have done in the Department of Defense, we have consistently emphasized that security comes first, and economy second, but I wanted to open this discussion with a brief reference to the economy program, because of the widespread misinterpretation to which that program has been subjected.

Turning now to the more specific subject of national security and the military budget, I should like to review with you the developments which prompted the Department of Defense, less than a week ago, to request that the military budget for the coming fiscal year be increased by $350,000,000.

In beginning my discussion of this subject, I would like to go back to last September. Immediately after the President's announcement, on September 23, that there had been an atomic explosion in the U. S. S. R., we began a revaluation of our own military requirements. Almost simultaneously with this development, the President directed the Secretary of State and the Secretary of Defense, as a working committee of the National Security Council, to conduct a broad reevaluation of our national program, in the light of our international commitments and the constantly changing world situation.

Some of the results of the reevaluations mentioned above are already known to you. Specifically, the President's decision to proceed with the construction of the H-bomb was based in part on the studies described above. In addition, many of the steps we have taken in furtherance of the North Atlantic Pact and the military aid program implementing that pact have been based on the continuing studies I have already mentioned.

I would not like to leave the impression that these studies are completed. Indeed, in the broad sense, studies of this nature are never completed, for both the State and the Defense Departments must continuously review foreign policy and the military strength that goes hand in hand with it. In making continuing reviews of this type, we have the advantage of the very excellent organizational arrangements Congress has provided, through the vehicle known as the National Security Council—and I refer particularly to the language used by Congress in assigning to the National Security Council the duty to assess and appraise the objectives, commitments, and risks of the United States in relation to our actual and potential military power, in the interest of national security.

Secretary Johnson, speaking to this subject last week in his testimony before the House and Senate Appropriations Committees, said:

"The point at which we have arrived at the present time can be described as follows: Based on the work already done by the Council of Foreign Ministers, by the Council of Defense Ministers, and by the Chiefs of Staff, of the North Atlantic Pact nations, we have, for the first time, a fairly clear picture of the collective military requirements of the North Atlantic community of nations. We have also appraised recent events which make it entirely possible that appropriations in excess of those which have been requested for the current year will be required in succeeding years, not only for our own military forces but also for the military-aid program. Just as it is possible that in future years this Nation will have to devote an increased percentage of its total budget to these items, it is also possible that our partners in the North Atlantic Pact will be required by the force of events, and by the force of our collective planning as well, to take similar action. The events to which I allude include the Soviet atomic explosion, the fall of China, the serious situations in southeast Asia, the break in diplomatic relations with Bulgaria, and deteriorating relations with other satellite countries, the Soviet assumption of control over the armed forces of Poland, Soviet naval expansion, the increased Soviet pressures in Germany, the recent attack on a naval aircraft in the Baltic, and the recent Soviet demands relative to Trieste.

"None of these presents a happy prospect; but the cold war is not a happy circumstance. The only satisfaction that I can personally derive from the situation lies in the fact that our own Military Establishment is well on the road to becoming a stronger and more powerful organization, and one which, as circumstances require, can utilize increased appropriations in a manner which will provide substantially increased combat effectiveness, whereas, even as recently as 1 year ago, large sums of money out of any increased appropriations would have been drained off in the form of unnecessary overhead."

The struggle to eliminate unnecessary overhead is a continuing one. I feel sure that all of you face it in your own businesses. To help meet this problem in the Department of Defense, we created, last August, a management committee. This committee consists of Gen. Joseph McNarney as chairman, and one representative of each of the Departments—Army, Navy, and Air Force—as members. This committee, assisted by the management engineering firm of Robert Heller and Associates, has been of tremendous value to us in our efforts to eliminate overhead, and channel the funds thus saved into combat effectiveness.

The work of the management committee is really based upon, and flows out of, the recommendations of the Hoover Commission. Many of you will undoubtedly recall what the Hoover Commission had to say with respect to the Military Establishment, but just to refresh your recollections on this point, I would like to summarize just what it was that the Hoover Commission said about us. These were their comments and recommendations:

1. They said that there was extravagance and waste in military spending.

2. They recommended that, in order to remedy this situation, the Secretary of Defense should be given complete authority—instead of the divided authority which he possessed under the original Unification Act which Congress passed in 1947.

3. They said that the Secretary of Defense should be given full power over the military budget.

4. They said that the Secretary of Defense should proceed to overhaul the military budget and put it on a performance basis.

5. They recommended that Congress provide for an Under Secretary of Defense and three Assistant Secretaries of Defense.

6. They recommended that provision be made for a Chairman of the Joint Chiefs of Staff—the position which Gen Omar Bradley is filling in such an outstanding manner today.

A little more than a year ago, President Truman submitted to Congress his legislative program for carrying out the Hoover Commission recommendations concerning the Department of Defense. After a considerable amount of legislative turmoil, this program was enacted into law by the Congress, and took effect on August 10, 1949.

I mention all of this by way of reminder of the fact that we have been functioning under this strengthened type of unification for less than 9 months—and have been able in this relatively brief period of time, to bring about the major economies to which I have referred earlier.

Rather obviously, the level of defense expenditures in future years is not a matter that will be determined by an abstract intellectual exercise on the part of the people of the United States. Indeed, while the military budget is prepared by the President and enacted by the Congress, in the last analysis the level of defense expenditures is determined by the type and severity of the threat

to our national security which world conditions impose upon us.

Defense expenditures differ from the remainder of the Federal budget in still another respect, for defense expenditures do not really constitute a budget at all, but consist of the translation into dollars of the operating force plans evolved by the Joint Chiefs of Staff. This is a point which has been frequently misunderstood, and I mention it here in the interest of clarity—for I think it is important to understand that the Joint Chiefs of Staff are not a group which sits around deciding how many dollars shall be allotted to the Army, the Navy, and the Air Force. As distinguished from this rather widely held but mistaken view of the functioning of the Joint Chiefs of Staff is the true picture—which is that of a group of men working out comprehensive plans for the armed forces which this country, in concert with its allies, must maintain in order to protect our national security. Once these operating-force plans are worked out by the Joint Chiefs of Staff, the job of affixing dollar tags to them can be handled with comparative ease.

In this connection, it is significant to note that the strength levels in uniformed manpower recommended by the Joint Chiefs of Staff for the coming fiscal year are not altered in any way by last week's request for additional procurement funds. In other words, the operating force plan of the Joints Chiefs of Staff—which calls for an Army of 630,000 men, naval and marine forces of 461,000 men, and an Air Force of 416,000 men—continues to be the basic operating force plan to which the military budget is addressed. The augmented strength which the additional $350,000,000 will provide is to consist, in Secretary Johnson's phrase, of "hardware, and nothing else"—that is, more matériel rather than more men. Summing up the picture, I would say that our Department of Defense military expenditures for this year—the total of $12,300,000,000 which I mentioned earlier—can be broken down as follows:

Major procurement, including aircraft, ships, tanks, and the like, will account for $2,400,000,000, or about 20 percent of the total.

Pay and support of uniformed personnel will account for $4,500,000,000, or 36 percent of the total.

Pay of civilian personnel—a field in which our economy program has already resulted in savings in salaries and housekeeping costs that will amount to more than $500,000,000 a year—will account for approximately $2,000,000,000, or 16 percent of the total.

Research and development—a field to which we have given, and will continue to give, the closest of attention—will account for $600,000,000, or 5 percent of the total.

All other costs will account for $2,800,000,000, or 23 percent of the total.

In conclusion, I should like to address myself to a statement which, while frequently made and apparently fashionable, does not seem to me to be wholly accurate. I refer to the rather apologetic statement one frequently hears from Government officials to the effect that most of the difficulty one encounters in Government fiscal matters stems from the fact that Government has no substitute for the profit motive. I realize that many departments and agencies are not as fortunately situated as the Department of Defense in this respect, but I submit that we do have a reasonable substitute for the profit motive, and that substitute is this: The Chief of Staff of the Army, the Chief of Naval Operations, and the Chief of Staff of the Air Force, have the best of all "profit motives" in that each of them knows that the money which he saves can be used to buy additional striking power. Admiral Sherman summed up this point of view in admirable fashion in a message he recently sent to all Naval personnel, in which he said: "Navy Department is exerting every effort to translate available appropriations into maximum fighting strength and mobilization potential. Savings made are generally available for increasing the state of readiness of authorized forces. Economies already effected have permitted increasing previously planned fleet strength by one large carrier and one cruiser, to provide additional equipment for antisubmarine warfare, and to augment general readiness. Planned economies are an important contributing factor in retaining two additional Marine battalions"—to which could be added, in the light of last week's announcement, the four additional Marine air combat squadrons I have already mentioned.

In my opinion, this is indeed a powerful substitute for the profit motive—and it is being so utilized by the patriotic and conscientious men, military and civilian, who head the Army, the Navy, and the Air Force. The caliber of these men, coupled with the able and aggressive leadership of the Secretary of Defense and his Deputy Secretary, seem to me to be the best assurance that the American people can possibly have that the aim of the Department of Defense will continue to be a stronger and more effective military establishment, wherever possible at a reduced cost to the taxpayer.

John F. Moran and Alvin Goodman

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article, which appeared recently in the Scranton Times, Scranton, Pa., honoring John F. Moran, Technical High School's first blind valedictorian, and Alvin Goodman, also a 4-year honor student and a member of the sight-conservation class. The article follows:

WEST LOCUST STREET YOUTH CAPS HIS 12-YEAR PUBLIC SCHOOL CAREER

John (Jack) F. Moran, 18, son of Mr. and Mrs. Frank Moran, 904 West Locust St., today capped his 12-year public-school career as a "blind conservation" student by becoming Technical High School's first blind valedictorian. Also, it is said that he is the first blind student to take top honors in any district school.

Young Moran, who became totally blind at the age of 14, will deliver the valedictory address when the school graduates 391 students Tuesday, June 13, at 8 p. m. in West Scranton High School, on the basis of having the highest average in the class during his 4 years in high school.

While he has many accomplishments to his credit, the most important, according to his teacher, Miss Helen Smith, is that he provided proof that handicapped children can be educated in schools in their own home town among familiar surroundings.

According to Miss Smith, she began teaching Jack in first grade at Benjamin Franklin School at the inauguration of the Scranton school district sight conservation program. Partially blind since birth because of a congenital eye disease (one eye was removed when he was an infant), Jack was her first student. During the first 4 years the program was in an experimental stage. Miss Smith later began picking up other sight-handicapped students. Her class at Technical now numbers 14 students.

Miss Smith and Principal W. Albert Murphy praise Jack highly. He is editor of the senior-class yearbook.

An all-around, well-built, and good-looking student, Jack has a high interest in sports. For writing several songs for the football team, this year he was elected honorary captain. He never misses a Technical football or basketball game. Possessing a good tenor voice, Jack has been soloist of the school choir and has entertained at many local affairs.

No story would be complete without mentioning his "eyes," friend and constant companion, Alvin Goodman, son of Morris Goodman, 630 Taylor Avenue, also a 4-year honor student and a member of the sight-conservation class.

Jack and Alvin are familiar sights around the school. Although they use the elevator to go from first to the other floors, the two boys walk down the stairs when changing classes.

Both Jack and Alvin plan to enter college—Jack in law and Alvin in Government work. To gain college credits, the past 2 years they have taken Latin a period a day in Central High School. This gave them 4 years of Latin.

The district's program has been little publicized in the belief that attention to handicapped students is not desirable.

The students go to regular classes with the sighted students but return to the special class for reading and writing. Special text books with large lettering and typewriters, also with large letters are provided. Jack, who learned to typewrite in the fourth grade, knows little Braille.

In this special class "black" boards become "green" boards for the benefit of the students. The walls are painted a dull green. There is no glossy finish in the room and it is lighted with bright flourescent bulbs.

The class is scheduled to graduate four students this year. With Jack and Alvin as honor students, it gives the class a 50-percent average of 4-year honor students—a record probably unmatched in any other class, school, or district.

What's Ahead for the Nebraska Cattlemen?

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech I made before the Nebraska Stock Growers Association at O'Neill, Nebr., on Tuesday, April 26:

It is good to be back in Nebraska where people live close enough to the soil and the sun to know what makes America tick. It is good to be present at this district meeting of the Nebraska Cattlemen's Association.

It was possible to come because for the next 10 days there is only general debate in the House and no urgent roll calls. I miss very few votes. The Fourth Congressional District in Nebraska has more cattle than any one of the other 435 congressional districts in the United States.

What's ahead for the Nebraska cattlemen? In my opinion if employment and wages

UNIVERSITY OF MICHIGAN LIBRARIES

stay high, there will be a continued demand for meat. If unemployment increases and the people's confidence in our money decreases, then I would expect a general pulling in of the belt and less buying all along the line.

I am suggesting that this association join with the National Meat Institute to promote an "Eat More Meat" campaign. Actually the per capita consumption of meat has been declining since the war. Less meat was consumed by the public in 1949 than in 1948. It is estimated less will be consumed in 1950. Part of this is due to agencies of Government who are constantly seeking and advertising substitutes for meat.

The American people have always been meat eaters. Meat has been the principal item of diet for the human race from the beginning of time. Primitive man found satisfaction in making a kill and eating the meat. As a physician, I can tell you that the human body is especially adapted to the consumption and digestion of meat and animal products. There is no food which nature has endowed so lavishly with the necessary proteins, vitamins, minerals, and fat. In fact meat is the master piece of nature's laboratory. It contains 22 amino acids, 10 of which the body needs to keep healthy. People who are big meat eaters are large in stature and have great energy. The Hindus, Chinese, Japanese, and the inhabitants of Okinawa, who eat little meat, are small of stature.

This good meat is produced from Nebraska grass and feed. The people of Nebraska should be thankful that they have a quantity and quality of grass upon which to grow their livestock. There are more than 26,000,000 acres of grass in Nebraska. When it is properly pastured, it will give excellent returns on labor and investment. Your livestock makes a good harvesting machine that seldom needs repairs. Some of this livestock comes off of the range ready for the butcher's block.

Again, speaking as a physician, I feel that an eat-more-meat campaign would dispel the false idea that hospital patients and youngsters should not eat meat. For many years I operated a hospital in Kimball, and at that time there was the feeling among medical men that patients should be given fish and chicken instead of red meat. Recent experiments have shown that red meat is not harmful, but can contribute to the patient's recovery by supplying many of the vitamins, minerals, and acids so necessary to tissue repair and health.

It is estimated that in 1950 there will be 23,200,000,000 pounds of meat produced. This is 6 percent more than in 1949 and 8 percent less than in 1944, when production reached the all-time peak. This would mean a possible per capita consumption of 150 pounds, as compared with 145 pounds in 1949.

The United States imported 241,000,000 pounds of meat in 1949, the bulk coming from Canada and Argentina. We exported 130,000,000 pounds. I would also point out that we imported 10,000 carloads of potatoes from Canada, a million and a half pounds of powdered eggs from China, 48,000 cases of crab meat from Russia, and huge quantities of beans, fish, and other agricultural products from other countries. When we consider what is ahead for the cattlemen we must consider what the international trade organization will do when the nations of the world meet in England on September 17, 1950. If they follow the pattern of their last meeting they will make further reductions in tariffs on agricultural products. In their last meeting 80 percent of the reductions on imports coming to this country were on agricultural products. This could have unusual results to your business.

The production of cattle has increased about 2,000,000 head in the last year. It is estimated that all types of cattle in 1949 amounted to 80,277,000 head. The all-time high was in 1945 when there were 85,573,000 head. It is estimated that beef cattle numbered about 43,000,000 head.

It should be remembered that our human population is increasing about 2,500,000 a year. It would seem that the number of cattle should increase to 90,000,000 head in the next few years if we are to keep pace with the demands of our increasing population. Thirty years ago we had 70,000,000 head of cattle when our population was only 105,000,000.

The increase in the number of livestock would solve another problem. It is estimated that if an additional 2 percent of the cattle were fed grain, it would completely wipe out our surplus of feed grains. It is natural that the high support leveled on grain will discourage feeding it to livestock.

In considering what is ahead for the cattlemen, we must speculate upon how far the administration will go in adopting such measures as the Brannan farm program, socialized medicine, or the so-called Spence bill, which is nothing more than a superduper OPA with more trimmings and regulations than we have ever had before.

If we adopt the Brannan plan, which is similar to the English agricultural program, you would not be able to sell your cattle without a permit; you could not kill them or produce more than the Secretary of Agriculture would indicate. You would be told when to sell and what to feed. The regulations in England, and those under the Brannan plan, would be so numerous that incentive and free enterprise would then be smothered. There are 15 pages of penalties in the Brannan farm program, which would require you to keep such records, letters, memoranda, accounts as the Secretary would indicate. Your books would be inspected. For noncompliance you could be fined $5,000 or be placed in jail. Adopt this plan and the future of the livestock industry would not be very bright.

There is another move that should be watched carefully by your association and that relates to the intense pressure by the consumers of the East to lower the barriers and permit cheap meat to come in from South America. I know there are groups who are considering ways and means to bring this about. If fresh meat is permitted to come from Argentina, Mexico, and other countries infested with foot and mouth disease, and this disease is transplanted to our cattle herds, as it surely will be, then the future of the cattle industry again grows precarious.

I must sound another warning on what is ahead. In my opinion we have two Frankenstein monsters facing our people today. One is increased inflation; the other more taxes. Either can destroy the economy of this country. You people on the farm will be in an ideal position, if an uncontrolled inflation takes hold, because the quart of milk and the dozen of eggs, and your meat still has the same food value regardless of the value the dollar may assume.

You cannot escape so readily the taxes. The huge spending of this administration, with a $7,000,000,000 deficit this year, can mean but one thing—more taxes and more inflation.

Another note of warning must be sounded and that refers to the growth of socialism and regimentation. It is not only in the Brannan farm program, socialized medicine and attempt to nationalize steel and other industries, but it means bigger government with more controls in Washington. I am fearful that socialism, like the termites in a building, is silently destroying our way of life. It is destroying the rights of the individuals. The holding of property should always be a human right, but under socialism, Government assumes the ownership and denies that individuals have the right or the capacity to manage their property and economy. We have seen big government grow, from 1933, when there were only 533,000 on the Federal payroll, a debt of $16,000,000,000 and only $5,000,000,000 to run all phases of government, up to this time when we have more than 2,000,000 on the payroll; a debt of $260,000,000,000; and $43,000,000,000 to run the Government. This does not include a deficit of $7,000,000,000,000 for this year. In 1933 there were 351 departments of government. Today there are more than 1,850.

The need for the adoption of the Hoover Commission recommendations is imperative if we are to rid ourselves of the deadwood duplication, and extravagence in Federal Government. In 4½ peacetime years, we spent more than $190,000,000,000. This is more than 32 Presidents spent in the first 152 years of our existence, and during that time we went through several wars and depressions. We cannot be in a good position with printing-press money. It seems to me that our Government, the banks, trust and insurance companies, who are the unofficial custodians of the peoples' money, ought to be able to tell the citizen that the dollar that he puts in bonds today will always be worth a dollar. Unsound economic policies, with more unemployment, mounting surpluses, declining exports, with threats of Government operation of business are real storm clouds.

I also know that our citizens have great faith, energy, character, and are of sound moral fiber. We have more food, electrical gadgets, and new inventions than any other country in the world. We have great power to produce. The strength of our country rests in our soil and the spiritual make-up of our people. We are a Christian Nation—a praying Nation. We have the ability to meet great emergencies and still keep our economic and social balance. Our know-how of production leads the world. It is a bright shining beacon light. It is my great hope and fervent prayer that the Congress and this administration will be able to guide the frustrated world through the international fog and rough economic waters so that we may be able to pass on to future generations a type of society in which they can be secure and our Nation will remain strong.

Development of Irrigation in Nebraska

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. MILLER of Nebraska. Mr. Speaker, on April 25, it was my privilege to ride over and inspect the Loup River Basin irrigation project. With me were Governor Peterson, of Nebraska; Paul Larsen, of St. Paul; Avery Batson, from the Bureau of Reclamation; and many other interested citizens. That evening more than 500 folks had supper in Scotia and listened, with much interest, to the prospects of irrigation in this area. I hope this project can come before Congress next year. It is feasible.

The farmers and the city folks realize the value of water on good land at the

proper time. Irrigation is a great stabilizer, and assures the farmer a backlog of safety and security. Irrigation brings new wealth to a community and the Nation, and provides food for our expanding population and economy. It brings new purchasing power and improved standards of living.

Nebraska has more than a million acres that can be successfully irrigated. This is one of our great natural resources that deserves the support of the Congress.

When these projects come before the committee of which I am a member, they will be easy to defend because they are feasible. Our natural resources are the cornerstone and foundation of our country. They should be developed for the benefit of mankind. The people of the country are brave and hospitable. Give them fertile soil, a sound government, and they will reach new horizons which have been denied the present generation.

A Balanced Economy and the Brannan Plan

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. WHITE of Idaho. Mr. Speaker, so much is being said about the Government price-support program and the Brannan plan that I have taken occasion to express my views concerning price parity and stable national economy in a letter written in response to an editorial sent me from the Cleveland Plain Dealer which is inserted here:

QUESTIONS OF MORALITY

Can a Government behave in an immoral manner toward its own people? Can it deceive them, rob them, cheat them, plunder their resources and infringe on their liberties?

We know how a community would condemn a man who ran up charge accounts, went on a binge every Saturday night and didn't pay his bills.

What would the neighbors say about a housewife who carted home large quantities of food from the grocery and butcher shop every day and then, instead of preparing it for her family, let it spoil?

How long could a respected citizen borrow money from his friends and, when the time came to pay it back required them to settle on the basis of 60 cents to the dollar?

How lenient would the community be with a door-to-door salesman who insisted at the point of a gun that every householder buy his products? Or with a smooth talking promoter who tried to force his neighbors to turn over a large percentage of their incomes to him on the promise that he would take care of their insurance, their medical and hospital bills, and send their children to college?

Surely any community would frown on a person who indulged in these practices and at least call for the police or the men in the white coats with the strait-jacket to come and get him.

But when a government does these things, is its conduct any less immoral?

The United States Government is on a big spending binge. It is living beyond its income, not accidentally or because of misfortune, but deliberately.

The United States Government has arranged to have more food delivered to the markets than the people can consume and the surplus is either spoiling or is in storage, which merely delays the process of spoilage. This didn't happen accidentally, either, but was done deliberately.

The United States Government has borrowed money from its citizens, promising to pay $100 after 10 years for every $75 that was loaned through the purchase of savings bonds. But when the time comes to repay, the lender gets back only $60 in actual purchasing value, in terms of the value of the original $75 loan. Then, to add insult to injury, the Government requires him to pay a tax on the fictitious $25 profit he has collected.

The United States Government forces its citizens to buy things they don't need or don't want or can't afford, at the point of the tax collector's gun. Every subsidy paid out by the Government to some special interest or pressure group is a forced purchase by all the citizens of the products or services of that interest or group. Since the citizens do not or will not of their own volition buy the products or services of the favored interests or groups, the Government takes the money away from the citizens anyhow in taxes and makes the purchases.

The United States Government has already taken away a large percentage of its citizens' incomes in the form of taxes, thus depriving them of the freedom of spending their own money, and is demanding a larger share, for the purpose of looking after more and more of their affairs.

It is not surprising that a large number of people have lost confidence in the Government, for the Government is conducting itself in a manner which, if an individual so conducted himself, would be condemned as profligate and immoral.

Nor is it any excuse to point out that some Government administrators and policy makers who commit these offenses may be well intentioned and may sincerely believe they are acting in the best interests of the people. Others, we fear, and this goes for the practical politicians, are not always well-intentioned. Their promises, their deceit and their loose handling of other people's money are deliberate, for the purpose of maintaining themselves in power.

But they will not remain in power, we believe, if the people insist that their Government adhere to the same standards of morality which apply to individuals.

MAY 8, 1950.

Mr. J. CECIL ROWE,
Cleveland Heights, Ohio.

DEAR MR. ROWE: I received your letter with which you enclosed a reprint from the Cleveland Plain Dealer. This deals with one of the most important issues concerning the people of this country today—sound national economy and stable price structure.

From time immemorial, the necessary adjustments in the price structure have been regulated by competition and the law of supply and demand. If for instance, all the farmers should take occasion at one time to raise watermelons, and a great many more watermelons than are needed and could be used were produced, the price of melons would fall. And melons being a perishable food, much of the crop would waste, and for that reason, people would reduce the production of watermelons.

And so it is with everything else. If the butcher shop in your town were charging too high prices for steaks, chops, hams, and other commodities he sells in his shop, and some enterprising men wanted to go into the butcher business and sell meat at fair prices, and they went down the street and rented a building and equipped it with a refrigerator, butcher block, and other necessary facilities for a butcher shop; then went out and bought livestock from the farmers and slaughtered them, and brought beef, pork, and mutton into their shop and sold meats at a reasonable price, and so as to make a fair profit the fellow who was charging too high prices for his meats would have to meet competition and sell at the right prices or people would purchase from the new butcher shop. It has been this way in every line of human endeavor.

When the Government adopts a "hands off" policy, the big manufacturers, business organizations, and large combines, monopolize the business, drive small competitors out of the field, raise the prices on things people must buy to unreasonable levels, whether it is meat from the butcher or a mowing machine from the manufacturer, and so something has to be done to keep prices within bounds, which we call price parity, and to maintain a stable economy.

The Congress has been struggling with this problem for a great many years, and has finally adopted the support price program for farmers, as well as producers of most everything in the basic industries, whether it is farm products, lumber, brick, lime, lead, zinc, copper, and things for the mining industry.

To maintain price parity, we must have a balance between the prices of the things the consumer must buy, and the price of things he produces to sell, which is being done by price support programs. This scheme has worked pretty well in recent years. The farmers have prospered, and so have the manufacturers and their employees.

But what about the businessman who has saved up a few dollars and retired; the retired engineer, the retired policeman, retired street car man? The manufacturer is making big profits; the farmer is making big profits. So the only way I can see how these retired men can buy the things they need and must have from the farmer and the manufacturer is for the Government to step in and skim the cream off the money taken in by these excess profits and price support payments and pay it over to the people supplying the market so that they can reduce their prices and sell at a fair price to the retired businessman under arrangements which make it possible for him to go into the market places and buy the things he must have at a fair and reasonable price that he can afford to pay. Now, this is called the Brannan plan. If you have a better plan, let's have it. The Congress has been struggling for a great many years with this problem.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Bad Samaritans

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

BAD SAMARITANS

You will remember a stranger on the road to Jericho fell among thieves. They robbed

UNIVERSITY OF MICHIGAN LIBRARIES

and beat him, and left him half dead. The Good Samaritan, moved with compassion, bound up his wounds, took him to the inn and told the innkeeper to do what was necessary and he would pay the bill. Are we forgetting about the place of the Good Samaritan in the world today?

Can you picture the Good Samaritan as the agent of a Government bureau? A certain priest, a bureaucrat of the temple, and a patronage holder under the Roman conquerors, looked at the stranger in trouble, and passed by on the other side. His official duties did not cover this situation. The Levite also passed by one the other side. He, too was a part-time officeholder whose official duties did not include attending to an unusually distressing case by the roadside.

Can't you imagine their counterpart, the modern bureaucrat, from Washington or London or Berlin? He must examine his book of regulations to see if he is under any legal compulsion to bind up the wounds of the stranger. He must go to some division chief for instructions and for authorization of funds to cover this particular situation. Most likely he returns to the poor fellow still lying on the roadside, and says, "Sorry, old man, your case is unfortunately not covered in our regulations. Congress failed to appropriate enough money for our department to take care of you. But when you're well again, old chap, you should organize a group of voters in the same kind of trouble and introduce a bill to cover such cases. And if you will vote for our party we will pass the bill, levy a new tax on the people, and fix everything up."

The Good Samaritan was an individual guided by his own conscience. He gave of himself, of his own money, of his own time, of his own mercy. He did not avoid his own personal moral responsibilities. Indeed he could not. He could not shift the responsibility to some government employee. For government has no capacity and no property with which to do charity. It does not produce. It certainly can't steal from one to do charity for the other.

Yet I work with new style "Good Samaritans," who think this can be done. They come to Congress demanding that we take more of your money for them to give away and they insist on keeping a goodly portion for themselves. I know what it is like to refuse their demands, and have them threaten me on election day. I hear their clever arguments showing the easy way to hide taxation in the price of things you buy. They call this "taking money by the democratic process" to distinguish it from outright robbery. They never ask for small appropriations. They ask for more and more.

Does anybody believe that anywhere in the world we have solved any problems by making government officials bad Samaritans? Can they relieve our individual consciences from the duty to be Good Samaritans ourselves?

As Roscoe Pound, dean emeritus of the Harvard Law School, said, "Achieving of high humanitarian purposes by the easy method of using the involuntary Good Samaritan * * * is not edifying. There ought to be a better method of making the legal order effective for our humanitarian ideals than that * * * of the pickpocket who went to the charity sermon and was so moved by the preacher's eloquence that he picked the pockets of everyone in reach and put the contents in the plate."

Robin Hood is dramatized in almost every language as a legendary figure true to every people. We thought we had completely fettered our governing men so they could not steal like Robin Hood and become bad Samaritans.

It is only the free men exercising a free conscience and producing men who have a surplus capable of being given away that can be Good Samaritans.

The Indochina Problem

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of May 9, 1950, entitled "The Indochina Problem."

THE INDOCHINA PROBLEM

The first question that Secretary Acheson has had to tackle in his current discussions in Europe is the problem of aid to Indochina and what we propose to do about it. That problem is closely tied up to the questions of strength and stability in western Europe, since the French hold that they cannot sustain the cost and effort of a substantial contribution to European defense while they are obliged to spend $500,000,000 a year to fight off the Communist advance in southeast Asia. We have talked about global strategy and global diplomacy, and here is a swift instance of the indivisibility of the fight for the right to remain free.

The Indochinese problem, however, is not simple. It is not an open-and-shut case, right or wrong, black or white. We cannot approach the French in a take-it-or-leave-it attitude, since we, like they, are on the horns of something of a dilemma. We want to support nationalism and the movement toward independence in Asia. We want the French to help us in the defense of threatened peoples against the onslaught of aggressive communism. But we can hardly demand that the French continue to give their lives and half their military budget to preserve a position merely for the sake of abandoning it. We are certainly not prepared to assume all of the French obligations in southeast Asia, so we are scarcely in a position to dictate all the terms of our assistance.

Indochina occupies a critically strategic position. It borders on Thailand, Burma and south China. It is a gateway to Malaya, as the Japanese demonstrated. It flanks the Philippines. It is a big arch in the bridge to Indonesia. If it falls to the Communist advance the whole of southeast Asia will be in mortal peril.

Indochina, moreover, is not a political unit. Two great partially autonomous areas, Laos and Cambodia, are under French protection. They are fearful of the Annamese, who are the dominant element in Viet Nam, and wish to preserve their identity. Viet Nam, taking in the areas of Tongking, Annam and Cochin China, has two rival claimants for nationalist supremacy. In the north, chiefly, is the Communist-led Viet Minh regime of Ho Chi Minh, recognized by the Soviet Union and its satellites as a republican government. Farther south is the French-sponsored Viet Nam government of Bao Dai, former Emperor of Annam, which has been made partially self-governing but which is still under strong French control. Both regimes are nationalist. The Ho Chi Minh group stands for complete independence from the French. How far it can be independent of Moscow is another matter. The Bao Dai group proposes to stay within the French orbit. How far, therefore, it can command profound popular support as truly nationalist is also a question.

The United States Government decided that Bao Dai, with his recognized shortcomings, was at least the lesser of two evils and granted recognition to his regime. It was therefore presumed that United States aid would be forthcoming to strengthen that government in its resistance to the Communist attack. It now appears that the United States wishes some further French commitment in respect to Bao Dai that will enlarge the powers of the regime and enhance the prospects of early independence.

The French are convinced that Indochina does not have the requisite trained leaders to undertake all the obligations of an independent state at this time and they do not believe that those necessary leaders can be found in the near future. The defense of Indochina, for example, cannot possibly be conducted at this time by Indochinese alone.

It is against this background that Secretary Acheson has discussed the Indochinese situation in Paris. It is a situation, obviously, that is not susceptible to any ready-made doctrinaire solution. If Indochina is to have a chance for eventual freedom, and if southeast Asia is to be preserved, the Communist threat must be met. This is not just a choice between colonialism and independence. There will be no free Indochina in a slave world, and we and the French, with British help, must find the means to prevent that eventuality.

If You Were Born in Russia

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. JAVITS. Mr. Speaker, a new book, If You Were Born in Russia, has just been published, detailing the everyday life of an ordinary citizen in the Soviet Union, and pointing out very vividly what we all know—communism is the sharing of want and despair and the complete denial of freedom, while it indoctrinates its victims so that reality and truth are replaced by propaganda. Appended is a review of this book from the April 16 edition of the Washington Post:

TERRIFYING BOOK CARRIES READER THROUGH LIFE OF SOVIET CITIZEN

(By J. R. Wiggins)

If You Were Born in Russia, by Arthur Goodfriend. Farrar, Straus, 191 pages. $5.

This is one of the most alarming books ever written about Soviet Russia.

Arthur Goodfriend takes the reader through the life of a Soviet citizen, from cradle to grave. The journey reveals the endless flood of indoctrination that engulfs the individual in this Communist society from early youth to old age.

It is a frightening trip for those who still dare hope that somehow the east and west may avoid a conflict that appears sometimes inevitable. It is a discouraging experience for those who still search for a meeting of minds. For this book discloses, with painful clarity, how different are the minds that come to the council table when spokesmen for the Soviet world and the free world foregather at international conferences.

This book is no anti-Communist tract, mind you. The author obviously has done his level best to present objectively a summary of the lifelong process of party indoctrination to which Russian citizens are subjected. Only those who are intimately acquainted with the process can judge how well he has succeeded.

He confesses the handicap of his own point of view. But he has exerted himself to es-

cape it. He has tried so hard to do so that some readers may be misled into regarding this book as a sympathetic study of Soviet Russia. He does not intrude into the narrative to point out the falsehoods in the stream of Soviet propaganda, to warn against the lies about the west, to deplore the distortions of fact. He just describes the floodtide of propaganda as it exists.

Perceptive readers will find this book, in a far different way, as terrifying as George Orwell's "1984." They will put it down in a kind of despair. Can the free world hope that the victim of such a tyranny can retain anywhere in the mind an isolated island of objectivity where truth could find lodgment?

Obviously, Mr. Goodfriend did not intend to inspire such despair. It is his business, and the business of the firm with which he is associated, to help the free nations of the world utilize modern communications to disseminate their story.

The real lesson of this book is that we must proceed with our own indoctrination more vigorously and energetically than ever before, if we are to have any real hope of success. This book is an intelligence estimate of the enemy's weapons in this field. It should frighten us into action.

We Are Under Siege

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. DONOHUE. Mr. Speaker, I should like to recommend to the Members' reading, an excellent editorial which appeared in the May 9, 1950, issue of the Christian Science Monitor.

The writer points out the absolute necessity of the peoples in the democratic nations understanding and supporting the common program against the advancing strategy of the Communist cold war.

The sustained effort to stand together will demand, for a long time, extreme sacrifice, personal and national, for individuals and countries, that hope to remain free. We must continually remind ourselves we are under siege and we cannot, for a moment, forget that the realistic objective is survival itself. The article follows:

WE ARE UNDER SIEGE

This is no time for hysteria.

This is no time for apathy.

The democratic nations of the world are under siege. That is why the United States, Britain, and France are holding conferences of their foreign ministers in London this week.

The moral and practical advantages of righteousness and freedom are on the western nations' side. But advantages don't count unless they are used. Let us use them, let us develop them.

Messrs. Acheson, Bevin, and Schuman can do what is needed for peace and freedom at London if their peoples do what is needed. The United States, Britain, and France can be built into a dynamic core at the center of western defense if their peoples show that they understand how urgent is the necessity.

Of the three men at London, Mr. Acheson needs and deserves the greatest support from the home front. This is true partly because the State Department is suffering from attacks which in a parliamentary system such as Britain's or France's could be answered by a timely vote of confidence, but which have no such adequate answer in Washington. But it is also true because Mr. Acheson's responsibility for world leadership is greater than that of his London colleagues simply because of American power.

Yet, Mr. Acheson had to prepare for London with knowledge that the European recovery program would be subjected to attack from Senator TAFT and other legislators who refuse to recognize any vital difference between foreign aid and domestic spending. Mr. Acheson had to go to Europe, backed up by a Senate vote on ERP which says that Americans may have what it takes to save freedom and prevent war, but they are not prepared to give Europe's survival a priority over unusable beds for veterans' hospitals or untimely expenditures for improvements to American rivers and harbors.

This really isn't America talking. But it's time the real America began. It's time for Americans and their allies to be counting the strengths in the free-world position and organizing these strengths against the threats against that position. The strengths are not too little and we are not yet too late.

At London the Big Three should determine how American economic power can be deployed usefully throughout the western community.

The relationship of America, Britain, and France requires tightening.

A basis for using West German resources safely, for keeping Germany as a member of the western group instead of letting it drift to an uncertain neutrality, should be found.

The risks which France must take in such an association must be balanced by American and British guaranties. British participation in a united Europe must be made economically safe.

The question of relieving Communist pressures on French military resources in the Far East must be faced. At the same time ways must be found to show far-eastern peoples that the west is not an obstacle to their natural development.

The first requisite to success in such a challenging program is the equipment of statesmen to deal with it. This equipment consists mainly of the knowledge that the peoples they represent are prepared for the decisions which must be taken—decisions with no less compelling an objective than survival itself.

The Welfare State

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. VELDE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Peoria (Ill.) Journal of May 8, 1950:

THE WELFARE STATE

The term "welfare state" recently has come into wide use, particularly in a political sense, with Republicans accusing President Truman of attempting to set up a welfare state in this country and defenders of the President either denying that he has any such intention or asserting that the welfare state is a good thing.

Different persons have different ideas as to just what a welfare state is or would be. Generally, however, it is used to describe a country in which the government has taken over almost entirely the responsibility for providing for the general welfare of the people.

A welfare state usually is conceived as one that attempts to provide for "cradle to the grave" security with all manner of assistance being given by the government from provision of medical care at birth to old age assistance in later years. The welfare state runs the gamut from socialized medicine and Federal aid to education, through unemployment insurance, widespread social security benefits, guaranteed wages, and crop insurance to pensions and subsistence in old age.

It is possibly best described as paternalistic government and on the face of things may appear to be a pretty good thing.

It is not until consideration is given to the manner of payment for all these benefits and the way in which they are to be administered that some doubt about its advisability will arise. England today is a fair example of a welfare state. There the people have medical care provided by the government, social security and government housing. They also have lost their choice of selection of a physician, much of the right of selection of where they will live or work, and pay a tax rate far higher than the one that we grumble about in the United States.

Always with a welfare state comes restrictive governmental controls. Farmers are told what they can plant to a far greater degree than exists in the United States. Industries are taken over and operated by the government. Gradually, one by one, the rights of self determination are surrendered by the people in return for what they think is free assistance from the government. In reality, of course, the cost of these free services must be borne by government and the cost is paid by the taxpayers.

The welfare state holds out a rosy promise for the unthinking but it is a trap in which people lose their independence and freedom. It leads the way to totalitarian dictatorship and is to be shunned by everyone who is convinced that free enterprise is a desirable system of economic control.

Missing Files

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. VELDE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Peoria (Ill.) Journal of May 9, 1950:

MISSING FILES

When President Truman, on the eve of his departure on a 16-State political tour, released a limited number of State Department loyalty files to the Tydings subcommittee, we expressed the suspicion that the files might not be complete. Senator MCCARTHY, in a radio address Saturday, elaborated on the same thought and read from an official FBI report of the laxity of the State Department in allowing access to its files.

Are suspicions justified? A succinct answer may be found in this brief paragraph from the May 8 issue of Newsweek:

"The House Judiciary Committee's entire file on its 1945 closed hearings in the Amerasia case, in which six were accused of stealing Government documents and passing them to Communists, is missing."

UNIVERSITY OF MICHIGAN LIBRARIES

No official Washington file, it seems, is inaccessible to spies. Those who have the greatest trouble getting to the files are committees that are looking for the spies.

If there are disloyal employees in the State Department, they have had 6 weeks to alter and remove material from the Department's files. If the Tydings Committee accepts them at face value, the committee itself needs investigating.

Protest Against Curtailment of Postal Services

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. HELLER. Mr. Speaker, I am this day introducing a bill, the effect of which would nullify the intent of Postmaster Donaldson's order of April 17, 1950, curtailing postal services. I am taking this means of calling this legislation to the attention of my colleagues, many of whom have already indicated their opposition to the Postmaster General's order.

Mr. Donaldson's order would cut residential mail deliveries from two to one a day. Most persons will get their mail in the afternoon instead of in the morning, as at present. Collections from boxes would be curtailed; deliveries in business districts reduced by one delivery on Saturdays; post office windows would be closed at 5:30 p. m.; and parcel-post deliveries limited to one a day.

In New York City alone, between 4,300 and 6,450 faithful postal workers are facing the loss of their jobs because of this order. In addition, the public will be inconvenienced, and business handicapped.

It has been stated that most of the employees who will be affected by curtailed employment are veterans. According to some persons, many of them are 10-point disabled veterans. These postal employees, most of whom are low-paid substitute workers, will be on the receiving end of the brunt of this directive.

The resulting unemployment will be a severe blow to the morale of the postal workers. Mr. Philip Lepper, president of the New York branch of the Association of Letter Carriers, AFL, declared that the order had thrown panic into the hearts of the letter carriers in his organization.

Likewise, David Silverglied, president of the Joint Conference of Affiliated Postal Employees of Greater New York and Vicinity, stated "that the American people are entitled to the continuance and maintenance of the best postal service in the world. This order will not only disrupt the postal service as we have always known it, but will destroy all feelings of security on the part of its faithful employees."

This curtailment of employment and service in the post office will result in irreparable damage to our postal system. With the resulting lowered morale of postal workers, shipments will not receive the attention they have been receiving in the past. Mail will necessarily be delayed. The departmental order will promote inefficiency in our great postal service.

The daily mail is the backbone of our communication system. The demand and need for postal service is now greater than ever. It is a Government function that has become essential to the growth and economic well-being of our country. It is unfair to deny our people the service they want and the service to which they have become accustomed. It is unjust to throw faithful employees out of work when they are providing such a service.

The curtailment of postal services would result in sizable money losses to American business.

The proposed cut in postal appropriations amounts to $24,921,000, or only 1.4 percent of the total requested budget. It does not seem reasonable that this small a cut would warrant such a sweeping reduction in employment and in service. Indeed, it is estimated that 10,000 jobs in the Post Office Department will be lost and that 8,000 first- and second-class post offices will be affected.

There are other ways to save money than to fire $40-a-week postal workers, most of whom are veterans. For example, some of the postal subsidies could be reduced or Congress could provide the sum of money requested. In speaking of subsidies, the Postmaster General has called our attention to the $200,000,000 subsidy to second-class mail. In addition, the Post Office Department's budget supports a fifty to sixty million dollar airmail subsidy. Last year, third-class mail was subsidized to the extent of $129,000,000, and fourth-class mail was subsidized in the amount of $90,000,000. Our foreign mail costs $74,000,000 more than the revenue generated from this service. We do not have to hire $40-a-week clerks to same money—there are better ways to do this.

Mr. Speaker, I urge the preservation of jobs to the faithful postal employees and the uninterrupted excellent services of the Post Office Department to which we have all so properly become accustomed.

Who Won in Chrysler Strike?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a very interesting article by John R. Stewart, which appeared in the May 8 issue of the Detroiter, published by the Detroit (Mich.) Board of Commerce:

WHO WON?

Last week the 100-day Chrysler strike ended, the second largest and costliest in the automotive industry. Who won? Certainly no one in any way connected with the making or selling of Chrysler-made cars and trucks. Certainly not the merchants, the service-establishment owners, or the employees of such places in Detroit and other cities where Chrysler plants or Chrysler supplier plants are located. Certainly not the city of Detroit which paid out nearly $2,000,000 in welfare funds. In short, nobody won.

This billion-dollar strike resulted in a few wage adjustments in certain plants and classifications, and minor noneconomic changes. Against these small gains, which could have been obtained without suffering a strike, the Chrysler workers lost $87,000,000 in wages and forced losses well over twice that amount among fellow workers in supplier plants—including those in raw-material plants, transportation facilities, mines, and farms.

Chrysler's 89,000 workers lost 72 working days' pay, about $984 per worker, or a total of $87,000,000. (Figures based on earnings of $1.71 per hour, average figure for all hourly paid factory workers in Wayne County, 1949.) Automobile production during period of the strike approximated 1,930,000 cars and trucks. With Chrysler in operation, total would have been somewhat greater, probably averaging out at about the 158,400-car weekly level prevailing just prior to the strike. On this basis, total automobile output over the 100 days would have been 2,263,000. Chrysler's share—as indicated by its proportion in the year 1949—would have been 463,000 cars and trucks. Total cost of these cars at retail was approximately $950,000,000. This loss was divided about as follows:

Chrysler employees lost [1]	$108,000,000
Chrysler stockholders lost [1]	14,000,000
Employees and stockholders lost (retained earnings) [1]	27,000,000
Loss in taxes [1]	66,000,000
Loss in depreciation fund [1]	22,000,000
Suppliers lost (largely wages lost, ultimately) [1]	413,000,000
Factory cost of lost car output	650,000,000
Dealers lost	162,000,000
Optional equipment, handling charges, sales tax, etc	138,000,000
Total	300,000,000
Retail cost of lost car output	950,000,000

[1] Based on Chrysler Corp. financial statement for 1949.

Before strike started, workers were promised $100 a month pensions. After 100 days of strike, workers got $100 a month pensions.

Did Reuther win? Time will tell.

Is Our Denazification Program Working?

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made at Harrisburg, Pa., on April 30, 1950:

IS OUR DENAZIFICATION PROGRAM WORKING?

I bring this question before you because it is basic in any understanding of foreign policy.

Nobody seriously believes that the allied victory resulted in the disappearance of the

Nazi ideology, and nobody seriously believes that Germany welcomed with open arms the occupation authorities, and nobody seriously believes that the Germans have learned or are learning the meaning of democracy. Nobody seriously believes any of these things, and yet we find that the problem of denazification is being treated with more than a measure of indifference and that there are a good many who hold the view that there are many, many more important problems pressing upon the occupation authorities and that denazification is certainly the least of them. Nothing could be more fallacious and nothing, but absolutely nothing, could be more dangerous.

How many wars must be fought before we learn the lesson that ideas are as powerful as weapons? The sword follows the word.

The Fascist and Nazi ideology which brought so much tragedy to the world must not, in the name of humanity, must not be permitted to flourish again. To ignore the danger signals in Germany is to ignore a threat that some day will grow into a conflagration that will burn the very pattern of civilization.

Let us not make light of this. What happened after World War I is happening after World War II. Germany is again being wooed. She is being groomed to be the belle of the ball and is being made to feel that she can sell her charms to the highest bidder in the cold war. What madness is this, what consummate folly to feed in this way the dangerous German ego—to give her a weapon of blackmail?

Let me read to you a resolution I, together with several others in the House and Senate, have introduced:

"*Resolved*, That the Committee on Foreign Affairs, or any duly authorized subcommittee thereof, is authorized and directed to conduct a full and complete study and investigation of all matters relating to the conduct and status of the denazification program in the zone of Germany under occupation by the United States, especially as concerns (a) the result of transferring responsibility for denazification to the German authorities; (b) whether or not there is infiltration of former Nazis, Nazi supporters, and other antidemocratic elements into denazification tribunals; (c) whether or not former Nazis and other antidemocratic elements have been eliminated from high position in public office and the economic life of Germany; (d) whether or not there has been reinstatement of thousands of Nazi teachers to former or higher positions in the Bavarian and other public-school systems; (e) whether or not there is resurgence of intensive antisemitism and militant nationalism in the United States zone; (f) whether or not there is a rise of strong new political parties based on Nazi doctrine and militarism; (g) whether or not there has been reappearance of Nazi-type propaganda in the German press; (h) whether or not there is development in the German youth of appreciation of and devotion to democratic institutions; and to report with expedition its findings, together with such recommendations as it deems proper, to the House of Representatives."

There is no doubt in my own mind of the urgency of such an investigation. If peace is to be deserved, peace deserves to be worked for. It would be a bitter mistake if this resolution were permitted to die in this session of Congress.

Let me point to a few of these danger signals I made reference to earlier. For example, we learn that the Intelligence Service of the western occupying powers in Germany are now employing former Gestapo personnel and former members of the SD, the Nazi security service, whose main task was once espionage, sabotage, and special assignments outside the Reich. We learn, too, that the German Party, which has 17 members in the Bundestag, submitted the following motion to the Bonner Assembly:

"The Bundestag resolves to request the Government of Western Germany to submit to the Assembly a bill ordering the immediate conclusion of all pending denazification cases and a law of amnesty in favor of denazified persons in classes III and IV."

While classes III and IV refer to lesser offenders and followers, it would nonetheless mean the reinstatement of former civil servants in government, state, and municipal services.

We know that the major offenders, the former top Nazis, have not been brought to trial due to the failure of the denazification tribunals to act vigorously. Party officials, like Franz Richter, member of the West German Parliament, asked not only that the amnesty resolution be adopted, but urged the granting of restitutions for damages inflicted by denazification.

Now let's look for a moment at some of the appointments to official posts in the Western German Republic. We read that such men like Dr. Hans Ritter vonLex (once in a high government office in the Chancellery of the Reich) and Dr. Hans Globke (once adviser to the Minister of the Interior when Hitler was in power) are high in counsel in Western Germany.

The occupying Western Allies abandoned the licensing system for the press. What followed revealed immediately the prevailing temper of the German people. Not less than 30 former Nazi publishers rushed back into the newspaper business in the United States zone of occupation alone. Among them was Max Willmy, the notorious publisher of Der Stuermer.

Likewise a few days after the discontinuance of the licensing system for political parties in the American zone, three political units made their appearance: (1) the Socialist Reichs Party in Hesse, (2) the German Action Party, and (3) the German Communal Party, all of which hastened to proclaim the policy of an unbridled nationalist.

Let us look a bit further. As reported by the New York Times, Germans no longer ask whether their country is to be rearmed, but when. There is talk of a limited German army. Just what is meant by a limited Germany army? One that will impress the Soviet, but will not alarm the French? Does it mean strength when marching toward Russia, but weak when facing the west? What ridiculous contradiction is this?

Both the Associated Press and International News Service keep sending reports of secret formation of former German officer cliques.

Naturally, in the short space of time I have with you I cannot dwell in too much detail on all these symptoms of the resurgence of German nationalism, but I would be failing in my duty if I did not sound the alarm.

Now, for example, in contradiction to the occupation statute which states that displaced persons and the admission of refugees are among the powers reserved to the occupation authorities, the Allied High Commission of Germany recently passed a law, No. 13, dealing with judicial powers in the reserved fields. According to the new law, almost all persons may come within the jurisdiction of German criminal and noncriminal courts. The only persons exempted are members of the Allied forces, persons accredited to the Allied High Commissioner, and their families. This may mean that displaced persons who still are concentrated in camps will in the future be subject to the jurisdiction of German courts.

Of course, it is true that article 7 of this law contains the provision that the occupation authorities may, either generally or in specific cases, withdraw from a German court any proceeding directly affecting persons or matters within the jurisdiction of the occupation statute or suspend any decision of a German court affecting such person. The fact still remains that an act of withdrawal or suspension would be necessary after the German courts have had the original jurisdiction.

We know how the German courts have behaved in denazification cases, as witness the Hedler case. We know how the German courts have behaved when any claim has been pressed against a German citizen. We know that the German courts have been affording every opportunity to the extremist and nationalists to make themselves heard. What groundwork is this for future tragedies?

Let us return now to the more general scene. In the United States zone of western Germany, there are now a number of active groups which are busy inflaming the wounds of the defeated German. There is, for example, the League for German Revival, whose leader is Otto Strasser, now in Canada. There are various educational organizations which exist as cover-ups for Fascists, Nationalists, and anti-Semitic groups. The political contact office led by Klaus Mehnert is a typical example. Other groups are the St. Goarer Circle, the Heiligenberger Circle, the Laupheimer Circle, and the Humboldt Association.

The hazardous fact remains that the Liberals in Germany find neither a place for themselves nor encouragement. We know that the Soviets are flirting with German writers to disparge democracy, to build a powerful militant Germany, and to fight for a united Germany. According to Drew Middleton of the New York Times, Communist pressure for the unification of Germany is exerted through the medium of the radical right-wing political groups which include industrialists, former officers, anti-Semites, and opportunists.

It cannot be said often enough that the most potent weapon against communism is the ideological one. Rearming Germany, bribing Germany, wooing Germany, is not the answer. It sounds to some like an expediency we must use in the cold war, but they lose sight that a German-Russian pact was once in existence and could be again if the two contracting parties believed it could be used to a self-serving end.

Mr. McCloy, High Commissioner of Germany has stated unequivocally "There is nationalism in Germany. There is a nationalist fringe on the extreme right which is more active than it has been. There is a Communist fringe that plays the Soviet game, and there is the persistent tendency of both these fringes to work together."

It has been said that it is difficult to undo the 12-year rule of Hitler in 5 years. Of course, it is difficult. Does that mean we work less toward that end instead of more? Does that mean that we are to proclaim that we are permitting the resurgence of nazism and nationalism in Germany because not that we dislike the German less but that we dislike the Russians more?

I am not discounting the Russian threat of aggression. I am as gravely and as seriously concerned about it as is every citizen of the United States, but I maintain and I shall maintain with all the strength possible, that only an active, thriving liberalism—watered and nurtured—in all the countries of the world wherever possible can help us in the diminishing of the Russian threat. Must we forget Buchenwald and Dachau? Must we forget the poison and venom and the murder by Nazi Germany because a country of another name now threatens world peace?

Certainly denazification of Germany is not an easy task. It involves vigorous activity on almost every plane of existence—social, cultural, educational, economic, etc. For example, only a few short days ago testimony was received by the subcommittee on the study of monopoly power, of which I am chairman, that there is every sign of a reviving steel cartel. That is what I mean by activity on the economic plane.

If we pay lip service to democracy and lip service alone, and do not let our right hand know what our left hand is doing, then

UNIVERSITY OF MICHIGAN LIBRARIES

henceforth we shall have ourselves to blame if disaster overtakes us. As citizens of the United States, as mothers and fathers, as free men and women who have a stake in the future, who have a responsible part to play—I ask you to take cognizance of this problem and through your Representatives in the Congress express your concern with this growing resurgence of German nationalism and that you ask your Representatives in Congress to act now on a thorough exploration of our denazification program.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article.

CURTAILMENT OF POSTAL SERVICE

The Post Office, the perfect case the Socialists always cite to prove that socialism is better than free enterprise, has come a cropper. Though it has a Government monopoly, it can't pay expenses. The loss for 1949 was more than half a billion dollars.

Politicians do not like to raise the price of the services they give away, so they wanted to let the taxpayers pay the difference.

Congress thought otherwise. Congress said, "Improve your methods, cut costs. Put in machinery and cut down the losses." The House reduced the budget the Post Office asked for by only 1 percent. But immediately the Post Office politicians retaliated by reducing services, reducing deliveries, delaying mails, delaying business, and throwing thousands of men out of jobs. Home deliveries will be cut to one a day, collections will be cut, post offices closed at earlier hours. Letters in New York City must be mailed before 6:30 p. m. or lose a day. This, in Mr. Truman's most prosperous period of all time.

Here we have the old game of squeezing the people, to make them bring pressure on Congress to pay the losses. The Postmaster General even instructed all the postmasters across the country to give wide publicity to the readjustments provided for in this order. Time is short. Congress must be made to jump through the hoops by violent protests of the public.

A big part of the loss is incurred through carrying mail for the Government. It gets free postage to the value of $149,000,000, according to Postmaster General Donaldson. The Government propaganda for social security, public housing, socialized medicine, the Brannan plan, and all the rest, is carried by trains and planes and on the backs of mail carriers free—at taxpayers' expense. The Administration sends out trainloads of propaganda free of postage to put over its socialized measures. The cutting down of the service to the public will not disturb the free service to the Government agencies. That will go on unimpaired.

It is interesting to note that all Members of Congress, both Republican and Democratic, in both Houses, spend only $1,200,000 on franked mail against the Executive's $149,000,000. Those whose secret aim is to attack Congress complain about the Congressmen's franking privileges. In fact, congressmen spend only 1 cent for every $3 the administration spends on postage alone.

Why not turn the post office over to private enterprise to deliver our mail more efficiently and at less cost? Then the bureaucrats would have to pay the postage for their propaganda. We did this in the early days. Private carriers carried the mail so much better and more cheaply than the post office that several times they nearly put the post office out of business. They would have done so many times in the past if Congress had not come to its rescue.

Finally, Congress had to prohibit competition. It made a legal monopoly of the mail business for the Government alone to do. All private competitors have been barred, by law, from showing how much cheaper and better the work can be done by them.

Isn't it fortunate that we have not yet put all of our housing and food and medicine and manufacturing in the hands of the Government to manage? We have not gone completely Socialist. If we look closely at the Socialists' pet projects we may yet reverse our steps and recover our liberties.

Czech Shoe Probe

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Boston Traveler of May 8, 1950:

CZECH SHOE PROBE

No more Czech-made shoes will be dumped in the United States. This is the gratifying result of the campaign of the New England Shoe and Leather Association. It takes the form of instructions to the United States appraisers of merchandise at the various ports to withhold appraisement of shoes from Czechoslovakia according to the terms of the Antidumping Act of 1921.

The New England association has evidence at hand that shoes costing the equivalent of $7.50 in Czechoslovakia are being retailed at $2 in this country. Obviously that sort of business is not covered either by the laws of economics or the national objective of promoting foreign trade. Czechoslovakia is now a Russian satellite. It would be hard to find anything better calculated to help the Red cause than to cause unemployment and unrest in the United States by flooding us with the products of iron curtain slave labor. It is one of the cold war strategies against which we must be ever on guard.

Drain on Coking Coals Spurs Research

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks, I am including an article from a recent issue of the United Mine Workers Journal. Much publicity has been given to the tonnages of coal still remaining unmined in the United States, and it has left the impression that all grades of coal are included in that category. But the rapid depletion of some of the very highest grades of coal is a source of anxiety to the consumers of such coals. One of these high-grade coals is coking coal. During the past years, through the profligacy of mine owners and operators, valuable coking coals have been put to low-grade uses, and the two World Wars have also spurred their depletion.

The article that I have permission to include in my remarks is culled from the Bureau of Mines report, Coal and Coke Production, and it points up the rapid depletion of these coals and the attendant anxiety among coke producers.

DRAIN ON COKING COALS SPURS RESEARCH

Spurred by heavy drains on the best-known and most easily mined beds of coking coals, Government and industry are working together to stretch the available supply.

What is being done in this direction, including research and a new survey of our coal reserves is outlined in a Bureau of Mines report just released, Coal for Coke Production.

Some of the best seams of coking coal have already been exhausted due to the heavy demand for steel in two world wars, plus the mounting peacetime insistence on using increasing amounts of the available smokeless type of bituminous coal.

Virtually all of the best coking coal is in the Appalachian region, the report points out, but these deposits represent only about 4 percent of the Nation's estimated coal reserves, if allowance is made for unrecoverable and low-grade coal.

Thus, the foreseeable exhaustion of good coking coals has added to the pressure for research to develop more effective blending of high-ranking coal with lower grade types, as well as the up-grading of those coals with high ash or sulfur content so that they may be made to yield coke acceptable for blast furnace use, the report states.

Since World War II, Bureau of Mines field and laboratory studies on this problem have in the main been concerned with: (1) a survey of the washing characteristics of coals, by beds and mining fields; and (2) an experimental study of processes for separating the good from the poorly coking constituents of coals of marginal coking qualities. The Bureau has installed experimental slot-type ovens at Pittsburgh, Tuscaloosa, Ala., and Golden, Colo., to study various blends of eastern, central, and western coals.

At present the Bureau and the Geological Survey are engaged in making a reappraisal of the national coal reserves, the results of which will be published on a county basis, giving the tonnages of each coal bed and the ranges of quality. Reserves will be reported in two classes: measured (proved), and indicated (probable).

The President's Speeches at Burlington, Ottumwa, Creston, and Pacific Junction, Iowa

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speeches

delivered by the President of the United States at Burlington, Ottumwa, Creston, and Pacific Junction, Iowa, on May 8, 1950.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

REMARKS OF THE PRESIDENT AT BURLINGTON, IOWA

Thank you very much, Mr. Mayor. I don't think I have ever had such a happy birthday.

It is good to be back in Iowa again, I assure you. It always makes me feel at home in this great corn State. You see, I live in a corn State to the south of you, and I never have admitted that Iowa grows taller corn, but sometimes I have to.

I am making a trip across the country so that I can see first-hand how the people are getting along and what problems they are facing. I also want to talk about the problems that all of us are facing together. I want to tell you the truth about public affairs. There is no other way for me to get the truth to the people but to come out and tell it to you. That has been demonstrated—2 years ago—very well, I think. When the people know the truth, when the people can weigh the facts, I have no qualms about the decision they will make. It's the democratic way for people to argue the issues—the only way you can understand what I am trying to do. The only way you can understand whether I have carried out the platform on which I was elected in 1948 is for me to make a report to you, and that is what I am doing, and I have a perfect right to do that. It is not political, it is what any head of an organization does once a year. I didn't get a chance to do it last year, I had too much to do, but I am with you this time to tell you the facts, and when you have the facts, I am perfectly happy on what you will do with them.

Our democracy works because there is always a free and open discussion between the citizens of this country and their elected representatives in town halls, State capitals, and in Washington, D. C. Sometimes, the discussions in Washington, D. C., are not exactly to the point, but they still have discussions.

This is what makes this country different from a dictatorship. Our Government works for the people. It is a Government of and by and for the people, and its only reason for existence is to help build a more secure and a better life for its citizens.

What we are trying to do now is to make sure that our economy continues to grow and prosper, so that everybody in the country can have a better living standard. We have a higher living standard in this country now than we have ever had before, the highest in the history of the world. The way for us to keep these gains and do even better in the future is to see to it that farmers and businessmen and working men and women move forward together. Everybody ought to have a fair and square chance at the economic prosperity of this country. That's all I'm working for.

Here in Burlington, I need hardly tell you people that the people in town are prosperous only when the farmers are well off. Certainly the farmers have learned that they have good markets only when wages are high enough for the people in town to buy what the farmers grow.

I am working for a farm program that will give the farmers a good income. I am going to make a speech later in the day, at Lincoln, Nebr., When I will tell exactly what kind of farm laws we need on the books so that farmers will always have good incomes, and will always be raising the kind of crops we need, rather than raising huge unusable surpluses that the Government has to buy, and sometimes has to destroy.

Of course, I am just as interested in working for the welfare of people in cities and towns as I am for those on the farms, because you can't have one section, or one sector, of a population prosperous and have the others in misery. They must all belong together and share the good things of life.

We have passed a housing law last year that will mean nearly a million new housing units all over the country in the next 5 years, for families who otherwise couldn't afford decent houses.

That is the kind of progressive, forward-looking measure I am working for in the fields of social security, health, and education. Many States need new schools and more teachers. The only way our boys and girls can get the kind of education they need is for the Federal Government to help the States improve their school systems.

A lot of people are expecting me to talk about what the Eighty-first Congress has done on these matters, just as I told the country 2 years ago the truth about the Eightieth Congress.

I will say one thing, and say it emphatically, the Eighty-first Congress has done a lot better than the Eightieth ever did, and it is going to do a lot more than it has done up to date.

The record of the Eighty-first Congress is not complete yet, but when it finally finishes its work and goes home, then I will be ready to come back and give you the full details, and let the chips fall where they may. The country is entitled to know the facts, and that is what I am out here for now, is to tell you the facts in language that you and I speak, and that you can understand. And I believe that when I get through you will understand just exactly what I am trying to do. And when the Eighty-first Congress quits, I think it is going to have a good record. I am going to bet on it, anyway.

Thank you very much. I appreciate all these happy birthday greetings.

REMARKS OF THE PRESIDENT AT OTTUMWA, IOWA

Thank you very much; thank you very much. I can't tell you how very much I appreciate this warm and wonderful reception. It is one of the finest gatherings I have ever seen in a long time. Not since Dexter, Iowa, have I seen such a gathering. In 1948 that was, you remember. There were 10 acres of people at that meeting, and I was asked how I measure people, and I said you can put 9,600 people on an acre, and if you multiply that by 10, that's 96,000 people. I don't know how many there are here.

I have been reliably informed that there is a young man, working for the opposition, who has been following me in a plane to look the situation over. Now that young man is perfectly welcome to save himself a little money, and if he will buy a ticket and get on the train, I will take him along; and I sincerely hope that he has been as highly pleased with the reception I have had this morning and with the crowds as I have been, and I hope he will make that report to the opposition so that they can govern themselves accordingly.

This morning I want to talk to you briefly about your future, and the future of the rest of the people all over the country. That is why I am here, to tell you the truth about what your Government is doing. It is a most difficult thing for me to get the facts to the people, but I think I have demonstrated on another trip—and on that trip I was followed also—I demonstrated to the people at that time that when they know the truth and the facts, you can't fool them.

These are troubled times in the world. All of us know that the only way we can get a peaceful world is by keeping the United States strong and prosperous. We can have such strength and prosperity only if the farmers, the businessmen, and the workers are well off. You know, right here in Ottumwa that your meat-packing house and all other businesses in town depend on the incomes of the farmers for miles around. You know, too, that your businessmen and your farmers and your workers have a mutual interest in the prosperity of all our economy.

Well, that is true of the whole country, too, because this country can't remain prosperous unless you in this area prosper. We must make sure that Iowa farmers never again have to burn their corn for fuel like they did 20 years ago. I intend to keep on working to see that farmers and workers and businessmen get a fair deal, and that's all anybody can ask for.

I am going to make a speech in Lincoln today—in Lincoln, Nebr.—and I am going to tell you what kind of farm program we need, and I am going to make it easy and simple for everybody to understand, and it won't be complicated or garbled. It will be just exactly what we need. I am going to discuss those problems specifically, without dodging the issues, as many people have dodged them in the past.

You hear today a lot of wild charges that anything new which we propose for the farmer is socialism and regimentation. That's an old cry that has been going on for a long time; in fact, ever since 1887.

That reminds me of a story about a man from my home State who was in Congress back in the eighties. His name was William Henry Hatch, and his name was attached to many laws which benefit the farmer.

Congressman Hatch was the author of a law in 1887 which granted $15,000 a year for each State to set up agricultural experiment stations in connection with its agricultural college. There were a lot of folks who raised cain when that bill got to the Senate. You would have thought that the end of the world was just around the corner. One Senator from the great State of Kansas said that this proposal was cooked up in response to the "clamor of a certain select class of self-constituted reformers."

This Senator went on to say, and these are his exact words—now this was in 1887—sounds like an argument in the Senate now: "It illustrates a tendency of this class of agitators to demand the continued interposition of the National Government in State and local and domestic affairs, and with the result, as I believe, of absolutely destroying the independence and freedom of individual conduct, and subverting the theory on which the Government is based." Now, that is an exact quotation from the Senator from Kansas, who is also famous as a poet.

Now, that sounds just like the attacks which are being made today against any progressive measure. But it is even more interesting because a few miles north of here, at Ames, the Iowa State Agricultural College has been using the Hatch Act funds since 1887. It is still using them today, and there has been no limitation of anybody's freedom in Iowa as a result that I know of.

I think that our system of agricultural research and education provides real strength for our democracy. Your own Iowa State College at Ames is an outstanding part of this great system. We have the same situation down in Missouri, and even in Kansas, where that Senator made that statement.

The agricultural colleges in the other States are doing likewise. Each one is a part of this great system of research and education that extends all the way from the Federal Government to the individual on the farm.

Whenever you hear people attacking agricultural education, or other progressive measures that will benefit the farmer and the worker and the rest of the people, just remember that agricultural education has been a part of our democratic way of life since the days of Thomas Jefferson, and I hope it always will be in the future.

UNIVERSITY OF MICHIGAN LIBRARIES

Now, I want you people to distinctly understand that I am here reporting to you as the President of the United States, giving you an outline of things just as they are in Washington, and just as I would like to have them to be in Washington. I have a perfect right to do that. That is part of my job, to let you know just exactly what the facts are; and when I tell them to you I think you can understand that they are not garbled by somebody who wants to give a wrong impression. You understood them in 1948, and you are going to understand them in 1950, and when we get through, when I report to you the next time, you are going to be happy and satisfied with the results.

I can't tell you how very much I appreciate this magnificent reception this morning. It is grand. I will remember it all my life.

Thank you very much.

REMARKS OF THE PRESIDENT AT CRESTON, IOWA

Thank you very much. I appreciate the fact that you are willing to stand around in the rain like this for a chance to get a look at and to hear your President. It certainly is a compliment to me, and I appreciate it more than I can tell you.

You know, this city is almost due north of Independence, Mo. They are in the same kind of bluegrass country down there that you are here. You people are fortunate in having some of the best growing soil in the whole Middle West. I have been glad to see that you know how to take care of that soil and that you know the importance of the farm problems with which we are faced today.

Two of the biggest problems in many parts of the country are electric power and an adequate water supply. I was glad to get a report a few days ago from the Department of Agriculture that shows that you are well on the way to solving your electric and water problems.

This report—I have got it right here; I have to keep it chained down to keep it from blowing away—tells how the Rural Electrification Administration has joined with the city and the State of Iowa in a project to build a new dam and reservoir. They ought to bring tremendous benefits to this good city of Creston. They will mean more power, a better water supply, and a better life for this entire area.

You know, there are all sorts of places in the United States that are having water and power troubles. I appointed a Commission here not long ago to look into the whole situation from Maine to California and from the State of Washington to Florida. I think that is the way in which the REA is working, together with Creston and the State of Iowa, in this project. It is a sample of the way in which we are joining in cooperative effort all over the country. Some people tell you that the Federal Government in Washington is trying to take over everything. That kind of talk is just plain nonsense. It is just not true.

We are all partners together. We believe that we can solve our problems by the kind of city, State, and Federal cooperation which is helping you build this new dam and reservoir in Creston.

If we could get the same kind of cooperation with all the rest of the world that we have here, the problem of guaranteeing world peace would be a simple one.

This cooperative spirit is the very foundation of the Fair Deal program. By broadening the opportunities for a good education, health, social security, and a high standard of living, we are helping each other and, at the same time, keeping the United States strong and prosperous.

You don't know how glad I am for the opportunity to stop here and how much I appreciate your willingness to stand around in the rain to listen to what I have to say. It is a compliment to me, and it is a compliment to you, because you are interested in public affairs. I am here to report to you, to tell you what the problems are with which this great Nation is faced, and to give you some idea of how I am trying to solve them as your public servant. Again I want to thank you very much. I have had a most cordial welcome all the way across the great State of Iowa. I don't think I ever had a happier birthday than this one. Thank you very much.

REMARKS OF THE PRESIDENT AT PACIFIC JUNCTION, IOWA

Thank you very much. You know, I have had a grand trip through Iowa today. In some places the weather has not been all that you would expect for a meeting of this sort, but the people turned out just the same, and that is a compliment, a high compliment, when people come out in inclement weather, although I understand you wanted the rain, anyway, so maybe you wanted the rain and not the President—I don't know.

I have been through some great country this morning. It is fine to see Iowa looking so prosperous. I remember very clearly what conditions were like in Iowa just about 20 years ago. We were just as badly off down in Missouri. Corn was selling at 30 cents a bushel, and the farmer was scraping the bottom of the barrel. Farm mortgages were being foreclosed. I can remember it very distinctly. I remember one Iowa judge almost got hanged for foreclosing a farm up here.

Just think of the difference today, not a single bank failure in a year, here in the State of Iowa or anywhere else in the United States. That is because we have had a wonderful prosperity all over the country in the past few years. Business has been booming. Factories have been working at peak peacetime rates. The farm income has been high, too. Of course, it has not been as high as it was during the war, and it fell a good deal last year, because we do not yet have the right kind of farm legislation on the books.

One reason why no banks have been failing these days is because people now have complete confidence in them. They know that their deposits are protected by the Federal Deposit Insurance Corporation. We take the FDIC for granted today.

But, when President Roosevelt first proposed it back in 1933, a lot of reactionaries set up a terrible howl. One prominent Governor said—and he was a neighbor of yours: "The guarantee of bank deposits will completely destroy the entire banking system of the Nation." Think of that—think of that!

Well, the prediction was nonsense. So were all the other predictions against the other great progressive measures of the thirties and forties. And so are all of the predictions about doom and disaster which some people are trotting out today.

The same old scare words about improvements in housing, farm legislation, and social security, are being used over and over again by the people who don't want us to continue growing and becoming stronger. I don't think you are going to be fooled by those scare words any more than when people told you 20 years ago that guaranteeing bank deposits would ruin the country.

It takes a lot of hard work on the part of the Government in Washington, working right along with all the people of the country, to keep us growing and prosperous.

I am making this trip so that I can find out just exactly how things are going, and what it is you want your Government to do. I want to keep us on the road to prosperity, and I want you to understand what I stand for, and why I send down the messages I have been sending down to the Congress in the interests of all the people, the farmers, the businessmen, and the workers. I think it is proper, and I think it is right that the President, who is your hired man, should come out once in a while and let you get a look at him and listen to what he has to say, and find out if he is the same fellow who was out hunting for votes 2 years ago.

I have enjoyed today very much. You know, it is quite a day for me. I am 66 years old today. I know you will say I don't look it, but I am.

It has been great. The people of Iowa have shown me a wonderful, wonderful welcome, and I am going over into Nebraska now, and I am going to Lincoln and make a specific speech on what I believe is proper for the farm program of the United States of America, and I am going to make it perfectly clear and simple so you can understand it. Nobody will have a chance to garble it up, because I am going to talk to you over the radio, and you are going to hear just exactly what I have to say, and nobody will have to interpret it but yourselves. That is the reason I am out on this trip. I want you to understand the facts as they are. You don't very often get a chance to do that, because people don't have the opportunity to read all the records of the Congress, you don't have a chance to read the messages which I send down, you don't have a chance to read the debates. What you read is something that is skimmed off the top, that will maybe make a headline, and sometimes it doesn't mean a thing.

I do thank you most sincerely for your cordiality to me today in the great State of Iowa, and I want you to understand that I am the servant of the people. I am still working for you. I am trying to do just exactly what I told you I would do in 1948, and I hope I haven't changed a bit.

Thank you very much.

The President's Speech at Galesburg, Ill.

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. SABATH. Mr. Speaker, on May 8, 1950, President Truman made a speech in the city of Galesburg and in my State of Illinois. Although he stopped there at an early morning hour, he was received by a gathering of eager men and women, greater than ever before witnessed by that city. His speech was of course received with great enthusiasm and acclaim.

Of course, this indicates and I am confident that the American people approve of his utterances and policies. Reports indicate that President Truman has been similarly received in every town, hamlet, village, and city that he stopped at.

On May 15, our beloved President will be in my own city, the great city of Chicago, where arrangements have been made for him to make a major speech. I know that he will be received by the greatest crowd ever to assemble in the Chicago Stadium, and same will be overfilled with some 250,000 admirers. He will speak on Monday evening, May 15, 1950, from Chicago.

I am indeed happy to insert the text of President Truman's speech made at Galesburg, Ill., to be read by all. Moreso, I am pleased at the privilege given me personally, to see and hear the President in Chicago next week.

The address follows:

Mr. Chairman, it certainly is good to see all of you. I appreciate your coming out this early in the morning to see me. I am more than happy to be back in Illinois once more. They tell me that Knox College in Galesburg is famous for some very great people. I have been told that Carl Sandburg and Eugene Field were alumni of Knox College. My wife had a great uncle who was a graduate of that college and one of our great Circuit Judges in Jackson County, Mo. I am also told that Adlai Stevenson came from this town, and that reminds me of something—my first "sashay" into politics was in 1892 and I wore a white cap to school, and across the top of it it said Cleveland and Stevenson. That was Adlai's grandfather, that Stevenson. Well, some big Republican boys took my cap away from me and tore it up, and the Republican boys have been trying to do that to me ever since.

I am starting out on this trip which will take me almost to the Pacific coast. I am mak ng the trip so I can give a report to the American people on some of the major problems which this country faces today. I wanted to come out here to find out what you think about them, and to let you know what I am thinking about. There is nothing mysterious about it. I am not running for office. I am merely making a report to the citizens of the United States on what has happened since you honored me by making me President of the United States, and I have a perfect right to do that, and that is my privilege and my duty.

Our democracy is strong because we have always had this kind of free and open exchange of ideas between our citizens and their elected officials. One of the great Lincoln-Douglas debates was held right here in Galesburg.

Democracy was strengthened in those days by the Lincoln-Douglas debates on the great problems which confronted the country at that time. We can make our country stronger today by the same kind of discussion.

I like discussion. I like discussion of the issues, and I like to confine the discussion to the issues, not the side issues and foolishness.

Today, May 8, is the fifth anniversary of VE-day. Instead of having the kind of world we hoped we would get after the war, we find that the kind of freedom and democracy we enjoy here in the United States is being threatened all over the world. It is being threatened by Soviet communism, which is trying to wipe out democratic countries everywhere.

The kind of decisions you and I make in the next few months and years will determine what kind of a world we are going to live in, and whether or not there will be a third world war.

We face a clear-cut choice between two courses of action. We can either isolate ourselves from the rest of the world, or we can take constructive steps to build lasting world peace. And that is just exactly what I am trying to do.

Now, isolationism would be a cheap policy to follow. It would be easy and cheap to stop spending money on our Army and Navy and Air Force, and to stop sending supplies to other countries who survived the great war. We can stop these things today. Isolationism would be mighty cheap for today and tomorrow, and maybe next week. You remember how cheap isolationism was in the 1920's. Taxes were cut, at least for the big fellows, but look at the terrible price we have paid for isolationism in the Second World War.

Today, exactly the same issue faces us. There are still some men who keep telling you that we can economize by following an isolationist policy. These men can't see beyond the ends of their noses. They don't see that isolationism would let the rest of the world be swallowed up by communism. That would certainly bring on a new world war, just as it did in 1939. We reneged in 1921, just as Russia today is doing it with the help of our own isolationists.

I don't think I need tell you that another world war would not be fought and carried on on foreign soil, as the last two have been. The terrible weapons now available could be used to tear up our cities by the roots.

Some people get hysterical in the face of problems like these. I believe that we should meet this challenge calmly. We should do everything in our power to support the United Nations and to help the free nations abroad who are putting up such a good fight against communism. And we ourselves must stay strong.

I have often said, "Our goal must be not peace in our time, but peace for all time."

We can have peace, but it takes hard work, and it will cost a great deal of money. We are now spending 71 percent of our budget to pay the cost of past wars, and to prevent a future war. It would be easy enough—it would be easy enough to cut the expenses of our Armed Forces and to cut off help to European countries that are trying to survive communism. That would be easy enough to do, and we would have a balanced budget. But in the long run we would pay the fiddler. This is the financial load which is causing a deficit, trying to prevent a third world war. But I want to say to you from my heart that this cost is nothing compared to the cost of losing the peace.

In 1945 the budget of the United States was $103,000,000,000. When Japan folded up in September, I cut off $65,000,000,000 of that budget and canceled the contracts so that money would not have to be spent. I have been asking the country to expend over a 4-year period about $20,000,000,000 to prevent another world war. Now, which is cheaper, $20,000,000,000 over 4 years, of $100,000,000,000 a year to fight another war? I don't think I need to argue that question with you.

I am not afraid of losing the peace, because I believe that the people of Illinois and others like you all over the country understand the situation in the world today. I think you know that international cooperation is the key to world peace. We had experience with not cooperating in 1920 and it brought on another war. We must cooperate to end another war.

I think you know that we will never have to worry about the strength of the United States as long as we keep moving forward with measures to provide prosperity and a better life for our fellow citizens.

A fair deal for more people in agriculture and in industry and in housing, health and education, will strengthen this country and make the road to world peace less difficult.

I can't tell you how pleasant it has been to be with you this morning. I had no idea that there were 10 acres of people in Galesburg. This is, you know, the fifth anniversary of VE-day. Also, incidentally, it makes the sixty-sixth anniversary of the President of the United States. I appreciate this delegation. It makes this a very happy birthday for me.

Thank you very much.

The Farmers' Interest in the Kerr Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me concerning the farmers' interest in the Kerr gas bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KERR ON THE FARMERS' INTEREST IN THE KERR GAS BILL

A pick-up truck comes to a stop in front of a local bank; a farmer swings from the driver's seat and makes his way inside to the cashier's window. Without fanfare but with deep satisfaction, this Oklahoma farmer lays out a fresh, crisp check from oil and gas royalties or lease bonus. He adds to his balance, starts a nest egg, or pays off his note, guaranteeing his family a better future and a greater security.

This is a typical experience. In the past half century, thanks to the production of oil and gas, thousands of Oklahoma farms have literally been saved from the auctioneer's hammer and countless farm families have been given a new lease on life. A steady stream of cash—millions and millions of dollars—has flowed annually into the pockets of Oklahoma farmers.

This welcome income from royalties and leases often has meant the difference between real comfort and bare existence, between solvency and debt. The farmers call it easy money, and they certainly know whereof they speak. It involves none of the hardships of digging a living from the soil. It is not subject to the hazards of flood or drought or storm, green bugs, or boll weevils. No wonder every Oklahoma farmer lives in the hope that some day he may strike it rich below the surface of his land and open a finer way of life for himself and his family.

But there is bad news from Washington for the farmers of Oklahoma. President Truman's veto of the Kerr gas bill may upset this whole picture and puncture many a landowner's dream for quick prosperity.

The purpose of the Kerr bill is really simple, and so desirable as to carry the unanimous indorsement of the Oklahoma legislature. It was sponsored and urged by Senators THOMAS and KERR, in accordance with a special resolution by the State legislature.

Despite the misrepresentations of its enemies, the Kerr gas bill does not involve one iota of change. The Kerr bill seeks only to continue a system which has been both fair and satisfactory to landowners, producers, and consumers, throughout the long history of the industry. The Kerr bill does seek to stop the new and revolutionary threat by the Federal Power Commission to fix oil and gas prices at the production level, and thereby freeze the field developments which have brought big money to the farmers of Oklahoma.

If the FPC is successful in tagging the wellhead with an OPA nonprofit price tag, this would knock the props out from under the oil and gas industry and freeze the flow of gas to northern consumers. It would be the worst blow ever delivered at this multimillion-dollar income so vital to Oklahoma farmers.

UNIVERSITY OF MICHIGAN LIBRARIES

How well do I know what a windfall a little oil and gas money can mean to an Oklahoma farm family. When I was a small boy in Oklahoma, I remember the day that Bill Skelly paid my father $500 for an oil and gas lease on our farm home near Ada. That was one of the important economic events in my father's life. It was a matter often discussed not only by my parents but all of the children. In fact, what we and other nearby owners received was the talk of the neighborhood.

We got our precious lease money, but the drill never went down into our land. The field played out before reaching us. Skelly bought the lease because he thought our land might produce gas. However, if the FPC had been regulating the price of gas at that time, as it now threatens to do, Skelly would not have paid my father $5.00 for the chance to drill. There would have been no incentive to hunt for oil or gas.

We have been fighting a battle here in Washington so that Oklahoma farmers can continue to have a chance for the dividends which belong to them. Many thousands of farmers already have benefited from their subsurface property rights in the past, and we expect to win this battle so that they may do the same in the future.

If the northern consumers could just understand that they have the same interest in a healthy, stable gas industry as the Oklahoma farmer and the producer, then selfish politicians and subversive forces would not be able to exploit the issue and build up false pressure. Lacking any sound case based on facts these enemies of the Kerr gas bill deliberately resorted to the personal abuse of its sponsors and the misrepresentation of its purpose. Through carelessness or ignorance, the press and radio of populous consumer areas picked up and peddled what appeared to them to be popular propaganda. But, ironically, in the name of the consumer they only added to his present confusion and his future insecurity. We intend to keep telling the true story to the consumer, and we think time will drive it home.

There are currently nearly 60,000 producing oil and gas wells in Oklahoma. This means the jackpot for between 600,000 and 800,000 acres of Oklahoma land. Oklahoma farmers and other royalty owners share in this tremendous income to the tune of $50,000,000 annually. The Kerr gas bill seeks to preserve that income for the future.

Oklahoma farmers get another big chunk of cash each year in lease money. They enjoy a substantial income before the derricks march across their fields. Twelve million acres of Oklahoma land are now under lease for oil and gas. Oklahoma farmers collect more than $12,000,000 each year in annual rentals from these leased lands which are not yet producing even a drop of oil or so much as a cubic inch of gas. They receive at least another $8,000,000 each year in the form of bonus money for renewals of the leases.

Now, let me tell you what this Federal bureau in Washington seeks to do to this Oklahoma industry and the farmers who share in it. (The McAlester News Capital calls it "the Federal Pizen Commission"). The FPC wants to force the producer to sell his gas at what it costs him to produce it, plus 6 percent. For all the dry holes, the bureau wants the producer just to go in the hole himself. He is supposed to profit only 6 percent from the wells that hit. But, the Commission does not allow the producer anything for the value of the gas, under the established formula for regulation.

This would mean that the FPC could fix the price at 1 cent per 1,000 cubic feet, or 2 cents per 1,000 cubic feet, if it was found that the operator could drill the well and produce it for that price. This, of course, would completely destroy the value of the farmer's royalty and the operator would receive only the amount required to drill the well. Naturally, under such an artificial arrangement, the independent producer wouldn't be interested in drilling any wells. No business man just goes around asking for bankruptcy.

And what happens to the farmer's interests? Exploration for new gas fields would dwindle, and production would drop. His chance to secure bonus money for oil and gas leases would lessen, because the premium on his mineral rights would be destroyed. His opportunity to collect annual rental on existing leases would all but disappear. His chance for new royalty checks would be mighty slim. Yes, the Oklahoma farmer is in for a big shock when the FPC starts to move in on the oil and gas industry, and I think only Congress or the Supreme Court can stop them. They have served notice that they aim to move in to regulate the price of gas. Every schoolboy knows that if they regulate gas today they will get the oil tomorrow.

What the gas producer wants is simply the continued right to sell his product in free, open competition at whatever price it will bring. And, not even the hardest critics of the bill ever have dared to say that gas prices are out of line. They simply raised a bugaboo about what might happen to prices in the dim future.

Gas producers simply want the same freedom, for example, enjoyed by the citrus growers of Florida, the farm machinery manufacturers in Senator DOUGLAS' home State of Illinois, the shoe manufacturers in Senator DONNELL'S St. Louis, and the dairy people in Wisconsin. But, the populous industrial States, for some reason, think that the big "price-fix" should hit nobody anywhere except the gas producers of Oklahoma and the Southwest. Of course, the same champions of price fixing for gas producers would be stricken with horror if the same "price-fix" was clamped on the finished products which Oklahoma must buy. They would "holler" at the very idea of a Federal bureau regulating the price of cars, farm implements, refrigerators, radios, and other manufactured goods sold by the industrial North and East to Oklahomans.

I still agree with Aunt Eller in the show Oklahoma when she said: "We don't claim to be no better than anybody else, but we dern sure are just as good."

The fallacy of this great effort to discriminate against Oklahomans is obvious. The time will come when misguided consumers realize the shortsightedness of their cries of alarm. By imposing this price-fix penalty on the farmers and operators of Oklahoma, the FPC would fail utterly to profit the northern and eastern consumers, whom they say they want to benefit.

This price-fix would mean that Oklahomans could not afford to sell their gas in interstate commerce because they would get nothing for it if they did. They would be forced to keep their gas inside the State and sell what they could in Oklahoma for Oklahoma consumption. This would mean less gas at higher cost to eastern consumers. It would mean that the interstate pipeline companies would handle less volume at less profit. The result would be that everybody from the farmer who leases his land and the operator who drills the well, to the consumer who burns the gas, would lose and nobody would profit.

Of course, the FPC will move very slowly in putting the shackles of price regulation on Oklahoma operators and farm landowners. They will slip up on our blind side if we let them. But we must not be deceived. Unless stopped by the Supreme Court or congressional legislation, exactly like the Kerr bill, this is as sure to come as death and taxes.

Is It Not a Fact That Secretary of State Acheson Contemplates Increasing the Level of German Steel Production From 11,100,000 Tons to 16,000,000 Tons?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. SABATH. Mr. Speaker, on January 26, 1949, soon after he became Secretary of State, Mr. Acheson assured the American public that the United States is not planning to increase Ruhr steel production beyond the 10,700,000 tons a year authorized by this country, France and Great Britain.

It is also a policy of the United States Government to prevent the iron curtain countries from receiving badly needed strategic materials.

The conference of foreign ministers is meeting today in London to discuss Germany's integration into western Europe economically, politically, and strategically. The Germans have stated they would be glad to cooperate with us in the integration of Western Germany on the condition that they be given greater sovereignty in foreign affairs and that they be granted the right to increase the level of industry from 11,100,000 tons (which includes 400,000 tons of steel produced in the French zone) to 16,000,000 tons.

The facts are that the Germans have been selling 18 to 20 percent of their products exported abroad to the areas now behind the iron curtain, and furthermore, they have been and are shipping approximately 1,000 tons of steel daily to Russia. If the German steel production is increased to 16,000,000 tons, the only market available for Germany will be Soviet Russia.

Mr. Speaker, is not Mr. Acheson going far afield in contravention of his former pledges and commitments on behalf of the United States Government? Such unauthorized activity should not be permitted.

Implications of the Hiss Case

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hiss Case Said To Have Aroused Irate Demand for Full Spy Story," written by Mark Sullivan and published in the New York Herald Tribune of May 10, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HISS CASE SAID TO HAVE AROUSED IRATE DEMAND FOR FULL SPY STORY—MARK SULLIVAN SAYS PUBLIC CRY FOR TRUTH STIRS TURMOIL THAT IS HARMING FOREIGN POLICY

(By Mark Sullivan)

An emotion widespread among our people is described by Mr. James Rorty in the New Leader. He is writing a review of a book about the Alger Hiss case called Seeds of Treason and is dealing with American conditions and events during a period of more than 15 years preceding and including the revelations brought out in the trial of Hiss. Concluding, Mr. Rorty says, "Instinctively the masses of the people have grasped the truth. * * * Fear and rage are burning at the American grass roots." While these words are strong, it can be said with complete restraint that America is beset by anger and anxiety.

The people have grasped the truth, but only the central truth, and the grasping of that has led to demand for further and complete light. The Hiss case was of only limited scope; it covered the accusation that Hiss had delivered copies of secret Government documents to a courier for a Russian Communist spy ring, and Hiss was convicted of perjury for having denied that accusation. From what was only alluded to in the Hiss case, it was apparent that there was more; that there must have been what Mr. Rorty calls "the mountainous molehills thrown up by the Communist underground that had infiltrated * * * Government departments."

RAISES TRYING QUESTIONS

The public demand for more light, for complete light, is at the bottom of what now rages at Washington. It raises trying questions. Part of it is the demand by a committee of Congress that the President turn over to it for inspection files assembled as the result of previous investigations of Government employees by Government agencies, including the Federal Bureau of Investigation. This demand was at first strongly resisted by President Truman, but has now been in part yielded to.

This raised a question of fairness and justice to Government employees who had been exonerated by the preceding investigations. It raised a question of public interest, brought up by FBI head, J. Edgar Hoover. He feared, with obvious good reason, that inspection of the files might lead to leaks, which would handicap the work of the Bureau by revealing the names of sources of information which the Bureau had used.

Ordinarily the plea of Mr. Hoover for keeping the files secret would weigh strongly with the public. Ordinarily also the early resistance of President Truman to the demand for the files by a Congressional committee would receive public support. Secrecy of documents in the executive department has been a tradition generally respected since the Presidency of George Washington. But the present case is bedeviled by recollection of a past attitude of Mr. Truman. More than 2 years ago when a committee of Congress was making an early investigation into the Hiss case, Mr. Truman jeered at the investigation as a "red herring."

And there is a longer recollection. Throughout some 13 years, following the creation of a committee of Congress to investigate un-American activities under the chairmanship of Representative Dies, the picture has been one of Congress giving hearty support to such investigation, with jeering at it from the school of thought that created much of the atmosphere of Washington during the Roosevelt and Truman administrations. What is now going on is a climax of that long controversy, precipitated by the Hiss case.

UNITED STATES SOLIDARITY QUESTIONED

The pending investigations, and proposals of more, work tragic harm to the conduct of our foreign relations. They present to foreign governments a question of whether or how completely the Truman administration has the confidence of the people and of Congress. Domestically, they create difficulty for Republicans who recognize the imperative necessity of bipartisan support of the administration's foreign policy.

Beneath all is the public disquiet which causes the investigations and to which the investigations respond. In the present phase the investigations tend to focus on our policy about China during the years in which that country was overcome by Communist Russia. So great a tragedy as the fall of China is not likely to be permitted by the people to pass without investigation. Indeed there will be investigation by historians for generations to come.

Address by Mrs. Oveta Culp Hobby at Annual Journalism Banquet, University of Missouri

---

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, Texans have long been proud of the outstanding leadership of Mrs. Oveta Culp Hobby. During wartime, Mrs. Hobby served her country and the cause of freedom well as director of the Women's Army Auxiliary Corps. In peacetime she has served with even greater benefits her chosen profession of journalism as executive vice president of the Houston Post.

Well-deserved recognition of Mrs. Hobby's effective crusade for responsible journalism came last week when the University of Missouri honored her for distinguished service to newspapering. At the time the award was presented to her, Mrs. Hobby presented an address outlining her philosophy of newspaper service and responsibility.

Her remarks are inspiring to laymen; they should also be challenging to journalists of the Nation. I ask unanimous consent to include her remarks in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Considering the world as a whole—if I may use a phrase which has in it more of hope than reality—the profession of journalism and the existence of free, courageous newspapers have seldom been in a worse position. In a large segment of the world, free journalism has been destroyed by dictatorships; a free press still exists in our own country, but even here there are certain elements of weakness.

The first is that we take freedom too much for granted. In the days of Peter Zenger, th words "freedom of the press" were an oriflamme and a battle cry; today, to many people, they are merely a cliche in oratory, the slogan of a fight won long ago, the dusty echo of an old battle.

But, as we are learning painfully, the fight for freedom is never won permanently. Freedom can be destroyed suddenly, by fiat; but it can also be nibbled away while its defenders are engaged on some other battle front. It can be lost in translation or distorted in application.

Freedom of speech, of religion, of association, and of the press are basic to the American way of life.

THREAT IS HERE

Freedom of speech and of association are now being threatened, as anyone who reads the news must realize. Freedom of religion is not yet in crucial danger, but the rising tide of Ku Klux Klanism in some Southern States, and the bitter social ostracism and divisions into social cliques based on religious differences found in many northern and eastern seaboard cities, prove that there are forces within the United States which could threaten freedom of religion were they ever to gain even a local control.

Freedom of the press therefore becomes doubly important, for without it no other freedoms can long exist. This is not just a high-sounding generalization; it is something that anyone in this audience may need to remember in a very personal way. Suppose, for example, that one of you Missouri students is arrested for reckless driving, and your home-town paper prints the fact. Your family may find it hard to understand that the publication of the incident, though embarrassing to you and them, is really proof that you have a God-given protection against something much worse than embarrassment. For so long as no young men can be arrested without a newspaper knowing it and publishing it, that young man cannot vanish without recourse into a dictator's prisons. When the newspapers of Nazi Germany could no longer publicize the arrest and disappearance of private citizens, the people they served were no longer either safe or free.

But freedom of the press is not merely a privilege given to newspaper editors and publishers for their special enjoyment. It is rather a sword of trust with the obligations as well as the privileges of usage. And this brings me to what I feel is the second element of weakness in our press freedom today. We do not use that sword often enough. Too often we remain silent in the face of obvious injustice, when we ought to be crying aloud—or at least questioning.

Take, for example, the case of Doctor Condon. A respected scientist and a public servant, he was labeled one of the weakest links in our atomic security in a report released to the press by J. Parnell Thomas, then chairman of the House Un-American Activities Committee. Though Doctor Condon repeatedly demanded the right to a public hearing and official denial, he was not granted this right. The American Press should have demanded the right for him, and continued relentlessly to demand it until it was granted. But worse, some of us gave, by column count, three and four times the amount of space to the charges than we later gave to the statement relating to his innocence.

There was a time when every citizen was adjudged innocent of a crime until legally proved guilty in court. This was a precedent we inherited from English Common Law. Now almost suddenly, in mid-twentieth century, this long-established protection of the ordinary citizen against possible injustice is being nullified. When sensational charges are made by anyone—not by a grand jury, not by a district attorney, but sometimes by vacant-minded hysterical, or politically malicious people—the charges are broadcast from coast to coast. And the public instinct often is to accept charges as proof.

UNIVERSITY OF MICHIGAN LIBRARIES

In the case of accusations such as those against Doctor Condon, it is the duty of the press to demand evidence. If the evidence is lacking, it is the further duty of the press to make the accused person's vindication as widely known as was the charge against him.

Sometimes the failure of newspapers to do this is an unwitting, rather than a deliberate, one. A paper may be honorable of intent, but lack alertness in editing. For example, an accusation is made by the House Un-American Activities Committee in time for all morning editions. But the denial may reach the wire services only in time for a late evening edition—thereby covering perhaps one-fifth of the readership offered the accusation story. Unless an unusually fair-minded and alert news editor is on the desk, it is even unlikely that the late-edition denial will be picked up and carried in the first four editions next day.

Papers may also be unjust in more subtle ways—by the words they include or omit in what seems to be a factual story. Some always identify the race of a man in a murder story—"Matthew White, Negro, confessed to the slaying of two white men"—but never mention race if the story is one of honorable portent: "Lawrence Keenon, long time professor at Industrial High School, has been awarded the Carver medal for outstanding service to the cause of science."

This kind of hidden editorializing may sound unimportant. But as in the case of the water torture, the steady, incessant drip of a word many times has a stronger effect than a cataract.

PROFESSION

All of the points about journalistic freedom, responsibility, and weakness which I have discussed so far are already well known to you through your studies. But I have diagramed them again in order to underline the point that journalism is a profession of many facets, many techniques, many greatnesses, and many potential evils.

I used the word "profession" naturally, but I should like to do it again deliberately. For journalism is a profession—regardless of those who try to make it simply a skill, a matter of man-hours and the ability to type.

Newspapers—with all the world—have changed and are changing continuously. The old-time reporter of the five-star-final days would not feel at home with today's best-known journalists, though you may still see him in an occasional moving picture. There he still sits, hat on the back of his head, cigarette dangling from cynical lips, rattling away with two fingers, turning out sensational scoops.

If you would like a nostalgic review of that period read Paris Herald, by Al Laney. Laugh affectionately at those good old days—but don't expect to find any remnant of them left on today's metropolitan newspaper.

The major newspaper stories of that era were accounts of bank robberies, kidnapings, homicides. Such stories are still played daily—but they no longer are considered the top presentation the paper has to offer. The newspaperman who had never gone beyond high school could cover any of these as well—perhaps better—than the intellectual and highly literate product of today's schools of journalism.

But a world war—and the thought-provoking, soul-stretching years of this peace which is no peace—have given newspapers greater depth and a broader perspective. Today's stories of the new medical center, the city-hall probe, the murder trial, are being written with a new clarity and vigor. And with new brevity. And newspapers in Bay City, Tex.; Anniston, Ala.; St. Joseph, Mo., are carrying more international news than did many metropolitan papers back in the 1920's. Journalism is maturing. The emphasis has shifted from scoop to scope.

Such schools as this one have played their important part in the growth of our profession. By turning out graduates trained in political science, philosophy, music, and art—as well as in the art of pyramiding a story—the colleges of journalism have taught newspaper editors to lift their standards in hiring new cubs.

Since the present and future of journalism are yours as well as ours, let us consider our future: First, in terms of style and performance; and, second, in terms of thought and idea.

Murders, court trials, explosions, mine disasters, and the small, heart-touching human-interest stories—all these, of course, must still be covered. They are day-to-day living. But now they are handled more intelligently than formerly, written in better prose, freer of the hackneyed sentimentalities of the sob sister and her time.

Less and less are we using the "it was alleged" and "a spokesman said" type of reporting. More and more the newspaper man or woman is expected to be widely read, widely trained, and widely thoughtful. He is also expected to be a writer—a literate writer—able to give a fresh, vivid coverage of facts with the greatest possible clarity and interest.

RUNYON VERSUS WEST

For a perfect contrast between what yesterday was called great and what is today our target of achievement, read Damon Runyon's book, Trials and Other Tribulations. Then read Rebecca West's Meaning of Treason. Both are newspaper coverage of famous court trials. But what a difference.

Runyon was a superb reporter of his time. His fast-paced copy—spiked by an occasional tear-jerking paragraph—was the envy of newsmen everywhere. But when you reread those famous stories of his you find that his style is already dated. He was writing journalese, not English prose. Today journalism and literature can be synonymous—or should be.

Rebecca West, in her accounts of the treason trials in England at the close of World War II, has lifted journalism into the realm of great prose. The editors of Harper's have called her "the world's best reporter."

Of course, not every story you write can be a great one. As cubs, you will find yourselves coping with what seems a heartless load of routine—unless you learn to see and appreciate the humanity behind it. The church page and the PTA beat seem tame to someone with ambitions to be an Anne O'Hare McCormick or a Walter Lippmann. But the reporter who learns to cover the people behind the simple announcements, to grasp the idea behind the work they are doing, will find this training exceedingly valuable when he becomes, perhaps, a political interpreter or a Washington correspondent. People are still people, and their desires, motives, and reactions are much the same, even though they may have moved from Main Street to Constitution Avenue.

The newspaper writer must not only be well informed, but continually alert to become even better informed. However stimulating or inhibiting an editor may be, the responsibility for professional growth rests primarily with the reporter himself. He must continue to learn every day of his life—or expect to be left behind by those who have gone on learning.

Fortunately, many outside influences are now coming in to help the individual newspaperman grow. The Neiman fellowships to Harvard, and the Reid Foundation fellowships for study abroad are sending many men back to their newspapers with broadened concepts and vastly increased stores of information.

The American Press Institute—another fine undertaking—offers seminars—10 days to 2 weeks each—on every specialized aspect in newspaper production. There is a seminar for managing editors, another for city editors, others for picture editors, sports editors, composing-room heads, municipal affairs reporters, music and drama critics, and so on. It is continuous, drawing into New York from over the Nation a selected group of men, 1 from each of 25 to 27 newspapers over the country. While in New York, the visitors see large metropolitan papers, talk to atomic scientists at Columbia, attend United Nations meetings, and do whatever else interests them and the API can arrange.

Now, with these new skills of ours, how much are we advancing in the realm of thought and ideas?

In common with that of the minister and the scientist, the responsibility of the journalist to the public is far heavier than that of the average man. Tacitus once said that in time of revolution the greatest difficulty for an honorable man was not so much to do his duty as to know it. We have clarified our style, we have trimmed the flowers and flourishes from our prose; but each day it becomes harder to clarify our thinking.

The press in all its expressions is the eyes and ears of the world. The lawyer, the cook, the college student, the mayor of a small town—none can go to Germany to trace the progress of postwar democracy, none can stay at United Nations to watch the developments and achievements. They know only what they read in the papers, in news magazines, or what they hear in brief comments on the radio.

TELL ALL—TELL TRUE

This means that the press has a great responsibility to tell all and tell it true. You will find that is not always easy.

How many of us here have informed ourselves on the facts of today's world events? And how many of us have analyzed our opinions to find the degree to which they have let prejudice color facts? The newspaper writer who is uninformed or prejudiced is, in part at least, responsible for the misinformation and prejudice of thousands of other people—sometimes of millions.

It all boils down to this: Every newspaper writer, however obscure or however famous, is first of all a public servant. The newspaperman who forgets this has betrayed his profession as surely as the doctor who misses his chance to help a patient.

Second to serving the public, the journalist must serve his own profession. Service to a profession means doing all within one's ability to lift the profession to new heights of speed, accuracy, truth, and good taste. Cheap sensationalism may draw readers for the moment, but the highest type of journalism helps to develop an increasingly high type of readers for all time.

Of recent years, there has been a tendency in many fields of expression to try to find out what the public wants and then give it to them at all costs. This is always a precarious move, since none of us singly or collectively know what we want when we have never yet seen the best possible. It is significant that, in moving pictures, the slavery to the so-called box-office appeal has produced neither a large percentage of excellent pictures nor an eager public reaction to pictures as a whole.

Newspapers cannot live without circulation. As a consequence, many formulas are devised to obtain and retain circulation. The formulas may begin with the "A" of art and run to the "Z" of zither. The reason for such an infinite variety and sometimes questionable taste is either the editor's poor taste or a desperate effort to attract readers. Newspapers, in these times of increasing production costs, have as their first obligation the duty to live—to continue to exist as voices in the choir of information. But blended with this obligation is the duty to lift steadily the level of public taste.

In law, a man may not practice until he has passed the State board examinations. In teaching, a professor must have a certain amount of training and must have received certain college degrees. In medicine, the standards, set by law and by the profession itself, are equally exacting.

But in the profession of journalism, each journalist must set his own standards.

I should like to see us work out a journalistic form of the Hippocratic oath, such as is taken by all doctors. Or perhaps we could call ours the Socratic oath. Socrates, the man with an inquiring mind, is surely a model to whom journalists could look for inspiration.

SOCRATIC OATH

Each man or woman who goes to work for a newspaper might be given a copy of the Socratic oath, which could run something like this:

"I will strive to write the truth with complete accuracy, with no expression of my own personal bias or opinion, in order to give the facts I transcribe the chance to be judged for themselves alone.

"I will work to improve my own knowledge in many fields, in order that I may better understand the facts presented to me, and more clearly transcribe them to the reading public.

"I will keep myself aware that my work is a service to my community, my nation, and my world—that I serve all men rather than myself; that man's right to know, rather than the private furtherance of my own career, is, and must always be, the first goal of my endeavor."

Electrical Cartels in Postwar Europe

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article from the New York Times of May 10, 1950, discussing a report by a committee of the Swedish Government on electrical cartels in postwar Europe. This report illustrates the heavy price paid by Europe due to the business habits which underlie the great cartels. These habits do not flow from the Socialist governments of Europe. Indeed, they lead to the development and strengthening of such governments. This fact is but little understood by the American business community.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SWEDEN UNCOVERS ELECTRICAL CARTEL—WORLD COMBINE ALLOTS MARKETS, FIXES PRICES FOR WIRE, CABLE—"WELFARE" IS A DISGUISE

GENEVA, May 3.—The first authentic information about postwar cartel agreements in Europe has been published by the Swedish Government after an investigation that occupied nearly 2 years' time of a 10-man committee.

Copies of this committee's report, entitled "The Capacity and Competitive Position of the Swedish Electrical Industry," have just reached here. The chairman of the group is Prof. Ingvar Svennilson. The committee consisted of representatives of industry and labor and experts appointed by the Government.

In meters, cables, and copper and copper wire, all vital components of the entire range of end products of the electrical industry, the investigation revealed the revival of international cartel arrangements to restrict competition. This happened as early as 1946, when Europe was laboring through a period of great shortage of nearly all electrical products.

The report throws more light than a dozen speeches on the real price Europe pays for the system of national protected markets in which combinations to curtail competition are tolerated and, indeed, almost inevitable. The progress of the investigation itself brought to light such unpalatable facts about the control of the industry that some of the agreements—not the international ones—have already been canceled.

WELFARE STATE NEW DISGUISE

The postwar cartel builders have learned to dress up their agreements to make them look like part of the welfare state. The agreement on copper products (without which the motor and generator factories could not operate) states that "The parties shall try to attain a high and stable level of employment and a satisfactory standard of living for everybody employed in the nonferrous-metals industry and to give every part of the industry unrestricted access on the same conditions to world trade in these products."

These phrases are precisely those used to state the aims of the International Trade Organization and appear to have been culled from the original Atlantic Charter.

To this high-sounding agreement belong 8 Belgian companies, 1 French national cartel grouping 50 companies, an organization of 10 British companies representing 85 percent of British nonferrous metals output, 2 British export companies controlling 100 percent of British exports, a group of 3 Swiss companies, and the leading Swedish company. No German companies belonged in 1946, but some may have joined since.

The method of giving everybody unrestricted access to world markets is to divide such markets into two sections—the home market of cartel members and markets that have no members in the group.

PRICE CONTROL IS RIGID

In the markets of members no other member may sell below that member's price—the member being itself a cartel that sets national prices or has them set by government machinery, which it usually controls. In other markets no member may sell below an agreed price list kept up-to-date by a permanent secretary.

The committee found that agreements on similar lines had existed since before World War II on cables and electric meters. These both had German membership. The evidence collected in Sweden indicates that they were originally formed when electrical industries in Sweden were threatened with ruin by persistent German dumping. These agreements have persisted, sometimes purely informally, despite the break-up of the prewar world cartel agreement covering finished products of the electrical industry.

The committee unanimously found that participation in these arrangements by Swedish companies was contrary to the Swedish public interest.

The agreements now in force affect components, not finished products, bought by consumers, and they require a minimum of enforcement or of formal written agreements or records.

Comments by Hon. Kenneth S. Wherry, of Nebraska, on Statements by the President

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD my radio address of May 9, 1950, commenting on statements made by President Truman during his present western tour.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thanks, fellow Americans.

This transcription is being made for radio broadcasting from the radio studio of the United States Senate.

My duties in Congress, in these fateful times, prevent an extended tour of the country. But, as Republican floor leader of the Senate, it is my responsibility to report on public affairs, from time to time, to the people of Nebraska and the Nation. It is for that reason I avail myself of this opportunity to speak to you by radio.

It is vitally important that the people are given the facts if they are to make the right decisions.

President Truman is on the rainbow trail again, promising everything to everybody. When he was on a similar campaign in 1948, some of our highly placed Republican leaders assumed that the people were fully informed and that it was unnecessary to refute misleading statements made by Mr. Truman.

But this time, 1950, it is going to be different, and every time the President, in his role as leader of a political party, divided though it is, makes misstatements we shall answer him.

We shall go further: expose the dangerous road to ruin down which he is leading the Nation, and submit our constructive program for getting the United States onto the road to solid prosperity, and to fulfill our obligations in the troubled world.

As we Americans cross the threshold, into the crucial congressional and State elections of 1950, may I implore you, all patriotic Americans, to weigh carefully the evidence, for freedom is everybody's business.

As a nation, we are today in great danger of losing our liberties; our freedom of choice.

Our republican form of government has accomplished more for our country, in its short span, than all other systems of government combined have produced for their people over 2,000 years.

But, if our country is to survive as a republic, there must be a Nation-wide revival of the spirit of '76.

Fellow-Americans, from the firing line in Washington, I tell you it is just that serious.

Our national economy is resting on artificial props, huge Government spending, goods produced in this country to arm and support half the world, and shots in the arm, from time to time, such as the $3,000,000,000 in refunds to veterans on their insurance policies, overcharges against veterans because of faulty actuarial tables prepared by the administration at Washington.

TRUMAN IS CONFUSED

President Truman recently sought to belittle the rise of communism within the

UNIVERSITY OF MICHIGAN LIBRARIES

United States, when every observing citizen in the land knows that Communists, and their fellow-travelers, are boring into every segment of our population, a larger percentage than that which took over the Government of Russia.

Before President Truman started on his present political tour, he told the country that the international situation is better today than it was in 1946.

At the same time, through the national defense establishment, he was asking, and still is asking for a $350,000,000 increase in appropriations for national defense.

General Bradley, Chairman of the Joint Chiefs of Staff, cited the Communists' conquest of China, the fall of Hainan, the crisis in Formosa, armed conflict in Indo-China, the shooting down of an unarmed American plane by Soviet fighters, Yugoslavia's demands that western powers withdraw from Trieste, our break in diplomatic relations with Bulgaria, and friction in Hungary.

"Frankly," General Bradley said, "it gives us little cause for comfort, and little excuse for delay."

Then, President Truman on his present vote-luring tour of the west, performed one of his all-too-familiar zig-zags, and is reported to have told one of his whistle-stop audiences, that the next few months may determine whether there is to be a war.

Fellow-Americans, we are worried enough about the cold war, without having the President confuse the situation.

But is it any wonder that the President is confused on domestic and foreign matters, when he harbors in the offices of government so many pro-Communists, and other alien-minded radicals, who do not have faith in our republican way of life, and concoct a steady stream of proposals for spendthrift socialism?

Since entering the White House, President Truman apparently has forgotten, or just brushed aside, the ingredients for a strong agriculture and a strong United States—spiritually, economically, and financially.

NEBRASKA REJECTS SOCIALISM

We Nebraskans hope that during his journey across our beloved State, he absorbed some of the sound thinking that has made Nebraska a great State; sound thinking that is incompatible with his specious proposals.

In Nebraska, he found a frugal people pioneering to greater heights, a State that has no bonded debt, no general sales tax, and no State income tax.

Like other States, Nebraska welcomed the President of the United States, although we reject his program for strait-jacket socialism, with an all-powerful government at Washington. His program does not square with the faith of the people in the dignity of the individual and his inalienable right to life, liberty, and the pursuit of happiness.

The President, in his campaigning across the country, partly at the expense of the taxpayers, professes wholehearted support of liberty and freedom. But his official acts speak louder than his words.

The President has presented officially to the Congress proposals for Government control of industry, agriculture, and labor; control of prices, wages, and materials.

He wants to socialize medicine, have Government "snoopers" invade the confidential relationship between doctor and patient.

And, on the eve of his departure from Washington, despite all of the protests against socialism, the President sent to the Congress a special message to establish a beachhead for Government control of small and independent business firms, all in the name of freedom and liberty.

BRANNAN PLAN IS MONSTROSITY

At Galesburg, Ill., the President fittingly recalled the Lincoln-Douglas debates, and then moved on to Lincoln, Nebr., named after the Great Emancipator, where he advocated the stupid Brannan farm plan, which carries fines and jail sentences for farmers who refuse to goose-step upon command of Washington bureaucrats.

Under the Brannan plan, which the President now unblushingly champions, producers of perishable commodities would become wards of Government. The Government would manage their farms, and tell them what to plant and how much, with an eye to price-wrecking surpluses.

The Government, dependent upon the will of Congress for appropriations from year to year, theoretically would give to each producer a production payment.

Now, the production payment is nothing more or less than wages, wages to make up for the farmer the difference between the market price for his commodities, and what the Secretary of Agriculture may in his wisdom decide is a fair income for doing the work.

And, all taxpayers, including the farmers, would pick up the check.

Of all the fantastic proposals, the Brannan plan takes first prize. Obviously, the President is trying to please CIO bosses and Americans for Democratic Action, with dirt-cheap prices for food and win the farmers' votes with a pap-knows-best proposal that they stand in line with tin cups in their hands.

Problems that confront the farmers are national problems, for unless the farmers are prosperous there can be no national prosperity.

Even leaders of the President's own party in Congress have spurned the Brannan plan, because it is an economic monstrosity.

While the President is out peddling the Brannan plan in political speeches, responsible leaders of both major parties in Congress, including a former Democratic Secretary of Agriculture, are trying to work out a statesmanlike approach to the farm problem. We need a farm program that will give the farmers a fair return for their products at the market places.

A sound farm price-support program, aided by full crop utilization, and by development of new markets at home and abroad, is more in keeping with the American tradition than the give-away proposals of the Brannan plan, which can result only in the total destruction of the normal markets for the farmers' produce.

TARIFF CUTS ARE RUINOUS

By his tariff and other international policies the President is digging the grave of ruin for American agriculture, labor, and industry.

He is pursuing the unsound theory that by abolishing tariff protections for American industry, labor, and agriculture, the United States will maintain prosperity.

The truth is, his tariff-slashing policy is leading the United States down to the world level of low prices, low wages, low standards of living, and jobless millions.

Against American products foreign countries now have their highest barriers in history. Of course, even though their productivity is on the average 20 percent above prewar level, they continue to ask for more and more gifts from the producers and taxpayers of America.

In the United States, tariff barriers are at the lowest level in all history, with an average rate of duty of 5.7 percent and 60 percent of all imports coming in free of duty.

In the first 2 months of 1949, we exported agricultural products valued at $172,000,000 more than we imported. In the first 2 months of 1950, we imported $116,000,000 worth of agricultural products more than we exported, and the Truman administration is now preparing for another tariff-cutting spree next fall.

If the present trend continues, the excess of imports of agricultural products over exports will reach $1,000,000,000 by the end of 1950, and millions of men and women will find their jobs have been exported.

At Casper, Wyo., the President dug up the Teapot Dome scandal of 30 years ago. He failed to say that it was a Republican President who brought that case to justice with convictions for the guilty.

This is strange talk from a President who tried to suppress the Alger Hiss case with claims it was a "red herring"; strange talk from a President, whose lieutenants in the Senate sidetracked a resolution to have a thorough investigation of interstate gamblers and racketeers, such as the old-time Pendergast gang of Kansas City; strange talk from a President who refuses to cooperate wholeheartedly in ridding the Government of pro-Comunists out to destroy our country.

SPENDTHRIFT SOCIALISM IS COSTLY

President Truman is telling the people at the whistle stops that it is too bad the cost of Government is so high, but past wars and the cold war are chiefly to blame.

Listen to the official figures. They come from the Senate Committee on Expenditures in the Executive Departments.

Senator JOHN MCCLELLAN, a Democrat, is chairman of the committee. Now, the truth is, the report shows that $6,000,000,000 of the nine billion increase in the cost of Government in the last 2 years, is due to domestic civilian spending—not national defense or aid to foreign countries.

Senator MCCLELLAN's committee says, in Senate Document 150, that 15 new programs and expanded governmental services officially recommended by President Truman to Congress, would cost $7,000,000,000 the first year and twenty-five billion annually within 5 years.

And, the truth is, under President Truman's leadership, we are losing the cold war with Russia, and heading for strait-jacket socialism and national bankruptcy.

This time, next November, we Republicans are going to see to it that the people have a clear-cut choice between candidates who believe in Truman spendthrift socialism, and our candidates, who support the American way by which America became great and strong, for only such an America can stand against communism like the Rock of Ages.

The President's Western Tour

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Concord Daily Monitor of Friday, May 5, entitled, "The 'Non-Political' Tour" on which the President recently entrained at the taxpayers' expense. I assume, of course, that he will refrain from discussing directly or indirectly any subject relating to politics.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NONPOLITICAL TOUR

The last time the President took to the stump he was trying to save his own political life, for he was the principal candidate.

This time, as he departs on a 9-day, 16-State tour he is not a candidate, at least not in this year's elections. What he is attempting is to preserve Democratic majorities in both branches of Congress.

A politician can speak best for himself. That is, not even a President in an off-year election can deliver support which he might have if he were a candidate to other candidates. He may help create a partisan atmosphere, but the individual candidates for the United States Senate and the House of Representatives are pretty much on their own in each of the States.

The President might have intervened in the Florida contest for the senatorial nomination, but SMATHERS would undoubtedly have defeated PEPPER anyway. In the same way, where the fight is not within the party, the voters of each State will tend to resent presidential influence. They did when President Roosevelt attempted to do some purging within the Democratic Party. They will again.

Even in advance of his speaking trip the President has been on the defensive. He has at the last minute reversed himself in the matter of congressional access to State Department loyalty files. He asked Messrs. Cooper and Dulles to become State Department advisers. He has issued statement after statement trying to discredit the general charge that left wingers have not been kept out of the administration.

These actions are not the same as those with which he campaigned when running for reelection. Then he gave Congress hell. It happened to be a Republican-controlled Congress. But now the Congress is controlled by his own party, yet it has not managed to repeal the Taft-Hartley law nor has it balanced the budget. Otherwise it has done almost nothing, except raise the President's salary.

It wasn't so much the effectualness of the Truman tour of 2 years ago which won for him as it was the ineffectualness of the Republican opponent, Governer Dewey, who was a little too much "me-too" on socialism, and far too gentle in his approach to the issues. Today Truman effectualness is at an all-time low, as measured by popular response. Popular sentiment has changed. The Communist investigation and the various convictions—the Communist leaders, Hiss, Coplon, Bridges, etc.—have made the people more conservative.

The President will have some explaining to do on the stump. If he avoids trying to explain some things his omissions will speak louder than his words. The people want to know more about the Reds in Government, the gamblers in big-city political machines, the surging operating deficit of the Federal establishment. They want tax relief. They want an end to the folly of billions of dollars thrown away on unnecessary surpluses, and the continuing high cost of too many products.

The President can't blame the Republicans for all his troubles and get away with it, though he will try. He and his party are the majority in the Government, and with that power goes responsibility. Even the war scare grows less and less, for the administration has cried wolf so long the people no longer heed the cry as they once did.

The President is the President. People will turn out to see and hear him. They should, even though the pretense that he is making a nonpolitical tour is so thin it fools nobody. The respect Americans have for the office of President has to be tempered with critical analysis of the man who may hold the office. If often hasn't been but in this spring of 1950 it will be more than for a long time.

Not even the political cleverness of the President can much longer overcome his lack of adeptness at being the Nation's Chief Executive. The office glamorizes any man, for a period of time, but in the end the men who occupy the office get found out for what they are. The finding-out process will continue during the current presidential tour.

Double Standard in Administration Harasses Private Parties

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. BIEMILLER. Mr. Speaker, it has been stated that Reorganization Plan No. 12 is a back-door effort to amend the Taft-Hartley Act. That is utter nonsense. Reorganization Plan No. 12 is no more and no less than an effort to correct an experiment in administration that failed—failed dismally. It is the very type of structural debacle in Government that the Reorganization Act is best adapted and aimed to remedy.

Here we have only one thing: the question of the proper and efficient organization of an administrative agency of the Government. The particular agency involved happens to have the task of enforcing the national policy on matters of a dynamic character. But the question is still the same: the proper structure of an administrative agency. Should this question be considered as a side issue in the heat of debate? Or should it be considered away from the vigorous contests over high policy? It seems to me the latter is the only choice of a rational man desirous of reaching a wise and reasoned solution. And certainly it it most appropriate that this should be done under the provisions of the Reorganization Act. That was the very intent of that act.

The matter we have before us today might be called the experiment of the governmental agency with two steering-wheels. The experiment, you will recall, began 3 years ago when the Eightieth Congress set up the general counsel of the National Labor Relations Board as a completely independent officer—independent of the Board and independent of the entire executive branch of the Government. He was given final authority over the investigation of charges of unfair labor practices, the issuance of complaints based upon such charges, and the prosecution of the complaints. He was authorized, also, to supervise all attorneys employed by the Board except trial examiners and the legal assistants of the Board members themselves. He also was given supervision over the officers and employees in the regional offices of the agency. These powers, which never before had been exercised in the administrative agencies of our Government by anything less than a board of three or more commissioners, were all concentrated in a single man—with no provision for review except when he acted affirmatively. As the present general counsel himself has said, he was vested with powers that are broad and absolute and his authority final to an outstanding degree seldom accorded a single officer in a peacetime agency.

The Board, however, enlarged from three to five members in order to expedite decisions. The Board members could make its decisions, however, only after the general counsel had decided to give them something to decide. And the Board members could get their decisions enforced only through the office of the general counsel.

This experiment in dual control was launched in the atmosphere of heat and horse trading that seems always to appear whenever the emotion-packed issue of the regulation of labor-management relations comes up.

Two years later the Senate specifically rejected the experiment as a failure. One of the two distinguished lawmakers who gave the Taft-Hartley Act its name was at the forefront in urging the rejection of this experiment. Yes, Senator TAFT himself proposed, and the Senate approved, the abolition of the independent office of the general counsel.

In the House, you will recall, the matter became entangled in the contest over the whole labor policy, and, despite a powerful recommendation by the House committee that the experiment of a two-headed agency be rejected, this lame-duck experiment was permitted to continue solely by inaction. It was preserved by being lost in the consideration of larger issues of the national labor policy. This is the very same mistake that certain opponents of plan No. 12 are asking us to repeat by postponing this matter of efficiency in governmental organization for a time when we may again be considering the national labor policy.

Now, the President has reported that the experiment is a failure, and by the completely legal and appropriate use of the Reorganization Act has offered the Members of Congress an opportunity to consider the matter solely on its merits—divorced completely from the heat and fireworks of debate over substantive policy.

Oddly enough, it was the general counsel of the National Labor Relations Board himself who first publicly predicted that the establishment of the Board as a two-headed agency "could lead to fantastic results." As long ago as September 1947 he told the American Bar Association:

> There are bare spots in the picture and there are spots where a protracted division of opinion between the Board and the general counsel could lead to fantastic results. Particularly is this true in matters pertaining to the jurisdictional features of the law. The Board on appeals in representation cases may find jurisdiction and entertain a petition. On the same facts the general counsel may refuse to issue a complaint for what he conceives to be lack of jurisdiction. In neither decision will a direct appeal lie. It is an absurd situation but it can happen in the present state of the law.

The general counsel deserves a high mark as a prophet in this case. The fantastic results and the absurd situation he foresaw came to pass very soon.

UNIVERSITY OF MICHIGAN LIBRARIES

They came to pass in spite of the long and earnest efforts of the Board and the general counsel to make the experiment work.

So far, just as the general counsel forecast, most of the conflict and confusion has centered around the question of the extent to which the agency should assert its constitutional jurisdiction over small businesses. The general counsel, as you know, has taken the position that the agency's powers should be exercised over any and all enterprises, however small, that have any affect upon interstate commerce. He has sought to exercise jurisdiction over such local businesses as corner grocery stores, neighborhood drug stores, bars, and restaurants. The Board, on the other hand, has declined to take jurisdiction over these small businesses mainly on the ground that they are essentially local and that the Federal Government should not interfere.

But the general counsel has refused to accept the Board's decision in the matter. In fact, he has taken the position that the Board has no power to reject any case that he may present to it.

In a case involving four neighborhood drug stores out in Oregon he proceeded to issue a complaint based upon charges of unfair labor practices after the Board had declined jurisdiction over the very same employer in a representation case. In spite of the fact that it was certain the case would be dismissed, this was fully within his authority as independent general counsel. The same thing has happened in other cases.

In short, what we have here is a picture of a Federal office so constructed that it can put private parties and Government officials to the expense of preparing cases, conducting hearings, and engaging in lawsuits when everyone—including the general counsel—has full knowledge that the entire matter will be dismissed by the Board on appeal. This indeed is a spectacle. Parties being confronted by a two-headed agency of the Federal Government which has two different policies applicable to the very same case—to the utter confusion and waste of Government and private funds.

Whatever may be the ethics of the case from the standpoint of a zealous Government official, such a fantastic double standard can result in nothing but confusion for private citizens endeavoring to abide by the law. Employer and employee alike are left in a state of complete uncertainty. Instead of minimizing industrial strife, such confusion can only multiply it.

This chaos can be eliminated only by recognizing that the National Labor Relations Board is simply a regulatory commission engaged in carrying out a single national policy, whatever that policy may be. Reorganization Plan No. 12 merely makes the National Labor Relations Board exactly like its sister regulatory commissions—an agency with a single head. The head will be the five-member Board. That is all there is to the plan.

Reorganization Plan No. 12

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. SHELLEY. Mr. Speaker, under the guise of remedying a complaint that the National Labor Relations Board combined the functions of grand jury, prosecutor, judge, and jury, vitally important administrative and policy-making functions were taken away from the Board members and concentrated in the hands of a single officer, the general counsel. This transfer of functions was one of the many ill-advised features of the Labor Management Relations Act of 1947—the Taft-Hartley law.

Let me now call your attention to one incident which is part of the background of the passage of that law. We all know that in 1947 there was a rash of legislative proposals for revising the Wagner Act or writing a new labor law. Early in 1947, before the enactment of the Taft-Hartley law, there was pending in the Senate of the United States a bill known as S. 360, introduced by then Senator Ball, of Minnesota. At the invitation of another Senator, a distinguished attorney, with years of familiar experience with labor law, expressed his views in writing concerning the merits and demerits of the Ball bill. One of the proposals in that bill was for the separation of the functions of the NLRB, and the assignment of the prosecuting functions to the Department of Justice. I shall read briefly from the comments made at that time by that lawyer concerning this proposal. He said:

> The provisions for dividing the functions of the Board between the Department of Justice and the present Board savors of the wisdom (?) of Solomon in dividing the child. It simply will not work. The administration of labor relations at the source involves much more than the trial and determination of adjudications. More than 90 percent of the matters which might develop into litigations are disposed of administratively in the regional offices. These dispositions must be coordinated to the same general policy that influences the final determination of the litigated cases. This proposed division would only create additional confusion with policy emanating from two independent and uncoordinated sources. (Senate hearings 1949, p. 1130.)

The author of these words is Mr. Robert N. Denham, the present general counsel of the National Labor Relations Board. Mr. Denham was a very accurate prophet. His words have been borne out. They have been proved. The separation of functions, with broad investigative, prosecutory, administrative, and policy making functions in the independent office of the general counsel, "simply will not work." It has not worked. Two and a half years of conscientious effort on the part of the Board members and the general counsel to work together smoothly and cooperatively, as a team, has demonstrated this beyond any possible question.

Mr. Denham also warned, in 1947 that is, that the administration of Labor Relations at the source involves much more than the trial and determination of adjudications. Of course this is true. It is true because the essence of the administrative agency approach to regulation in the public interest is flexibility. Flexibility in marking out and laying down policy within the framework of the regulating statute. That is why it involves much more than merely prosecution and adjudication. The administration of the National labor policy under the Taft-Hartley Act involves innumerable policy determinations. It involves determinations as to when to proceed and when not to proceed to complaint and injunction; it involves determinations as to whether the public policy will be better served by inviting compromise or by insisting on rigorous prosecution; it involves determination of where to draw the line between industries that ought to be brought into conformance with Federal policy and industries whose total impact on the national economy is too small to warrant Federal interference. All this and more is involved. All this is policy determination and under the present setup much of this policy determination is in the hands of the general counsel; some of it is in the hands of the five-member Board; and as to some of it, the two agencies are in irreconcilable conflict and nobody knows where it is.

Mr. Denham also observed, in 1947, that "more than 90 percent of the matters which might develop into litigations are disposed of administratively in the regional offices," and that these dispositions "must be coordinated to the same general policy that influences the final determination of the litigated cases." In other words, the work of the field staffs should be consistent with and governed by the policy of the agency that makes the final decisions in litigated cases—that is, of course, the Board itself. The experience under the present separation of functions justifies Mr. Denham's early fears. The field and legal staffs of the agency are required to serve two masters, who frequently disagree. It is impossible for them to know which master to follow.

Mr. Denham stated—still in 1947—that the proposed division "would only create additional confusion, with policy emanating from two independent and uncoordinated sources."

The confusion foreseen by Mr. Denham with respect to the transfer of Board functions to the Department of Justice it has been his misfortune to experience with respect to the transfer of those functions to himself as general counsel.

Despite Mr. Denham's warning in 1947, the Taft-Hartley law provided for a division of the functions of the NLRB—with the general counsel as its alter ego. That officer now enjoys all the power of a grand jury—sole, unreviewable discretion as to whether a complaint should

issue; all the power of a prosecutor—unsupervised power to prosecute cases and to apply for injunctions; and heavy administrative responsibilities, including supervision of the field and legal staffs of the agency.

The separation of powers has not only placed a disproportionate amount of authority in one individual but it has subjected the entire agency to demoralizing friction and conflict, resulting in dual and confused policy making, inefficiency, and uncertainty in the minds of parties to Board proceedings.

The hearings before congressional committees last year, as well as this year in connection with Reorganization Plan No. 12, have conclusively demonstrated that the public interest and a decent regard for good management require an immediate end to this monstrous organizational freak. Let me briefly repeat some of the outstanding reasons why the costly experiment in dual administration should be terminated:

First. The advantages of group responsibility are lost by assigning tremendous authority to a single individual. I quote from the task force report of the Hoover Commission:

> A distinctive attribute of Commission action is that it requires concurrence by a majority of members of equal standing after full discussion and deliberation. * * * A single official can consult his staff but does not have to convince others to make his views or conclusions prevail. The member of the Commission must expose his opinions and judgments to the critical scrutiny in his fellow members and must persuade them to his point of view. * * * Deliberation has certainly reduced the likelihood of capricious decision, and promoted objectivity (task force report, p. 21).

Inevitably a five-man Board is a better guaranty of fair treatment than any one man can possibly be.

Second. The general counsel, under this act combines the function of prosecution with that of rule making, which properly belongs to the five-member Board. As was pointed out in the task force report—

> Only in part are his present duties genuinely prosecution. Some parts are administrative, and some parts are a species of rule or policy making. It may be that the administrative and policy-making functions could be subordinated more clearly to the Board's control while still maintaining an adequate separation of the truly prosecuting activities (Senate hearings, p. 6).

Third. Dual policy making by the general counsel may result in the substitution of district court judgment for the Board's judgment in injunction cases. The statute empowers the general counsel to seek court injunctions. If he seeks and obtains an injunction, the result will be that a district court will have passed upon the legal theory of his complaint before the Board has had an opportunity to say whether or not the complaint spells out an unfair labor practice. Where the Board itself seeks an injunction there is no similar danger that the entire proceeding will ultimately prove abortive because the Board rejects the theory underlying the prosecution.

Fourth. The general counsel has supervision over the field staff although that staff performs work which may be wholly under the control of the five-member Board. This tends to separate and isolate the staff from the Board which is responsible for a large part of its performance.

Fifth. As a result of the separation of functions as spelled out in this act, the general counsel's authority impinges even on election cases which are supposed to be exclusively under the Board's control. His failure to issue a complaint may render a Board certification meaningless; his decision whether or not to issue a complaint may determine the outcome of an election held during a strike.

Sixth. The dispute which has arisen between the Board and the general counsel over the power of the Board to refuse to take cases involving small employers has entailed endless confusion. Senator TAFT made this the principal basis of his recommendation last June for the abolition of the separate office of general counsel.

Seventh. The general counsel occupies both the position of a litigant before the Board and the position of the Board's attorney when the Board seeks to enforce its orders in the Courts of Appeals. Several times the general counsel has asked the Board to relieve his staff of the responsibility of enforcing Board decisions with which he disagreed. In one case he has threatened to file a brief in court disagreeing with the Board's position. Yet, under the statute, all the agency's lawyers are under the supervision of the general counsel.

Eighth. The testimony and statistics introduced in evidence before the Senate Committee show that the present dual structure results in more litigation than formerly. A great proportion of all cases of the agency are, always, disposed of informally in the field. But the proportion of such cases that now have to go to formal hearing has risen. This is true not only of cases involving new kinds of unfair labor practices created by the present law, but even of cases involving unfair labor practices which were the same under the old law. This can only mean that the general counsel and the regional staffs are unable to carry Board policy to the parties at the initial stages of disputes, so as to keep down the number of cases that have to go to formal stages.

Ninth. No necessity whatever has been shown for this unusual type of bifurcation. The needs of due process and fairness are adequately taken care of by the Administrative Procedure Act, which applies to all administrative agencies and which provides for an efficient, yet fair internal separation of functions. The NLRB was in full compliance with the Administrative Procedure Act ever since it became law. In fact some of the APA provisions are said to have been modeled on NLRB procedures. No reason has ever been shown why the NLRB should be saddled with a frustrating and inefficient organization, in contrast with all other similar agencies.

Tenth. The separation of functions now in effect at the NLRB is unique and threatens the organizational integrity of all administrative agencies in the executive branch of the Government. As was cogently stated in the task force report:

> The existence of such an office independent both of the Federal department structure and of the Board marks a departure from previous administrative practice. If permitted to set a pattern for future Government organization it may lead to a diffusion of responsibility. (Senate hearings, p. 6.)

It is time to return to a rational organizational structure, with clear lines of authority. The present split-personality of the Labor Board is wasteful and inefficient. The Board can amply safeguard public and private rights through an internal structure which isolates the purely prosecuting function from that of adjudication. All other regulatory commissions in the executive branch of the Government do this successfully. No reason exists for an exception here. Reorganization Plan No. 12 should be adopted. This House should place itself emphatically upon record as favoring restoration of the Labor Board's functions and abolition of the separate office of general counsel through a vote of strong disapproval of House Resolution 516.

United Jewish Appeal

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an editorial entitled, "United Jewish Appeal," which appeared in the New Hampshire Morning Union of May 9, 1950. This editorial presents a real understanding of the problems in Israel which the United Jewish Appeal is organized to help solve.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED JEWISH APPEAL

The state of Israel owes much indeed to the generous understanding here in America of the new decomcracy's problems. Israel itself is prompt to acknowledge that obligation with heartfelt thanks.

Miracles have been performed. But the age of the need of more miracles has not passed. Great tasks have been performed. Greater tasks remain essential.

It is in that realization that the Manchester Jewish community, other Jewish communities throughout this State, and in the Nation, are now emphasizing the tremendous reasons for giving, with the same fervor and generosity marked in the past, to the 1950 United Jewish Appeal. Last evening here in Manchester marked the initial gifts dinner. Now comes the campaign itself.

UNIVERSITY OF MICHIGAN LIBRARIES

As in former years, again now! The local quota will be used not only in behalf of performing more miracles in Israel, but also for United States countrywide and local requirements. As an example of home benefits, advantage will occur to the Manchester Jewish Community Center.

In Israel, the contribution of American Jews and their Christian friends will complete immigration tasks, will further rehabilitation requirements, and will make new construction possible.

Eighty thousand new immigrants in Israel are still living in tents. One hundred new settlements must be established. Five hundred thousand Jews in various parts of Europe require help if they are to live. Twenty-five thousand Jews are awaiting a new life in America. Hence—for these good causes and many more—the 1950 United Jewish Appeal.

This is not alone the problem of the Jews—or for the Jews. It also is the problem of all humanity, a truth recognized in the cooperation that the appeal is receiving from leaders of other lands. Governor Adams, for example, is proud to act as a member of the National Christian Committee associated with the appeal. In Manchester, John P. Carleton has been glad to give of his energies and time.

So it is throughout the country, among Jews and all other peoples of God, in the recognition that the moral and material assistance given during the appeal is an investment in the ideals of peace and freedom.

Directors of the appeal are stating the case in all essential detail. The verdict now rests with the people. Again they will make it possible for more miracles to be performed. By their good deeds Americans all will continue to be known, esteemed, and beloved.

Is Not Secretary of State Acheson Exceeding His Authority and Presently Acting Contrary to His Former Assurances and Policies?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. SABATH. Mr. Speaker, I hope that the reports in various newspapers, and in particular, the May 10, 1950, editorial in the Chicago Sun-Times, about the actions of our Secretary of State, Mr. Acheson, are not going to form the basis for a change in our basic foreign policy.

For instance, Mr. Speaker, within a few hours after he arrived by air in Paris yesterday, reports indicate that he quickly agreed with French Foreign Minister Schuman on aid to Indochina. Secretary of State Acheson and Minister Schuman specifically agreed to send Indochina military as well as economic aid—most of it being military aid. All of this assistance will go to Viet Nam, an independent state in the French Union, which is presently being torn by real conflict on the part of a revolutionary named Ho Chi Minh. The latter has fought for 40 years against French rule in Indochina, and set up a strong nationalist movement shortly after World War II under an agreement with the French.

In the latter part of 1949, France installed a new government under the leadership of a former Annamite emperor whose family ruled in Indochina for four centuries.

The above editorial suggests that the American people wonder by what authority does Mr. Acheson send military aid to Viet Nam? Is Veit Nam really threatened by Communists from outside or is Ho merely trying to give his countrymen an independent government? Are we helping France hang on to a colonial possession against the will of the majority of the inhabitants?

In that connection permit me to quote excerpts from an editorial appearing in the Chicago Sun-Times on May 10, 1950, entitled "United States Tanks and Planes to Viet Nam," wherein Mr. Acheson said:

Neither national independence nor democratic evolution can exist in an area dominated by Soviet imperialism.

The editorial went on to point out:

Nor as Mr. Acheson knows, can democratic evolution exist in an area dominated by European imperialism. While France controlled Indochina, it did nothing to solve problems of land distribution, illiteracy, poverty, and the like. The Communists make bright promises along these same lines to attract support.

Let us consider what Mr. Ho actually stands for, keeping in mind that he has been a revolutionary leader fighting for 40 years against French rule in Indochina, and I quote further from the above editorial: "The people must be given the means to rebuild, to eat, to live. If we cannot provide this for them they must fall into the misery on which communism thrives." Are these the words of a Communist?

The editorial further states:

In addition to tanks, planes, and guns, Viet Nam needs other aid, including food. It also needs convincing arguments that France is really on the square when it says it wants the inhabitants eventually to run its own affairs.

Mr. Speaker, if France wants Indochina to run its own affairs, why did they agree to placing a former Annamite Emperor into the position of leadership?

The editorial concludes with a gem of a statement, to wit:

Our aim should be to stop not only Russian imperialism but any imperialism that denies peoples the right to govern themselves.

Food Prices and Politics

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HAND. Mr. Speaker, there recently appeared in the Cape May County Gazette a sensible editorial entitled "Politics Versus People," which I feel is worthy of wide circulation. The editorial is appended:

POLITICS VERSUS PEOPLE

"A sensible, honest, radically new agricultural act * * * that will gradually ease the price-control falsework from under the farm economy" is urged in an article in the April Reader's Digest, condensed from Fortune. Declaring that the Government's price structure would collapse if supports were suddenly removed, the article holds that this program is forcing farmers to produce wildly in excess of any reasonable American capacity to consume. It is responsible for most of the $11,800,000,000 deficit in the last fiscal year.

After 17 years the price-support program is coming full circle to its preposterous conclusion as one of our most potent inflationary influences, the article states. The Government's recent wholesale destruction and distress sale of surplus potatoes, a price-supporting move, cost taxpayers $204,000,000. That is a fair illustration of what happens when the Government helps a special group maintain or increase its share of the national income regardless of the group's contribution to that income.

Commodity Credit Credit Corporation has a current investment of nearly $3,000,000,000 in farm commodity loans, purchases, and agreements to purchase. Last year CCC took over 21 percent of the wheat harvest, 26 percent of the cotton crop and enormous stocks of other commodities. Having disposed of minor quantities it is left with a $2,500,000,000 inventory, including:

Nearly 5,000,000 bales of cotton, 600,000,000 bushels of corn, and 400,000,000 bushels of wheat—enough wheat for a loaf of bread a week for everyone in the United States throughout a full year. Millions of pounds of dried eggs, butter, tobacco, wool, soybeans, and other commodities are held by CCC.

This immense inventory, the article states, would feed and clothe millions of poor people, were it not that CCC is forced by statute to price the products so high that poor people cannot possibly buy them.

Present farm policies are certain to increase rather than liquidate this inventory. Following a bumper corn crop in 1949, hundreds of millions of bushels of new corn will probably be put under loan. With prices of hogs at 3-year lows, CCC may soon support hog prices by buying pork on a grand scale. Wheat promises another giant harvest, with further Government loans and purchases indicated.

Surplus farm commodities are being stored in oil tanks, hangars, schoolrooms, and even laid-up ships, the article says. At least $80,000,000 is being spent on additional storage space this fiscal year.

The agricultural planners proposed two solutions: (1) To dump surplus abroad and to cut prices in the open market (against the policy of the State Department); (2) to limit output by curtailing planted acreage.

Despite smaller acreage, output may well be maintained at recent levels by better seed and more fertilizer. And acreage taken out of restricted crops will be shifted to other crops, causing new gluts.

The average taxpayer, mystified by the intricacies of the farm price-support program, has remained inarticulate. But the time has come, the article concludes, for the politicians to pay attention not only to the farm organizations but to the rest of the people as well.

Water Supply of the United States

EXTENSION OF REMARKS
OF

HON. JOHN R. MURDOCK
OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. MURDOCK. Mr. Speaker, the United States is becoming more and more aware of the great importance of its water supply and the proper uses and conservation of water. In that connection, I would like to call to your attention an address recently delivered by Carl G. Paulsen, chief hydraulic engineer, United States Geological Survey. This address was presented at the fortieth convention of the National Rivers and Harbors Congress, held at the Mayflower Hotel, Washington, D. C. The address is as follows:

WATER SUPPLY OF THE UNITED STATES

The front pages of the press throughout the country during the past several weeks have dramatized the critical water shortages in many parts of the Nation. The concern that has grown in recent years over the future of our water supplies has been forcibly brought to the attention of the public by the water shortage that New York City is experiencing. This shortage is not the first that has affected an American community, and it probably is not the most serious. Ample sources of additional water are known to exist in up-State New York, and in all probability construction that will bring this water to the city will be pushed as rapidly as possible. Nevertheless, the fact that our largest city, the center of our business life, has an acute water shortage, even though it may only be temporary, causes everyone to realize something of the importance that water has in our national life and our national economy and security. In nearly every State of the Union one or more communities now has or has had water problems as serious as or more serious than that which now faces New York City. These problems are springing up in increasing numbers, and it is high time that orderly and systematic consideration be given to their solutions and to the avoidance of as many such problems as possible in the future. If the crisis in New York serves to bring this fact into national focus, New York's misfortune may in the long run be a blessing in disguise.

The comments on water problems that have appeared in the press have ranged all the way from the alarmist view that we are short of water on a national scale to the complacent view that all that is needed to cure the troubles is some particular type of conservation or construction which the particular writer or promoter favors. Actually, the truth lies somewhere between these divergent views.

It has been said that we are running out of water. Yet throughout the period of record the total available water resources of our country, except for local and temporary variations due to droughts and floods, have not trended persistently either up or down, but have continued essentially constant. I know of no evidence in either long-term precipitation, stream-flow, or ground-water data that controverts this statement. During the past several decades stream run-off in many places, as shown by carefully selected records of the United States Geological Survey, showed a downward swing which reached its lowest point in the decade from 1930 to 1940, but most records show an upward swing since 1940. In the 1949 water year the annual flow of all major continental rivers gaged by the Geological Survey was near normal or above normal. Likewise, precipitation data of the United States Weather Bureau show no persistent country-wide progression toward long-term declines. Records of water levels in nearly 15,000 observation wells maintained by the Geological Survey and its cooperating agencies show no over-all trend toward decline. Water levels in some wells have declined, but only because of pumping or other activities of man, or temporarily as a result of severe droughts. Even the great drought of the thirties was subsequently offset by above-average precipitation which fully restored stream-flow and ground-water levels to predrought stages.

The amazing situation that has arisen in this country, however, is that our use of water has increased by leaps and bounds. A century ago the per capita use of water was probably not more than a few gallons per day. Today it is estimated that our per capita use of water amounts to more than 1,300 gallons per day, exclusive of water used for hydroelectric power, for dilution of wastes in streams, for navigation, recreation, etc. The total for the country probably approaches 200,000,000,000 gallons (600,000 acre-feet) a day of water now taken from wells and streams for use by industries, municipalities, irrigation projects, and domestic and other users.

During the past century our population has increased about 600 percent. The use of water, however, has increased by several thousand percent. The future is expected to bring an even more disproportionate increase in the use of water. The rapid growth of industry and technological advances, the introduction of new industries such as the chemical industry, the spread of air conditioning and temperature control processes in industry, and the hydrogenation of coal and oil shale for synthetic fuels, will require enormously increased quantities of water. Plans are also going forward for large additional developments of irrigation in the West. In the East, on Long Island and elsewhere, supplemental irrigation to provide optimum moisture for growth of crops has spread very rapidly in the last few years. It is to be expected that such uses will increase rapidly if our national economy is to be maintained at a satisfactory level.

The question is, How does this use of water compare with the amount available? The 200,000,000,000 gallons daily that is estimated to be used now is equivalent to between 1 and 1½ inches of water spread over the surface of the country in a year. The average annual precipitation is about 30 inches, and the average annual runoff is about 8.5 inches for the country.

Supposedly, this country-wide average of 8.5 inches that now runs off to the sea should be utilizable by man, but it is not possible in practice. At least a substantial part cannot be used economically because it is flood flow that occurs in such tremendous volume that there is no feasible means of storing it. And of the low flow of the streams, at least a considerable part must be reserved because it dilutes and carries off municipal, industrial, and other wastes. Also, a part cannot be consumed because it supports hydroelectric power, navigation, and other purposes. Moreover, in some streams, there is the problem of maintaining enough flow to carry off the products of natural erosion. Therefore, our use of the 8.5 inches of runoff is severely limited and restricted.

Of the water now used by industries, irrigators, and others, a substantial part is actually consumed by evaporation and transpiration as it goes into the various processes controlled by man. The rest of it may be altered to a degree depending on the processes through which it goes, but fortunately it eventually is discharged back into the streams or into the ground and is available for reuse as it travels on its path toward the sea.

Thus, the comparison of availability and use of water on a national basis is complex and has many ramifications. However, it appears safe to say, despite the fact that accurate and detailed information is not available, that perhaps several times as much water is available throughout the country as a whole as is now used or consumed. All of which leads to the bold statement that our Nation's water supply as a whole is entirely adequate for all present needs.

However, it does not follow that our water supply is adequate for an indefinite length of time in the future. Nor does it by any means follow that our local supplies in every case are even now adequate.

Instead, as I stated in the beginning, there are many localities throughout the country today, including widespread areas in certain places, where the presently available supplies have been developed to such an extent that serious problems have resulted. In some of these places additional supplies cannot be obtained within the present economic limits, and decentralization of population, industries, and agriculture is a real possibility. In other places, additional water can be obtained, but it will cost more, and the problem is to obtain it in the best and cheapest way.

These problems in the aggregate are very real and are of grave concern to the people who are experiencing them. They cannot be taken lightly. It is one thing to say water problems may be solved by decentralization of man's activities, and another thing to carry it out. We must do everything within our ability to solve the existing problems if possible without such decentralization, and to anticipate and prevent other problems from occurring in the future.

The major way to solve water shortages still appears to be to make better use of water that is already available in our streams or ground-water reservoirs, and which in large part is not now being used or is being ruined by pollution. To do this effectively we need more water data.

Some water-supply problems can be solved by importation of surface water from other drainage areas that have a surplus. Others might be solved by elimination of pollution upstream, making the existing supplies more usable. Impounding of streams salvages flood waters and also lessens pollution problems by using the stored water to supplement stream flow during periods of low flow. Multipurpose dams and drainage basin developments are helping a great deal in many parts of the country.

Another means of solving many local problems is to make better use of our ground-water reservoirs. By and large, the development of these reservoirs will not make more total water available, at least away from coastal areas and away from places where the ground water is now being used by wasteful phreatophytes, for if not developed the water will seep out into streams and be available as stream flow. However, ground-water reservoirs do have several natural advantages that in general have not been fully utilized. The most important advantage is position. Much of our country is underlain by water-bearing formations of one kind or another through which water may move great distances before being withdrawn from wells. Thus, nature does a part of the job of collecting and transporting the water to the points of use. Many of these water-bearing formations are tremendous underground reservoirs. As with surface reservoirs, they collect water in wet periods and store it for use in dry periods. Two special advantages of the underground reservoirs are freedom from large evaporation losses and freedom from sedimentation.

UNIVERSITY OF MICHIGAN LIBRARIES

As the press has proclaimed, in some places the ground-water reservoirs are already being utilized to the maximum extent possible under natural recharge conditions, and in a few areas are even overdeveloped. But in many other places there are large undeveloped supplies available which might very well be used. Their use would be the means of salvaging water which otherwise seeps out into the oceans or into streams where it is not needed or where it cannot be impounded for use.

Furthermore, there is the possibility of augmenting the natural recharge of our ground-water reservoirs by artificially recharging with surface water which otherwise would run off to waste during high flow, or which in some cases would be partially lost by evaporation from surface reservoirs. Such practice is termed water spreading. By such practice, the ground-water reservoirs might be made to serve almost identically as surface reservoirs, to store excess water during high flow for later use when flow is small. Such unique use of underground reservoirs is already being practiced on a fairly large scale in California and on Long Island, N. Y., and on a smaller scale in other parts of the country. Effective utilization in this manner of more of these underground reservoirs, including the ones whose natural recharge is already fully developed, it is believed, will go far toward remedying the situation many localities face today, where supplies are plentiful most of the year, but are short in times of dry weather.

The most urgent prerequisite to undertaking these various solutions of our existing and pending water problems is more basic water facts. We can talk in general terms about our water resources, and for many areas we do have adequate basic data, but for much of the country our current store of such facts is pitifully meager. The general tendency in the past has been to take water for granted, and not to worry "until the well goes dry." Now we are being given cause for worry. It will be impossible, of course, to go back into history and gather satisfactory data on stage, flow, recharge, discharge, and quality-of-water changes with time—those facts, once gone, are gone forever. However, for the future, and to help solve the serious water problems of the present, we can make a beginning at the earliest possible time to develop comprehensive programs for collecting and analyzing the water-resources data that will be necessary for sound development. Careful detailed appraisal of our water resources and the establishment of an adequate water accounting system for our major sources of supply will materially assist in solving our present water-supply problems, and will provide a basis for the prevention of future problems of increased magnitude.

Capitalistic Common Sense

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona Tribune of May 9, 1950:

CAPITALISTIC COMMON SENSE

So deeply have prejudice and class hatreds been sown in America in recent years by political opportunists that too many people these days refuse to face common sense, are afraid, indeed, to consider it for fear that they may be victimized by clever propaganda.

Adherents of big government, in their quest for political power in this country, have used a line borrowed from the Communists for many years. That line is to pit the rich against the poor, the successful against the unsuccessful, and capital and management against labor.

We in America have started paying the bill for that kind of rotten politics. The Alger Hiss-Whittaker Chambers case, the Bentley charges, the Budenz accusations, the McCarthy investigation may be traced back to this vicious departure from Americanism * * * this political strategy of creating issues to champion against the established business and very economic system of America.

The Government has been pushing an investigation of monopoly in American business and industry. Mr. Ernest T. Weir, chairman of the board of the National Steel Corp., denied to a House monopoly investigating committee the other day that monopoly actually does exist within the industry.

The mere fact of bigness has centered Government action on the steel industry, as on others of the basic American businesses. Yet, it is illogical to assume that the steel industry could be small. By its very nature it must be big. A railroad never could be a small industry; by its very nature, it, too, must be big. What small-business man, or operator of any kind, could set up a steel mill? Blast furnaces, rolling mills cost millions. What small-business man could set up a railroad?

Both industries are vast. But they have multiple owners * * * thousands of them * * * their stockholders. They make big business possible, and they alone make it big.

There is, in a very real sense, the essence of democracy in our big industry. Of course, it has controlling geniuses, men of skill and initiative and vision to direct it. But its ownership is vested, with few exceptions, in the thousands who hold the stock, who buy the bonds, a majority of whom are just average Americans who want good investment for small savings.

Mr. Benjamin Fairless, president of United States Steel Corp., made one of these common sense talks the other day. Prejudice on the part of many misled Americans may blind them to his wisdom. But, if they should think a moment, they must see it, as true Americans.

Mr. Fairless himself comes under the "capitalist" category. Yet, his father was a coal miner. Fairless worked his way through school, his father didn't pay the way. He went to work on the Wheeling Railroad as a civil engineer, and he worked his way to the top the American way, the hard way, no politician to smooth his path, nobody to "pay his freight."

The Communists call him a "capitalist," and they sneer when they say it.

Does that make Mr. Fairless good, or bad? Does that detract from his words of wisdom?

Here are some of them:

"Our economic system is in deadlier peril today than ever before. Yet, I do not fear communism because every day proves its utter failure. I do not fear fascism because it has killed the three great nations which adopted it. I do not fear outright socialism because in Europe today, socialism itself is living on the dole, and America is the only country on earth that is able to foot the bill for it.

"But when somebody in Washington starts telling me how much he loves free enterprise and how he proposes to save it from itself, I shake in my very shoes. I wonder why it is that these self-appointed saviors of our national welfare always seem to miss the point.

"The point is that our American system of free enterprise, competitive enterprise, is the only one left in the world that is not controlled by power-hungry politicians, and whether you call it the Square Deal, the New Deal, the Fair Deal or just plain Federal regulation, the fact remains that once the dead hand of politics gets its convulsive grip on American business and industry, free competition will be strangled, and our economic system will be no different, and no more successful, than those noble experiments which are crumbling into dust in Europe."

Address by Senator Martin Before Presbyterian Chaplains' Dinner

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Pennsylvania [Mr. MARTIN] at the Presbyterian chaplains' dinner, held at the Shoreham Hotel on May 9, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, BEFORE THE PRESBYTERIAN CHAPLAINS' DINNER OF THE MILITARY CHAPLAINS ASSOCIATION OF THE UNITED STATES AT THE SHOREHAM HOTEL, WASHINGTON, D. C., TUESDAY EVENING, MAY 9, 1950

America is a deeply religious Nation.

We rejoice in the spiritual strength of our people, established on abiding faith in God and the teachings of the Holy Bible.

We are proud that in every corner of our land churches of every religious denomination preach the word of God, free from all governmental regulation or restriction.

In the early days of our history the deep religious convictions of the pioneers sustained and strengthened them in the face of grave dangers and terrible hardships.

When trappers and traders crossed the mountains to establish homes in the wilderness and the plains of the West, they were accompanied by courageous men, dedicated to the service of God.

Those heroic Americans carried with them Bibles, axes, and rifles, symbols of faith, truth, and righteousness; hard work and thrift; courage, self-reliance, and love of liberty.

In the growth and development of the United States we have had times of trial and crisis.

We have had financial depressions. We have had bloody conflict within our own borders. We have had wars to preserve American liberty from foreign aggression.

We have experienced periods of reckless and extravagant living. We have had times when the spiritual side was at a low ebb because we placed too much emphasis on material gain.

But, fortunately, from every period of crisis the great majority of our people have emerged strengthened in faith and in firm conviction that God rules in the affairs of men.

The great majority did not forget the teachings of the Ten Commandments, the Golden Rule, and the Sermon on the Mount.

One outstanding reason why North America has made so much greater progress than South America was expressed by a student of history some years ago. He said that the early settlers of South America were seeking gold while those who settled North America came in search of God.

The United States will live and prosper so long as we continue the search for God in our daily lives.

Americans are a peace-loving people. We have never engaged in a war of conquest or aggression. We know that war does not rightfully settle differences among men or nations.

Nevertheless, we recognize that eternal vigilance is the price of liberty. We must be prepared always to defend American freedom and independence against the threat of tyranny and enslavement.

We have always fought to preserve those rights and liberties of the individual which we hold to be derived from the Creator of all mankind.

The essence of American patriotism is willing sacrifice to sustain the rights, freedoms, privileges, and opportunities enumerated in the Declaration of Independence and given force and effect by the Constitution and the Bill of Rights.

The strength of American military force is based on high morale.

From early Colonial days our defense services have recognized the importance of religion among our soldiers. The morale of the American Army depends greatly upon the spiritual attainments of the officers and men. It is developed through tolerance, self-denial, respect for the rights of others and devout love of God.

Ministers who wear the uniform of the United States learn to work together in love and harmony.

The relations between a real commander or a leader of a unit and his chaplain should be as close as those of members of the same family. The chaplain should be his constant advisor. When the commander is depressed by problems, hunger, losses, and defeat, he can gain new strength from the spiritual advice and guidance of his chaplain.

Many heroic deeds are recorded in the history of World War II. But none stands out with greater glory than the self-sacrifice of the four Army chaplains whose memory will be honored wherever Americans meet in the name of brotherhood.

None of us can recall the heroism of these men of God without profound reverence and deep humility.

Standing on the sinking deck of a torpedoed transport their thoughts were not for themselves but for others. In their glorious hours of surpreme trial and sacrifice they offered their lives that others might live.

Giving their life preservers to enlisted men they stood, hand in hand, with prayer in their hearts and on their lips for the safety of the survivors.

Two were of the Protestant faith, one a Catholic priest, one a Jewish rabbi—all true servants of God and their fellow men. Each, in the manner of his own belief, prayed to the same God, the Creator of all mankind.

Their honored memory calls upon all Americans for greater faith in all religions and for deeper devotion to the sacred principles for which they gave their lives so heroically.

In my own military experience I have known many tragic moments when differences in form of worship faded into insignificance.

I recall particularly an event of World War I which has made an unforgettable impression upon me. In the fierce fighting around Courmont, in France, the headquarters of the One Hundred and Tenth Infantry were blown up. There were many casualties. Three boys from western Pennsylvania were among the fatally wounded—one a Catholic, one a Protestant, and the third a Jewish boy.

In their dying moments they were ministered to by two chaplains, one of the Catholic faith, the other a Protestant.

No Hebrew chaplain was available but the Jewish boy was not neglected or overlooked. The prayer that ascended to heaven was said by the Protestant clergyman who also administered the last rites to the Catholic boy.

The Catholic priest was at the side of the Protestant boy, bringing the comfort of hope and faith to a soldier who died for his country.

I cannot recall that day without realizing how trifling our worldly differences are when the soul of a hero goes to meet his God.

America is again in a time of crisis. We live in a period of world-wide unrest and danger.

It is a time when we cannot preach too forcefully the need for loyal adherence to the principles of religion, patriotism, and high moral standards without which no nation, however strong, can long survive.

This is no time for men to prevail in politics, business, labor, or the professions who have bitterness in their hearts or selfishness in their souls.

We must break down the barriers that divide us. We must cleanse our land of intolerance, hate, and prejudice. We must strengthen the moral fiber of American citizenship.

The United States must be kept strong and sound financially, physically, and spiritually.

Yes; America is again in a time of crisis.

We pray that we may never again be forced into the horror and the tragedy of war.

But if the time should come when we must defend our liberty and independence, let us foster and inspire deeper understanding and wider acceptance of the sacred ideals that have made the United States the greatest nation of all times.

Toward the achievement of that objective no group will take a more important part than the chaplains of our armed forces.

New Formula Needed

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. SIMPSON of Illinois. Mr. Speaker, under unanimous consent I include in the Appendix of the CONGRESSIONAL RECORD an editorial of May 8 from the Quincy Herald-Whig, Quincy, Ill.:

NEW FORMULA NEEDED

Roosevelt's desperate hope that the Soviet Government would learn to cooperate as a member of the world organization, the United Nations, has not been fulfilled. Five years after San Francisco many agencies of the United Nations are in tight deadlocks. On the eve of the anniversary of the first conference Secretary Trygve Lie has set out in somber mood to explore the possibilities of making the wheels turn again, even mechanically. He hopes to wind up his journey in Moscow.

It was the same motive that actuated his predecessor, Woodrow Wilson, and it became more and more dominant in Roosevelt's thinking as the conflict neared the end. Wilson accepted an unsatisfactory peace settlement in the conviction that the League of Nations provided the machinery for correcting the inequities of the treaties. After Yalta, especially, Roosevelt pinned all his hopes for a fair and amicable adjustment of Russian claims, which already deeply disturbed him, on the confidence he expected to grow out of membership in the United Nations. In his last days he was consumed with impatience to get the covenant signed and sealed before hostilities ceased. He kept telling those about him that there would be no peace unless the fighting coalition was bound irrevocably together in a working system for collective security before the war was won.

It was a case of trying a formula different from the one that failed to work in Wilson's time but different conditions are faced. In Germany the victors are taking a different line from that pursued after the first World War, but there is less assurance every day that it will be more successful. In both cases new elements change the picture. And old forces—expansionism and rooted suspicion in Russia, power and pride in Germany—are seldom given due weight in the assumption that the way to avoid previous errors is to adopt the contrary method. The United Nations succeeded the League because such an organization has to exist, but perhaps the best way to make it work is to forget what was done in San Francisco and what was not done in Geneva and strike out with an entirely new formula.

The Near East Armaments Situation

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. TAURIELLO. Mr. Speaker, the State Department's reply of May 5 to the communication of the 51 representatives of May 3 to the Secretary of State, the Honorable Dean Acheson, is painfully disappointing. It is simply a repetition of the allegations of the Department of State during the last 3 months.

Mr. Acheson's assurance that "there has been no indication that the United Kingdom is diverting any undue proportion of its resources into military production" is, to put it mildly, misleading. The amount and kind of arms which England is diverting to the Arabs may not represent an undue proportion of England's resources, but it certainly is out of proportion to the Arabs' ordinary needs for defense unless it intended for aggressive purposes.

Mr. Acheson closes his eyes to the fact that there is an inconsistency between words and deeds; that there is a conflict between the declared policy of the United States relative to peace in the Near East, and particularly between Israel and the Arab states, and the disproportionate shipment of arms by England to the Arab states, which is the very negation of the American policy.

Pious words which are nullified by action are not only meaningless, they are even cruel—cruel to the infant State of Israel, whose very life is being threatened by this overwhelming delivery of arms to the Arab states by England with the blessings of the Department of State. We call upon Mr. Acheson to establish a harmony-in-fact between words and deeds.

UNIVERSITY OF MICHIGAN LIBRARIES

Accidents—Bruce Barton's Column

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a column by Bruce Barton, published in a recent issue of the Seattle Post Intelligencer, in which Mr. Barton suggests that plenty of leeway should be allowed for accidents in making life plans.

There being no objection, the column is orderd to be printed in the RECORD, as follows:

ACCIDENTS

A young man asks: "Should I have a plan for my life?"

Yes. But allow plenty of leeway for accidents.

When I graduated from college my picture was printed in a Chicago morning newspaper: "Chicago Boy Makes Good."

The publisher of some little magazine in Chicago saw the picture, sent for me, and asked what I was going to be.

I told him a professor of American history.

"How do you know you want to be a professor?" he asked. "You have never been anywhere except school. You should take a year in business; then you would have other experience to compare with academic life. Come into my business for a year."

So I hooked up with the printing press for a year, and never got unhooked. If that man had read the other Chicago newspaper that morning, my whole life would have been different.

It was by just that sort of fluke that the career of Alfred P. Sloan, of General Motors, was changed. When he graduated from Massachusetts Institute of Technology he couldn't connect with any big firm; his first salary was a few dollars a week from a man named Hyatt, who had one ambition—to make a synthetic billiard ball.

Hyatt never realized this dream. Instead of billiard balls, he developed a process for manufacturing roller bearings.

At first the business was small and almost insolvent. Sloan persuaded his father, a wholesale grocer in Brooklyn, to put $100,000, half of his life's savings into it. The father's other $100,000 was invested in good, sound securities. The good, sound securities all went sour.

But the automobile came along and made Hyatt a big company almost overnight. Sloan and his father sold out their $100,000 interest to W. C. Durant, as a part of United Motors, for $15,000,000. Later, Durant merged United Motors into General Motors, and Sloan was merged with it.

"So, you see, it was just a series of accidents," he told me.

By all means, have a plan. But keep your eye peeled for the accidents. They often are more important than the plan.

One other suggestion. Don't fall into the prevalent habit of leaning back and letting the big planners in Washington make the plans for you. They promise to employ you, and clothe and feed you. But when you sit down at their table the seating arrangement is always the same. They sit at the top of the table and are first served. You sit at the foot, near the cashier. You get the check.

Alcohol and Blabbermouths in Washington

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clipsheet of the Board of Temperance of the Methodist Church:

ALCOHOL, WASHINGTON, BLABBERMOUTHS, WAR

Currently, a remarkable open letter to the President of the United States, signed by Billy Rose, is appearing in newspapers throughout the country which carry his column, Pitching Horseshoes.

Mr. Rose makes the statement that an editor of a national magazine with more than 15,000,000 readers (is there more than one such magazine?) not so long ago was present at a dinner party in Georgetown, a community of the city of Washington, and over a postprandial brandy was told by a high-ranking official just how many atom bombs the United States has, where they are stored, and the security measures effective in that area. "Fortunately," remarks Mr. Rose, "the editor in question is a man of responsibility and discretion." He continues, however, that the recipient of this information is of the opinion that Washington is currently "a-bursting with blabbermouths" who, at the drop of a daiquiri, are perfectly ready to blurt out classified information to anyone who cares to listen, "including those who cash their pay checks in the First National Bank of Moscow." Mr. Rose concludes his letter with a postscript that calls attention to the fact that the per capita consumption of liquor in Washington is greater than it is in any State of the Union. The damage which has been done to this country, and is now being done to this country, by alcohol consumption on the leadership level constitutes a peril difficult to overestimate.

The Board of Temperance of the Methodist Church has repeatedly, and with the greatest earnestness in recent years, called attention to the fact that it is here the damage and danger of the alcohol custom, promoted under law for profit, imperils the very life of the United States and the future of civilization.

Alcoholism is not the alcohol problem—it is only one phase of it, a relatively small phase of it. More important is the fact that the consumption of alcohol causes blabbermouths, that persons in places of responsibility are by it made irresponsible, that it results in wrong political and military decisions, and this at a time when even one wrong decision may mean disaster, final and complete.

The scientific principle involved is expressed thus:

Alcohol successively weakens and suspends the hierarchy of functions of the brain, and therefore of the mind, in the order from above downward; that is to say, in the inverse order of their development in the individual and in the race. For the emotional dispositions or capacities are a very ancient racial endowment and have their physiological seats in the basal ganglia, the lowest levels of the great brain, the part which alone is represented in the brains of the lower vertebrates. The higher intellectual faculties, on the other hand, are the latest acquired and are connected with the anatomically highest and last developed parts of the brain.

This is the effect of alcohol which is the all-important effect, and which has nothing to do with drunkenness, which, on the contrary, is brought about by the consumption of relatively small amounts of alcohol, such amounts as are commonly consumed at cocktail parties and dinners, where men meet other men for casual social talk.

It is a reasonable deduction from the known effect of alcohol as commonly consumed, that drinking may have been in large part responsible for the fundamental misconception at Yalta which has had such terrible results. With the international communistic conspiracy, brutal and bloody beyond description, shutting off vast areas of the world from the light of freedom, closing the Baltic Sea to the western nations, probing at the defense lines of free men with provocative aggressions, the time has come to call upon all men in places of political or military responsibility to adopt a policy of total abstinence from the use of alcohol as an inherent obligation of their position, in order that the nation may be wisely led in this time of increasing peril.

Tax Exemption of Cooperatives

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from America, by Hon. Walter A. Lynch:

COOPERATIVES AND TAX EXEMPTION

Should cooperatives pay income taxes? This controversial question is posed for the thoughtful consideration of the readers of America. It is a vexing problem, and one to which this writer will not, in this article, attempt to give the answer. The affirmative and negative sides of the question were recently argued by more than two score of witnesses before the Committee on Ways and Means of the House of Representatives.

There are some who believe the question is too hot a political potato for the committee to handle in an election year. Others are of the opinion that no really comprehensive study and consideration of the problem by the committee was possible in the 2 days of public hearings. It is a fact that while witnesses were presenting their carefully prepared statements, there were at times only two or three members of the committee in attendance. This was due neither to a lack of interest on the part of the members nor to any discourtesy toward the witnesses, but was caused solely by the fact that the days set for the hearings were unfortunately the 2 days when the opponents of a fair employment practices law were using every parliamentary device to block that legislation. Quorum calls, teller votes, and yea-and-nay votes were so numerous that the committee members worked in relays in their endeavor to hear witnesses.

Nevertheless, a group composed of well-organized businessmen seems determined to get action in this session. Its spokesmen point to the existing tax treatment of cooperatives as a loophole in the tax structure and of cooperatives as a revenue source which neither the President nor Secretary of the Treasury Snyder mentioned in the tax program submitted to the Congress.

HISTORY OF OUR CO-OPS

In the consideration of the question it might be well to take a look at the role of the cooperative in the economic history of our country. It is beyond question that the profit system is the bone and sinew of the American way of life. It has made America great by opening up vast opportunity for the enterprise of individuals.

As a result of the profit system, the country has developed a revenue structure based principally upon the taxation of income. Nearly 75 percent of the revenues for the general operation of the Government, national defense, and the commitments the Government has made abroad toward peace and world security come from the taxes imposed on the net incomes of individuals and corporations.

Our economy and tax structure are lashed firmly to the principle of private enterprise for profit. Yet it has been the policy of the Government to encourage the establishment of cooperatives which claim to be nonprofit in character. An apparent conflict that could, perhaps, be safely ignored in 1940, when income taxes amounted to only $2,000,000,000, may require critical reappraisal in 1950, when taxes on corporate and individual profits are estimated at nearly $30,000,000,000.

The cooperative business organization in American history dates back to 1752, when Benjamin Franklin joined with others in setting up a mutual fire-insurance society. Farmer cooperatives, however, originated as a natural outgrowth of the profit system, for as farmers began to grow more cash crops they also began to try out cooperative methods of selling to get better prices.

In 1820, livestock raisers in Ohio made joint shipments to a terminal factory. Nearly a hundred years ago a cooperative cheese factory and a creamery were established in New York State and a cooperative grain elevator was started in Wisconsin.

By the turn of the century mutual fire-insurance companies, irrigation associations, cooperative creameries, grain elevators, and fruit-marketing associations were commonplace. Between 1900 and 1920 the number of farm marketing co-ops almost doubled, as farmers learned to organize regional cooperative associations of local cooperatives, such as the Dairymen's League Cooperative Federation of New York and the Farmers' Union Livestock Commission Associations of Omaha and other midwestern cities.

When farm prices broke in 1920 and 1921, farmers' marketing cooperatives were utilized to control the supply and movement to market of various farm commodities, including wheat, cotton, and tobacco.

The importance of this new function of the cooperative was recognized by the Federal Government in the Capper-Volstead Act, which resolved any doubt about the exemption of co-ops from the provisions of the antitrust laws. Moreover, their exemption from Federal income taxes was broadened. At the same time there was a flood of State statutes on the organization of cooperatives.

With the passage of the Agricultural Adjustment Act in 1933, farm cooperatives returned to the problem of better merchandising methods and left the job of controlling agricultural production to the Government.

Between 1920 and 1930, when most of this legislation was enacted, the estimated total farmer co-op business ranged from $1,300,000,000 to $2,500,000,000, and the number of farmers' marketing and purchasing associations grew from approximately 7,000 to nearly 12,000. Today the number of such farmer associations is closer to 10,000, but the estimated volume of business is $8,600,000,000.

Businessmen engaged in purchase, storage, and processing of farm products, and dealers in feed, farm implements and hardware, fertilizer and other farm necessities complain bitterly about competition from the farmer cooperatives. They point out that in 1930 the Federal corporate tax rate was only 12 percent, in comparison with the 38-percent rate today. (While smaller corporations pay a tax of 21 to 25 percent on an income of less than $25,000, they must pay 53 percent on earnings between $25,000 and $50,000.)

Businessmen contend that Federal tax exemption is the explanation for the increase in the volume of cooperative business and for the rapid rise in co-op net worth. They charge that the tax savings provide capital funds for the expansion of co-op activities—for the purchase of refrigeration plants for the storage of fruits, creameries for the bottling of milk and cream and processing of butter and cheese, gins and warehouses for cotton, oil wells, cracking plants, pipelines and filling stations supplying fuel oil and gasoline to the farmers, and for many other ventures.

The members and supporters of cooperatives answer that cooperatives should pay no Federal income tax because they are founded and operated to do business without making any profit. The doubtful value of the Federal tax exemption to farmer cooperatives is underscored by the fact that only about 60 percent of them take the trouble to qualify for the exemption. They embrace the view, expressed by Secretary of Agriculture Brannan, that "the existing tax status of farmer cooperatives is an aid to agriculture and is fully justified in the public interest."

Both sides admit that the heart of the issue is the practice of the Bureau of Internal Revenue of allowing all cooperatives—city consumer co-ops as well as farmer co-ops—to subtract from their total income the amount they pay out in patronage refunds, and to compute their tax on the remainder. In the case of consumers' and purchasing cooperatives, the patronage refunds are treated as an overcharge return to customers. In the case of marketing cooperatives, the patronage refund is considered as additional cost of goods sold. Co-op supporters argue that a commerical business obligated to return its profit to customers could also deduct such refunds in figuring out its taxable income.

Competing businessmen retort that the patronage-refund ruling is abused by the issuance of "scrip" dividend notes payable at some indefinite time in the future. They say that, since farmers are not actually refunded the cash, the cooperative has a tax-free source of retained earnings for investment and expansion that is driving its competitors to the wall. And, they add, "although these patronage dividends are supposed to be taxable income to the farmer in the year received, we'll bet that very few patronage refunds ever show up on a Form 1040–F."

The patience and wisdom of a Solomon may be required to resolve the conflicting views. Meanwhile, however, individual businessmen are crying, "Don't look to me for higher taxes. I am going out of business. I cannot compete with the tax-free cooperative."

"Nor to us," says the president of a farm-implement company. "We are turning cooperative. We will work for a salary and not for profit."

Of course, a dividend credit to eliminate the double taxation of corporate income would solve the problem; but this is so expensive to the revenues as to make the enactment of such remedial legislation in the immediate future extremely doubtful. Meanwhile, if modification of the existing tax treatment of cooperatives should be enacted, perhaps the next barefoot step along this thorny tax-exempt path would be an analysis of the Federal tax status of mutual-savings banks and savings-loan associations.

Interest is mounting in the need of an over-all revision of our tax structure. Perhaps the question of whether cooperatives should pay income taxes should not be decided apart from a more general overhauling of sources of public revenue.

General Counsel of NLRB Is Policy Maker as Well as Prosecutor

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. ADDONIZIO. Mr. Speaker, there is startling evidence that the NLRB general counsel is in a position not merely to prosecute, but also to interpret and apply the act.

Take, for example, the Taft-Hartley Act provision against excessive union initiation fees.

The act says that—

> In making such a finding the Board shall consider, among other relevant factors, the practices and customs of labor organizations in the particular industry and wages currently paid to the employees affected.

Notice that the act says "the Board shall consider," not "the general counsel shall consider." The act calls for collective deliberation by the members of the Board.

But the General Counsel alone can issue a complaint. The Board cannot issue one. If the general counsel believes that a given initiation fee is not excessive, nothing can be done.

A clear case of policy determination vested in a prosecutor.

The same thing is true with respect to the duty of unions and employers to bargain collectively. If the general counsel believes that a particular union or employer is excused from bargaining, or has fully satisfied its duty to bargain, he simply dismisses the case. The Board may believe that on the same state of facts the union or employer should bargain, or that it has not satisfied its obligations under law. But there is nothing the Board can do.

Even in election cases the Board cannot enforce its views without consent of its general counsel.

Only the Board can issue a certification. But this is not a binding order. An employer may refuse to honor a certification. A rival union may refuse to honor a certification.

Then, the matter is entirely up to the general counsel. He may prosecute or he may not prosecute. If, for any reason he refuses to prosecute, the Board certification is useless. It is a mere scrap of paper.

If an election is held during a strike and the strikers have been replaced, their eligibility to vote will depend on whether they went on strike against unfair labor practices by the employer, or for other reasons.

UNIVERSITY OF MICHIGAN LIBRARIES

The Board members believe that they have no power to decide the cause of the strike unless the general counsel issues a complaint. This means the strikers cannot vote if the general counsel, for any reason, fails to issue a complaint. In this way action or inaction of the general counsel may determine the outcome of elections.

What we have at the Labor Board today is no mere separation of the prosecuting function. Great policy-making power, at the initial stages of labor disputes, is in the hands of a single officer. It is time we corrected this situation.

I urge approval of plan 12, by voting "no" on the disapproving resolution.

Present Divided Organization of NLRB Creates Confusion Among Field Personnel and Overemphasizes Litigation

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. RODINO. Mr. Speaker, one weakness of the present set-up at the Labor Board that has not received sufficient attention is the dual and uncertain control of staff. Under the law the five-man Board has power to appoint personnel. Under the same law, the general counsel, an entirely separate and independent agency, has general supervision of the Board's field and legal staffs.

Over 90 percent of the work of the agency is actually performed and completed in the field offices. Election cases are the final responsibility of the five-man Board, but they are largely handled by the field staffs whom the law places under the supervision of the independent general counsel. A man cannot serve two masters. Shall he try to please the Board which has power to hire him, or the general counsel who has statutory authority to supervise him? This might not present a real problem where the two separate and independent agencies work hand in glove. But the record demonstrates that this is not the case. Frequent and important differences of opinion and policy have arisen between the Board members on the one hand, and the general counsel on the other. Moreover, the statute, as written, contemplates their independence of each other. Under the circumstances it is impossible for an employee in a field office to know whose policies to follow. The result is insecurity, uncertainty, and inefficiency. Mr. Speaker, I know of no other Government agency whose employees are placed under a similar disability.

Another activity which ought to be carried out under the supervision of a single policy maker, is the function of securing compliance with the law through informal procedures and agreements. Under existing law, this function is performed by employees who take their orders, not from the policy-making five-man Board, but from a single, independent general counsel. Under the old Board field employees became proficient in closing out cases through voluntary compliance or agreement, and by securing compliance with Board orders after hearing, so as to make further litigation unnecessary. Now these same employees are under the supervision of a prosecutor. They take a prosecutor's point of view. The public comes to regard them as prosecutors. This has had a most unfortunate effect on field settlement efforts. The testimony of Board Member Styles before the Senate committee is particularly pertinent on this point because he was until recently in charge of a field office. He testified:

> One of the great weaknesses of the general counsel concept has been the difficulty of administration at the regional level, because people wanted to litigate; people said, "This is a statute under which you prosecute. Now, get out there and prosecute."
>
> The whole approach of the Board in the past, of all its regional offices, was "Let us get the public," the employer, back in those days, "to comply with the law. Let us talk him into complying with it. Let us settle these cases if we can."
>
> I noticed in my own regional office that, the minute the new act was passed, there was a tendency on the part of everyone, not confined only to the attorneys who ordinarily like to go to court, who, after all, spend years in law school anyhow to get into the courts, and what to do when they get there, but the field examiners themselves, the people who really do the work of the Board, to say, "Let us litigate."
>
> They dropped their settlement efforts to a large degree. (Senate hearings, p. 228.)

Staff members are not to be too much criticised for this. In view of the frequent disagreements between the Board and the general counsel the staff is no longer in a position to tell the public just exactly what is agency policy. The confusion resulting from disagreement between equal but independent agency heads filters down to the staff, and on to the public. Under such a setup, field examiners will shrink from expressing themselves on agency policy. The inevitable result is confusion, uncertainty, and needless litigation.

If the only thing accomplished by plan 12 were the clarification of this situation and a restoration of an agency staff secure in the knowledge of who their boss is, its adoption would be eminently worth while. For this reason, among many others, I shall vote against the resolution of disapproval.

Destructive Foreign Competition

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. BRYSON. Mr. Speaker, some weeks ago I called the attention of the House to the increasing threat to our textile industry by the infiltration of textiles from Japan. Since that time, I have been giving further thought and study to this problem, making investigations through every possible channel, but, as yet, I have not compiled the data I have in hand.

Manifestly, our textile industries with their high wages, the average textile worker in the United States receiving more for an hour's work than a Japanese textile worker receives for a day's work, cannot continue to compete under these circumstances.

Of course I intend to continue my studies and seek to prevent this evil un-American practice by every possible means.

I attach hereto a newspaper article pointing out that a committee of outstanding textile men are now in Japan and, of course, we shall be anxiously awaiting their report.

TEXTILE INDUSTRY WORRIED BY COMPETITION FROM ABROAD; PRODUCTION BEING CUT BACK

SLOW BUYING AT HOME EXPECTED TO IMPROVE IN FALL TRADE

NEW YORK, May 6.—Threats of competition from abroad, slow buying at home, and cutbacks in production have returned to harass the textile industry.

Trade sources say the slow buying and production curtailments are only temporary. They say they're looking forward to a good fall.

But foreign competition—that has them downright worried.

The possible influx of foreign textiles into the United States troubles them more than a little. And in addition, dollar-shy world markets are finding it more convenient to buy from sterling-area industries.

When cotton-textile exports from the United States drop, American mills must cut back production. When production is curtailed there are going to be unemployed textile workers.

How much unemployment will shrinking exports mean?

Take an export figure of 1,000,000,000 yards of cotton cloth a year. That was the total in 1948.

BILLION-YARD YEAR FINE

The Cotton Textile Information Service figures that means work for 50,000 persons and an annual payroll of $104,000,000.

A 1,000,000,000-yard year for exports is fine. Many in the industry consider 700,000,000 yards a satisfactory figure.

But cotton-textile exports are slipping. They dropped from a billion yards in 1948 to 980,000,000 yards last year. That isn't too much of a drop.

This year, however, figures for the first 2 months are at an annual rate of 420,000,000 yards. And that's not good.

The cotton men aren't just sitting back twiddling their thumbs. They're starting with a survey of the Japanese textile industry, one of our large competitors in world markets before the war.

A committee headed by Robert C. Jackson, of Charlotte, N. C., executive vice president of the American Cotton Manufacturers Institute, has gone to Japan for a joint survey with British textile men.

Their purpose is to collect factual information for use as a possible foundation on which the industry can build a long-range policy for both domestic and world markets.

Japanese osnaburgs are an example of the things they are concerned over. Osnaburgs are a course cotton cloth used extensively for bag linings. They also are sometimes used for upholstery and sportswear.

REPORTS DISTURBING

Osnaburgs have been quiet in the domestic cotton textile market recently and mills specializing in that type of cloth have been disturbed by reports that substantial additional quantities of Japanese osnaburgs are scheduled to arrive here to compete with the American product.

Recently trade sources reported as much as 500,000 yards of Japanese osnaburgs had been sold here at 1 cent a yard under the comparable domestic fabric.

The domestic market for cotton textiles has been slow for some weeks. But most trade sources feel that the fourth quarter will be good. They do not expect a robust third quarter but they point out that normally is a slack period of vacation slowdowns.

At the minute folks just aren't buying. Hand-to-mouth purchasing has returned to the retail and converter markets.

The fabric-making mills have curtailed production by cutting back premium shifts—shifts on which overtime is paid. They prefer this to piling up inventories in slow times

Many trade sources look on this type of action as healthy. They say mills are a little gun shy after a depressing experience a year ago.

KEEP GOODS MOVING

Rather than be left with a warehouse full of unsold goods they slow production a bit, confine their operation to filling orders they have in hand. And when buying starts again they'll be set to roll again full tilt.

The slackness in recent weeks has been noticeable in woolens and worsteds as well as in cottons.

But the wool men, too, feel it is a temporary situation. One wool-trade spokesman termed it a great waiting period during which everyone is attempting to determine a level at which to stabilize.

Keen competition for the consumer dollar has brought the slow buying at retail levels. This in turn has delayed orders for fall goods by the converter—the garment maker.

But comes fall, he adds, business should be excellent. One source even went so far as to forecast a scramble for delivery of fabrics.

Meanwhile the Government is calling for bids on various types of cloth. Recent Government orders for woolen and worsted goods amount to around 5,000,000 yards. And in the cotton field, the Army Quartermaster has asked for bids on a total of 5,670,000 yards of gray cotton duck.

These orders probably will help several mills bridge a gap.

Prices for civilian goods in the fall? Most textile men think there will be no significant change. They say they just don't see how there can be with raw material and labor costs high and no likelihood of material changes in either category.

FOREIGN TEXTILES SEEN SOUTH CAROLINA PAYROLL THREAT

UNION, May 9 (AP).—South Carolina's economy is inescapably linked with the textile industry, now harassed by a potential influx of goods from cheap-labor foreign countries, a writer-lecturer on textiles said here today.

Mrs. Mildred Barnwell Andrews, long identified with the cotton and cotton-textile industries, said American textile exports have shrunk sharply and that a large quantity of Japanese osnaburgs sold cheaply on the American markets recently.

Mrs. Andrews, who addressed the Union Rotary Club, said the loss of a billion-yard annual market by American mills—exports were that much in 1948, but shrank drastically last year—can be translated into the equivalent of 50,000 jobs and an annual payroll of $104,000,000.

The American Cotton Manufacturers Institute, she added, believes United States tariff policy should provide proper safeguards to the American textile industry and its more than 500,000 employees. A joint Anglo-American textile group now is in Japan on a fact-finding mission.

Only in recent years have textile mills been able to earn profits comparable with those of American industry as a whole, Mrs. Andrews declared. A large part of these earnings had been plowed back into modernization and research, she said.

She cited State labor department statistics showing that South Carolina cotton-manufacturing plants began 1950 with $358,901,038 capital investment, an increase of $110,081,983 over 1948. She said average employment increased from 95,181 in 1937 to approximately 125,000 in 1949.

"You get a payroll in this State from the textile industry of approximately $284,000,000 a year (the 1949 figure, which reflected a recession in the industry) but which nevertheless is an amazing increase from the $72,000,000 in 1937," she said.

"Just visualize the enormous purchasing power represented by the textile-mill employment in South Carolina, and you get some idea of why continuous employment in the textile industry is important."

Senator McCarthy's Charges

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, the Saturday Review of Literature, an eminent and respected periodical published in New York, recently ran an editorial entitled "Subversion in the Senate." The editorial is an exercise in irony and is thought provoking. I ask unanimous consent of the Senate to insert it in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUBVERSION IN THE SENATE

The editors of the Saturday Review have carefully studied the records of the congressional hearings into the charges against communism in the State Department. As a result we have reluctantly come to the inescapable conclusion that the chief participant must inevitably be a Communist. We refer to Senator MCCARTHY of Wisconsin. This conclusion is based on a working definition of Communists and secret agents as used by Senator MCCARTHY. We are glad to present the documentary evidence:

First, guilt by association. For 4 years Senator MCCARTHY has belonged to an organization of which a well-known member has been a prominent supporter of the policies of the Soviet Union. Moreover, Senator MCCARTHY has actually worked full-time for that organization. We refer to the Congress of the United States, of which VITO MARCANTONIO, a consistent party liner, has been a Member since 1935.

Second, guilt by smokescreen. Senator MCCARTHY, inferentially and otherwise, has stated that the public anti-Communist activities of such persons as Dorothy Kenyon and Philip Jessup are ostensibly only a cover-up for their real activities and sympathies. The greater the apparent opposition to communism, the greater the real affiliation. This being the case, it is clear that Senator MCCARTHY's violent outbursts are merely intended to conceal his real sympathies somewhere on the other extreme. What better smokescreen than to attack the State Department of the United States?

Third, guilt by imitation. This is the most incriminating count of all, for it is apparent that Senator MCCARTHY has modeled his tactics after the notorious Russian purge trials. All the elements of justice in a democracy—due process of law, grand jury, presentation of direct evidence, the assumption that an individual is innocent until proved guilty—all these have been spurned by the Soviet as outworn bourgeois niceties. The Senator from Wisconsin has paid high honor to this Soviet conception of justice in his tactics on this matter; indeed, his use of slander and vilification under immunity bears an uncanny resemblance to the privileged position enjoyed by official character assassins of the Soviet Union.

Fourth, service to the cause. The easiest way to black any reasoned, impartial, and effective examination of subversion is through a helter-skelter, wild-jamboree approach that obscures the real problem. In addition, the damage to America's reputation abroad must be heartfelt satisfaction to those who have a large stake in the defamation of the United States. For this service to the cause the Senator is entitled to whatever distinctions the Kremlin can bestow.

Spending by Government

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. MILLER of Nebraska. Mr. Speaker, in my several visits to my district, I repeatedly said that I would vote for every cut offered in the appropriation bill, and that I would vote against all attempts to increase the amounts.

Mr. Speaker, the country is deeply disturbed about the spending of the Federal Government. They are disturbed about the 16 years of deficit spending under the Democrats. They realize their money is being polluted and the dollar buys less and less. They realize that inflation and increased taxes are two Frankenstein monsters that can destroy our economic system.

Mr. Speaker, the committee has been considering the one package appropriation bill for 5 weeks. It is interesting to note that 45 amendments have been offered to increase items of expenditures and 35 of them came from the Democratic side of the aisle. There were 36 amendments offered to reduce various items, and only 5 of them came from the Democratic side. The other 26 came from the Republican side, and they were rejected. We never did have more than five or six votes for reductions from the Democratic side of the House. That, Mr. Speaker, is the record to date. Your party has voted for continued deficit spending and high taxes. You did not vote for economy.

UNIVERSITY OF MICHIGAN LIBRARIES

The amendments offered by Mr. TABER, of New York, and Mr. JENSEN, of Iowa, should be adopted. They will mean a further reduction in the Federal Government of about 300,000 people and will cut appropriations about $1,500,000,000. I voted for these amendments and I hope that they stay in the final bill.

The administration is full of expensive plans and programs for leading the American people down the road to socialism. The programs grow and multiply. They all cost money. It means more taxes, inflation, and deficit spending.

The only way to stop deficit spending and balance the budget is to stop spending. It is just as simple as that. The Government is no different than the people. We must stop spending money for things we might want but do not necessarily need.

Mother's Day

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, Sunday, May 14th, the second Sunday in May, will be observed throughout the land as Mother's Day. Each of us in his own way will bestow love and devotion upon the best mother who ever lived, our own, and in so doing give honor where honor is due. It will be a wonderful day indeed.

This beautiful custom of setting apart one day in each year to pay just tribute to our mothers should never be abandoned or forgotten. We regard mother as the noblest, sweetest and best of all God's creations and in appreciation of her love and devotion pause to pay especial tribute to her this sacred day.

The real origin of Mother's Day dates back to the period immediately following the Civil War, when Mrs. Anna Reeves Jarvis, organized the mothers of her community in West Virginia. The avowed purpose at that time was the reuniting of families and invitations were extended to Union and Confederate soldiers and their families to meet, reestablish friendships and pleasant associations. The results were so encouraging and successful as to instill in the Jarvis family a sincere desire to promote on a national scale the spirit of love and honor. Miss Anna Jarvis, a daughter of Mrs. Anna Reeves Jarvis, a woman of keen intellect, broad vision, high ideals and commanding personality, developed and promoted the idea of honoring the Mothers of America, both living and dead. It was through her persevering efforts over a long period of time that Mother's Day has been officially recognized and proclaimed. Therefore, when paying tribute to our mothers, let us spare a fine thought of appreciation for Miss Jarvis, whose efforts made this special day possible.

The Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the seventeenth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Communism, today, is an all-Russian power play. In every important country in the world there is now a tightly organized and carefully trained force of Russian agents whose sole aim and object is to carry out the purposes of Russian foreign policy.

There is a very simple way to distinguish between these Communists and the local political groups in any country.

In our own, for instance, we have a number of legally qualified political organizations seeking to elect their candidates to public offices.

The Communists here claim themselves, too, a political party with all the legal rights and powers of any other. But unlike any other group on these shores, the Communists take oaths of allegiance to something they called the Marxist-Leninist line.

That oath ties them to the Communists in France in Pritain, in Germany—wherever other Communists may be—to fight and when need be, to die, for Stalin in Moscow.

Such is the Red thread that tied Dr. Klaus Fuchs, the German who became a Briton, to persons as yet undisclosed in the United States of America, and so resulted in the atom bomb being stolen for the Kremlin.

Such is the thread that binds the Harvard prize package, Alger Hiss, to the events of long ago and far away being reviewed here.

When you know how all this began, you know with certainty why things happen now and what to do about them.

And so it means something to us now that as soon as the Communists set up a government in Moscow in March 1918, they rebuilt the musical clock on the Spassky tower in the Kremlin so it would play not God Save the Czar, as of old, but the Internationale, world communism's fighting song.

Lev Davidovitch Bronstein, alias Leon Trotsky, knew why. He was home after years of exile and busy at the right hand of Lenin, the organizer of the Soviets.

In rapid order, Trotsky joined the Bolsheviks, became head of the Soviet foreign office, negotiated the peace of Brest-Litovsk with Germany that was the Kaiser's balance against United States entrance into Europe's war of 1914–18.

And then Trotsky became commissar for war, for he wanted to send Communist armies out against all the rest of the nations as soon as possible.

He was rolling high and wide with a private railroad train, a special commissary out of which to dole judicious gifts to factions that would remember him. For it was already obvious that among Communists as among all others, one boss follows another, sooner or later.

Trotsky, as Lenin's most spectacular lieutenant, was running with all his hands and feet and his lightning brain, to be next when Lenin would go over the river.

Trotsky was a really able soldier and he was a very clever plotter and deceiver. But Trotsky had one great weakness that turned out to be fatal. He was so vain that he could never see himself as others saw him.

He took flattery to be faithful adoration. And he was so interested in forming the Communist International that was to breed revolution abroad he overlooked something at home.

The consequences killed him.

He had failed to take care against somebody who was not a Russian at all, who did not care for drinking tea from a glass or wiggling his toes while he talked airily about "historical necessity" or "dialectical materialism" or explained to friends abroad the regrettable incident of machine-gunning the streets of Petrograd to "keep revolutionary discipline."

No. Lenin died, and Petrograd, which had been St. Petersburg, now became Leningrad. And Trotsky, unfortunately, was out of town when the boys got together to see who would be next up.

That was in 1924.

It took time, but just the same on January 20, 1929, the Gosudarstvennoye Politicheskoye Upravleniye, which means "state political board," and which we know as the GPU, issued the following order:

"Considered, the case of citizen Trotsky, Lev Davidovitch, under article 58/10 of the criminal code, on a charge of counterrevolutionary activity expressing itself in the organization of an illegal anti-Soviet party, whose activity has lately been directed toward provoking anti-Soviet activities and preparing for an armed struggle against the Soviet power.

"Resolved, citizen Trotsky, Lev Davidovitch, to be deported from the U. S. S. R."

The revolution was beginning to eat its own children.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the RECORD excerpts from a letter which I have received from a highly respected constituent, a close friend, and a leading surgeon in the city of New York, Dr. Richard Lewisohn, of 1155 Park Avenue, protesting against the curtailment of postal deliveries. The letter is typical of a large number of protests which I have received. I believe that it will interest the Members of the Senate.

There being no objection, the excerpt from the letter was ordered to be printed in the RECORD, as follows:

I was delighted to see that you spoke against curtailment of postal deliveries in New York. I hope you will get strong support from your colleagues in the Senate. It seems ludicrous that the richest city in the world should cut down on mail service. They have three deliveries in the residential section of London and four in the business section; one delivery a day seems a joke, like RFD.

This is the first time in my life that I write to a Member of Congress. So please don't disappoint me.

Dynamic Republicanism

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, it gives me great pleasure to include an inspiring and enlightening speech by the distinguished gentleman from Connecticut [Mr. LODGE]. I had the good fortune to hear this address delivered and felt that it was of sufficient importance to bring to the attention of the entire membership of the Congress.

DYNAMIC REPUBLICANISM

Ladies and gentleman, in Maxwell Anderson's play Valley Forge, George Washington says: "This liberty will look easy by and by when nobody dies for it." Well, it is less than 5 years since Americans were fighting and dying for freedom and yet our freedom is today more seriously threatened than at any time in our history. We cannot take freedom for granted. The great world conflict is still and most urgently a contest between freedom and slavery. In this battle what we do at home is inevitably related to our actions abroad. Indeed our ability to meet this somber challenge, to forge a less precarious peace will depend on what we do at home. It will depend in large part upon the survival of the two-party system.

If we had more than two major parties our political system would probably degenerate into a myriad of splinter parties reminiscent of Europe. We would in all likelihood have a minority government which would be far too weak to preserve political stability.

On the other hand, if we had less than two parties, we would have a one-party system and this would completely nullify our Constitution, neutralize our Bill of Rights, and invalidate all our free institutions. Our checks and balances would be but a nostalgic memory and there would be no separation of powers since all power would be concentrated in one partisan instrumentality.

The two-party system is the greatest bulwark of American freedom.

And yet we have a growing body of independent voters in America. More serious still, there were in the last presidential election some 45,000,000 people who failed to vote.

The independent voter represents the balance of power in our elections. To some extent this can be a healthy condition. It can put the major parties on their mettle. It can engender a fine spirit of political competition out of which the country can benefit. It can result in electing the best candidates to public office. It can produce sound policies and progressive programs.

But if independence of party is carried too far it can undermine our two-party system.

The increased independence of the American voter is in large part the fault of the parties themselves. It is due to an inability to make the parties attractive to a larger number of people. The Republican Party contains people of varying views, and this is natural since our party is a national party and since our country includes many races, creeds, occupations, and climates. Politics is in large part the art of conciliating varying and differing groups of people, of bringing them in and keeping them in under one partisan roof. The Republican Party must convince a majority of the people who vote that it has a constructive plan of action which will respond more effectively to the needs and aspirations of all the people than the tired clichés, the reckless promises and the special interest appeals with which the Democrats have in recent years preyed upon the fears and apprehensions of the voters.

But this electoral independence is also, it seems to me, due to the fact that many people do not associate themselves with the political life of the Nation. It is due to the tendency of many independent voters to think that if the Republican Party should fall by the wayside, if it should succumb for lack of adherents, or because of an excess of independents, then that is "tough luck" for the Republicans. That is hard on the office-holders and on the party workers. It is none of their affair. Yet it is, I fear, desperately true that the disappearance of the Republican Party would affect them as much as it would affect the Republicans. It would affect the Democrats. It would deeply affect the lives of all Americans. The American people have a great stake in the survival of the Republican Party. The independent voter depends for his independence upon the survival of the two-party system.

Narrow partisanship is, of course, deplorable. Partisanship which places party above patriotism, patronage above principle, and personalities above policies is highly reprehensible. Yet the best way to discourage such sordid attitudes and such demagogic practices is not to retire to the sidelines in derisive independence but rather to plunge into the political melee and endeavor to influence the party of one's choice in the direction of the people's real welfare. The best, the only way to be effective politically is through the medium of one of our two major parties. We cannot give a vigorous demonstration that we believe enthusiastically in our kind of government unless an increasing number of Americans become increasingly active in politics.

In creating a broader base of political participation it is vital that the young people of America should play a prominent part. Based upon a Census Bureau estimate of July 1949 there are some 24,000,000 people in this country between the ages of 21 and 30. It is only by strong infusions of new blood that the Republican Party will survive as a vital and effective political force. The Republican Party is, in its original concept and by its best traditions, the party of youth, the party of new ideas, the party of individual freedom. We are the young Turks, the insurgents. We are the party of reform.

Some Republicans contend that the reason for our lack of success at the polls is that the Republican Party has become infested with a point of view which has been labeled me-tooism. Others maintain that Republican defeats are due to a philosophy which has been described as reaction. The result of this pulling and hauling has been to create a spirit of division, defeatism, and defection which has prevented us from going forward as an integrated and dynamic team. It seems clear to me that if our choice is indeed between copying the Democrats on the one hand and a die-hard horse-and-buggy philosophy on the other, then we are deservedly doomed not only to defeat but to disappearance. Happily for the American people, this is not our choice. That this is not our choice is underscored by the interesting fact that an increasing number of northern Democrats, anxious to appease the growing apprehension among the people of our country, have been talking increasingly about the merits of the private-property free-enterprise system, about the need for economy in government, about our great tax burden and about a strong antiappeasement policy. In sober truth they are becoming me-too Democrats.

Now there is no occasion for us to respond defensively to the personal abuse and name-calling of the Democrats. If they choose to wallow in the weasel words of recrimination and demagoguery then let them be hoist with their own political profanity. We must attack. We must take the offensive. We must fight the great battles on the broad highways of Nation-wide debate and not in the side streets and back alleys of Pendergast politics.

There is no lack of momentous issues to be thrashed out during this election year. There are many grave public questions on which we can take a strong and vital stand without on the one hand betraying the timeless principles on which our party was founded or on the other hand espousing a weak and ignominious philosophy which would require us to rubber stamp every half-baked New Deal proposal.

For instance, we should take a strong stand on civil-rights legislation. The Democrats are weak, apologetic, and divided in this whole field, and while the Democrats have been arguing with each other and maneuvering for partisan advantage we have been acting in the best interests of all. We must continue this activity. It is right, it is just, and it is in the best Republican—Lincolnian—tradition.

On labor legislation we should floodlight the shocking hypocrisy of the Democrats. The Democrats have done great damage to the cause of labor by their determination to treat the welfare of the working men and women of America as a political football rather than as a matter involving the public interest. We should remind the voters that when the repeal of the Taft-Hartley law was brought to the floor of the House, out of 263 Democrats only 30 voted for repeal. We should recall that these same Democrats who voted against repeal campaigned on the cynical slogan that they favored repeal. These are the self-styled friends of the common man who referred to the Taft-Hartley law as a slave-labor law. And then we can point out that these same Democrats not only voted against repeal of the Taft-Hartley law but also voted against virtually all Republican-sponsored amendments which would liberalize the law, eliminate its most serious defects, and accommodate it to changing circumstances.

We can discuss the question of high taxes and point out the many hidden taxes which are depriving the people of this country of a large share of their earnings. It was Abraham Lincoln who said that a man is entitled to the fruits of his labor. While recognizing that our Government needs a large revenue at this time of crisis and change, we should point out that an early implementation of the Hoover Commission reports and recommendations can bring about great economies. We have a duty to do this in spite of the fact that the Hoover Commission reports and recommendations are not a partisan matter and because of the fact that there is a lamentable tendency in some administration bureaucrats to block a proper streamlining of our Government. Surely even those who want the Government to do so much must want it done without waste and with efficiency.

We can point out that job security is more important than unemployment compensation, however necessary that may be, and we can add that job security is fast disappearing not only because of the import of goods from iron-curtain countries but also because of the absence of adequate incentives for equity investments. The grab-bag policy of this administration deters our citizens from investing their savings and thus providing new jobs. It has been estimated that the average job in America requires a $6,000 investment. It is a disservice to labor to discourage such investments.

We can remind the people also that while the Democratic Party is talking loud and long about security, they are resorting to the very policies which undermine security. They are undermining it by a policy of deficit

UNIVERSITY OF MICHIGAN LIBRARIES

spending which pumps into our national economy more money than the taxes can pay for and which, therefore, diminish the value of the dollar. This is inflation. Indeed, the American dollar has been cut 40 percent since before the war. This year we face a deficit of approximately $5,000,000,000, and this will further depreciate the value—the purchasing power—of our money.

Here one might ask how much security for the average citizen is there in a system which requires that you pay your taxes in a dollar worth 100 cents, that you pay for your social security in a dollar worth 100 cents, that you pay for your old-age and survivors insurance benefits in a dollar worth 100 cents, that you pay for your pensions and retirement funds in a dollar worth 100 cents, and then when you are old you receive payments in a dollar which, if present policies continue, may be worth only 15 cents? Is that security?

How much security is there for the many millions of American citizens who are living on fixed incomes, on endowment policies, and so on, when their Government is consistently eating away these modest incomes, not only by taxes but by cutting the value of the national currency?

The Democratic administration in Washington is attempting to bribe the people with the people's money to vote for the Democratic politicians. This is immoral; it is wrong; it is an issue.

And there is also a clear-cut cleavage on social legislation. Here the Republican Party is not, in my opinion, faced with a dilemma. We should not turn our backs on social problems where they exist; but neither should we feel bound to embrace the solutions offered by the Democrats. We of the Republican Party have the vigor and the talent and the intellectual creativeness to produce better solutions. But the fundamental and irreconcilable difference between the point of view of the Democrats and our point of view is that for us social legislation represents an attempt to respond to a human need, while for the Democrats it is usually part of a plot to concentrate additional power in Washington. Such concentration of power is, of course, entirely agreeable to the Communists since it enables them more easily to destroy the American economy and, what is even more important, cause a breakdown in the American character. It was Herbert Hoover who pointed out recently that if we continue along this profligate path, private charities will cease to exist and the element of human compassion, which is so wonderfully a part of our whole culture, will have been sacrificed on the altar of Government panaceas.

It is precisely because the Government must be the servant of the people that it must be wise enough and strong enough to respond effectively to the problems of the day. The Government must be flexible and alert in order to function in areas where our private-property system does not reach. But it should only run the traffic signals; it should not operate the automobiles. It may regulate; it should be reluctant to own. This is a delicate field in which the Government must seek to protect the freedom of the individual without crushing him. And then we must also bear in mind that however valid much so-called social legislation may be, the essential welfare of the American people depends upon the continuation and increase of the vital opportunities for employment and effort which are inherent in our free society. When a government attempts to redistribute to its citizens more than the citizens can produce, inflation and eventual dictatorship are the inevitable result.

These then are some of the great domestic issues with which we are faced.

Now let me turn for a moment to foreign affairs, mindful of the fact that these matters, involving as they do the grim issue of life and death, should be treated on what Senator VANDENBERG has appropriately referred to as an unpartisan basis. But let us not forget either that there is an inevitable interdependence between what we do abroad and what we do at home. Moreover, our standard of living, our social improvements, our prosperity will dissolve if we should have war. And so, while this overriding issue which broods over all our doings should be met without regard to party advantage, it is, I venture to think, more important to be right than to be bipartisan.

It so happens that I have been a nonpartisan supporter of foreign-affairs legislation ever since I have been in Congress. But I do not feel that because I am a Republican, therefore I have no right to criticize or to disagree. After all, the Democrats are not of one mind on these matters. Indeed, I am profoundly convinced that the American people are entitled to a second voice on these fateful questions. And I believe also that to attempt by cries of partisanship to deprive our people of these criticisms in matters of such importance is to subvert the great purpose of our political system at a time of increasing national peril.

If we Republicans abdicate our prerogatives in the field of foreign affairs, America will soon become an island of liberty in a sea of slavery.

While I am frequently in disagreement with members of both parties, a partisan attitude in this field is dangerously out of place. Accordingly, it is most unfortunate that our President has by his actions shown that he believes more firmly, more instinctively, in partisanship as usual, than in bipartisanship at the water's edge.

President Truman has accused certain Republicans of partisanship in their attacks on this country's foreign policy. He went further. He said these Republicans are making partisan attempts to sabotage the bipartisan foreign policy of the United States, and he is reported as saying that such efforts during the cold war are just as bad as trying to shoot our soldiers in the back in a hot war.

I deplore smear tactics. I deplore smear tactics whether they are employed by Republicans or Democrats, and particularly when they are employed by our President. I think it is a dangerous business to attempt to assess the motives of others. Moreover, while I do not believe in innocence by association, neither do I believe in guilt by association. Because of this I do not feel responsible for the positions taken by my colleagues in the Congress. But I do believe that our President must be held responsible for his own expressed attitudes, and I am convinced that such extravagant pronouncements at a time of international crisis and internal tension are not helpful to the cause of bipartisanship at the water's edge. They will accentuate the very condition which our President decries with such violence.

Indeed, such petulant outbursts as those recently made by our President exacerbate a situation which is already highly irritated. It is most unfortunate that our President should not use the prestige of his high office in efforts to bring divergent elements together instead of driving them farther apart by intemperate statements. Perhaps I may respectfully venture the suggestion that he should attempt to emulate General Eisenhower's behavior in the lamentable armed services controversy: Pour oil on troubled waters. For surely the President himself is open to the accusation of partisanship when he singles out Republicans for attack and does not also attack the Democrats who have joined in the outcry against the foreign policy of this administration. If the President felt called upon to attack the critics of the State Department, he should have included members of his own party.

But it would have been wiser had he not attacked at all. By such attacks he gives aid and comfort to the Communists at the same time that he accuses certain Republicans of being an asset to the Kremlin.

Furthermore, our President is in a most vulnerable position when it comes to such accusations. The cataclysmic results of the agreements made at Yalta, at Tehran, and at Potsdam are, I fear, of far more terrible consequence in the cold war in which we are inextricably engaged than are the statements now being made by certain Members of Congress. Certainly these historic arrangements have been an incomparable asset to the Kremlin.

And there have been other great assets to the Kremlin for which the Republicans cannot be held responsible. You will recall that it was contended a short time ago that the dictator of Russia was "good old Joe," and that we could "get along with him." It was also thought, as Hanson Baldwin has pointed out in an interesting article in the Atlantic Monthly, that the Politburo had given up its policy of world conquest and was sincerely desirous of having friendly relations with capitalist governments. And there were other mistakes for which we could hardly be held responsible, such as that Russia's entry into the war against Japan was essential to victory and was necessary to save American lives. You will also remember the apprehension that Russia might make a separate peace with Germany and the effect that this had on our strategists. These mistaken judgments have been real assets to the Kremlin. I mention these grievous and costly errors not in order to recriminate over what has been done, but simply to set the record straight. A dispassionate inspection of the past can perhaps help us to rescue the future.

Then, too, it is pertinent to recall that at the time that the Alger Hiss case first arose, the President made his celebrated red-herring statement. Subsequent events have amply demonstrated the dangerous inaccuracy as well as the political nature of this comment.

Due in large part to the Alger Hiss case many people in our country are deeply apprehensive regarding the Department of State. While this apprehension is natural, it is not sufficient reason for our President's outbursts of anger. I had hoped that our President would sympathize with that sincere apprehension and would himself take the necessary steps to increase confidence in our State Department. I had hoped that he would help the cause of unity by attempts at conciliation rather than assist the forces of division and agitation by recrimination and abuse.

I now recognize that this was hoping against hope. Indeed, there was, I suppose, little basis for such hope.

A cursory glimpse at the record will disclose that in the campaign of 1948 the President described the Eightieth Congress as a "do-nothing" Congress. This was the Republican-controlled Congress which at the President's request provided aid for Greece and Turkey, passed the Foreign Relief Act and the interim-aid bill, and created the Marshall plan. This was the Congress which, at the President's request, passed the selective service law and the measure providing for unification of the Armed Forces, and approved the loan of $65,000,000 for the construction of the new UN headquarters. These are but a few of the many notable accomplishments of the Eightieth Congress. The taxpayers of America who are paying the bill don't think that this massive legislative achievement is nothing. And if all this was nothing, then why did the President ask for it?

Unfortunately, this Presidential attitude is at least consistent. In the campaign of 1948 the President refrained from attacking the 106 Democrats who voted for the Taft-Hartley law and leveled his attacks exclu-

sively on Republicans who had voted the same way. He made it clear then that he does not believe that the welfare of the working men and women of this country is entitled to bipartisan consideration. I believe that it is. I believe that he has rendered a grave disservice to the cause of labor.

But be that as it may, the President has from time to time made it devastatingly clear that he is not so much interested in unity in confronting the Communist aggressors as he is in making political capital out of the unfortunate and dangerous situation which now exists in the Congress, a situation which, it can be said in all fairness, he has done much to bring about.

I may say that some of us Republicans anticipated this predicament and expressed our preoccupation last year during the New York senatorial campaign. Surely the President must have known that the great humanitarian and statesman, John Foster Dulles, an eminent Republican, could be of more value to him in the preservation of a nonpartisan attitude toward foreign affairs than could the distinguished Democratic Senator HERBERT LEHMAN, whatever his attributes. Yet, the President went out of his way, as did other leaders of the Democrat Party, to give John Foster Dulles the knife in a cynical and reckless exhibition of vicious attacks and partisan prejudices rarely equaled in the political annals of our country.

I am delighted that our President has recently appointed Mr. Dulles as a principal adviser to Secretary Acheson, and I am glad, also, that Mr. Dulles has accepted this appointment.

With this excellent selection, it was to be hoped that our President had at long last understood, and then, alas, just the other day our President chose to announce that he intends to campaign in the congressional elections this fall on foreign-policy issues. He said this at a meeting with members of the United States Commission to the United Nations. This was not only in very bad taste, since politics is supposed to have no place in international discussions, but his statement also produced the impression that he was criticizing the entire Republican Party, including those who have supported the foreign policy of the administration. As David Lawrence pointed out, the President made no differentiation between those Republicans who support the bipartisan concept and those who oppose it. Accordingly, says David Lawrence, he has given cause for the assumption that, no matter what support an individual Republican gives to the administration's foreign policy, the leader of the Democratic Party in the White House will refuse "to recognize such service in the only place where restraint has been urged, namely, in political contests."

It is also to be regretted that Mr. Averell Harriman, who, as Ambassador at Large, is our diplomat for the European recovery program—a creation of the much-maligned Eightieth Congress—should deliver himself of a speech as partisan as that which he made a week ago in New York. Such an utterance seems to me ill-timed and unwise.

Handsome is as handsome does. Bipartisanship must, by definition, be a two-way street. The foreign policy of our country is, under the Constitution, primarily the responsibility of the Chief Executive. The President must take the lead in creating a climate of unity. Perhaps, clever politician that he is, he feels that since the Dewey unity campaign failed in 1948 he will have no part of it. Perhaps his profound partisan predispositions incapacitate him for nonpartisan attitude. I do not know. But it does seem clear that, because of his partisan indiscretions, the President has made it difficult for himself to call upon the magnanimity of those Republicans who have been working for a nonpartisan approach to these great and challenging questions while he descends to the lower levels of political combat to thrash out these urgent matters in a partisan, knock-down, drag-out, no-holds-barred, brass-knuckle political brawl.

In the hope that he would see the light, I have remained silent while the President has made vociferous statements characterized by vindictiveness rather than by a lofty desire to reach useful solutions. I feel that the time has come for me to speak and I deeply regret the necessity to speak in these terms. But in sober truth the time is out of joint, and we live in the midst of restless events which surpass us all and which are no respecters of persons.

In reply to a shallow suggestion recently advanced by the senior Senator from Connecticut as a nostrum against war, Secretary Acheson said, and he said it well, that what we need in the cold war is steady nerves and firm resolve. Surely we are also entitled to expect some poise and some vision from the President of the United States. Total diplomacy must ultimately depend upon the united effort of the American people. It is a primary responsibility of the President so to conduct himself as to help in creating this unity.

While I do not always agree with the Secretary of State, for my part I shall continue a nonpartisan attitude in an effort to help achieve a policy which will enable us to win the cold war. For if we do not win the cold war, we shall have a war in which the penalty may be slavery or death.

I continue to harbor the fervent and prayerful hope that our President will consider the dangers to this Republic ahead of the political campaign of 1950.

For I need hardly stress the remorseless fact that we are in mortal danger not only in Europe but in Asia. And while, in general, I have gone along with the President's recommendations regarding the European area, I am convinced that in Asia the administration has been engaged largely in attempts to justify its errors instead of to correct them.

The Secretary of State, in my opinion, is most unconvincing on the Asiatic question. And, whereas in Europe we are bringing aid, in Asia we should, according to him, rely mainly on the defenseless anger of the Chinese to liberate themselves by the spread of Titoism. Yet at this very moment we have it within our power to help to safeguard southeast Asia—to help to liberate the people in China—by helping the anti-Communist forces on Formosa. It has been reliably estimated that an expenditure of two or three hundred million dollars could safeguard this island from Communist invasion. I recommend, not intervention, not the American Army, Navy, or Air Force, but aid on the Greek pattern. To date no satisfactory reasons have reached me why this should not be done.

We cannot base a successful foreign policy on a doctrine which calls for hunting with the hounds in Europe while we run with the hare in Asia.

The Republican Party must speak out on these and on all other matters involving the national interest.

The present administration has grown old and tired in office. While mouthing hypocritical incantations to freedom and liberalism and human rights, they have become the party of authority, of reaction, and of regimentation. It is in the interest of all the people that the Democrats should be defeated for public office next November.

Abraham Lincoln said: "Revolutionize through the ballot box, and restore the Government once more to the affections and hearts of men by making it express, as it was intended to do, the highest spirit of justice and liberty."

Dynamic republicanism is needed to accomplish this wholly desirable end. We Republicans can take heart from the sure knowledge that our opportunities for useful service are equal to our unprecedented responsibilities.

Ladies and gentlemen, this is the challenge to the young people of America; this is the challenge to the Republican Party. This is the challenge to America.

Tax Tricks—Millville Republican Comments on Congressman Hand's Recent Statement on Hidden Taxes Imposed on Low-Income Groups

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HAND. Mr. Speaker, the Millville Republican recently commented on my statement concerning indirect and hidden taxes, and I am including their editorial in the RECORD. I do so because of my conviction that we will never get away from extravagance, deficit financing, and high taxes until the average American family realizes that no matter how small their income is, they are paying their full share of the bill.

The editorial follows:

"If more Americans realized how much they pay in taxes—direct and hidden—each year, their clamor would force real economy in Government." That is the opinion of Congressman HAND.

A lot of people don't think they pay taxes, or at least very little, simply because they do not own their homes or because they pay only a meager or no income tax. Congressman HAND calls this "the greatest fallacy of modern times." He would like to make every citizen in this congressional district aware of how they are being victimized by tax trickery.

The Congressman in a recent public address cited the study of the American Taxpayers Association. This showed in actual case studies that a man earning $960 a year paid $123.08 annually in hidden taxes; a man earning $1,800 paid $243; and a man with $2,400 income paid $314.76 in hidden taxes.

The association's survey traced various products from the first step to the point of sale. There are 78 different taxes on a quart of milk, 151 on a loaf of bread, 100 on an egg, 125 on a woman's cotton dress, 118 on a man's suit of clothes, 154 on a cake of soap, and 201 taxes on a gallon of gasoline.

Hidden taxes, according to the study, take $10 of every $30 of rent, nearly $7 a year on every telephone, one-third of all normal day-to-day living expenses.

On a $7.85 cotton dress there are $2.20 in hidden taxes. An automobile that costs $1,600 to $2,000 is encumbered with 206 taxes amounting to from $355 to $466. A study made on a woman's hat showed that it carried 64 Federal taxes, 43 State taxes, and 41 local taxes.

Congressman HAND contends "until the majority of Americans fully realize the huge slice that taxes take from their annual incomes, until they realize that no one escapes hidden taxes, there can be but little hope for genuine economy in Government. It is easy to hide taxes on the things everyone buys in order to give the public all the services and things that so many people think they get for nothing from the Government."

UNIVERSITY OF MICHIGAN LIBRARIES

President Truman's Speech at Seneca, Nebr., on May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. O'SULLIVAN. Mr. Speaker, the Presidential train, proceeding westward on May 8, 1950, stopped for a brief time at Seneca, Nebr., and was greeted by a cheering crowd who were privileged to hear the President make the following remarks:

I didn't think there would be very many people here this late in the evening. I am surprised and really appreciate your greeting me. I appreciate it more than I can tell you.

Since yesterday afternoon, I have traveled halfway across the country. I have met and talked with a great many people. There is no better way for a President to find out what people are thinking about, and what they think of the great problems of today than to come out here and exchange ideas with you.

Tonight I want to talk with you briefly about the greatest problem we have today. That problem is how to obtain a world peace. When you stop to think about it, there is nothing more important to us than that.

This is the fifth anniversary of VE-day. In the last 5 years we have learned that the road to peace is a most difficult and expensive one. Eventually we will get the kind of world peace we are working for. It will come when the great majority of the people in the world have learned that the kind of democracy we have in the United States offers more to the average citizen than any other system of government.

Some people forget that what we do here at home has a direct bearing on whether there will be peace in the world or not. Peace depends on our staying strong, and remaining prosperous, and making constant improvements in our democracy. That is why we need to see that business and industry continue to grow. That is why it is so important for us to press forward with better housing, better health, better schools for all our own people. That is why it is so important that we have strong and prosperous farms.

I am working for these goals because I believe that they will not only strengthen this country, but will provide the best means for achieving world peace.

I am more than happy that you came out here tonight, and I am more than happy that I stayed up to come out here and talk to you tonight. I started out on this trip to let you know that I am still working for the same goals, and trying to do the same things for the welfare of the country that I was when I was out here asking you for votes.

I think that we could accomplish the things that we really want to accomplish if we work hard enough to get them done. I tried to prove that to you in 1948. I think I did. We still have a great many things that need to be done in this country, and in the world.

I am going around to Grand Coulee Dam, and out to Wyoming, Montana, and North Dakota, Minnesota, and Wisconsin, and am going to finally wind up in Chicago; and when we get through, I think the people of the United States will understand that my position on the great issues which face this country and the world has not changed, that I am still working for the same goals, and I am doing my best to make this Government a government of all the people, that I am doing my best to attain world peace, a peace that will last and that is to the interests of all concerned.

I appreciate most highly your coming out here tonight, and I thank you very much for your kindness.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a series of telegrams which I have received from industries and businesses in my home State, showing the very serious unemployment situation now existing and which will become more serious as the result of the present railroad strike.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MANSFIELD, OHIO, *May 11, 1950.*
Senator BRICKER,
Senate Office Building, Washington, D. C.:
Mansfield is materially effected as a result of train stoppage on Pennsylvania Railroad. If your office can be helpful we solicit your cooperation.
MANSFIELD CHAMBER OF COMMERCE.

WELLSVILLE, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building, Washington, D. C.:
Rail strike has paralyzed our operations affecting 700 employees as well as our customers since we are served only by Pennsylvania Railroad. Please use your best efforts to terminate this interruption.
STERLING CHINA CO.

STEUBENVILLE, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building:
Rail strike if continued will necessitate complete lay-off of all personnel.
H. W. HENNINGS, *President,*
CHICAGO WALL PAPER CO.

WARREN, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building, Washington, D. C.:
The strike on the Pennsylvania Railroad will shortly shut down our plant. After a steel strike and a coal strike this railroad strike is ruinous. We respectfully urge you to use your good office toward an early settlement.
J. N. KERR, *President,*
THE OHIO CORRUGATING CO.

CIRCLEVILLE, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Washington, D. C.:
As a patron located on the Pennsylvania Railroad at Circleville, Ohio, the trailroad trainmen strike starting 6:00 a. m. this morning will close our plant completely, depriving our customers of approximately 30 cars animal and poultry feed daily, badly needed for the production of poultry, eggs, meat and milk. Also approximately 200 men will be laid off. We urge you to take all possible action to effect settlement.
JOHN W. ESHELMAN & SONS.

COLUMBUS OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:
Strike of firemen and engineers already crippling and will soon result in complete shutdown of this plant affecting 1,500 employees. Request that you use every means at your disposal to terminate this strike at once.
BUCKEYE STEEL CASTINGS CO.,
F. H. BONNET, *President.*

ROSEVILLE, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:
Your support solicited to settle railroad strike. Business suffering.
ROBINSON RANSBOTTOM POTTERY CO.

ZANESVILLE, OHIO, *May 10, 1950.*
Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:
Appreciate your best efforts for early settlement of present railroad fireman strike.
DRESDEN PAPER MILLS CO.

COLUMBUS, OHIO, *May 10, 1950.*
Senator JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:
Today's trainmen strike paralyzing certain of our railroads promises a chaotic condition within this territory and to our business. It is ridiculous that our Government would permit such disregard of public welfare and we must ask that you exert every possible effort to have this situation corrected without delay. We appreciate your position but we know only you as people to whom we can call upon. If there is anything we can do in any other fashion, won't you wire us what to do in order to end this unnecessary interruption to a business that is already staggering.
THE BAKER WOOD PRESERVING CO.,
R. M. HAMILTON, *Vice President.*

EAST PALESTINE, OHIO, *May 10, 1950.*
Senator JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:
Our plant with 100 employees is now shut down indefinitely for the duration of the strike in effect on the Pennsylvania Railroad. This will throw 100 people out of work and on unemployment compensation. We trust that you will use your best efforts to bring this strike to a conclusion.
ADAMSON CO., INC.,
D. B. GILLIES, *President.*

WAYNESBURG, OHIO, *May 10, 1950.*
Hon. JOHN BRICKER,
Senate Office Building,
Washington, D. C.:
Railroad firemen's strike and resulting shutdown of Pennsylvania Railroad west of Harrisburg is serious threat to continued operations of this company and to the local public interest in the continued industrial operations on which the people of this community are dependent. The executives of this company point out that industry-wide labor monopolies are permitted under present Federal laws to take action incompatible with public interest and believe they should be restrained and regulated by Federal law as industrial monopolies, including the railroad, long have been.
WHITACRE GREER FIREPROOFING CO.
D. D. WHITACRE.

WEST LAFAYETTE, OHIO, *May 10, 1950.*
Senator JOHN BRICKER,
Washington, D. C.:
What can you do to cancel this railroad strike? We can't even receive mail regularly.

More than a couple of days of this will cause severe losses to this company because our competitors are not affected.

THE JONES METAL PRODUCTS CO.,
E. F. MULLIGAN.

CANTON, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Pennsylvania Railroad strike crippling economic life of our community. What immediate action can you take in Washington to end strike?

CANTON CHAMBER OF COMMERCE,
G. R. HOSTETLER, *President.*

NEWCOMERSTOWN, OHIO, *May 10, 1950.*

Hon. JOHN BRICKER,
United States Senate,
Washington D. C.:

The refusal of the railroad unions to abide by the recommendations of fact-finding boards is a serious threat to the economy of the Nation. We strongly protest the utter disregard of the public. The inaction of the Truman administration is beyond comprehension.

HELLER BROS. CO. OF OHIO,
GEORGE H. HODAPP, *President.*

SALEM, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Continuation of rail strike will force complete shutdown of this plant with 800 persons employed within 5 days and result in shutdown of our two affiliated plants with 1,300 employees at Ford City, Pa., and Marysville, Ohio, immediately thereafter. We earnestly request your influence in obtaining immediate settlement of the rail dispute.

THE NATIONAL SANITARY CO.,
LOUIS PROBST, *Vice President.*

CANTON, OHIO, *May 10, 1950.*

Hon. JOHN BRICKER,
Senate Office Building,
Washington, D. C.:

As shippers of glazed tile face and paving brick being used in essential construction including schools, hospitals, and public utilities, we urge all possible speed in early conclusion of rail strike and without further featherbedding. A continuation of strike means loss of production to us and of wages to our employees.

METROPOLITAN BRICK, INC.,
D. J. RENKERT, *President.*

PITTSBURGH, PA., *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

The railroad strike is seriously affecting operations at our East Palestine, Waynesburg, and Magnolia, Ohio, plants. We ask your good offices and efforts in restoring vital rail service to our country at the earliest possible hour.

NATIONAL FIREPROOFING CORP.,
R. A. SHIPLEY, *President.*

CLEVELAND, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Eleven hours of railroad strike conditions resulting from unreasonable demands on part of one small group of workers demonstrate clearly paralyzing effects upon our national commerce. Respectfully urge governmental action to stop this hindrance which stands in way of normal conduct of business and spread through the welfare of all.

F. R. HYSELL,
General Traffic Manager, Glidden Co.

WILMINGTON, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Current railroad strike imposing great hardship on our business. It appears to be without any just reason and we respectfully ask that you use your best efforts in urging termination.

THE IRWIN AUGER BIT CO.

CAMERIEGE, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

We are greatly handicapped here due to lack of facilities of Pennsylvania Railroad caused by strike. Anything you can do to get railroads working again will be appreciated.

THE CAMBRIDGE GLASS CO.

WELLSVILLE, OHIO, *May 10, 1950.*

JOHN W. BRICKER,
Senator, Washington, D. C.:

Honorable Sir present railroad strike causing undue hardship to ourselves and customers. Why does the public have to be continually plagued with these hardships? Please use your efforts to get an early settlement.

WELLSVILLE CHINA CO.

TOLEDO, OHIO, *May 10, 1950.*

Senator JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

On behalf of the many business and industrial establishments who are highly dependent upon New York Central, Pennsylvania, and other rail service curtailed by strike of Brotherhood of Firemen and Enginemen. The Toledo Chamber of Commerce urges you to extend every effort to seek end of this stoppage.

WAYNE E. KAKELA, *Executive Manager,*
TOLEDO CHAMBER OF COMMERCE,

MANSFIELD, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Our company is located on side track of Pennsylvania Railroad. The present strike on this railroad has greatly inconvenienced delivery of outgoing production of much needed building materials, baths, lavatories, and sinks. If continued for 1 week it will be necessary to lay off approximately 600 employees. The issues as we understand them are so fantastic that we urge that steps be taken immediately in the public interest to bring about the operation of railroads without penalizing the carriers.

THE HUMPHREYS MANUFACTURING CO.,
M. A. DOWNS, *Vice President.*

COLUMBUS, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Must have early settlement. Rail strike crippling business and will cause untold suffering of millions by action of only a few. Use all power to settle without delay.

R. J. JOYCE,
Chairman, Car Efficiency Committee, Ohio Valley Transportation Advisory Board and General Traffic Manager, the Central Ohio Paper Co.

CLEVELAND, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Imperative you do everything possible to expedite end of railroad firemen's strike seriously affecting our mine operation in Ohio.

CHESAPEAKE COAL CO.,
EDWARD R. SNEAD, *President.*

CANTON, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Every effort should be made to terminate existing rail strike which is discriminatory between certain areas and railroads and is seriously affecting us as well as other shippers and receivers in this area. At present we have no passenger or express service. Mail is being seriously delayed. Freight service impaired. Every effort should be made toward an early settlement. We urge your support for prompt action.

HOOVER CO.,
J. F. HATTERSLEY,
Executive Vice President.

ROSEVILLE, OHIO, *May 10, 1950.*

Hon. JOHN W. BRICKER,
United States Senate,
Washington, D. C.:

Present rail strike paralyzing manufacturing business this district also delaying reconstruction of our pottery plant destroyed by fire recently. Please take necessary steps to relieve this serious situation.

THE NELSON McCOY POTTERY CO.

PORTSMOUTH, OHIO, *May 10, 1950.*

J. W. BRICKER,
Senator, Washington, D. C.:

Strongly urge you use all available effort to have President Truman as well as Senate and Congress take action to immediately end rail strike caused by striking locomotive firemen whose demands have no merit as evidenced by reports of Presidential Fact Finding Boards dating from 1946.

J. H. CROSS.

COLUMBUS, OHIO, *May 10, 1950.*

Senator JOHN W. BRICKER,
Senate Office Building,
Washington, D. C.:

Today's trainmen strike paralyzing certain of our railroads promises a chaotic condition within this territory and to our business. It is ridiculous that our Government would permit such disregard of public welfare and we must ask that you exert every possible effort to have this situation corrected without delay. We appreciate your position but we know only you as people to whom we can call upon. If there is anything we can do in any other fashion, won't you wire us what to do in order to end this unnecessary interruption to a business that is already staggering.

D. B. FRAMPTON,
President, D. B. Frampton & Co.

MASSILLON, OHIO, *May 11, 1950.*

Hon. JOHN W. BRICKER,
Senate Office Building:

Pennsylvania strike causing delay and prohibitive expense to our company; nonstriking railroads inadequate; urge immediate action your part.

SUPERIOR PROVISION CO.

COLUMBUS, OHIO, *May 11, 1950.*

Hon. J. W. BRICKER,
United States Senate:

Immediate action should be taken to terminate railroad strike at once, otherwise our

plant, along with many others, will close down completely.

THE JAEGER MACHINE CO.,
RAY MCLEAN, *President.*

NEW LEXINGTON, OHIO, *May 11, 1950.*
Senator BRICKER:
Railroad strike already jeopardizing our business.

EVANS REAMER & MACHINE CO.,
W. J. BLAZEK.

NEW LEXINGTON, OHIO, *May 11, 1950.*
Hon. JOHN W. BRICKER:
Imperative railroad strike end at once, our utility customers need our coal.

J. T. COAL CO.

Whither Are We Tending?

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. SHAFER. Mr. Speaker, with the passage Wednesday by the House of Representatives of the greatest peacetime appropriation bill in history—to pay the cost of government—I am reminded of the ancient political cliché which has the speech maker asking: "Whither are we tending?" In ordinary English, this means: Where do we go from here? The question, at this time, is pertinent. Just where is this Nation headed? A truthful answer is vital now, as never before, to the welfare of the American people; if not, indeed, to the survival of the Republic.

I shall attempt here to provide that truthful answer, at least insofar as it is possible for anyone to do so. In order to simplify the answer, and thus make myself clear from the outset, I shall have to begin with a few quotations. If you will listen closely, I think you will find them far from tedious.

In his first interview ever given the western press, Nicolai Lenin, chief architect and first leader of Russian communism, as we know it today, declared back in 1923 that:

> Three steps block the progress of world communism from its present state to its ultimate objective.
>
> The steps are, first, to nullify the strength of the British Navy, through internal political action in the British Empire; second, to nullify the power of the Catholic Church by a world-wide campaign against religion; and third, to dissipate the savings of the American working class by inducing the United States to spend itself into the status of a third-class power.

In this interview Lenin predicted that the three objectives, to bring about the ultimate triumph of world communism, would be reached in the span of a single generation.

In his book entitled "The Economic Consequences of the Peace," the British economist, J. M. Keynes, had this to say:

> Lenin is said to have declared that the best way to destroy the capitalist system was to debauch the currency. By a continuing process of inflation, governments can confiscate, secretly and quite unobserved, an important part of the wealth of their citizens. By this method they cannot only confiscate, but can confiscate arbitrarily; and while the process impoverishes many, it actually enriches some.
>
> The sight of this arbitrary rearrangement of riches strikes not only at security, but at confidence in the equity of the existing distribution of wealth. Those to whom the system brings windfalls, beyond their deserts and even beyond their expectations or desires, become profiteers. They are the object of the hatred of the bourgeoisie, the middle class, whom inflation has impoverished, not less than they are the object of the hatred of the proletariat.
>
> As the inflation proceeds and the real value (the purchasing power) of the currency fluctuates wildly from month to month, all permanent relations between debtors and creditors, which form the ultimate foundation of capitalism, become so utterly disordered as to be almost meaningless. The process of wealth-getting degenerates into a gamble and a lottery.
>
> Lenin was certainly right, concluded Keynes. There is no subtler, no surer means of overturning the existing basis of society than to debauch the currency. The process engages all the hidden forces of economic law on the side of destruction, and does it in a manner which not one man in a million can diagnose.

It is a strange thing that J. M. Keynes, the man who wrote the words I have just quoted, should be the same man who persuaded a large section of the American people that deficit spending by our Federal Government and a consequent tremendous national debt are desirable because as they said "we only owe the money to ourselves." Keynes, as an economist, knew the inflationary effect of deficit spending by any government.

Yet it was Keynes whose blandishments encouraged Franklin D. Roosevelt to embark upon the Government spending spree which has now reached great height in the Truman Fair Deal "squandermania"; which now, indeed, threatens the very existence of the Republic. From this, you may be sure that Keynes came to America, not as an ethical and highly skilled economist, but solely as a propagandist; solely as a servant of the British Government, which needed then, as it needs now, to support socialism, larger and ever larger chunks of the money collected from American taxpayers.

Lenin said that the first step toward a world-wide triumph of communism should be nullification of the strength of the British Navy through internal political action in the British Empire. All of us by this time know that this step has been taken. The British Empire, through socialism, has fallen apart at the seams. The British Navy is largely obsolete or out of commission, and British seapower today is a mere shadow.

Lenin said that the second step toward world-wide communism should be nullification of the power of the Catholic Church. All of us know by this time of the unparalleled ferocity of the Communist attack on all religion. The Mindszenty case, the recent expulsion of Mormon missionaries from Czechoslovakia, and many other instances of the kind, involving all religious sects, but especially the Catholic, prove that the second step toward a Communist world is now being taken.

Lenin said that the third and most important step toward world communism should be dissipation of the savings of the American people by inducing the United States to spend itself into the status of a third-rate power. Keynes quoted him as saying also that the best way to accomplish this end, of dissipating the savings of all Americans, would be through inflation; by debauching the currency, as well as by endless deficit spending.

In view of our present 50-cent dollar, and in view of the senseless waste and deficit spending of the Fair Deal administration, can any one of you doubt for an instant that by means of inflation and the pouring of American tax money down political rat holes around the world, the third step toward world communism is well on its way? Since the war, the present Fair Deal administration has spent more money than did all the administrations preceding since the founding of the Republic.

Even the United States Treasury, which is dominated by the White House, estimates that the Federal deficit in the present fiscal year, which ends next June 30, will be $5,500,000,000. More likely it will be $7,000,000,000 or more. The Treasury estimates, on the basis of the President's budget, that the deficit next year will be at least $5,300,000,000. But the spending policies of the present Democratic Congress indicate that, in fact, it will be at least $8,000,000,000, and perhaps $10,000,000,000, or even more.

Last Wednesday, the House of Representatives passed the so-called one-package appropriation bill for the fiscal year of 1951 which begins next July 1. In spite of reductions of more than a billion dollars, the total appropriations for the coming fiscal year will amount to around $28,000,000,000, and this does not represent the total of spending by the Democratic Eighty-first Congress; not by a long shot. The President's budget, remember, is $42,500,000,000 and it appears now more than likely that in the end congressional spending will exceed the President's budget by a wide margin. Mark my word, the spenders are still in the saddle and in spite of a temporary set-back, are in the mood to carry on, on a grand scale.

President Truman and his Fair Deal supporters started at the beginning of the present session of Congress to whoop it up for bigger and better spending, for bigger and more disastrous deficits. Until recently, when the President's hand was forced, they supported his policy of reducing national defense expenditures, while increasing those for Fair Deal measures to socialize the American economy. Thereafter they fought to pile the increased expenditures for national defense on top of the other expenditures, the latter calculated only to advance Fair Deal political interests.

Republicans in Congress, almost to a man, have opposed this spending program. During consideration of the omnibus appropriation bill, Republicans offered 36 amendments involving reductions of about $2,000,000,000. All but three of them were voted down with a whoop by the Democrats. At the same

time, Democratic Members added amounts here and there through 45 amendments increasing appropriations, so the end savings that were accomplished were far less than they should have been.

Now, just what do you, as American citizens and taxpayers, think of a Democratic majority in Congress which would spend in excess of a Presidential budget? Especially when that budget is so large that the wiser heads, even in the Democratic Party, time and again have warned that it will lead to a disastrous deficit; when they have warned of its terrific inflationary effect? What do you think of a Fair Deal administration which would cut defense expenditures in a time of international emergency, while at the same time boosting expenditures for advancing the cause of socialism within our own borders? What do you think?

Up to this point, I have traced the manner in which the three steps to world communism, as outlined by Lenin, either have been or are now being completed. Lenin was the creator of communism as it is known today. He knew whereof he spoke, and his teachings are the only bible of his communistic followers.

British seapower has been virtually destroyed. The church is fighting in the last ditch in all countries behind the iron curtain. In the United States, inflation and deficit spending by the Federal Government have debauched the currency by reducing the dollar to little more than half its former purchasing power. The savings of the American people have been largely dissipated; confiscation of private property through inflation and excessive taxation is progressing apace. The national debt now exceeds $1,700 per capita; and $1,700 is pretty close to the average family's annual income.

Now what is your answer to all this? I think you will agree with me that the only possible answer lies in drastically cutting domestic expenditures by the Federal Government, through implementation of the Hoover Commission recommendations, as they actually are, and not as they are twisted by the President in his many proposals to Congress. The only possible answer lies, too, in throwing out of power political opportunists, the demagogues, the spenders, and fellow travelers, who are playing Lenin's game—Stalin's game—for the sake of their own greed for political power.

Disapproval of Reorganization Plan No. 21—Statement by Roscoe H. Hupper

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement by Mr. Roscoe H. Hupper in support of Senate Resolution 265 directed to the disapproval of Reorganization Plan No. 21 relating to transfer of the United States Maritime Commission to the Department of Commerce.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROSCOE H. HUPPER BEFORE UNITED STATES SENATE COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS, TO BE FILED PURSUANT TO LEAVE MAY 9, 1950, IN SUPPORT OF SENATE RESOLUTION 265 DIRECTED TO DISAPPROVAL OF REORGANIZATION PLAN 21 RELATING TO TRANSFER OF UNITED STATES MARITIME COMMISSION TO DEPARTMENT OF COMMERCE

My name is Roscoe H. Hupper. I am a lawyer, member of the firm of Burlingham, Veeder, Clark & Hupper, 27 William Street, New York City, with which I have been connected since 1911, since which time I have practiced actively in various shipping, transportation and other commercial matters both before courts and commissions, including Interstate Commerce Commission and the Maritime Commission and its predecessors.

I make this statement principally as a citizen, and against the background of my experience and observation, for such aid as the same may be to your committee. I support S. Res. 265 but my doing so is not pursuant to any retainer or request by any particular interest; rather because of my personal belief that plan 21 as now before your committee should not be permitted to become effective because adverse to what I conceive to be the national interest in shipping. My views thereon appear in the several numbered paragraphs below.

My comments stem to considerable extent from my contacts with shipping men of many nationalities over a period of nearly 40 years and my representation of many of them in legal matters affecting ship affairs before courts and commissions; likewise from being counsel for many years to various conferences both in domestic and widespread foreign trades as established under section 15 of the 1916 Shipping Act. I have a further contact with shipping in that as trustee I am sole stockholder of Luckenbach Steamship Co., Inc., a seasoned common carrier (not subsidized) which owns and operates 16 substantially new C–3 and C–2 vessels (acquired under the 1946 Ship Sales Act) in our intercoastal trade and in foreign trades. It may be that substantially all its operations will presently be in the intercoastal trade. That company has not participated in announcements heretofore made on behalf of a considerable number of other carriers indicating that they did not intend to oppose plan 21. Their reasons for this view are naturally not my concern, but I can say that my contacts throughout the shipping fraternity have given me the distinct impression that there is a complete lack of enthusiasm for plan 21, and lack of faith in its purpose or power of accomplishment, amounting almost to a sense of frustration.

Coming now to certain major points:

I. WHY DISCARD OUR MARITIME COMMISSION?

The set-up of the Commission is that of an independent agency responsible to Congress created by section 201 of the 1936 Merchant Marine Act following the declaration of policy in section 101 thereof, following the most thorough investigation and consideration. It is specially to be noted that section 201 divides membership between political parties and staggers terms of the Commissioners; this doubtless to minimize political considerations and control.

Having noted the barrage of discontent which has been leveled at the Commission over a considerable recent period I find myself confused as to the reason for or purpose of the same. At any rate I condemn it as exhibiting a lack of fair perspective in respect of the functions and performance of this important governmental body. This I say notwithstanding that I have noted signs of discontent or friction within the Commission itself; but emphasis on such would also seem to me a distortion of perspective. Restoration of a true perspective, affected neither by praise nor blame, would appear to be most necessary. It is right to admit that the Commission, like most other bodies whether private or public, even on occasion Congress itself, have not always operated at the highest level of efficiency. This is but common human experience. On occasion the heart and incentive for highest efficiency and cooperation has rather been taken out of the Commission members and representatives by a form of treatment from a privileged seat which although probably not so intended could in a cooler moment be described as unduly harsh. Matters of criticism generally have two sides but it ought to be remembered that the Commission has had and still has stupendous duties to perform, quite enough to consume for some time yet the time and energies of its entire membership. There has been inevitably a heavy hang-over of affairs as aftermath of the war, among which may be mentioned the ship-sales program, the chartering program and the subsidy program, to say nothing of regulatory matters, the problems as to shipbuilding and a few considerations as to the future in international affairs where shipping is or may be involved.

Congress itself in these last few months has been making a considerable investigation into a long-range program. By plan 6 only recently put into operation the Chairman of the Commission was given enlarged powers, and the President doubtless has authority to go further in this respect. Besides it should be simple to amend the Merchant Marine Act if additional authority or enlarged compensation were deemed necessary by Congress.

The possible efficiency of the independent agency set-up of the Maritime Commission will be brought to mind and emphasized by recalling the performance of Joseph P. Kennedy as first Chairman, likewise the chairmanship of Admiral Land, likewise the valiant service of Admiral Vickery; also of many others who have held the post of Commissioner or other office in the Commission. I venture the thought that there can be no reason against constant attainment by the Commission of whatever efficiency is requisite. I have had the privilege of some acquaintance, as I recall, with every Commissioner of this body and with many of its other personnel from the time the Shipping Board was organized under the Shipping Act of 1916 up to the present date.

Against the background of all the foregoing I state that the current attacks on the Commission are substantially uninformed and ill-considered; and that the greatest spirit of helpfulness and cooperation should be evinced pending the reaching of a far better conclusion than the one projected before your committee by plan 21. Nobody has suggested yet what departure from the independent agency principle would gain for us; nor has any reason been suggested why Congress should permit its substantially direct control of this great national interest of shipping (just because of occasional hard problems, or shortage of patience) being renounced and turned over to some executive department.

In event that mistake should be made, who can say that sometime the inquiries of Congress might be answered only as from behind an iron curtain—with a genial suggestion that the executive is independent of the legislative.

UNIVERSITY OF MICHIGAN LIBRARIES

It is appropriate to add here that the very pendency of this plan 21 has already been prejudicial to the functioning of the Commission and to important maritime interests. Proposed abolishment of the Commission (the Chairman only definitely to be retained in the proposed Maritime Board) has placed four worthy gentlemen in doubt as to their continuance with any part or character of the official status for which they were selected under section 201 of the Merchant Marine Act, and confirmed by the Senate. An unjust and unseemly situation has thus resulted in which it must be difficult for them severally to avoid pulling, if they could find one, some political string in aid of continuance in office. This by itself is bad enough but from point of view of the public interest it is much worse; seeing that these gentlemen since March 13 last can scarcely have had peace of mind adequate to give them complete devotion to their public duties. The resultant bogging down of public business has become rather apparent, and importantly noticed in the press. Procedural delays have already been far too great and costly to carriers and to the public even when our commissions have been functioning regularly. Something must surely be done about that before long, in any event; seeing that our administrative bodies now appear often to out-legalize and out-technicalize our courts. However, when a fairly complete bogging down results from such a proposition as plan 21 the situation becomes truly destructive and unendurable both as concerns the Commission and the public interest which the Commission is bound to serve.

II. OUR MERCHANT MARINE REQUIRES AN INDEPENDENT AGENCY

Our ships are now of superb quality, operated by men of the highest capability. There are great difficulties and obstacles particularly in the foreign trade resulting from almost overwhelming competition, due principally to much higher costs than the shipowners of other nations have to bear. This circumstance is at the base of our national subsidy policy, which has been deliberately adopted as matter of national necessity; in contrast to the policy of placing our reliance as to commerce and safety largely on the shipping of other nations through medium of charters, and so forth, which on many occasions would involve lower expenditures. Our world responsibility has substantially dictated our shipping policy. The myriad questions which attach to shipping whether foreign or domestic are of special content and quality which fit well into the functions and supervision of an independent agency, and for aid in which such an agency appears to be absolutely requisite for close collaboration with Congress. Many of us recall the great benefit of such collaboration which continued many years as between Senator White in the Senate and Mr. Bland, of Virginia, in the House both with the present Commission and its predecessors. Putting control of shipping into any executive department would be a complete back-track on the tried and true independent agency principle which had its first expression in the 1916 shipping act, after most extensive hearings and consideration beginning in 1911. The question and proposition then pending was as to whether this country should be important in maritime affairs or not. That we should become so important was demonstrated by the First World War and its aftermath and again demonstrated by the Second World War and its still pending aftermath.

The character of the Shipping Board as an independent agency was based on the pattern of the Interstate Commerce Commission as established in 1887 to deal principally with rail transportation. There is a parity of purpose and necessity as between land traffic and high-seas shipping which naturally calls for independent agencies responsible directly to Congress, without interference from other bodies. It would surely be scarcely endurable that the functions of the Interstate Commerce Commission should be turned over to any executive department; and less endurable if that should be possible as concerns the Maritime Commission. Both Commissions have performed well and justified their establishment and continuance, quite irrespective of defects in performance which show up from time to time, and which can always be cured by a refreshed sense of responsibility, whether on the initiative of Congress or from the side of a reasonably vocal public.

III. WHY SUBSTITUTE THE DEPARTMENT OF COMMERCE FOR THE MARITIME COMMISSION?

The Department of Commerce was not established with any purpose that it would ever be called upon to carry out in any respect such functions as the Merchant Marine Act states. None of its personnel have ever shown any capabilities or sense of direction in the matter of our shipping or national shipping policy that would justify said Department in having the slightest measure of participation in or control over the making or fixation of shipping policy—any more than say the Department of Agriculture or the Post Office Department. Indeed any executive department we might name would be just about as well qualified for exercising ocean shipping functions in the national interest as a fairly capable lawyer, by virtue of his profession, would be qualified to be bishop of Washington. The achievements of the Interstate Commerce Commission, and comparably with it, those of the Maritime Commission, would never have been brought about under the aegis of any executive department, burdened with widespread interests and responsibilities which make impossible that quick focus on problems and necessities that characterize shipping affairs. We need not doubt the capabilities of the Department of Commerce in making important studies and reports but that is no qualification for exercising shipping controls.

That the Secretary of Commerce has in mind extensive control is demonstrated by his April 14, 1950, letter to Senator MAGNUSON in reply to the Senator's letter of April 5. The first portion of the Secretary's letter is gentle, genial and cooperative as concerns that remnant of the Commission characterized as "Maritime Board" but the latter portion (pp. 3–4) indicates rather completely the purpose of the Department to take over all the truly important functions now exercised by the Commission. The hearing on Monday, May 8, developed the view and purpose of the Secretary to take over subsidy control under items (a) and (b) of section 211 of the Merchant Marine Act. This purpose was not very apparent from anything said in his April 14 letter and its specific development at the hearing, although perhaps ascertainable by an informed and careful study of the letter, was almost surreptitious, which circumstance in itself justifies careful questioning of the whole proposition as concerns subsidy control. The purpose of the Secretary if permitted to be carried out would amount to nothing less than a fairly complete vivisection or evisceration of the subsidy provisions of the Merchant Marine Act in respect of their application and administration.

In contrast with the protections in section 211 of the Merchant Marine Act directed to avoiding political control, let it be remembered that administration of shipping affairs under the Department of Commerce could not have such protection. That Department and its personnel are subject to political winds, tides, and currents which are variable and no executive department yet has been able to avoid harboring now and then personnel of considerable political vigor and disposed to exercise the same in this, that, and the other direction. There is nothing to be gained for transportation and the public interest by such political controls and they should be avoided at all costs. A suggestion that Department of Commerce control would give our national shipping the benefit of Cabinet deliberations is without beneficial weight. The general subject matter is too involved and complicated to permit of helpful result from consideration by men having so many diverging interests and so busy as Cabinet members.

I remain ready to render any further assistance that your committee might request.

Two Worlds in Conflict

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach an excerpt from an article titled "Two Worlds in Conflict," published in the ALF's Labor's Monthly Survey for April–May. It is a penetrating discussion of the significance of the battle for Berlin and the need to formulate and carry out a constructive program for the whole of Germany. It furnishes instructive background material for the current discussions of Germany and related problems by the Big Three Ministers:

TWO WORLDS IN CONFLICT

American workers today realize that events in Europe and Asia are of utmost consequence to them in their daily lives. No longer can two oceans and four or five thousand miles of space make us secure against totalitarian communism which drives to close in on United States of America from two sides of the world, as well as through fifth-column activity within our shores. We know that communism means the end of freedom; under it workers cannot choose or change their jobs, no union can raise wages, anyone may be imprisoned for years without trial for such minor offenses as lateness and absence from work or through false accusations. The people, deprived of all voice in choosing their government, cannot remedy such evils. For all but a favored few, communism means a life of poverty, shadowed by the secret police, purges, concentration camps, a life of mental stagnation, where true facts are denied and the worker's mind is filled with false propaganda. Communist aggression is of utmost concern to all Americans. For, unless we stop losing the cold war and permitting ourselves to be outwitted in strategy, our whole Nation in self-defense will be forced into a shooting war in which bombs will fall on our homes.

Stalin's method, in his drive for world conquest, is to attack every strategic spot he thinks he can seize without starting a shooting war with the western powers.

BERLIN, ISLAND OF FREEDOM

Berlin's west sector is such a spot—an island of freedom completely surrounded by Soviet tyranny. If, under guise of the May 28 youth rally, 500,000 Moscow directed young German Communists peacefully march into western Berlin, they can install their agents, set up their cells and action committees, foment strife and civil war, and by familiar

methods attempt to complete their peaceful conquest by destroying its democratic government. Once allowed to enter, they could not be thrown out except by force. Gerhardt Eisler, top Communist escaped from United States of America, is master-minding this piece of trickery for Stalin. The Communists try to conceal from the outside world the fact (well known behind the iron curtain) that Gerhardt Eisler, Stalin's tool, makes good use of the secret police to see that these German youths carry out Communist orders. And back of the secret police is the Soviet terror and the concentration camp. The Soviet also conceals from the world its new use of the Nazi horror camps—Buchenwald and the rest. These camps have been reopened and are now filled to capacity with German anti-Communists, free trade-unionists and other men and women within Stalin's reach who have heroically stood for freedom.

ALSO KEYPOINT

Berlin is a keypoint in Stalin's effort to subjugate Europe. As their former capital, it has for Germans a significance beyond any other city. Seizure of Berlin would open the way for a Communist campaign of irresistible pressure to destroy the German Republic. But as long as western Berlin remains a symbol of hope and freedom to all Germans, Stalin cannot consolidate his grip on east Germany or subjugate the western republic. Germany is the heart of Europe. Stalin is reaching for the Ruhr, because a shift of its immense steel, coal, and other industrial capacity would change the balance of productive power from west to east, and after that the rest of Europe would fall easily into Stalin's hands.

West Berlin's 2,000,000 people have shown tremendous courage in their unflinching stand against communism.[1] Surrounded by communism, they know what democracy and freedom mean. Free trade-unionists who have suffered under Hitler's dictatorship have no desire to suffer under Stalin's. The United States Government has announced that the "peaceful" invasion of Communist youths will not be permitted. This is fortunate, for protecting the people of Berlin against "peaceful" conquest depends on the allied occupation forces.

NEEDED: A CONSTRUCTIVE POLICY FOR GERMANY

The German Federal Republic (west Germany) under the courageous leadership of Chancellor Konrad Adenauer, has left no doubt of its desire to cooperate with the western Allies. The people of Germany do not want an alliance with Russia.[2] But they are faced with many difficulties. Foremost is the problem of making a living. Germany has always depended heavily on trade with the east to provide a market for her products and jobs for her workers. Today trade with the east is reduced to a mere trickle. To revive it would open the doors to Soviet penetration, for the Soviet uses control over trade as one method of dominating a country. But Germany cannot support herself until other foreign trade is developed to replace the lost eastern trade. Meanwhile unemployment in Western Germany has increased every month since December 1948 and now (February 1950) affects 13 percent of the population, a level equivalent to 8,000,000 unemployed in the United States of America. In western Berlin, due to Soviet interference with trade, one worker in every four is unemployed. This problem of German export trade should be a first concern of the occupying powers—Britain, France, and the United States of America—for until it is solved the German people must depend for support on American taxpayers. Unemployment will continue and German workers cannot hope to raise their living standards. Since the occupying powers have not yet permitted Germany to set up diplomatic relations with other countries, the responsibility is theirs.

ON SAAR SEPARATION

Another serious problem is the action by France of separating the Saar from the rest of western Germany so that Germans see their country further torn apart. Britain continues to dismantle essential German factories in her zone. The American Federation of Labor has steadfastly opposed dismantling as an unnecessary burden on the American taxpayer and a crushing and needless blow to German working men and women. Dismantling destroys workers' means of earning a living, eliminates needed factories, adds to unemployment. The argument that dismantling destroys war potential misses the point; factories now slated for dismantling were never on the official list of war plants; they were declared surplus under the level of industry rule which restricts production, thus limiting employment and living standards.

While the Western Powers have not yet developed a constructive program for Germany, the Soviet beckons German industrialists to revive their trade with the East. Soviet propaganda ceaselessly promises the Germans peace and unity under the Communist banner, and Soviet military power grows from month to month creating in every German a paralyzing sense of insecurity. Refugees, fleeing Communist tyranny and persecution in East Germany, pour daily into the western republic, adding to the burden of unemployment; among them come Communist agitators, disguised as refugees, to work upon unemployed Germans with their lies about the Soviet paradise.

The German people do not want communism. But they desperately need the jobs that could come from industrial expansion and they want to share in the restored European economy and help make it a going concern, secure against Soviet infiltration and aggression. They want to revive German trade in order to maintain expansion. The 5,000,000 German trade-unionists and the Social Democratic Party have voluntarily decided that they do not want German rearmament—but they want a chance to produce adequate food, clothes, housing.

The real security is not in dismantling German plants or in separating off German territory, but in restoring the German economy, thus strengthening her present friendly government, and in enabling Germany to play a constructive part in building the new Europe.

[2] Report of the Federation's European representative after interviews with leading German trade-unionists and others.

The Railroad Strike—Article by Don Ross

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a news article entitled "Rail Service Cut in 27 States by Firemen's Strike on 4 Roads," by Don Ross, published in the New York Herald Tribune of today, May 11, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAIL SERVICE CUT IN 27 STATES BY FIREMEN'S STRIKE ON 4 ROADS

OTHER LINES MOVE TRAFFIC—PENNSYLVANIA RAILROAD TAKES OFF 250 TRAINS—CENTRAL, 125—SOUTHERN USES OFFICIALS

Operation in 27 States of 4 of the Nation's major railroad networks—the Pennsylvania, the New York Central system, the Santa Fe, and the Southern—were disrupted yesterday by a strike of 18,000 firemen. Though passengers and freight movements were seriously hampered at many points, it appeared that no crippling blow had been struck at communications because of the many alternate routes available on other railroads and by other means of conveyance.

The strike, which became effective at 6 a. m. yesterday in each of the country's time zones, was aimed by the union, the Brotherhood of Locomotive Firemen and Enginemen, unaffiliated, at the entire Santa Fe and Southern systems, which operate, respectively, from Chicago to the west coast and south of Washington. Only those portions of the New York Central west of Buffalo and of the Pennsylvania west and north of Harrisburg, Pa., were included in the strike call, which followed 25 straight hours of mediation in Chicago between the disputants and Francis A. O'Neill, Jr., Chairman of the National Mediation Board.

Effects of the strike were felt in the New York area, however, because of the cancellation by the Pennsylvania—largest railroad in the country—and the New York Central of many freight and passenger trains to the West. The Pennsylvania reported it had dropped 250 passenger trains out of 1,000 it runs daily over its entire system. The New York Central canceled 125 passenger and 300 freight trains. Both railroads placed embargoes on freight shipments.

The strike also involved portions of the Chesapeake & Ohio Railroad, which uses terminals of some of the struck roads. C. & O. trains serving Washington, Chicago, Toledo, Columbus, Ohio, and Grand Rapids, Mich., were taken out of service.

The strike was caused by the insistence of the union that the railroads hire a second fireman to work on multiple-unit Diesel locomotives. The railroads, describing this a "featherbed" demand, refused, while the union claimed that it was necessary for safety reasons. Presidential fact-finding boards have held that the railroads are justified in refusing the union demand.

Late yesterday, David B. Robertson, president of the union, said at a news conference in Chicago that the union had offered conditionally to drop its demand for a second fireman on all multiple-unit Diesels. The union had proposed instead that the railroads agree to arbitrate the question whether a second fireman should be hired only on high-speed Diesel hauling through-passenger trains, he said.

MEDIATORS GIVE UP

In Chicago Mr. O'Neill said that "we've given up" and that a report on the deadlock would be submitted to the White House. For the railroads Daniel P. Loomis, their chief negotiator, announced that the industry would hold out adamantly against this featherbedding drive even if the union should extend the strike to other roads.

Mr. O'Neill said later that he had conferred with Dr. John R. Steelman, an assistant of President Truman, over the long-distance telephone. Dr. Steelman is in Washington. The mediation board, Mr. O'Neill said, would remain in Chicago a few days to be available to the disputants for consultation.

The Pennsylvania and the New York Central reported that, in general, passenger and freight travel along the Atlantic coast would not be hampered by the strike, which is the first involving more than one major rail system since 1946. The roads also said that

UNIVERSITY OF MICHIGAN LIBRARIES

their commuting operations into New Jersey, Pennsylvania, and New York State would not be affected. West of Harrisburg the Pennsylvania said no freight or passenger trains were moving.

The Southern Railway system said in Atlanta that it had begun running idle trains with supervisory employees as firemen and that it expected to meet "95 percent of our regular schedule within the next 48 hours." A railroad official said that all the work normally done by firemen will be taken over by managerial and supervisory employees as fast as they can be indoctrinated in their duties. Other railroads were also using supervisory employees as firemen on some runs.

The union's strategy of confining the strike to four networks, though it has the same grievance against most of the railroads, was said to be based on the belief that President Truman could not declare a national emergency and seize the roads. It was explained that essential shipments can be moved over other lines, while much freight could be shifted to trucks. The union also said that it had agreed to furnish firemen for trains carrying troops and medical supplies.

The Santa Fe announced that it had canceled four of its major trains between Chicago and the Pacific Coast. The road also placed an embargo on all carload and less-than-carload shipments of livestock and perishable freight. The Pennsylvania said that perishable freight scheduled to go over its lines would be rerouted to other railroads, while the New York Central said that freight permits would be issued in New York for perishables and other essentials.

LAYOFFS TO START TOMORROW

Figures on unemployment, other than that of the strikers, caused by the strike, were sketchy yesterday. The New York Central estimated that the strike would eventually cause the furloughing of some 50,000 of its employees. A large number of its employees would be laid off tomorrow, the Pennsylvania said, adding that the number was as yet undetermined.

Among the trains canceled by the New York Central for the duration of the strike were the Twentieth Century Limited, the Commodore Vanderbilt, the Cleveland Limited, and the Chicagoan. Only one main line train will operate over the Central lines from New York to Chicago. This will be a combination of the Pacemaker and the Commodore Vanderbilt which will leave Grand Central Terminal at 4 p. m. daily. At Buffalo, beginning of the strike area, supervisory personnel, will replace firemen, it was said.

The Empire State Express will continue to leave Grand Central at 9 a. m. daily. The section to Detroit will operate over the Canadian division of the line, which is not struck, but the Cleveland section has been canceled. Trains to Canada are unaffected. The Pennsylvania canceled 10 through trains to the West, including the Broadway Limited to Chicago, the Jeffersonian, and the Spirit of St. Louis to St. Louis, and the Red Arrow to Detroit.

Florida trains from Pennsylvania Station, which proceed south over the lines of the Atlantic Coast Line and the Seaboard Air Line, will run as usual. Mails for the strike area, the Pennsylvania said, will be sent to Washington and there be rerouted over the Baltimore and Ohio lines to the affected areas.

The Post Office Department in Washington and New York reported that mail shipments were being maintained with only a few delays. No unusual increase of activity was reported yesterday at New York's airports because of the curtailment of train service, but there were indications that airline travel would increase sharply if the strike were not speedily settled. Airline ticket offices reported an unusual number of calls for reservations. American Airlines said it had added one extra round-trip flight out of La Guardia Airport to Chicago, and that it would operate 11 extra flights to Chicago and other points tomorrow.

The Railroad Strike—Article by George Eckel

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 11 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a news article from the New York Times of today, entitled "Railroad Traffic Is Disrupted as Firemen Strike on Four Lines." The article is by George Eckel.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAILROAD TRAFFIC IS DISRUPTED AS FIREMEN STRIKE ON FOUR LINES

CHICAGO, May 10.—Large-scale disruption of traffic, together with scattered industrial shut-downs, cut-backs, and lay-offs, marked the first-day effects of the strike called this morning by the Brotherhood of Locomotive Firemen and Enginemen against four major railroads.

Hope for a settlement of the dispute appeared dim tonight after the principals had lashed at each other during the day.

Francis A. O'Neill, Jr., Chairman of the National (Railway) Mediation Board, who continued conferences nearly 4 hours after the walk-out became effective, made a report to Dr. John R. Steelman, the President's assistant, in Washington.

The Board will remain here for a few days to be available if its services are further desired, Mr. O'Neill said, but no further mediation conferences have been scheduled. He described the negotiations as "deadlocked."

The principal issue in the strike is the union's demand for a second fireman on multiple-unit Diesel locomotives. Two fact-finding boards have held that the demand was not justified. One of the panels was appointed in 1943 by President Roosevelt and the second was named last fall by President Truman.

The four strike-bound railroads are the New York Central west of Buffalo, the Pennsylvania west of Harrisburg, the Atchison, Topeka and Santa Fe and the Southern Railway. They normally carry 39.2 percent of the country's passengers and 24 percent of the total freight volume.

Other lines using the tracks of the four railroads or connecting with their affected trains, also discontinued or reduced service.

David B. Robertson, president of the brotherhood, said that the strike was "completely effective among the 18,000 firemen and enginemen affected on the four lines." Nevertheless, the New York Central and Santa Fe operated "skeleton" service through the use of supervisory personnel or engineers qualified as firemen.

Mr. Robertson said that no expansion of the strike was contemplated. The statement caused considerable interest in view of speculation on whether the extent of the present strike was sufficient to warrant Presidential seizure of the railroads on the basis of national emergency.

The union leader indicated at a press conference that the strike might have been averted if the railroads had accepted a union proposal to arbitrate after the union had modified its original demand by abandoning the request for a third fireman in all freight and passenger locomotives of the multiple-unit Diesel type. The arbitration would have related only to passenger trains, and among those only to high speed, streamlined and main line through trains, he said.

His arbitration proposal contained a condition, however, that a finding adverse to management would carry with it acceptance of a second fireman on the types of passenger trains in question, he added.

A management spokesman asserted that "this is offering to arbitrate after losing two court cases," referring to the two fact-finding board verdicts.

Mr. Robertson declared that while the railroads termed the union demand "featherbedding," they now had about 5,000 "special duty" men doing the same job the brotherhood sought for the firemen.

"Not true," a railroad spokesman said, adding that firemen were not qualified for the job done by Diesel experts now occasionally carried as a "third man" to observe performance of the engines. Mr. Robertson held firemen were qualified as "third men."

Today's walkout, which was postponed for 2 weeks on April 26, came after Federal mediators had worked nearly 2 days without sleep in an effort to head it off. They were led by Mr. O'Neill, who is 72 years old.

The strike is the largest rail tie-up since the 2-day country-wide walkout of the engineers and trainmen in May 1946, which ended in an "indefinite postponement" shortly before a seizure deadline set by President Truman.

Great demand was reported throughout the affected area for transportation by alternate rail routes and by bus and airplane lines.

While Chicago, the rail hub of the country and a terminal for three of the affected lines, was experiencing no immediate economic effects of the walkout, reports from other cities gave this picture:

The Fisher Body plant in Cleveland shut down, sending its 7 a. m. shift home after 4 hours when outgoing materials began piling up.

The Midland Steel Co., also in Cleveland, cut back operations 80 percent at noon, after an unsatisfactory experiment with truck transportation.

In Pennsylvania, coal began to pile up at once at the mine.

Automobile manufacturers in Detroit reported extensive plans to use trucks in place of trains, but several of them expected serious effects if the strike lasted long. Chrysler Corp., just resuming operations after a 100-day strike, said it would "try to operate for the rest of the week, but longer than that is very doubtful."

Thousands of commuters in Pittsburgh and Chicago had to seek alternate means of transportation.

As many as 200,000 employees of the affected railroads themselves will be thrown out of work if the strike continues more than a day or two, it was indicated.

The Pennsylvania has notified 75,000 of its 120,000 employees that their work will stop Friday morning. The New York Central estimates that about 50,000 are out of work.

Total or limited embargoes were put in effect by the roads, but mail service will be little affected, if at all. Such trains as are kept in service will carry mail to their capacity, and the Post Office Department will rely on its own and contract trucks to supplement the diminished rail service, it was announced in Washington.

The New York Central, which took off 125 passenger and 300 freight trains daily, said that it was operating today a combined

Pacemaker and Advanced Commodore between New York and Chicago; the New England States between Chicago and Boston; a combined Detroiter and Wolverine between New York and Detroit; and between Detroit and Chicago, the Mercury westbound and the New York special eastbound. All trains were scheduled to operate in both directions. Three freight and two mail trains also were sent out from Chicago.

Pennsylvania Polka

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HOLIFIELD. Mr. Speaker, I call attention to a very interesting article in the April 3 issue of Newsweek regarding the troubles of the Republican Party in Pennsylvania:

PENNSYLVANIA POLKA

The Republican Party is undergoing the shake-up of its life in Pennsylvania, one of its strongholds. Following is a report by Harold Lavine, Newsweek political writer, on the causes and effects of the commotion.

Gov. James H. Duff, of Pennsylvania, is a big, belligerent man, with a streak of stubbornness that wide and a temper as flaming as his nickname, "Red." A lawyer by profession ("and I was a helluva good one, too"), he spent most of his youth wildcatting in oilfields from western Pennsylvania all the way to Mexico. He drilled a few dusters, brought in a few gushers, and ended up with a million.

Then the 1929 crash came along and wiped Duff out. It left him neck-deep in debt, with nothing to show for his years as a wildcatter except an oilman's crackling vocabulary and an oilman's love of a brawl. As far as Duff is concerned, they were years well spent.

Last week Jim Duff was having the brawl of his life. It was a brass-knuckle battle with Pennsylvania's powerful Grundy machine, fought under boomtown-barroom rules. Everything went, including rabbit-punching, eye-gouging, and kneeing in the clinches. Duff swore that he would smash the machine into a heap of twisted junk. It was that, he said, or else the machine would destroy the Republican Party in Pennsylvania and nationally.

That was big talk even for Big Red. In one way or another, the Grundy machine has pretty much dominated the Republican Party in Pennsylvania for 30 years. Usually it has simply pulverized opposition. When it couldn't do that, it has pitched a little woo and married its opponents. The Grundy motto is that ancient political precept "When in doubt, deal."

Grundy leaders boast that no Governor has sat in the statehouse since 1922—except for Democrat George H. Earle—without the machine's O. K. In recent years it has just about named the Governor.

Nationally, of course, the Grundy machine isn't nearly as powerful as that, but it can still move mountains when the wind is blowing right. The Grundy machine was primarily responsible for making Warren G. Harding the Republican candidate for President in 1920. At 87, Joseph R. Grundy is the last survivor of the historic "smoke-filled room." And it was the Grundy machine that started the bandwagon rolling for Thomas E. Dewey in 1948.

If past performances mean anything, fighting the Grundy machine is a painful and rather violent form of political suicide. Nevertheless, Jim Duff has put up a full slate against the machine's candidates in the May 16 Republican primary. Duff himself is running for the GOP nomination for the Senate against the Grundy choice, Representative JOHN C. KUNKEL, a Member of Congress since 1938 and the latest in a long line of politicians starting with his great-grandfather, John Sergeant, who ran for Vice President with Henry Clay back in 1832. Duff's principal lieutenant, former Superior Court Judge John S. Fine, the boss of Luzerne County, is campaigning for the nomination for Governor against Jay Cooke, a retired Philadelphia investment banker and hero of two wars, who protests weakly that he's not a Grundy man but has the machine's open support.

The issue, says Duff, is Grundyism and Grundyism he defines as "the rule or ruin tactics of a small group of men, selfish and self-serving, one of the most reactionary groups in the Republican Party anywhere in America." The Grundy machine doesn't care about anything except the pocketbooks of Pennsylvania's big manufacturers, he insists. And he considers this not only wrong but politically insane as well. The Republican Party cannot hope to win in Pennsylvania this year or nationally in 1952, Duff maintains, unless it convinces the voters that it represents all the people and not just "the interests."

Who's a liberal? When Duff talks of himself as a liberal Republican and denounces his opponents as Old Guard reactionaries, the Grundy men look utterly bewildered. One of the machine's top leaders said last week: "I don't know what a liberal is and I'll give you a thousand dollars if you can define the word for me, but if that guy Duff is a liberal then I'm a liberal, too. He keeps calling me a reactionary. So far as I can figure out that's just a nice way of saying I'm an S. O. B."

The Grundy machine insists there's no question of principle involved. Duff's talk of liberal Republicanism the Grundy leaders say, is merely a cover-up for the fact that he wants to make himself dictator of the Republican Party in Pennsylvania. They call him power-mad, a would-be Caesar, a megalomaniac.

Actually, the issue doesn't appear nearly as simple as either side pretends. As usually is the case in political brawls, policies and personalities have become inseparably entangled. If Duff can make out a good case for his view of the conflict, the Grundy leaders can offer an equally good one for theirs.

However, Duff does have this advantage: Pennsylvania voters generally do regard the fight as one between liberalism and standpat Republicanism, although the Governor's critics contend that his liberalism is nothing but me-tooism and ask why he doesn't join the Democratic Party. Therein lies the national significance of the conflict. If Duff wins, his victory will be interpreted widely as a victory for liberal Republicanism And since the same issue has split the GOP elsewhere, that will have inevitable repercussions in other States, and especially at the Republican convention in 1952.

As a matter of fact, it's a cinch for any soap-box speaker to depict the Grundy machine as a stronghold of reaction. For the Grundy machine is simply the Pennsylvania Manufacturers Association by another name. The backbone of the organization is PMA's 17 branches. National Committeeman G. Mason Owlett, who runs the machine now that Uncle Joe Grundy has retired, doubles in brass as PMA president.

And PMA was founded on the assumption that what is good for its 8,000 members automatically is good for the State of Pennsylvania.

In the early days of the New Deal moreover, the Grundy machine stood steadfast against social and welfare legislation. Joe Grundy himself is almost the personification of Old Guard Republicanism, as well as the leading exponent of the GOP's traditional high-tariff policy.

Pro and con: That's only part of the story, however. For the PMA has mellowed considerably in recent years, and even Democratic critics admit that it has shown an increasing understanding of the workingman's point of view. And further to complicate Duff's black-and-white picture of the fight as being one between liberalism and reaction, the Grundy leaders offer two major arguments:

It was the Grundy machine, they say, which made Duff attorney general and which later threw him the nomination for governor. "If I've heard Duff say once I have heard him say 20 times: 'When God made Senator Grundy he threw the mold away'," Mason Owlett asserts, "and now he says, 'Our objective is to eliminate Grundyism'."

Moreover, although the PMA hasn't always approved of Duff's program, Grundy legislators nevertheless have supported him whenever his bills came up for a vote.

To both arguments, Jim Duff has ready answers:

To the first, he says: "I didn't know what those guys were like until after I was elected."

To the second: "Sure they voted for my bills. They were too yellow-livered to stand up and be counted against them. It was in committee they did their dirty work; behind closed doors they did everything they could to knife me."

According to Duff, his break with the Grundy machine came shortly before his inauguration. "Owlett barged into my office with a budget all figured out and an inauguration address all written. I wasn't supposed to ask questions. I was just supposed to sign the budget and read the address. The Grundy machine had done all my thinking for me. Now what do those guys figure they are—a supergovernment?"

The principal issue over which the break occurred was repeal of the 5-mill tax on manufacturers' capital stocks. Grundy leaders insist that Duff promised repeal. "Otherwise," they add, "we'd never have given him the nomination." Duff retorts: "They're liars. I never made any such promise." One of Duff's first acts had been to propose raising the cigarette tax from 2 cents to 4 cents a pack and putting a new tax on beer and soft drinks. "When Owlett came here and said he wanted the capital-stock tax repealed, I told him: 'If you think I'm going to give you a free seat in the grandstand at the same time I'm raising the price in the bleachers, you're crazy.'"

Duff says the Grundy machine has been fighting him ever since. Owlett, however, declares that, "although we didn't agree with the Governor, we went along." Duff snorts: "Nonsense."

As Governor, Duff has raised State aid to education, improved the mental hospitals, increased the State's nursery capacity, started cleaning up the Schuylkill River basin, built new roads, and made other improvements. He says the Grundy machine has fought him on every reform. Grundy leaders deny it. Duff's program is merely the program of former Governor (now Senator), EDWARD MARTIN, they say, and they supported it. They add: "The only thing we objected to was reestablishing the general State authority. That was just a subterfuge for running Pennsylvania into debt in violation of the constitution; it's deficit financing.

Duff answers: "Sure, they liked the program; they just didn't like the idea of paying for it. As for whether or not the general State authority is constitutional: The courts say 'Yes.'"

UNIVERSITY OF MICHIGAN LIBRARIES

So the fight has raged with almost unparalleled bitterness. The Grundy machine charges that Duff has used the State police to gather evidence against county chairmen, which he uses to blackmail them into supporting him. This Duff point-blank denies. When Harry S. Truman humorously invited six Republican governors, including Duff, who had blueprinted a new GOP policy, to join the Democratic Party, the Grundy leaders shouted: "We told you so." Duff for his part has been lambasting the Grundy machine as vituperatively as any Fair Dealer might.

It is conceded that Duff will win the nomination for the Senate, but control of the State GOP is dependent on control of the State House, for that is where the patronage lies. The race for governor is a toss-up. And even if Duff's man Fine wins, he will still have to defeat the Democratic nominee, Richardson Dilworth, a Main Line Fair Dealer. The Grundy machine can survive a Democratic governor, since it has the PMA organization. The machine that Duff has built up probably can't.

Grundy leaders say that if Fine wins they'll back him, but the bitterness of the primary fight has been so great that whoever is the GOP nominee will have a great deal of ill feeling in his own party to overcome. It will be a miracle if Dilworth wins the governorship, but Dilworth watches the GOP primary fight with unconcealed glee, hoping that it will help make a miracle happen.

United States Economic Program

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of President Truman at Pendleton, Oreg., on May 10, 1950:

TEXT OF TRUMAN'S OREGON SPEECH ON UNITED STATES ECONOMIC PROGRAM

I am glad to be here in Pendleton today.

I am always happy to visit the Pacific Northwest. You know, I have come out here to dedicate Grand Coulee Dam tomorrow. On the way out, I have been reporting to the people on some of the problems that our Nation faces, and the progress we are making in solving them.

At different towns and cities, I have talked about world peace and the farm program, and the development of our national resources. All these things are tied together, because we need to build a strong United States; strong morally and strong materially, as the basis for our own expanding future, and as the basis for world peace.

Today, I want to talk with you about the economic progress of our country.

The growth of the Pacific Northwest is a symbol of the breath-taking economic progress of the United States.

In one century you have grown from a few people pushing back the wilderness to thriving States with several million people. One hundred years ago ox teams were the power for your covered wagons. Today you use the energy of the Columbia River and in a few years more you may be harnessing the tremendous force of the atom for peaceful work.

These changes did not come about by themselves. They are the result of the daring and independent spirit which has always characterized this area.

The people of the West have always looked ahead. In their private actions and jointly through their local state and Federal Governments they have been eager to take bold and imaginative steps toward a better future.

THE DANGER OF TIMIDITY

So long as we hold fast to the frontier spirit of the West, we need never fear the greatest danger that could overtake our Nation. That is the danger of timidity of being satisfied with things as they are; of failing to seek ever higher goals.

Throughout our history there have been timid people who have been afread to move forward. They opposed all the progressive measures we now take for granted. These timid folk once tried to reverse the trend toward free education and political democracy. They called this trend mob rule.

Today the spiritual descendants of this timid group are afraid of bold, progressive measures to achieve an abundant and expanding economy and to distribute its products more fairly among all our people. They call these measures statism or socialism.

The use of the powers of Government to achieve a higher living standard and a fair deal for all the people is not statism and it is not socialism.

It is a part of the American tradition.

Every day we should thank Almighty God that the progressive trends of American life and progress have never been stopped for long. We have moved steadily toward a higher conception of human needs and human freedoms and a greater appreciation of the rights of the average man.

This progress in American life has not not been accomplished without a struggle. It cannot be continued without a struggle. Repeatedly the common sense of a majority of the American people has had to assert itself in the face of the opposition of those who wanted to cling to the past.

Much of this struggle has dealt with whether our vast country with its wealth of resources should be developed for the benefit of the many or the few. The issue has been whether we should stop trying to provide all our citizens with a good standard of living just because a few people already had more than enough.

The timid minority do not believe that prosperity for all our people is a goal that we should fight for. Many of them are sincere and well-meaning individuals. The trouble has not been always with their hearts, it has been with their eyes. Not only were they blind to the prospects of the future, they could not even see backward clearly enough to understand what had already happened.

POINTS TO THE DEPRESSION

Let us look to the recent progress of the United States.

Twenty years ago we had entered upon the greatest depression in our history. We suffered huge losses for more than three long years. Then we began vigorous policies of recovery and reform. Our recovery was so successful that by 1939 our total national output of goods and services was actually higher than it was in the last boom year before the great depression.

Since 1939 we have gone on to make further gains—tremendous gains.

I am going to give you some facts.

The calamity howlers don't like to look at the facts because the facts prove how wrong they are when they tell you what a terrible fix the country is in. They have been saying over and over and over again, for years, that the country is being ruined. But facts show that things have been getting better. So what do they do? They just ignore the facts.

Well, we are not going to ignore them. We are going to keep the record straight. We are going to see what has actually been happening to our country.

The best over-all measures of a nation's economy is its annual output of goods and services. In the United States the annual output of goods and services has increased in the last 10 years about 60 percent.

Now how does this affect the individual citizen? You know a favorite theme of the boys who are always trying to run our country down instead of trying to build it up, is that the Government takes all our gains away by high taxes. But the truth is that the annual per capita income of our citizens after taxes has increased in the last 10 years by more than 40 percent.

And some of the people who are doing the loudest yelling are the very people who have got the biggest increases. Most of them are better off now than they have ever been before in their lives.

However, and for this I am very thankful, the increased incomes have not been confined to a favored few. Annual wages and salaries of employees increased almost 75 percent in the last 10 years.

The income of farm owners, although it has fallen off in the last 2 years and has fallen off more than it should, is still more than 50 percent higher than it was in 1939. You would think all this would be enough to convince anybody that the country is doing very well. But some people are hard to convince. They say this administration looks after labor and looks after the farmer but that it just doesn't give the businessman a chance, that business is being taxed to death.

PUTS INCREASE AT 100 PERCENT

Let's examine that. The fact is that the annual income of corporate business after taxes—I repeat, after taxes—have increased about 100 percent since 1939.

That's right—100 percent.

It seems to me that free private enterprise is doing pretty well.

I am glad that it is. I want business to be prosperous and I am going to do all that I can to see that it remains prosperous.

There are some die-hard reactionaries who won't give up even when all the facts I have mentioned are pointed out to them. So they say, "Well, maybe so, but the dollars people have won't buy as much as they used to." That argument is just as phony as all the rest of the arguments the pessimists use.

In all the figures I have given you, allowance has been made for changes in the purchasing power of the dollar. The increases I am talking about are real increases, not just dollar increases. In dollar terms the gains would be even larger.

During the last 5 years, we have successfully met one of the greatest economic tests that can ever confront a nation. We have come through the adjustments following a great war without a depression. We have had depressions after most other wars and many people expected that we would have one this time.

Instead, we have weathered the readjustment period with relatively few hardships. Almost every newspaper you pick up gives new evidence of increasing business activity.

We have avoided the calamity of a postwar depression because our whole economy has been strengthened by a program of action which began 17 years ago. This program has been directed toward the humanizing of our economy and toward the humanizing of Government. This program has been marked by such measures as bank deposit insurance, regulation of the security markets, old-age and unemployment insurance, minimum wages, slum clearance and low-rent housing, resource development and protective farm legislation.

We have had a Government that was and is working for the people, not for special interests.

These measures have helped to distribute buying power more widely among the people. They have provided larger markets for the increasing products of our factories and our farms. They have protected our economy against shock. They have provided business with a stronger banking structure and a more flexible credit system. They have helped to sustain farm income.

A LESSON TO BE LEARNED

These results have not been achieved through public action alone. In private enterprise as well, employers and workers have placed more emphasis upon the human element. They have learned more about how our economy functions. They have constantly adopted more enlightened and progressive policies.

There is a great lesson to be learned from what we have accomplished. We have learned that it is within our power as a people to make full use of our tremendous resources of farm and factory and human skill.

We can use that lesson and we must use it to build for the future.

There are two conflicting schools of thought about the future of our economy, just as there are about its present condition. Those who can see nothing but evil in the precent situation can see nothing but gloom for the future.

They have been saying all along that our programs could not succeed, even though the programs were succeeding at the very time they were denying it. Now they are saying the same old things—that the country is going bankrupt, that depression lies ahead and that the only thing to do is to pull in our belts and save what we can from the wreckage.

I don't agree with them.

I believe that we know more now than ever before about how to keep our economy strong and prosperous. I believe that we can continue to rely on the programs that have served so well for the last 17 years—use them and improve them. I face the future with confidence that our Nation will continue to grow in freedom and in material and moral strength.

I am sure that the people of Oregon and all the Pacific Northwest share that confidence. It is the character of those of you who live in this region to dream big dreams and plan big plans. You will not join with the little men who throw up their hands and cry, "It can't be done" when we set up our goals for future prosperity.

I want to tell you about some of those goals. And I assure you that there is nothing fantastic about them. They are merely based upon the belief that we can improve as rapidly in the future as we have in the past. I am sure we can do that well and even better if we follow wise policies that are for the benefit of all the people and not just for the special interests.

GOALS OF NEXT 10 YEARS

Here are some of the things we can do. In the next 10 years we can reach toward higher standards of living for all.

We can lift our annual output of goods and services to more than $350,000,000,000 by 1960—a one-third increase within 10 years. And I am talking about real output measured in dollars of today's purchasing power.

We can increase real wage and salary incomes, and farm incomes, as our economy grows. We can increase the profits of business, not through higher prices or higher profit margins, but through increased volume in a growing economy.

I have said before, and I repeat, that by 1960 we can and should achieve a far better standard of living for every industrious family in the city and on the farm.

Now I want to tell you about some of the things we must do to achieve these goals.

First, the efficiency and capacity of our industries must be increased. Despite the large investments which industry has made since the war, there is urgent need for further investment and improvement to meet expanding markets and to take advantage of the rapid gains in technology.

This is a job for private owners and managers in manufacturing, in power, in transportation, in many other industries. It is also a job in which the Government must participate through resource development, sound tax policies, housing and small business programs, and many other ways.

Second, purchasing power must be expanded to develop and maintain markets for our increased production of goods.

The final market for all products is the ultimate consumer. Our economy cannot expand as fast as it should as long as we have a large number of families with substandard incomes. One out of four American families now has an income of less than $2,000 a year.

Our goal over the next decade should be to lift every hard-working American family to an income of about $4,000 a year—not a mere dollar increase, but an increase in the real standard of living. We have the resources to do this by balanced national growth.

SEES BENEFIT TO ALL

Raising the standards of our poorest families will not be at the expense of anybody else. We will all benefit by doing it, for the incomes of the rest of us will rise too.

Third, we must maintain a sound balance in the programs of our Government, faced as it is with huge and unavoidable responsibilities.

Most people realize now that more than 70 percent of the Federal budget is required to pay for past wars and our work to prevent another war. However, they often fail to realize just how vital the other 30 percent is to our welfare and progress. The costs of sound programs to improve the Nation's health and education, to stabilize agriculture, and to develop resources, are sensible investments in a better future.

I want to balance the budget of the Federal Government just as much as anybody else does. I would like to see taxes reduced. We will do both of these things just as soon as we safely can.

We must continue to strive for every true economy in national affairs. But I will not join in slashing Government expenses at the cost of our national security or national progress.

Fourth, we must continue to improve our economic relations with the rest of the world.

We must develop a larger flow of international trade and international investment on a sound basis. This will result in larger markets for ourselves and larger markets for other free countries.

Just as our Nation has grown through enlarged production and trade from which all sections of the country have benefited, so the expansion of world production and trade can strengthen all the free countries. That is an essential step toward world peace.

We must not be turned aside or slowed down in our efforts to help the other free nations get back on their feet by those who would retreat into isolationism in order to save a few dollars. We would pay for that folly many times over. It would greatly increase the chances of a third world war.

PUTS WORLD PEACE FIRST

As long as I am President we are not going to put dollars above world peace.

These things that I have been talking to you about the growth of our economy and the policies needed to make that growth possible, have very definite meaning for you folks here in Pendleton as they do for people all over the country. They are not just abstract theories. They are matters that will have a very important effect on your daily lives.

Our wheat and livestock growers cannot prosper without good incomes and high consumption in the rest of this country and in the other countries, too. The same thing is true of the Columbia River fisheries. Oregon's lumber industry will have good times only if our Nation builds the houses our people need.

And it works the other way, too. The Nation needs the products of your agriculture, forests, and fisheries. The whole country becomes stronger when Oregon and the Northwest grow and prosper.

We are a Nation that advances by cooperation and mutual benefit. We do not want any State or any group to grow at the expense of another. Our strength, the strength of free men, is in a society that works to bring better living to all our people.

We have demonstrated in our country that we can all move forward together. I believe profoundly that this forward movement is going to continue.

I believe that ultimately it will extend to the farthermost corners of the earth and that with the United States as a shining example we shall succeed in bringing greater welfare and freedom to all mankind.

Curtailment of Mail Deliveries

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

ERIE COUNTY COMMITTEE,
THE AMERICAN LEGION,
Buffalo, N. Y., May 8, 1950.

Hon. ANTHONY TAURIELLO,
House Office Building,
Washington, D. C.

DEAR SIR: Enclosed, herewith, please find copy of a resolution pertaining to the cutback in the Post Office Department which was unanimously adopted by the Erie County Committee of the American Legion on April 27, 1950.

We shall appreciate your assistance in this matter.

Respectfully yours,
THOMAS F. CAULFIELD,
Erie County Commander.

Whereas a recent order of the Post Office Department has been sent to every Post Office to curtail the delivery of mail; and

Whereas this order would give only one delivery of mail daily in residential areas and two in business sections; and

Whereas the Post Office Department is the direct contact of the public with one another and is the most essential public service granted the peoples of our great country; and

Whereas the dire consequences of the elimination of this necessary public service cannot be measured in dollars and cents: Now, therefore, be it

Resolved, that the Erie County Committee of the American Legion go on record condemning such contemplated action on the part of the United States Post Office Department; and be it further

UNIVERSITY OF MICHIGAN LIBRARIES

Resolved, That we send a copy of this resolution to our two United States Senators, namely, the Honorable IRVING M. IVES, and the Honorable HERBERT LEHMAN, together with a copy to our local United States Congressmen; and be it further

Resolved, That we inform our local newspapers of the action taken in reference to this matter.

THOMAS F. CAULFIELD,
Erie County Commander.

Republican Party Should Stand on Personal Freedom as the One Great Issue

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, on last Saturday I addressed the Young Republicans in their annual State convention at Janesville, Wis. I am including the remarks which I made at that time:

As members and workers in the Republican Party, it is well that we consider the position we must take in the coming campaigns, 1950 and 1952. There are those who feel that the Republican Party has no future in view of defeats in past national elections. We should not be discouraged. Republicanism in the State of Wisconsin is in a healthy condition; here is the place to strengthen our great party. We must arouse those who believe in the principles we support. There is an imperative need for productive action. We cannot hope to win on the weakness of our adversaries or in advocating "me-tooism." We must have a program of positive action consistent with the principles of freedom. The question presented, therefore, is where do we stand on State and national matters? Let me suggest that there can be no more sound program than a platform for free Americans. Our position must be grounded in personal freedom. This means freedom to work on our own initiative at any honest occupation we choose. It follows that personal freedom means the right to keep what we have earned. The opportunity to save, to invest, or to engage in business, or to work in a factory or on a farm, and thus face the future as free men in a free land. This concept is indispensable to the basic principle of life, liberty, and the pursuit of happiness. These are inalienable rights for all Americans. The founders of our Nation fought and died to obtain these rights and we, as Republicans, must wage a fight to transmit them to those who come after us—unimpaired.

To preserve freedom and for no other purpose the people of the United States created a government under our Constitution. They realized that no simple democracy could long survive the lure of political demagogues, leading to the dictator and they deliberately limited the power of their government and divided it into three separate parts; legislative, executive, and judicial. This was intended to be a check on each department so that no one of them might become supreme. The purpose of the Contitution was not to convey rights to individual citizens but to specify the limitations imposed by free citizens on government. Today we are cognizant that this limitation is being submerged by those who have become securely entrenched in government.

Our forefathers desiring freedom above all else and having won it with their blood did not propose to permit any new government to usurp authority or to interfere with their personal lives as free men. This principle, too, has been forgotten. Those who organized the Federal Government did so with the clear thought in mind of a government of limited powers in a general grant of sovereignty. You will recall that the Bill of Rights provides that the enumeration in the Constitution of certain rights shall not be construed to deny or disparage those retained by the people and further that powers not delegated to the United States by the Constitution nor provided by it to the States are reserved to the States respectively or to the people.

One hundred and sixty-three years have passed. True only a brief period in the history of the world and what do we find happening to this Republic? There can be no doubt that the trend we are following is leading to the abolition of personal freedom and reliance upon omnipotent government under socialism. I hesitate to use that term for it is greatly misunderstood and people pay little attention to it. We know, however, that socialism is government ownership or management of the nation's economy. Socialism leads to the denial by the Government of the right or capacity of individuals to manage themselves and their property. In effect, socialism sets up a government which is the master of the people and not its servant.

Today a young man cannot work at a trade without the consent of a labor dictator to whom he must pay political tribute. Today a young man cannot conduct a business of his own without the consent of bureaucrats who tax away profits and leave him losses so that business cannot grow under his direction and management. In many fields of business the Government, through loans and subsidies of special favors, actually competes with a man in business. Government threatens the professions; medicine and education, and the minds of our children may be subservient to governmental duress. Without young growth a forest passes away and with young people, who will make the jobs for them in the future? Will it be Government or will it be enterprising young people who have vision and faith in these United States.

Let me remind you of certain facts that are discernible today. We know that other lands have greater natural resources than our own and larger populations. Yet with only 6 percent of the world's land area and less than 7 percent of the world's population, we have produced a standard of living that is the envy of the world. What have we had that other nations had not? It seems to me the principal ingredient has been liberty, freedom from the avarice of government. If there is one deterrent to the healthy rehabilitation of the nations of Europe and Asia, it is that of oppressive governmental organizations geared to the principle of state socialism.

In our own country we see personal and corporate savings for expansion purposes drained into unproductive governmental projects. The average man is working 2 days of every week for government before he can earn his own living. On Monday and Tuesday he works to pay for government. Wednesday he starts keeping what he earns as a free man should. Of course we need some government to keep us free and we are all willing to pay a reasonable sum for it, but there is a limit and we are rapidly reaching that point today.

In 1930 the national debt was $131 per person, now it is $2,000 for every man, woman, and child. Yet there are those who think they can get something for nothing just so long as it comes from the Government. This is a fallacy that people are just beginning to realize. Government has no money of its own, whatever it spends it takes from all the taxpayers in this country. There is and can be no national gravy train. No program can guarantee something for nothing, year in and year out. Taxes are derived from productive enterprises.

Only production stimulated by free markets can give us anything. Every hour taken up in Government red tape is an hour taken from production and produces nothing but scarcity. It is sad but true. There is no such thing as free money. Government can only print money, it cannot create a value for it. Now we find that Government is taking money from the people in three ways; by direct taxation, indirect taxation, and by paper-money inflation. Direct taxation is such as the income tax; indirect taxation is anything involved in what we buy; bread, clothes, autos, movies, in fact, all of our daily needs. The only other way that Government can get money is by the paper-money inflation route, which arises as a result of deficit financing. Today we have a 60-cent dollar, probably less. This devaluation of our money is actually a loss. It seems to me that the time has come to restore the value of that money by stopping deficit financing and by the establishment of a balanced budget. I think it is important to realize that Government can only support a favored few. It cannot support all of us. It has nothing to give but what it takes from the people. Our real security in this country must be measured by production. We cannot consume more than we produce. Whatever kills initiative and incentive kills security. All around us there is evidence that men and women in the past have been ambitious and willing to earn, save, and invest. England fell for the welfare state and today it lives its meager existence dependent upon our bounty, but it will not let a man build a chicken coop in his own backyard without governmental consent. Socialism kills the spirit of adventure by distributing our wealth in numerous ways and it finally ends by distributing poverty to all but the ruling class. If we slip into the twilight of socialism and economic conditions become difficult, what nation on the face of this earth is there to send us its bounty and support us on its charity?

All this adds up to the point that I have been attempting to make, namely, that in the light of our history as a guide to save ourselves and our country, the Republican Party must stand for personal freedom without equivocation; the right to work as we please without fear of domination or control from any source; a public policy rededicated to the protection of the right to acquire and own private property; a tax system that will restore incentive to production; a public policy containing and eliminating Federal subsidies; reduction of Federal expenditures in every department of Government; a balanced budget in time of peace and a prompt termination of wartime powers; a judicial system where judges rise above politics; withdrawal by the Federal Government from competition in private business; the restraint of all monopolies whether of Government, business, or labor, so that no man or group of men would have the power to tie up our national economy; a systematic plan for the payment of our national debt; and finally economy in government and the restoration of a sound monetary system.

Only by freedom can the energies of the people of this country be realized. We must restore the dignity of the individual and return again to the fundamental and basic principle that government is still the servant and not the master of the people.

The second principle of our platform, in order to preserve our freedom and our constitutional Government, it seems to me, is

insistence upon the sovereignty of the individual States. The Federal Government has no inherent sovereignty as I have already said. It only has limited powers delegated to it by the Constitution. The inherent sovereignty of each State goes back of the Federal Constitution and is, in effect, broader and more basic. It was Thomas Jefferson, author of the Declaration of Independence who realized that the Federal Government might become strong and oppressive. He said, "I see with the deepest affliction the rapid strides with which the Federal branch our Government is advancing toward the usurpation of all the rights reserved to the States and the consolidation in itself of all powers, foreign and domestic, and that too, by constructions which if legitimate leaves no limits to its power." We see today that the prediction by Jefferson has come into full bloom with a Federal Government attempting to usurp all rights reserved to the States under our Constitution. This is a situation that calls for drastic action. We believe as did the founders of our Nation in a Federal Republic of limited controlled powers and in the system of checks and balances between the legislative, executive and judicial departments—no one supreme, no packed court and no rubber-stamp Congress.

It may seem strange but we know that an atom bomb might be smuggled or flown into this country and might someday explode in Washington, destroying in an instant, our President, our Congress, our Supreme Court, and our War Department, while saboteurs cut our communications. Is it not well then that our States retain their native strength and organization for independence so that an enemy may know that there is no simple path to the conquest of the United States? We have 48 States and thus we differ from European countries where the killing or the intimidation of central government officials has surrendered nations to communism. It is significant that all Communist policies favor centralization and the setting up of a strong centralized government. This is a matter that should have the serious thought of the American people immediately.

The third principle which we must consider if we are to preserve our personal freedom and the freedom of our States, deals with the freedom and independence of the United States against any foreign control whatsoever. It can be said that there are two present threats to the independence of the United States—(1) military and (2) subversive activities.

We humbly confess that with our own aid Russian communism has grown enormously, while nations fighting it have been undermined and abandoned. We have poured billions of dollars worth of military supplies into Russia, when it seemed as though Russia would fall before the onslaught of Hitler's hordes. At Yalta, our statesmen delivered 7 nations and 85,000,000 people into the hands of communism including, our own ally Poland.

Betrayed without her knowledge, Poland was left to learn her fate from conversations in Moscow. When our armies drove rapidly against Germany toward the eastern border and were about to take Berlin, word from Washington halted them, saying Russia must enter Berlin first. That American General Patton saw his victorious sweep across Europe brought to a halt by diplomats who did not realize what they were doing. Patton was humiliated but the die was cast. We continued and still are continuing to pour billions of dollars into a continent where Russia can take over at will. And today we find that communism is being consolidated behind the iron curtain and we are forced again to expend billions of dollars more to prepare for the war that might come. We have been chagrined by the Berlin blockade which cost millions of dollars and took many American lives in an effort to keep food going into Berlin proper.

While subsidizing socialism in western Europe with a show of strength and insisting that Communists stay out of the Greek Government, our same State Department insisted that the Chinese should admit Communists to their government and when the national government refused, they opposed it with obstruction and delay. After giving Manchuria to Russia which did not belong to us but to China, we now find that the Communists have conquered all of China.

All this has been very satisfactory to Russia who preaches war against America and foresees us outnumbered, 10 to 1, by an enemy controlling the greatest land mass in the world. This presents a difficult question and calls for a higher order of statesmanship than we have had in the past. The problem will not be solved by indiscriminate spending in all quarters of the globe nor spending in areas where the benefit flows readily on to help the Russians. The Communists plan to defeat us by making us spend ourselves into bankruptcy and we have made a good start.

Former President Hoover was right when he recently said that if the Nation is to survive, no new special projects however worthy, should be undertaken until the cold war is ended, since $23,000,000,000 of our $45,000,000,000 budget is needed for defense in the cold war.

The danger that comes in our preparation to establish a defense sufficiently strong to meet any thrust by a potential enemy arises in the transformation of our industrial economy from a peacetime to a wartime footing. In this country we could easily be spending forty or fifty billions creating a condition which would not be healthy from the standpoint of a sound industrial economy.

Finally there is this threat to our independence by subversive activities within the United States. Those of us who live and work in Washington know that this threat is a real one. Russian Communists have made great inroads within our land. Yet the President of the United States denies such to be the fact. Aside from influencing foreign policy their immediate purpose in the United States is to weaken us internally by cultivating conflict between Americans. Trained trouble makers, who urge the Protestant to hate the Catholic, the black to hate the white, the employee, the employer; love for Russia, but not friendship and understanding among Americans. To delude our people they have developed the technique of the Communist front and their sympathizers are prominent in the literary, educational, religious, and scientific worlds.

It is a known fact that Russia organized cultural conferences in various countries, the American one at the Waldorf in New York, where writers, scientists, movie actors, and other such intelligentsia rush to attend. In this group there were 100 professors from 51 colleges in 21 States, and a former Vice President of the United States. Just a year ago our own Atomic Energy Commission entrusted our allies' fortunes and honor by presenting scholarships to known Communists and then defended its action in so doing. Activity in known Communist fronts becomes fashionable in educational and scientific circles and no bar to high official positions close to the atomic secret. Investigations are blocked or turned secret, and the President puts an official gag order on 2,000,000 Americans forbidding them to testify before a congressional committee without his consent.

I believe that the people of the United States want no secret government for it is alien to the American tradition. Subversiveness and corruption thrive in darkness and wither in the light. We want no iron curtain in our country. Good administrators should frankly cooperate with representatives of the people in investigations of corruption and subversion, particularly in their own administration. Good administrators don't cover up, they clean up and they are glad when others help them to find bad spots. That is the kind of administration we want and the people of this country are entitled to know what kind we have. After all it is our country.

Now let me summarize the points that I have been trying to make in this presentation:

(1) We stand for personal freedon to live and work as we please, subject only to laws designed to preserve similar freedom in others. We believe in the right of freemen to own and keep property, as indispensable to human rights. We seek a sound and frugal government, without which there is no security for any man. And we would restore the dignity of the individual and return to the fundamental principle that the Government is the servant, not the master, of the people.

(2) To preserve our constitutional government we would faithfully observe the checks and balances created for that purpose, and protect the rights of the States and the people in their freedom.

(3) To preserve our personal freedom and the freedom of our States, we stand for the freedom and independence of the United States and against any foreign control whatsoever.

(4) We will oppose communism. We will aid those who fight against it in China and Asia as well as in Europe; we will husband our resources and carefully prepare for defense; we will cease to coddle communism within our own gates. We will not submit to any world government or alien association; we would help the world by example, not by conquest; we do not seek to conquer, neither will we be conquered.

Integration of Heavy Industry in Germany and France

REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, the proposal made yesterday in Paris by the French Government to integrate the heavy industries of Germany and France is one of the most far-reaching and significant developments of our time.

It is doubly gratifying that our Secretary of State has immediately hailed the plan as entirely consistent with American objectives in Western Europe.

Mr. Speaker, the integration and confiscation of the 270,000,000 free peoples of Western Europe will defeat and turn back aggressive communism. There is cause for rejoicing in the free world today.

I include herewith a splendid editorial from the Washington Post of this morning. I also include the text of the French proposal as well as a news story giving the American reaction.

[From the Washington Post of May 11, 1950]

UNION IN WESTERN EUROPE

There's a logic about the French plan for supranational control of heavy industry in western Europe that will doubtless repel the opportunists and the doctrinaires and the

UNIVERSITY OF MICHIGAN LIBRARIES

drifters in foreign-policy making. Let us examine the logic. The French are weak, the Germans strong. It is unrealistic to expect a Franco-German combine without either the entry of the British as a balancer or a real merger of the tools of war which would erase nationality. An inner advantage is that amalgamation would allow the French to absorb two or three million Germans in their population without fear of internal upset. Britain's cool and cautious attitude toward unity in Europe requires concentration on the alternative of a non-British continental authority.

Approach the problem in another way. There can never be any unity in Europe without the prior establishment of a vested interest in it. This thought was one of the great contributions to political theory of Alexander Hamilton. In assuming the preexisting debts of the constituent States, he built up a vested interest in Federal union on the part of the moneyed class of the young America. Similarly the control of heavy industry by the affected countries in unity would create a vested interest in European unity. So the French policy represents a contribution to integration of the utmost significance.

Our satisfaction is influenced by the fact that since the war ended the Washington Post has advocated exactly this plan as the necessary first step in establishing the European system in accordance with modern realities. It was given priority over Mr. Hoffman's payments union in our last comment. Mr. Schuman is still nuclear in concept. As a starter he would restrict control to Germany, France, and the Saar. Clearly the Foreign Minister wants first of all to overcome the stumbling block over the Saar which has created a new controversy between France and Germany. Incorporation in a wider union would simply swallow the Saar problem. In time, however, the authority would doubtless take in Luxemburg, Belgium, and Holland, for these three countries, now working toward unity themselves, have a vital stake in the Ruhr complex.

It has been our experience that two objections are usually advanced against such an economic union. One is fear of worker hostility, the other fear of cartelization. However, as to the workers, these have long been in advance of their governments. On March 15 a year ago, the union leaders of the metal workers of Germany, France, Luxemburg, Holland, and Belgium met to try to promote the idea of a continental industrial entity. The upshot was the establishment of the Joint Committee of the Metal and Mine Workers Unions. Headquarters are at Luxemburg, where the meeting was held, and there could have been no better place for the achievement of consolidation, for Luxemburg was the former headquarters of the Ruhr cartel.

Cartel! Does the word apply to the proposed new authority? Mr. Schuman takes specific pains to apply just the opposite description. He says it would be an anticartel authority, dedicated to free expansion, and in an effort to meet objection by the anticartelists, the United Nations would be invited to have a representative sitting with the authority.

In sum: Mr. Schuman has the root of the matter in him. A new Europe, as he puts it, will never be born by decision, but by action—action based upon what Metternich called "a unifying idea." The only "unifying idea" in a context of postwar modern life which has made prosperity and peace indivisible is unity itself. The Schuman policy is based upon the concept of a new Europe which shall be coprosperous and copeaceful. Many have had this idea before Mr. Schuman, including Messrs. McCloy and John Foster Dulles. It may be well here to pay tribute to one of them, for Washington will soon be the poorer because of his departure. This is the Netherlands' Ambassador, Mr. E. N. van Kleffens, who, as far back as 1943, proposed something very similar to the Schuman idea. It has been left to Mr. Schuman to spark a plan, which, we are confident, had been thoroughly studied and prepared before it was offered for public and ministerial consideration.

[From the Washington Post of May 11, 1950]

TEXT OF FRENCH PROPOSAL—POOLING WOULD UNIFY EUROPE AND KEEP PEACE, SCHUMAN SAYS

(Details of the plan for the industrial unification of Europe, as set forth by Robert Schuman, the French Foreign Minister, were made public here last night by the French Embassy. Schuman made the statement in Paris on Tuesday. The text follows:)

It is no longer a question of vain words, but of an act, a bold act, a constructive act. France has acted and the consequences of her action may be immense. We hope that they will be.

France has acted essentially for peace. If peace is to have a chance, there must first of all be a Europe. Five years almost to the day after the unconditional surrender of Germany, France is taking the first decisive act in the construction of Europe and is associating Germany with it. This act must necessarily transform European conditions. This transformation will make it possible to take other common action that has been impossible until now. Out of all this will emerge a sound, united, and strongly constructed Europe, a Europe whose standard of living will rise, thanks to the pooling of production and the extension of markets, which will bring about a drop in prices. In this Europe, the Ruhr, the Saar, and the French Basin will work together and their peaceful neighbors, followed by United Nations observers, will benefit all Europeans, eastern as well as western, and all lands, especially Africa, that look to the older Continent for their development and prosperity.

Such is France's decision, and these are the considerations that inspired it: World peace cannot be safeguarded without creative efforts proportionate to the dangers that threaten it. The contribution that an organized and vital Europe can make is indispensable to the maintenance of peaceful relations. As the champion for United Europe for more than 20 years, France has always had one main objective: To serve the cause of peace. Europe has not been organized; we have had wars.

Europe will not be built at one stroke or by means of one over-all structure. It will be built, first by means of concrete steps that create real solidarity. The unification of the European nation demands that the age-old enmity of France and Germany be eliminated. The action undertaken must apply primarily to France and Germany. To this end, the French Government proposes immediately to take action on a limited but decisive point. It proposes to place all French and German steel and coal production under a common high authority in an organization opened to the other European countries.

The pooling of coal and steel productions will insure the immediate establishment of common bases of economic development, the first stage in European federation and will change the destiny of these regions which have long been devoted to the manufacture of weapons of war, of which they themselves have been the most constant victims.

The solidarity of production thus established will prove that any war between France and Germany has become not only unthinkable but materially impossible. The creation of this powerful production pool opened to all countries that wish to participate in it and making available to all its members on the same conditions the basic necessities for industrial production will lay the real foundation for their economic unification. The output of this pool will be offered to the whole world without discrimination or exclusion as a contribution to the improvement of living standards and the advancement of peaceful enterprise. Europe will have increased means with which to promote the realization of one of her essential tasks; the development of the African continent.

The fusion of interests indispensable to the establishment of a broader and deeper community between countries that have long been kept apart by bloody conflicts will thus be realized simply and rapidly. By pooling their basic industries and establishing a new high authority whose decisions will be binding for France, Germany, and the other participating countries, this proposal will lay the first concrete foundation of a European federation which is essential for the safeguarding of peace.

In order to work toward the realization of the objective defined above, the French Government is ready to open negotiations on the following basis: the common high authority will be charged with insuring, in the shortest possible time, the modernization of production and the improvement of its quality, the supply of coal and steel on the same terms to the markets of France, Germany, and other member-countries, the increase of joint exports, the improvement and equalization of the living conditions of the industrial workers in the participating countries.

Since production conditions are very different in the member countries, certain conditional measures must be adopted to achieve these objectives: the application of a production and investment plan, the establishment of mechanisms to equalize prices, and the creation of the reconversion fund to facilitate the rationalization of production. All customs duties on coal and steel between participating countries will be abolished immediately and the same railway freight rates will be applied. Gradually, conditions will be created which will automatically insure the most rational distribution of production at the highest level of productivity.

In contradistinction to an international cartel which tends to divide and exploit national markets by restrictive practices and the maintenance of large profits, the proposed organization will assure the merging of markets and the expansion of production. The basic principles and engagements defined above will be the object of a treaty to be signed between the states and submitted to the Parliaments for ratification. The negotiations necessary to work out the measures of implementation will be carried on with the assistance of an arbiter designated by common agreement. It will be the arbiter's responsibility to see to it that the agreements reached are in conformity with the principles, and in case of a deadlock, he will decide upon the solution to be adopted. The common high authority responsible for the functioning of the whole organization will be composed of independent personalities designated on a party basis by the governments, and a president will be chosen by common agreement of the governments. This decision will be enforceable in France, Germany, and the other member countries. Appropriate provisions will insure the necessary means of appeal against the decisions of the high authority. A United Nations representative attached to this authority will make a report twice yearly to the United Nations Organization on the functioning of the new organization, especially with respect to the safeguard of its pacific aims. The establishment of the high authority in no way prejudices property rights in the enterprises concerned. In the exercise of its task,

the common high authority will take into account the powers conferred upon the international authority for the Ruhr and the obligations of all kinds imposed upon Germany as long as these obligations subsist.

FRENCH PLAN GETS BACKING OF ACHESON—BRITISH ARE CAGEY ON PROPOSAL FOR UNIFIED CONTROL OF HEAVY INDUSTRY

LONDON, May 10.—France and the United States appeared to be strongly united tonight on a policy of tying Germany into western Europe industrially and politically.

There was doubt, however, as to Britain's attitude.

Secretary of State Dean Acheson issued a statement giving sympathy and approval to the significance and far-reaching intent of the surprise French offer yesterday to pool French, German, and possibly other European coal and steel production.

This proposal dominated top-level diplomatic thinking today in London, where Acheson and British Foreign Secretary Ernest Bevin held two long secret discussions on German and other phases of the cold war.

Acheson said of the French proposal: "It is plain from the announcement that the spirit prompting it was the furtherance of rapprochement between Germany and France and progress toward the economic integration of western Europe.

LONG FAVORED BY UNITED STATES

"These are objectives which have long been favored by the Government of the United States."

He added, however, that "thorough analysis and final judgment" must await further development of the plan.

Thus, for the first time since the war, France and the United States appeared to be going into a western Foreign Ministers' Conference with common aims. The conference opens Thursday.

French Foreign Minister Robert Schuman arrived from Paris tonight.

British officials did not seem to share the enthusiasm of one American diplomat who commented that "this is the first time the French have taken the initiative in a major constructive fashion to solve the German problem."

A British Foreign Office spokesman danced all around the subject when questioned by reporters. Most of the British press expressed reserve toward the idea.

ADDRESSES PILGRIMS

In an address tonight before the Pilgrims, a society to foster American-British friendship, Acheson said both the United States and Europe must sacrifice some national interests to make the world secure against war.

Acheson said the job of bringing Germany back into the family of western civilization "must be a cooperative enterprise in which the risks and responsibilities are shared by all."

Though remarking on the success of American economic aid to Europe, he said remaining troubles can be cured only through "cooperative international arrangements in which some sacrifices of purely national interest will be unavoidable for all of us."

A combination of French and German heavy industry, as represented by coal and steel, would outweigh Britain in the European scales. If Britain entered the pool, as suggested by Schuman, the Government would have to take account of the pronounced effect on its planned economy schemes.

Aside from still nebulous phases of the Schuman idea, there remained a question of the extent of support the plan will get from the French people.

The plan escaped an adverse slap by only one vote in the foreign affairs committee of the French National Assembly today. When a rightist deputy moved that the Government get prior approval from Parliament for any pooling scheme the committee voted him down 18 to 17.

The plan is the most daring ventured by any French Foreign Minister toward Germany since the war. It probably would have toppled any French Government if attempted a year or more ago.

Many French, as well as German Socialists, were expressing misgivings that the plan would cut across their ideas of public ownership.

At Bonn, however, the West German Chancelor Konrad Adenauer has called the plan a generous step. Western Germany would have little to lose. France is in control of the Saar coal mines, whose output would be thrown into the pool for German use. Germany's coal and steel from the Ruhr already are under an international authority.

The scheme closely fits Acheson's urgent aim of knitting Western Germany so closely to the west that there will be no question of her sliding into the Russian orbit.

The speed of Russian armament has impelled him to seek bold cooperation from America's partners in the Atlantic Pact.

Britain has given the impression that she is unmoved by the same sense of urgency. Consequently, few concrete decisions have been expected from the three-way meeting of Acheson, Bevin, and Schuman.

The French suggestion, however, may change that and give an impetus to the conference that was lacking before.

Acheson and Bevin ended their talks tonight. No definite agreements were reached, it was reported, although officials described the talks as satisfactory.

A wide range of subjects reaching from Europe and the European payments problem of the Marshall plan organization to the Middle East and Far East were discussed.

The morning meeting of Acheson and Bevin presumably was devoted to Germany, since advisers on German affairs were present. These included United States High Commissioner John J. McCloy.

The afternoon session turned to other world problems, including those in the Far East. Informed sources said they expected the three powers would make a joint declaration of aims in the Far East, and might work out a joint plan to aid anti-Communists in Burma, Indochina, Malaya, and other embattled countries.

Acheson went from Bevin's office shortly after noon to an audience with King George. Later he and Mrs. Acheson had luncheon with the King and Queen.

Investment in Friendship

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. COLE of New York. Mr. Speaker, when the Philippine rehabilitation bill providing for $400,000,000 with which to restore war-ravaged properties of the Filipino people was passed, it was my pleasure to be a member of the House Committee on Insular Affairs, then having jurisdiction of the bill. I recall that at the time there was some indication that this sum would be insufficient to carry out all of the provisions of the act, and that a supplemental authorization bill may be necessary. Such a bill is now pending before the House Committee on Foreign Affairs providing for another $100,000,000, which I sincerely hope will receive early consideration, as being justified as expressed by the attached editorial:

[From the New York Herald Tribune of May 11, 1950]

INVESTMENT IN FRIENDSHIP

Since the Philippines were cut adrift on the rough seas of independence they have continued to look to this country as a friendly beacon in a storm-tossed world. They have made mistakes, but they have stood by us. It can be said with equal truth that we have stood by them. The United States has made a heavy contribution to the rehabilitation of the war-shattered economy of its former ward. Not all our expenditures have been wisely utilized. Tales of corruption and mismanagement have been too often substantiated to be ignored.

It must be admitted, however, that the fault has not always been on one side. That was shown in this newspaper's recent revelation of the dissipation and pilferage of surplus materials turned over to the Philippines after the late war. Although vigilance is necessary against a recurrence of similar incidents, these past happenings cannot deter us from fulfilling the special responsibility that we owe to a government and a people who fought loyally against the Japanese when collaboration was the rule rather than the exception in other southeast Asian countries and who now are endangered by Communist pressures, both from within and without.

The United States Congress is being asked for an additional $100,000,000 for rehabilitation under our war damage program in the Philippines. Frank A. Waring, War Damage Commissioner, has pointed out that a grant of this amount would make possible payments up to 75 percent of the allowed claim. Thus the proposed appropriation is in no sense an act of charity; it is, in fact, an obligation. The machinery set up for the carrying out of this program is such as to ensure careful and efficient dispensation of any funds that may be made available. These moneys would contribute to economic revival and general well-being in a hard-pressed country. If we are to keep faith with the Philippines and to keep them on our side, the proposed grant merits our fullest support.

Americanism

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, the Hunting Park Post, No. 265, Veterans of Foreign Wars, of Philadelphia, Pa., in cooperation with the Philadelphia County Council, representing 83 VFW Posts in Philadelphia, recently conducted an essay contest on Americanism. The winning essays were submitted by two students of the Olney High School, one by Norman Kaplan, 4921 North Ormes Street, Philadelphia, entitled "Americanism, My Creed," the other by Sandra Gunther, 1869 Conlyn Street, Philadelphia, entitled, "Americanism, My Faith." These essays reveal gratifyingly the intelligent perspective of modern American youth, and it is gratifying to me that by permission of the House they may be

UNIVERSITY OF MICHIGAN LIBRARIES

printed in the CONGRESSIONAL RECORD. In submitting these essays, I also wish to say "Well done!" to the Veterans of Foreign Wars for sponsoring such contests and instilling in our youth the principles of Americanism. The essays are as follows:

AMERICANISM, MY CREED

(By Norman Kaplan, 4921 North Ormes Street, Philadelphia, Pa.)

Mr. Noah Webster defines Americanism as, "the doctrine of United States citizenship; patriotic attachment to the United States, its interests and institutions." To me, however, my creed, Americanism, has come to mean a number of things. It means going to a baseball game and singing the national anthem along with people of entirely different racial and religious backgrounds. It means going to an Easter sunrise service even though I was born Jewish. It means going to a Purim service with my friend, who was born Catholic. Religious freedom, however, is just one of the things that Americanism means to me.

To my uncle, who lives around the corner from me, Americanism means writing to his Congressman and telling him how he would run the Government. It also means signing his name to the letter without fearing any unwelcome guests at his door.

To my father, Americanism means free enterprise, the right to invest some money and become "your own boss." It means being one of the owners of the Bell Telephone Co., and having a certain amount of "say-so" in their doings.

To get back to myself, Americanism means going to a free public school. It also means doing 6 hours of home work occasionally, which is good or bad according to the perspective with which it is observed.

Americanism means individualism and competition. Because of the individualism in America, producers and manufacturers are subjected to competition which means that their product had best be good or they will not remain in business. Perhaps the manufacturers do not appreciate this phase of Americanism as much as I, but to me, it means that I am buying the best that there is to be offered.

It is for these reasons that when I am asked my creed, I will proudly reply, "my creed is Americanism."

AMERICANISM, MY FAITH

(By Sandra Gunther, 1869 Conlyn Street, Philadelphia)

Americanism means to me my entire existence. It means I may have a date Saturday night. I can go where I please, do whatever I please, and enjoy myself with a carefree mind.

I can go to a lecture where I can listen to another person's ideas, beliefs, and opinions, and from these formulate my own opinions. I can express these ideas, too, without fear of being condemned because my ideas do not coincide with some dictator's spiteful wiles.

After school, I can come home to a house where I can have privacy or company as my whims fancy. I have no fears that a knock on the door will mean disaster for my family and me. I know we are free to live a life of our own choosing.

I have the privilege of attending school and taking the courses of my own choice. I can read uncensored books, books free from political pressure, books written by freemen.

I cannot be told that when I grow up I am to be a worker on an assigned farm. If I desire, I may be a doctor or even President of the United States. I have the same opportunity to succeed in any enterprise I undertake as the man next door or the girl across the street.

I have an unequivocal right to life, liberty, and the pursuit of happiness. I have this right because my ancestors fought and struggled so that I may live a free person. They settled in this land as a people seeking liberty and justice. They made certain that they secured these privileges. They secured their endeavor and they preserved it for me—a free girl in a free land.

President Truman's Speech at Grand Island, Nebr., on May 8, 1950

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. O'SULLIVAN. Mr. Speaker, the people of Grand Island, Nebr., were privileged to hear President Harry S. Truman, on May 8, last. His inspiring address was as follows:

When I was here last time, I was here on a Sunday in 1948. Time passes very quickly. You gave me a pair of spurs, and I told you I was going to make good use of them, and I did. I used them on the Eightieth Congress through the second term of the Presidency of the United States. I still have those spurs, and I am going to keep them as long as I live, because they were a symbol at that time.

I have just come from Lincoln, where I made a speech on the major farm problems which we face, and I made the speech in a terrific downpour of rain, and I got wet as a drowned rat, but I finished the speech, and I told them that I thought maybe they needed the rain more than they did me. They would not admit it, but they were very kind to me, and an immense number of that audience stayed in that heavy rain to hear what I had to say about the farm situation, and my program for settling it. I hope some of you heard that speech over the radio, and I hope you will all have a chance to read about it in tomorrow's papers.

There are four main principles on which our national farm program should be firmly based.

First. We must maintain farm income at high levels.

Second. We must expand the markets for farm products.

Third. We must conserve and improve our soil and water resources.

Fourth. We must preserve the American tradition of the family-size farm.

If we are to keep our farms prosperous, we can't sit still and do nothing while surpluses pile up, or when farm incomes drop, or when dust storms threaten. We have to take action, and that is exactly what I am proposing to do.

One thing we need is a system of production payments which will be beneficial to the farmer, the consumer, and the taxpayer alike. By using production payments, we can give farmers the proper incentive to grow more of the kind of food which the country needs, and less of the kind we don't need. We can prevent big surpluses. The consumers will get more food, and at lower prices. We shall get more livestock.

Some people will try to tell you that this idea of production payments is regimentation or socialism. The opposition has used language like that against every piece of progressive legislation for the benefit of the farmers or for the benefit of the people.

Back in 1933, after years of deep depression, when farm prices were at rock bottom, and your homes and farms were being foreclosed, the New Deal passed the Agricultural Adjustment Act.

What do you think the opposition said about the AAA in 1933? One Member of the Congress called the AAA "more bolshevistic than any law or regulation now existing in Soviet Russia." That was in 1933. Another Congressman predicted that the AAA would put the farmer "under bondage to the Government."

Well, you know that didn't happen after 1933, any more than it will happen now under this plan of production payments.

Whatever scare words the opposition uses, we intend to move forward with a positive program to keep high incomes for the farmers. We know that in order to keep the country prosperous, agriculture must be prosperous. And there is no surer way to guarantee world peace than to keep this country strong.

Now, there have been all sorts of conversation about farm programs and labor programs and business programs. In 1948 I went over the country and told you what I stood for. I am back here now, in 1950, reporting to you on what I have tried to do, reporting to you that the welfare of the country as a whole is my first job. I am your hired man. You hired me in 1948. I am trying to live up to the responsibility which you gave me. I am trying to obtain world peace. I am trying to keep the farmers prosperous. I am trying to keep labor on the same basis, and I am trying to keep business going as it should in this country.

And I think we have been very successful at it over the last 5 years. I want you to weigh the situation as you see it. I want you to look at the facts. I want you to know what the facts are, and that is the reason I am with you tonight. I am trying to tell you what the facts are. I am trying to tell you what I still stand for. I am trying to let you know that I came out here in 1948, and I was then running for President of the United States, and I was asking for votes on a certain kind of platform. I am out here now to report to you, to let you look at me, and to let you talk to me, and to let you know that I haven't changed since 1948.

I am still working for you and the welfare of the country.

Thank you very much.

Reorganization Plan No. 12 Will Promote Better Administration and Industrial Peace

REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. PRICE. Mr. Speaker, having seen the conflict and confusion that have resulted from the present division of authority within the National Labor Relations Board, we now come to the question of how Reorganization Plan No. 12 would cure that split. On this point, it is important at the very beginning to clear up a misconception that has been permitted to gain some currency.

Critics have suggested that the plan merely substitutes for unmanageable one-man rule of the general counsel a super-one-man rule by the Chairman. This assertion has no basis in fact. The plan contains no such proposal. The language of the plan itself is clear and unambiguous on this point; to dispel this misconception the Chairman of the National Labor Relations Board, speaking for the unanimous Board, the Director of the Bureau of the Budget and the Attorney General of the United States have gone on record, clearly and unequivocally, to state that no such thing is contemplated or even suggested by the plan. The only powers of the general counsel transferred to the chairman are those of agency housekeeping and the administrative direction of the field and operating forces.

The general counsel's power over unfair labor practice charges is transferred to the five-member Board itself, subject of course to the internal separation of investigation and decision-making functions required by the Administrative Procedures Act. Moreover, the Board has announced that, when plan No. 12 becomes law, it plans to adopt safeguards for the rights of parties coming before it that will go even beyond the Administrative Procedure Act. These additional safeguards are intended to assure that there will not be even the shadow of a question of the agency's complete impartiality in the handling of unfair labor practice charges nor even the faintest suggestion of prejudgment of any case.

Under the Board's proposal its power of initial review—in the very small number of cases which might come to it initially as a policy question—would amount to nothing more than the power to say that, on the facts turned up by preliminary investigation, it looks as if the case merits a full-dress investigation and a formal decision based upon a sworn record. Reposing this power in the hands of an officer beyond the control of the Commission—as is the case today—is a quite different thing. In the hands of an independent officer, it amounts to the sweeping power to withhold from the Commission itself the power to implement and enforce the decisions and rules that it is empowered and directed by Congress to make.

Just how this can work was clearly revealed recently in the case of the building industry's plea to the Board for relief from turmoil which the industry's management and labor representatives said the union security restrictions of the law were causing. Appearing before the Board to make a statement on the issue, the general counsel simply announced he had adopted the policy of not issuing complaints where the activities of labor and management in the building trades were technically illegal but would have been lawful were they able to obtain the union shop elections that they have so far been unable to obtain because of certain seasonal and organizational factors in the industry. By the general counsel's announcement, in the course of his statement to the Board members, their consideration of the question became largely academic. The general counsel, acting well within his final authority over the issuance of complaints, had made it clear that the Board would never have the opportunity to consider the question. In fact, he revealed to the Board members and the interested public for the first time that he had been pursuing such a policy all along.

The Board, which has never passed on the issue, now will never have a chance to exercise the power Congress supposedly conferred only upon it and the courts to interpret our national labor policy. I mention this instance without passing in any way upon the merits of the matter or the soundness of the general counsel's decision. I mention the matter only as an illustration of how easily the general counsel, as a wholly independent officer, may completely close the door to a whole field of enforcement of a right in the Board's face. This can happen wherever or whenever the uncontrolled general counsel arrives at an interpretation of the law different from that reached by the Board. Moreover, his refusal to act, even through arbitrary, is unlimited and beyond any review whatever—either by the Board or by the courts. The Board and the courts will never have an opportunity to consider his refusal to act, let alone being able either to agree or disagree with him as a matter of decision.

This is one fantastic facet of the evil farce that Reorganization Plan No. 12 will demolish. It will replace this Alice in Wonderland comedy of divided and inverted authority with a unified administration of the national labor policy.

As the courts and this Congress have long recognized, the enforcement of the national labor policy is not a matter of private combat between private litigants, nor is it a matter for enforcement by public combat between the two segments of a double-headed administrative agency. Nowhere more than in the labor policy does uncertainty and confusion so plainly thwart the very purpose and intent of the policy itself. How can peaceful and fair relations between employer and employee be fostered when the very rules of such relationships are the center of a storm of friction between two segments of the agency which must enforce those rules. This objective can be achieved only when the policy clearly and unmistakably enunciated by the Congress is given a uniform enforcement by a single-headed agency. Industrial peace is not maintained or fostered by litigation, friction, and conflict. It can best be brought to flower by negotiation and settlement. But such adjustments become impossible when two authorities are given power over the applicable rules and they then come into conflict over the application of the rules.

That is precisely the situation that confronts us today in the National Labor Relations Board between the 5-member Board and the general counsel. It is that impossible situation which Reorganization Plan No. 12 remedies.

The Late Maj. Thomas B. McGuire

EXTENSION OF REMARKS
OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. WIDNALL. Mr. Speaker, my distinguished colleague, Congressman CHARLES R. HOWELL, and I join in announcing to the Congress that on Wednesday, May 17, at 3 p. m., the body of Maj. Thomas B. McGuire winner of the Medal of Honor and one of the most outstanding and celebrated Air Force aces of World War II will be brought to Arlington National Cemetery in Virginia for burial. The decision to make Arlington the final resting place of the hero of the Pacific air war was made by his father, Thomas B. McGuire, of Ridgewood, N. J., who will fly to Washington for the ceremony with a number of relatives and close friends of the late Air Force officer.

My colleague joins with me in paying tribute to this great hero, as the Representative from the district where McGuire Air Force Base is located. This major Army Air Force base was named in honor of the valiant record compiled by Major McGuire during his period of service.

Major McGuire's body was recently returned from the Pacific theater, the scene of the combat exploits which won for him the highest honors awarded by the military services. At the time of his death, Major McGuire had destroyed 38 enemy airplanes in aerial combat, and had become legendary throughout the Air Force. He was awarded the Medal of Honor for conspicuous gallantry in action over Luzon, Philippine Islands, during December 25 and 26, 1944. During those 2 days Major McGuire shot down 7 Japanese fighters while leading a flight of 15 P–38 Lightnings flying as top cover for heavy bombers attacking Mabalacat Airdrome and Clark Field on Luzon. As the formation crossed Luzon on Christmas Day, it was attacked by 20 Japanese fighters. In the battle that followed, Major McGuire shot down three enemy planes. In two of the engagements he was outnumbered 3 to 1. The third plane was destroyed while attacking another pilot in McGuire's flight. Although McGuire's guns jammed, he continued to attack and brought another enemy plane into his wingman's line of fire, thus aiding in a fourth victory.

The following day he volunteered to lead an escort squadron to Clark Field. Over the target one of the bombers was hit by flak. As the bomber left the formation it was attacked by Japanese fighters. McGuire entered the fight and deliberately exposed himself to enemy fire to enable the crippled bomber to escape. He shot down one plane and was attacked by four more. He outmaneuvered the four, shot one down, and pursued the other three. He destroyed one of them before leaving the scene to join

UNIVERSITY OF MICHIGAN LIBRARIES

his formation. On the way out of the target area, McGuire shot down another enemy aircraft, his fourth for the day, bringing his total to 38 enemy planes destroyed.

Major McGuire died attempting to save a fellow pilot. On January 7, 1945, he was leading a flight of P–38's over a Japanese held airstrip on Negroe Island, when a lone Japanese plane suddenly sprang from the concealment of the clouds. The Japanese began his attack while the P–38 formation was at 2,000 feet where it hoped to intercept enemy planes taking off. McGuire led his squadron into a tight Lufbary, snaring the Zero inside. The Japanese made a sharp turn in an effort to break out of the trap, but the P–38's stayed with him all the way down to 200 feet. The formation scattered and the enemy pilot maneuvered into position on the tail of one of the Lightnings. The attacked pilot called for help on the radio and McGuire responded. He was so close to the ground that his aircraft fell off and crashed. He was fully aware of the risk he took and knew full well the small likelihood of success in what he attempted, but in order to rescue his comrade he sacrificed his life.

Major McGuire, who was 23 years old at the time of his death, was born in Ridgewood, N. J., and lived in Paterson during his youth. Prior to Pearl Harbor he was an aeronautical engineering student at Georgia Tech. While in school he was an officer in the ROTC Coast Artillery Antiaircraft Unit. Upon completion of his junior year at college he returned to Ridgewood and entered the Army Air Forces in July 1941. He won his wings at Randolph Field, Tex., and was assigned to duty in Alaska, and thence to the Aleutians in May 1942. He returned to this country after 6 months' service, and after a short time at Glendale, Calif., was sent to New Guinea, and then to Leyte, which was the scene of much of his combat experience.

Major McGuire had been awarded besides the Medal of Honor, the Distinguished Service Cross, three Silver Stars, six Distinguished Flying Crosses, two Purple Hearts, two Distinguished Unit Badges, and the Air Medal with 14 oak leaf clusters.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. TAURIELLO. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter and resolution:

CITY OF BUFFALO,
OFFICE OF THE CITY CLERK,
May 9, 1950.

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: At a session of the Common Council of the City of Buffalo, N. Y., held on Tuesday, May 2, 1950, a resolution relating to the proposed curtailment in postal service was adopted, copy of which is transmitted to you herewith.

Very truly yours,
DR. JOSEPH J. TRONOLONE,
City Clerk.

PROCEEDINGS OF THE COMMON COUNCIL, BUFFALO, N. Y., MAY 2, 1950

RESOLUTION 128—POSTAL CURTAILMENT

(By Mr. Cooley)

Whereas it has just been learned that the United States Post Office Department contemplates a curtailment in postal service; and

Whereas the curtailment of this important service will allow only one delivery of mail daily, which will cause serious inconvenience and hardship for business people and those using the mails for personal reasons; and

Whereas curtailment of postal services will result in unemployment: Therefore be it

Resolved, That the Common Council of the City of Buffalo being opposed to any curtailment in postal service, hereby directs the city clerk to forward a copy of this resolution to the Postmaster General and to the area Senators and Congressmen.

Adopted.

Address of Hon. Paul G. Hoffman

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Paul G. Hoffman, Administrator, Economic Cooperation Administration, before the Textile Workers Union, CIO convention, Boston, Mass., May 3, 1950:

I am delighted to be here at the invitation of President Rieve, since it gives me the opportunity of thanking your organization for the loyal support extended to the Economic Cooperation Administration and also of expressing my appreciation of the good work of some of your officers in our behalf.

Wesley Cook, national director of your rayon and synthetic yarns division, is with our mission in Austria; Ken Douty, your Georgia State director, is with us in France, both on leave of absence. Another of your officers, your research director, Sol Barkin, conducted a study of the British textile industry for the U. K. mission at the special invitation of our then mission chief, Thomas Finletter. We are grateful, too, for the cooperation and assistance of George Baldanzi.

So I feel that our organizations have strong bonds. I assure you that we count heavily on your understanding and continuing support. If any of your delegates to this convention entertain any doubts whatever as to the wisdom and necessity of our program I am sure it is because we have been at fault in not making our aims understood.

I realize that you are immediately concerned with the problem of unemployment in your industry. I know that you are naturally concerned with the impact that ECA programs, formulated with the purpose of balancing international trade at a high level, may have on unemployment.

However, before approaching that discussion, I would like first to describe the world situation as I see it.

On my return from Europe recently, I glanced at the first American newspapers I had seen in 10 days. The headlines were devoted to H-bombs, mysterious flying saucers, the latest spy hunts, and other sensational news. The second section bristled with ads of movies dealing with World War II, reviews of books on World War II, and so forth and so forth. Only in one or two papers did I see any articles stressing the fact that here and now we—the American people—are in the middle of the most titanic struggle the world has ever known.

That conflict is between the free world and the slave world of Russian communism. The stake is western civilization itself. The challenge is to the basic principle of that civilization—its faith in man as an individual. The realities of this fateful world situation are, I suppose, hard to grasp. There are few headlines and little obvious drama in what has been called the cold war. There are no jet planes, no guided missiles, no giant bombers. Yet the fate of free men everywhere hangs in the balance.

There are four fronts in this mighty conflict in which we are so intensely involved. They are economic, political, informational, and military. As in modern warfare, where the battles are fought on these same four fronts, the drama is confined to the spectacular fourth front—the exploits of the warriors with the modern engines of destruction.

But in this gigantic conflict between the free and the slave world it is crystal clear that battles are constantly being waged on the unspectacular three fronts—economic, political, and informational. And they must be won by us if we are to prevent the outbreak on that fourth front which would mean the change from the cold to the shooting war with all its terrifying implications for mankind.

If there is any doubt in your minds as to whether tangible results can be obtained from pressing the fight on the other three fronts—economic, political, and informational—I ask you to witness the fact that since 1945, when the end of the war came—but no peace—the Kremlin has extended its baleful domination, through the employment of its cold war techniques, to Bulgaria, Rumania, Hungary, Albania, Czechoslovakia, Poland, and Manchuria—without firing a shot. Without any action on that spectacular fourth front, Soviet Russia has obtained domination of more territory and more people than any nation in history has ever acquired through a shooting war.

We are winning the cold war in western Europe—and winning it by means appropriate to our end, which is a strong, free Europe able to be self-sustaining without extraordinary outside assistance after Marshall-plan aid terminates. Our methods have been to provide food for the hungry, clothing for the ill-clad, housing for the homeless, tools for the workers, essential machines for industry and agriculture, and the application of the most modern methods, through technological advice in both industry and agriculture, so that output per man-hour may be increased. We are winning—and our gains are evident—despite Soviet attempts to sabotage our efforts in every unscrupulous way imaginable.

With our help, this is what the peoples of western Europe have been able to accomplish: There has been a 20-percent increase in industrial production over the prewar level. Agriculture has been restored to approximately its prewar level. Inflation has been brought under control. There is food enough not only to give the people a better than sustaining diet but to provide workers with enough energy to apply themselves to their jobs and produce. Wages are higher and living conditions have improved. Communism has been held at bay, democratic institutions preserved, individual freedoms strengthened.

Nevertheless, all these encouraging achievements can be jeopardized unless these countries, by the time Marshall-plan

aid ends, find themselves in a position to earn the dollars they need to buy the vital necessities which they can obtain only from the United States. Their cotton mills can't operate unless they receive the raw material from us; modernization programs can't be carried out without essential machine tools that are procurable only from us; agriculture cannot develop to its full potential without the necessary modern implements that are obtainable only here.

If the dollar gap is to be closed without serious consequences, Europe, between now and 1953, must effect savings of more than $1,000,000,000 and at the same time increase her earnings by something less than that amount. She will have to buy a billion less and earn a billion more.

Provided these goals are achieved and a reasonable amount of capital investments are made abroad, I believe that trade between the United States and western Europe can be brought into balance at a figure between $3,000,000,000 and $3,500,000,000. That would protect our employment and at the same time create an economically healthy Europe.

Of the $1,000,000,000 in increased earnings required by Europe, not over $400,000,000 will come from additional exports, and considering our economy as a whole, that $400,000,000 cannot conceivably affect us adversely in view of the fact that production in the United States amounted to $140,000,000,000 in wholesale value in 1949.

If the dollar gap were to be closed as of this moment—if exports from dollar areas in Europe were reduced to what Europe can currently pay for with her present earnings—it would mean a $3,000,000,000 drop in exports—and that would obviously create unemployment here and generally threaten our prosperity.

Now I want frankly and firmly to grasp the thistle of serious unemployment in the textile industry. I know there are more unemployed in New England than in some other parts of the country, and I know a good many of those New England unemployed are in the woolen mills.

I have not been one of those who look upon unemployment merely as a statistical matter. An unemployed worker, without income, is not only in a tragic situation for himself and his family, but he is not a good customer for the products of industry. Working people need incomes to be customers, and businessmen need customers so they can employ workers.

I suggest that we look at the latest figures from the Department of Commerce about imports and compare them with figures on our domestic production. Let's find out precisely how much competition there is in the textile field.

Last year wool fabrics production in the United States was 356,100,000 linear yards. Total imports amounted to 6,000,000 yards, or 1.7 percent of our production. I wish to emphasize that most of these imports are special patterns and types of fabrics which are particularly adaptable to European production and not generally produced economically in the United States. Any increase in imports of woolen fabrics from Europe would undoubtedly be of those having these same characteristics.

Cotton fabrics production here last year was 9,296,000,000 square yards as against total imports of 19,743,000. These imports represented only 0.2 percent of our domestic production.

Production of rayon fabrics in the United States last year was 1,929,621,000 linear yards. Total imports amounted to 443,300 or 0.02 percent of our production.

Since these figures on imports represent the world-wide picture, if the data were confined to the European countries these tiny percentages would be even smaller.

It seems clear to me that we can't meet the problem of unemployment in the textile industry in the United States by cutting off this modest—this infinitesimal—volume of imports from western Europe.

In fact, it is perfectly clear that if we cut off imports—in any industry—we are going to have to cut down exports. And that would really create unemployment in this country. Not just in one industry, but in many. And it would spread. We all know about the chain reaction that unemployment in any one industry can create.

The way to solve unemployment in the textile industry—or again, in any industry—is to expand our domestic consumption, and increase our exports. That means that we must exploit our mass production methods to the fullest to produce goods at prices that people can afford to pay. And, it means that we must not—not even for a moment—forget that if other countries cannot sell to us, they cannot buy from us.

This I know sounds like an over-simplification of a problem. Actually, the problem is as simple as that—it is the solution that becomes more complex. There would not be time, at this large convention, to go into the details of a possible solution. But there is one, and it must not just be found—it must be put into effect. And it can be done by the industries and unions of this country. They have never yet failed to meet the challenge of changing conditions. I am sure that they will meet this one, and that they will not do it by what appears to be an easy out—surplus dumping. That would be a temporary alleviation—not a cure.

I do not wish to leave with you the impression that even if Europe, by 1952, is in a position to earn all the dollars she requires, all her problems will be solved. Fundamentally, there must be a closer union of the free nations of Europe, a willingness on their part to draw together and work together more harmoniously and purposefully than they are now doing, on the political and economic fronts. Even that will not be enough. We must help these nations in their ef[illegible] Europe needs us, but we also need her. [illegible] destinies are inevitably joined. I see [illegible] chance for an enduring peace unless Europe becomes strong and prosperous. It was the poet, John Donne, who said a long time ago that no man is an island unto himself. That can be said with equal verity of nations. Today America is strong, prosperous, blessed above every nation on earth. But she is still not an island sufficient unto herself.

The free peoples of the world need each other. Economic integration in Europe, of itself and by itself, is not enough. There must be a knitting together of all these free nations, economically, militarily, and politically. Benjamin Franklin's words—we must all hang together or assuredly we shall all hang separately—are most apposite to this situation in which we find ourselves.

Together—and only together—can we win this cold war and build a peace so strong and lasting that no aggressor of today or potential aggressor of the future will dare to violate it.

A Courtesy Week

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. DONOHUE. Mr. Speaker, I am pleased to include an interesting editorial containing a tribute to our youngsters which appeared in the May 10, 1950, issue of the Worcester (Mass.) Telegram.

In spite of many dire predictions to the contrary, most of our American youth today are Christian-minded and Christian-acting. The suggestion of the teenagers at Mount Vernon, N. Y., for a Courtesy Week is a commendable inspiration and might well be adopted by every community throughout the country.

The article follows:

A COURTESY WEEK

It is perhaps one of the more discouraging signs of our times that it became headline news when the citizens of Mount Vernon, N. Y., a Westchester County community, decided to try out the gentle art of being courteous to one another for a whole week.

Visitors to Mount Vernon this week are likely to be surprised to find how much real courtesy people can muster up, although it must be said that Mount Vernonites say they are usually pretty polite anyway. This week, however, they will be even more polite; there will be smiling traffic cops, eager assistance to help elderly folks across busy streets and a return to an era when folks seemed to take courtesy as a matter of course, and not something for which to be awarded a special medal.

It all started when a trio of teen agers, of all people, persuaded Mayor William H. Hussey that he should proclaim the week as a "courtesy week." The mayor agreed with the youngsters that perhaps much of the world's troubles do come from the fact that too many persons are inconsiderate of one another. Perhaps Mount Vernon could lead the way back to a courteous age, a period of gallant manners when life was casual and a lot happier.

It is to be hoped that this will be so. It is perhaps slightly encouraging that the idea for a courtesy week did come from some teen agers.

President Truman's Speech at Ravenna, Nebr., on May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. O'SULLIVAN. Mr. Speaker, our people-minded President, Harry S. Truman, on his westward dedicatory tour, had occasion to stap at Ravenna, Nebr., on May 8, 1950, and while there addressed a splendid crowd, as follows:

Thank you very much, Mr. Mayor. It is good to see all of you here in Ravenna this evening. I want to talk to you about one of your major problems, soil conservation. I hope some of you were listening to my rainmade speech in Lincoln this afternoon. We had a terrific rain there, and my thought was whether they wanted rain more than they did the President or wanted the President more than they did the rain.

Our growing population and rising standard of living require better and better use of our farmlands. That is why the dust storms in the Great Plains this spring have caused concern everywhere in the Nation.

The farmers of this country know a great deal more about dust and other conservation problems than they did 20 years ago. Since the "black blizzards" of the thirties, farmers and the Government, working together, have developed an effective soil conservation program. As a result of the soil conservation districts, and the agricultural conservation

UNIVERSITY OF MICHIGAN LIBRARIES

program, millions of acres of land are now being farmed with the best scientific practices.

In the Great Plains, an important aid to conservation is provided by shelter-belts of trees. Fifteen years ago last month the first tree was planted for the first shelter-belt. Now, I was in the Senate at that time, and I never heard as much argument against anything in my life. The arguments were just as if the world was coming to an end if we planted a few trees. We planted the trees, in fact 25,000 miles of shelter-belts were planted. You remember that many people scoffed at the idea of growing trees on the Plains. I wish you could have heard some of the Senators that are still there, making speeches against the shelter-belt. They said it was just a boondoogle. But today the trees are growing, and they are breaking the force of the wind. Of course, we have a long way to go yet before we lick the problems of dust and soil erosion, and floods.

We have got to move forward as far as we can, to find better conservation practices, and then put them into effect. We need more of the kind of pioneering work you people around here have long been doing with stubble-mulch farming. We have got to keep right on until we are sure there will never be another dust bowl.

There is another thing we have learned about soil conservation, that is that good conservation is good business. The man who manages his farm with good conservation practices will have a permanent and steady income.

We are going to keep right on moving ahead with soil conservation, just as we are with the other programs that will lead to more prosperity and a better life for all of us, such as improvements in our social-security system, Federal aid to States to help them improve schools, a broad Nation-wide health program, and better housing.

Above all, we are going to keep right on working for world peace.

Now, I am out here on this trip to tell you just exactly what is going on in Washington, to give you first-hand information about what I have been trying to do as President. I came out here over the country in 1948 and told you what I hoped to do. I talked to you very frankly. I talked to you as one of your citizens. I am talking to you now as your hired man. You decided to put me back in the Presidency, and I have come out here and I am going all the way across the country almost to the Pacific coast to tell you just exactly what I am trying to do, and I am telling it to you first-hand so it can't be garbled. I am letting you listen to me, and look at me and see if you still think I am the same fellow that was out here trying to get you to vote for me in 1948.

I am going to try to keep on working in the public interest. I am going to try to balance the economy of this country so that the farmers, the workingman and the businessman will have a fair share of the tremendous income that the country has now. We have the greatest national income we have had in the last 3 or 4 years in the history of the world, and that income has been rather equitably distributed—the farmers, the laborers, and the businessmen have all had their fair share.

Everybody has been put into the position of being a part of the economic situation of the United States. All I am trying to do is keep that up, and if we keep that up and improve it, we will come to the point where we will have peace in the world.

Because, our economic situation being strong, our defense situation being strong, the people in the world who are not for the things that we believe in will not directly attack us.

And we don't want to attack anybody. All we want is peace in the world, so that the distribution of things all over the world will be just like we want them here at home.

Now, if you people will support that sort of program, I am very sure that we can put it over. That is the reason I am out here, to tell you what it means.

I can't tell you how very much I appreciate the reception I have received today across the State of Iowa. Thousands of people stood in the rain at Lincoln to hear what I had to say about the farm program. People have come out to see whether their President is what he was when he was a candidate.

Now then, I am going to tell you just exactly what I stand for, I am going to tell the whole country what I stand for, I am going to tell the whole country what I am trying to do—and with your help I will get it done.

Thank you very much.

Tariff To Equalize Wage Rate Paid American Labor

REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. RAMSAY. Mr. Speaker, in a recent issue of the trade magazine Made in America, there is an article pertaining to the tariff as a measure to equalize the wage rate paid the American worker. The article goes on to say:

> That under our foreign trade program, if we enter into a trade agreement, for example, with Canada or any other country, whose labor standards more nearly approach our own, the same reduction in the rate of duty extended to any of these countries is automatically extended to all other countries, such as Japan, etc. For example, on wool gloves which sell for $2.90 per dozen in Japan and $7.07 for like merchandise from all other countries, the same rate of duty applies to all imported gloves.
>
> That by doing this, we reward the low-cost producing countries, and, of course, it enables them to take over the American market, not only from the American producers, but from all other higher-cost producing countries, as well?

This is a true statement so far as it goes into the manner in which trade treaties fail to take into consideration the same wages and cost of production in the various governments of Europe, and the inability of trade treaties to meet such conditions.

However, it does not take into consideration the fact that the trade treaties are not all alike in the adjustment of the tariff rates upon the admission of goods and merchandise that are now admitted into our country.

Nor does it make plain that tariff rates under our tariff laws are based on the value of such goods when they reach America; that none are admitted on the values prevailing in the country of exportation.

In all our former tariff legislation, including our present tariff laws, we only exacted equal tariff rates, regardless of the cost of such goods in the country of exportation. Such tariff rates applied to all export countries, regardless of the low standard of wages earned.

It is extremely doubtful if Congress would or could, in the face of the existing favorite-nation treaties with certain foreign nations, break and destroy such solemn treaties and exact from low-standard countries a higher rate of tariff on imports than those exacted from countries of a higher standard of living solely for the purpose of equalizing the equality of competition.

Surely, the same favorite-nation treaties would prevent us from exacting different tariff rates from low-wage countries, as it now seems to do through trade treaties. If Congress can exact different rates, the same Congress can exact different rules and rates for admission of goods and merchandise into this country from abroad, by trade treaties and agreements.

If this be true, then Congress can, by legislation, determine the kind and character—yes, even the terms—upon which our State Department may enter into such agreements. And if Congress desires the State Department to abrogate all favorite-nation treaties heretofore made, who are now controlled by a totalitarian government it should say so by appropriate legislation.

Personally, I do not believe Congress will ever vote to ignore and destroy any treaty ever made by its government, with free and uncontrolled countries. If I am right about this, then we must look to other methods left to Congress and grant to manufacturers and producers in our country, other necessary relief that will enable them to continue to pay the highest wages in the world, that guarantees the highest standard of living.

We must examine thoroughly every avenue of aid and protection possible.

We cannot leave the whole problem to the ingenuity of the American producer and his employees.

Because there is a limit to self-aid, some of us believe it has reached its limit, and that within a short time all foreign manufacturers and producers will be enabled by the adoption of our manufacturing methods to produce vastly cheaper goods than they do today. We must meet this problem now. We cannot, we must not dodge it longer.

We can grant relief to the injured American manufacturer, whose production is threatened, by granting to him in the way of a subsidy, a part of the tariff revenue obtained by the Government through the importation of goods.

Congress can require by legislation the State Department to annul all trade and favorite-nation treaties now existing with countries behind the iron curtain.

We can tighten up the amount of goods brought duty free into this country by travelers and others.

We can demand and require our Treasury Department to place the exact American value on all goods imported.

We can demand that any country receiving loans or gratuities from us will only export to this country goods and merchandise we do not produce in large enough quantities to supply the American demand.

We could pass legislation, setting aside a day each year to be known and observed as Buy American Day.

All of us could concentrate on being better and more sincere Americans, and work for its full production and employment, so as to give us a true and lasting prosperity.

Federal Deposit Insurance Corporation

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mrs. WOODHOUSE. Mr. Speaker, on May 12, 1950, the Federal Deposit Insurance Corporation will enter upon its seventh year in which there has not been a loss to any depositor in insured banks. This remarkable record is commonplace today and we accept present bank stability as a matter-of-fact occurrence in our everyday life. But it is not many years since every new day brought stories of bank failures and tremendous losses and suffering to depositors. The small depositors suffered most and their losses were reflected in our wavering economy.

The FDIC was established in 1933 to protect the small depositor. That it has done its job well is attested by the record. Beyond that it has restored the confidence of all depositors—it has maintained our banking system on a sound basis and has helped to stabilize our economy.

Under leave to extend my remarks, I include an editorial from the Hartford Times, Hartford, Conn., of April 24, 1950, as follows:

SOLVENT AND SUPERSAFE

The soundest and most widely accepted original New Deal agency, the Federal Deposit Insurance Corporation, continues to deserve this unqualified approval.

In its latest report the FDIC states that not one of the more than 100,000,000 depositors served by the insured banks has suffered a loss from bank failure in more than 6 years.

Total assets of all insured banks have reached an all-time peak of $170,000,000,000. These banks include 13,436 commercial banks and 192 mutual savings banks.

The feeling of security which this insurance system has engendered has made the thought of bank failures almost academic. In the words of Chairman Maple T. Harl, "This record of solvency and stability is without parallel in the Nation's history."

An important aspect of the FDIC's usefulness is that it works as a preventive. When people know their deposits are safe they don't start runs on banks. Thus the sense of panic does not spread because it does not even get a start.

Many a solvent bank was wrecked in the twenties because panicky depositors withdrew their funds for no reason except that of fearing the bank might close. They thus brought on the thing they most feared.

All that is a thing of the past. The FDIC's reserves are now so ample that the small assessments on the member banks may even be reduced and possibly be eventually eliminated. Interest income from the reserves may be sufficient to meet administrative charges. The original Government loan which was the initial capital of the FDIC has long since been repaid.

Veterans' Training

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. PHILBIN. Mr. Chairman, I heartily congratulate and compliment the gentleman from Texas [Mr. TEAGUE] for his fine work in bringing this bill to the floor of the House and so ably and clearly debating the issues involved.

It is high time that this House took notice of and effected a remedy for the present situation which permits so much misunderstanding, confusion, and dissatisfaction among veteran trainees and applicants under the GI bill. Every Member of Congress is familiar with the discriminations and injustices which have arisen from the administration of the vocational and educational features of this program.

I have been deeply impressed by the number of boys who have experienced difficulty in adjusting their training problems. Of course, there have been some instances of arbitrary decision by the VA militating against worthy, ambitious veterans. In the main, however, I think that VA officials have endeavored to be fair in passing upon these applications. Certain regulations interpreting organic laws have been misunderstood and have also worked palpable and substantial injustice and hardship.

It is this condition this bill seeks to remedy. It will regularize the status and eligibility of various schools providing veteran training. It will clarify the eligibility of the veteran himself and compel the VA in certain cases to recognize his entitlement to training. It will enjoin arbitrary, capricious action by VA officials in a large number of instances. It will improve, I firmly believe, the administration of the training program. Moreover, it is stated in this debate that it will not impose substantial costs upon the Federal Treasury.

Since I have worked for some time past for the principles of this bill, I intend to vote for it as amended. I believe it will be helpful to our veterans.

NLRB Administration Is Much Broader in Scope Than Prosecuting and Adjudicating

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. BOLLING. Mr. Speaker, what is this "separation of functions" that we hear so much about?

It is the elementary principle that the same officer should not prosecute and then decide as to guilt or innocence. To protect this principle, Congress enacted the Administrative Procedure Act requirement that no employee who engaged in prosecution or investigation of a case may participate in or advise as to the agency decision. The Administrative Procedure Act was passed in 1946 and applies to all administrative agencies equally. By the time of its enactment the procedures of the Labor Board were already in full conformity with its requirements. The Labor Board was already operating under the internal separation of the functions required by the act.

This is not what we have over at the Labor Board today. If that were all, there would be no necessity for plan No. 12. Today a great number of the functions of the Labor Board have been taken away from that agency and concentrated in the hands of a single officer, whose actions and decisions are largely free from review.

Prosecution and adjudication in their narrow sense are only two of the functions of the agency. It has the problem of administering and applying the congressional policy of the Taft-Hartley Act. This involves a host of duties which are broader than either prosecution or adjudication of complaints. First, there is the entire field of so-called representation cases, the cases which look to an election to determine who shall represent employees for bargaining. This is the bulk of the agency's work. It is primarily administrative. Most of it is performed in the field offices. Theoretically, the final authority over representation cases is in the Board members. However, by statute the field staffs are all under the supervision of the independent general counsel, who frequently disagrees with the Board. This creates great confusion.

In the second place, there is the function of determining how far and how fast to go in applying the national policy to small employers and borderline industries; the question of whether to exhaust jurisdiction completely or whether to conserve appropriations by applying the mandate of the law where it will do the most good. The Board and the general counsel are in violent disagreement on this issue. The general counsel has sole and exclusive authority over complaint cases, because only he has power

UNIVERSITY OF MICHIGAN LIBRARIES

to issue a complaint, and, although the Board disagrees with him as to the proper scope of the agency's activities, it can effectuate its collective views only in the area of election cases. It cannot prevent him from prosecuting cases, although it can later throw them out.

In the third place, there is the broad, over-all question of what kinds of activities are forbidden by the act. The Board may believe that certain practices are unfair and should be stopped. If the general counsel disagrees, they never will be stopped. He alone may bring a case before the Board. If he does not bring the case, the Board does not have it. Conversely, the Board may believe that certain types of activities do not constitute violations. It may feel that these should be allowed without interference. Nevertheless, if the general counsel feels otherwise, parties will be subjected to lengthy, expensive litigation, and possibly injunctions, only to have the Board throw out the case when it finally comes up for decision.

There is also the Board's function of defending the orders it issues before the courts of appeals. This requires the services of lawyers. Under this remarkable setup, all the agency lawyers are under the supervision of the general counsel. He may disagree with a decision of the Board. If he disagrees, the lawyers under his supervision are necessarily influenced by his attitude. Yet the Board is dependent upon lawyers assigned by the general counsel to defend the Board's own orders in the courts. The records before the committees of Congress demonstrate the friction and annoyance that has been caused when the general counsel, through members of his legal staff, has been called upon to defend Board positions with which he disagrees.

It is one thing, and a good thing, to isolate the actual prosecuting attorney from the trial examiner or other adjudicating officer with respect to a given case. It is an entirely different matter to concentrate tremendous powers of investigation, staff control, and administrative policy-making in the hands of one man under the guise of separation of functions. The present system at the Labor Board does just that. It places unprecedented power in the hands of the general counsel, and prevents the five-man Board from playing its proper policy-making role in the executive branch of the Government. The separate office of general counsel should be abolished.

Unless plan 12 is adopted, the people of the United States may soon be treated to the insane spectacle of a single agency of the Federal Government appearing in court on both sides of the same case.

The Board is empowered by the act to seek enforcement of its orders in courts of appeals. The general counsel, under the act, has supervision of all agency lawyers. As a result, the Board must use attorneys on the staff of the general counsel when it goes into court.

In several cases in which the general counsel has disagreed with the Board's decision, he has been reluctant to permit his legal staff to enforce the Board's order in court, claiming that it would be incompatible with positions taken by him, and would prove embarrassing. In two cases it was necessary for the Board to relieve the general counsel of the responsibility of enforcing its order. In one of these cases, the general counsel proposed, in addition, to present a brief to the court stating his views in opposition to those of the Board.

The case involved is that of the Halesston Drug Co. The Board dismissed the complaint because it found that the interruption of the employer's drug-store business by a labor dispute would have "only a remote and insubstantial effect on commerce," whereas the general counsel believes that the Board lacks the power to dismiss for that reason.

The fantastic result, in which responsible officers of the same Federal agency find themselves on both sides of a lawsuit, cannot be charged to the personalities involved. It flows from the peculiar nature of the separation of agency functions. Any incumbent of the office of general counsel as now established might find himself in the position in which Mr. Denham now stands.

There can be no excuse for permitting this state of confusion to continue. Plan No. 12 affords Congress an excellent opportunity to remedy it by restoring a sensible organizational pattern in which the Board will have authority to direct its own law officer, and not be dependent upon him for favors.

Alaska and Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD I include an editorial on Alaska and Hawaii statehood from the May 1 issue of the Courier-Journal published in Louisville, Ky.:

HAWAII AND ALASKA DESERVE STATEHOOD

Bills granting statehood to Hawaii and Alaska have already passed the House, and if common sense prevails the Senate will concur. There have been loud objections, of course, to statehood for either Territory, and these will undoubtedly be raised again. Already in the Senate hearings all of the old and questionable arguments against admitting the Territories into the Union are being raised. Some of them are selfish, such as the protest of the Alaskan fishing industry spokesmen who fear tax increases and stricter Government regulation. Some are downright stupid, such as the white-supremacy objection to the non-Caucasian people of both Hawaii and Alaska.

But some of the arguments against statehood merit at least an answer. It is pointed out, for instance, that Alaska has only 100,000 people. Is this enough to support statehood? Apparently it is. Idaho and North Dakota had smaller populations at the time of their admission. And the blessings of Federal Government, including participation in the highway building program, will undoubtedly draw more people to Alaska. Neither should their separation from the mainland be a serious handicap. Juneau and Honolulu are both closer to Washington, from the viewpoint of communication and transportation, than were Ohio and Kentucky at the time of their admission.

There are, it is true, Japanese and Eskimos among the people of the two Territories. But their patriotic conduct during World War II dispelled any possible doubts of their loyalty to the United States. Both have shown their capacity for self-government, Hawaii having had an efficient republican form of government for 50 years. And it is noteworthy that our highest military men have repeatedly urged the acceptance of Hawaii and Alaska into the Union, and have insisted that both strategically located Territories could best be protected if they were working parts of this country. Against these persuasive arguments, race prejudice and the selfish interest of a few fishing companies seem rather empty.

May Day Demonstration at Mosinee, Wis.

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a front-page article of the Mosinee Times giving a report on the May Day demonstration held in that city on May 1:

MOSINEE'S MAY DAY ENDS ON NOTE OF RELATIONSHIP BETWEEN CHRISTIANITY AND DEMOCRACY

"We believe in the dignity of every human being in our United States of America regardless of his social or economic position; we believe in the existence of God and that all of the blessings we enjoy flow from God." With this thought Charles Larson, Wisconsin Department commander of the American Legion, began his stirring talk that climaxed the country's first attempt to teach Americanism by demonstrating what "a day under communism" was like here in Mosinee on Monday.

Commander Larson held his vast audience during the evening's Americanism rally, by dramatically showing the relationship between the teachings of Christianity and the practices of democracy. At one point he said: "In sharp contrast to our fundamental philosophies, the Communists place the state in the supreme position and make all individuals subservient to the state. Personal dignity is unknown in a Communist land, and Communists teach, whether they believe it or not, that there is no God."

The Legion commander brought his fine talk to a conclusion with the thought that: "To preserve those freedoms for which our forefathers fought and died, those freedoms and that form of government under which our Nation has advanced beyond any in the history of the world we must do more than merely be law-abiding citizens. It is our duty to guard against subversion, to be actively interested in our Government, to be eternally vigilant. May God in His wisdom put an end to the scourge of communism.

May He bless the people of all lands as we are blessed."

SUNDAY NIGHT

The pageant really began on Sunday evening in the American Legion club when the 58 members of the press, radio, and movies, here to cover the event, were given a dramatization of the organizational preparations of communist party cells in Mosinee to seize the government of the city of Mosinee the following day. A large number of residents of the community attended this part of the press conference.

At 9:30 the same evening, with the public excluded, the press conference for the working press, was held with Francis Schweinler, general chairman of the event outlining the Monday activities; Paul Thielen, public relations director for the Wisconsin department of the American Legion, coordinating the activities of newspapermen and photographers, radiomen, and movie cameramen. Joe Kornfeder, Detroit, a former Communist organizer, and technical adviser to the committee, outlined the work of the real Communists in a project of this sort and pointed out where and why some of the real things couldn't be done on Monday.

MAY DAY

The activities of "A Day Under Communism" got under way at 6 a. m. on Monday with the arrest of Mayor Ralph E. Kronenwetter. (The schedule from here on is as it appeared on the schedule of events given to all the members of the press, but not released to the public in order to avoid crowds at the points of activities.—Editor.)

6:00 a. m. Arrest by Communist combat team of Mayor Ralph E. Kronenwetter at his home at 303 Fourth Street.

7:00 a. m. Arrest of Chief of Police Carl Cewiss at his home at 301 Fourth Street.

7:30 a. m. Scene at city hall. Police chief refuses to do as Communists command and is summarily dealt with.

8:00 a. m. Violent seizure of the powerhouse at Mosinee paper mill.

8:30 a. m.: Arrest of clergymen and confinement of them in concentration camp.

While all this is going on "Communist" action will be taking place in all parts of the city as road blocks are organized and manned; "activists" put up many different kinds of banners and placards and the "Red" flag is raised over the city hall and other public buildings.

9:15 a. m.: Parade to huge mass meeting of the populace in "Red Square." Parade starts at football practice field at Mosinee High School and moves as follows: North on Eighth Street to Main; east on Main Street to Fifth; south on Fifth Street to High; east on High Street to Fourth; north on Fourth Street to Main; east on Main Street to Water; north on Water Street to Buchanan; west on Buchanan Street to "Red Square."

9:30 a. m.: Mass meeting. Mayor is forced to make a statement and introduce "Chairman of the Council of Peoples" Commissars, Comrade "Joseph Zack Kornfeder," who reads brief dictatorial proclamation outlining what people of Mosinee, henceforth, must do. This will be followed by brief address on The Role of the Communist Party by the general secretary of the Communist Party of the United Soviet States of America, Benjamin Gitlow.

10:30 a. m.: Seizure of the Mosinee Public Library at east end of Main Street.

11:00 a. m.: Confiscation of sporting firearms at home of John Drengler above Drengler Tavern.

12:00 noon: Scenes at Princess Cafe and Quality Bakery.

1:00 p. m.: Social service class being taught "Communist line."

2:00 p. m.: High school, General Secretary Gitlow addresses YCL.

3:00 p. m.: Seizure of Mosinee Paper Mills with arrest of management and such of workmen as do not cooperate.

4:00 p. m.: Scenes at concentration camp. For the next 3 hours various dramatic scenes will be going on in different parts of the city—inspections of homes for anti-Communist literature, etc.

7:00 p. m.: Scene at theater. Seizure and confiscation of current film Guilty of Treason and substitution of film of Communist propaganda.

8:15 p. m.: Grand finale, Dessert Park. Loyal Americans from all parts of Mosinee and Marathon County gather; "Communists" cast aside their subversive roles and join in raising of the American flag. Boy Scouts burn all Communist banners, etc. in huge bonfire. Charles L. Larson, of Port Washington, Wis., Commander of Wisconsin Department of the American Legion will speak. Then whole multitude will join in singing God Bless America, and then start peacefully home thankful to God that they live in America.

THE SECURITY POLICE

The men who made up the security police for the day were from the local American Legion post and about 15 from the Wausau post. The political police were from many American Legion posts throughout the Wisconsin department. A large group came from Milwaukee post, and smaller numbers from Sheboygan, Fond du Lac, Waupun, South Milwaukee, and Seymour.

United States Maritime Commission

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. SHELLEY. Mr. Speaker, on April 6, 1950, I commented on H. R. 7786, the omnibus appropriation bill, which contained a suggested limitation on the granting of operating subsidies by the United States Maritime Commission. This objectionable limitation was the subject of consideration by the Committee of the Whole on Friday, May 5, at which time a substitute amendment was adopted which substantially relaxes the limitation. This modification resulted from conferences between the chairman of the House Committee on Merchant Marine and Fisheries and the chairman of the Subcommittee on Appropriations.

The compromise adopted by the Committee of the Whole imposes an over-all limitation on the Maritime Commission, but expands the size of the limitation by fixing the total number of vessels which may be subsidized at an aggregate of the following categories:

(a) Vessels covered by existing subsidy contracts, authorizations, commitments, or obligations on January 1, 1950.

(b) Vessels under construction or contracts of construction on January 1, 1950.

(c) Vessels covered by subsidy applications filed prior to January 1, 1950.

I understand that a total of the foregoing categories equals or exceeds 281 vessels, and that this will permit the Maritime Commission to function until such time as the question of a long-range subsidy program can be fully considered by the legislative committees and appropriate action taken.

As I explained in my remarks of April 6, the merchant marine is faced with a major crisis which can only be resolved by greatly expanding our subsidy program in order to avoid annihilation of the unsubsidized portion of our merchant fleet. This position was developed before the Senate Committee on Commerce. I wish to quote the following paragraphs from a statement by one of the witnesses which, in my opinion, well states the problem with which the American-flag merchant marine is confronted and the dangers of imposing any limitations on the subsidy program through the appropriation-bill device:

According to statistics filed with your committee, there were on January 1, 1950, a total of 600 American-flag vessels, aggregating approximately 6,304,000 deadweight tons, employed in the foreign trade. This is a substantial reduction from the number employed in 1949. Of the 600 vessels, 62 are Government-owned, and most of these may be expected to be withdrawn from the foreign trade during the current year. Of the privately owned vessels (538 in number), only approximately 23 percent were receiving operating subsidies. Thus, on January 1 of this year over 300 privately owned American-flag vessels were operating in the foreign trade without subsidy. During 1949, when as many as 800 American-flag vessels were operating in the foreign trade, the total American-flag participation for both subsidized and nonsubsidized vessels was less than 50 percent, which is usually taken as the minimum objective of the act. The 235 subsidized vessels alone probably handled less than 25 percent of the total volume of export traffic. Therefore, any hope of accomplishing the over-all objective of 50 percent is dependent upon continued operations in the foreign trade by a number of vessels which are now operating without subsidy.

In our opinion, the period of profitable operation by unsubsidized vessels is rapidly coming to a close. Increasing low-cost foreign-flag competition has already resulted in substantial reductions in our basic freight rates, a trend which probably will become further accentuated in the future. This and other developments will deprive the unsubsidized high-cost American-flag operator of any hope of operating successfully without subsidy in the future. The choice before the United States Government, therefore, is to increase the number of subsidized vessels by an amount sufficient to insure 50 percent participation in the foreign trade, or to abandon that target, restrict subsidies to a smaller number of vessels, and accept a much reduced target for over-all American-flag participation in the foreign trade. The last alternative will automatically result in surrender of the seas to foreign-flag vessels and acceptance by the United States of a participation perhaps as low as 20 to 25 percent over all. Any such development will mean the failure of the American maritime policy. I am sure that no member of this committee or Member of Congress would advocate any such result. I am confident that when the House Appropriations Committee suggested a provision limiting subsidies to the number of vessels actually receiving subsidy on January 1, 1950, that the

UNIVERSITY OF MICHIGAN LIBRARIES

committee was proceeding on the erroneous assumption that American-flag vessels operating in the foreign trade had already been granted subsidies for the most part, whereas the facts show that the major part of such tonnage has been operating without subsidy.

Hawaii Musicians Ask Repeal of 20-Percent Cabaret Tax

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of Members of Congress an appeal from 500 musicians in the Territory of Hawaii for repeal of the so-called 20-percent cabaret tax. Their letter follows:

MUSICIANS' ASSOCIATION OF HONOLULU,
Honolulu, Hawaii, May 3, 1950.
The Honorable Senators and Representatives,
The Capitol, Washington, D. C.

GENTLEMEN: On behalf of 500 musicians who are members of local 677, A. F. of M., located in Honolulu, T. H., we are addressing this open letter to you for proper consideration:

Like the rest of the musicians encompassing nearly 300,000 members of the American Federation of Musicians, we are appealing to each and every one of you to study and reconsider a measure which was enacted during the war but which, at present, has become discriminatory and the cause of unemployment of thousands of musicians throughout the country. The 20-percent cabaret tax has not only brought a sad situation in the employment of musicians in cabarets, night clubs, and hotels, but has caused the liquidation of many an establishment.

The establishments, because of their inability to continue to hire live talent due to the above tax law have been forced to turn to other means for entertainment in their places of business which is another direct imposition and discrimination of the employment of live talent, the installation of canned music.

France, with all the ill effects of the last war, has enacted a law absolutely prohibiting the use of any canned device for amusement. It has a law that if you want entertainment and music, hire live talent.

With establishments resorting to canned music, there is no 20-percent tax rolling in, and with musicians being out of employment, the situation becomes all the worse.

There are a few items that should be explained, but by this time we realize that you have read of them from numerous locals and dispensers throughout the country. There are, also, figures which could be used to compare the unprogressive effects of the 20-percent cabaret tax to both the employer and musicians.

Therefore, we sincerely hope and pray that you gentlemen will give this matter your careful consideration and show the same response to the proposals now before Congress for the repeal of the 20-percent cabaret tax, the most discriminatory, nonproductive, and unjust law.

Sincerely yours,

ALVIN K. ISAACS,
Secretary-Treasurer.

Coal Controls

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. FENTON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include therein in the Appendix of the RECORD, a letter which Mr. John Honicker, of St. Clair, Pa., addressed under date of April 27 to the editor of the Pottsville Journal, Pottsville, Pa., on the subject of Government controls in view of the proposed controls for the coal industry.

APRIL 27, 1950.

To the EDITOR, POTTSVILLE JOURNAL,
Pottsville, Pa.

DEAR SIR: For the last 20 years, with the exception of World War II, we have been afflicted with a disease called depression, and while we have been given hot foot baths, doses of antitoxin, and blood transfusions, we are still bedfast and have a high fever. Yet they tell us the cure, prosperity, is just around the corner. If it is, it is staying there and is well fortified and so far has defied all efforts of the PWA and WPA and the other dozens of different alphabetical agencies to dislodge it.

It is estimated there are 5,000,000 people idle in the country now, yet old Doc Truman assures us there is nothing to worry about and that everything is tip-top and the only fly in the ointment is coal, which, he says, is a sick industry and the only and sure cure is a Government control board. Here in the anthracite we have the bootleg problem. Specialists are springing up like mushrooms, who after taking X-rays and giving the patient the Wassermann blood test, have decided the only cure is Government or State control, as that will cure everything from a cold up to tuberculosis.

If State, or any government control, is a cure for all our ills, then why not put everything under State or Federal control, from a peanut roaster up to a locomotive works. Why not put sickness under control, as it is a well-known fact there are more people sick in the winter than in the summer. They could have a commission see to it that not too many of us get sick at one time, so we could keep the doctors steadily employed. Why not regulate and control the deaths so in case Jack Jones and I were both sick in bed, and both about to kick in, they could tell one of us to hold off and not both die at once so as to keep the undertaker steadily employed.

Now, I would like to ask those throat and bone specialists a few questions, and I want straightforward answers, not buts, ifs, nor ands about it. Is this control going to be the same as crop control in the West, where they killed pigs and sheep by the millions, ploughed the cotton under, and destroyed the wheat, or are they going to increase production? If they are, where are they going to find the market for it? Are they going to send it to the tropical countries, or the heathen Chinese, or Alaskan Eskimos, or dump it in the rivers, or use it for ballast on the railroads?

Maybe we can depend on the commission to effect a cure, or maybe take the advice of John L. Lewis, that mighty man who shakes the earth when he walks and people tremble when they hear his voice, who a few years ago made the statement there were too many miners and too many mines, and that the operators should shut down some of the mines and the men to go elsewhere. That is just what the operators did. The men were given a chance to go elsewhere and get a job, wherever that town or city may be. Yes; there are too many miners, and too many mines, too many carpenters, and too many plumbers. What are we going to do about it—knock them on the heads?

I am satisfied if this worthless coal-control bill is enacted into law it will not put one miner to work or sell one more ton of coal, but it will create an army of soft-job holders and mean thousands more votes to perpetuate the New Dealers in office.

You can't change the law of supply and demand by legislation, no more than you can change the seasons of the year or increase the average length of life. People are not buying straw hats in the wintertime or felt boots in the summer. That law has never been amended. All the Congresses and parliaments in the world cannot repeal it and no Supreme Court has declared it unconstitutional.

I am sending a similar communication to Congressman FENTON and Senator MYERS.

Yours truly,

JOHN HONICKER.
ST. CLAIR, PA.

May Day, 1950

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial is from the Mosinee Times. This letter indicates the impression the May Day demonstration made:

AS WE SEE IT—MAY DAY, 1950

There are a great many things that we'd like to say about the experiences of "A Day Under Communism," sponsored here on Monday by the American Legion and people of Mosinee, but we've been at a loss as to how to go about saying it.

The answer to our problem came to our desk this morning in a letter from Josephine (Mrs. Louis) Kotora, of Knowlton. In our humble opinion, there is nothing more forceful to be said for the program on Monday, and for that reason we are making it our editorial on the subject. It brought tears to our eyes, and we hope that you will read it a couple of times to get the full impact and meaning in this fine letter.—Editor.

KNOWLTON, WIS., *May 1, 1950.*

DEAR MR. SCHWEINLER: This is to tell you what your May Day program brought one American family in this community.

As usual, at 8 o'clock in the morning we were all at the table eating breakfast, listening to the news on the radio. This morning there was a recording played of the meeting that was held in Mosinee last night and telling of the event that would take place today when a mock communistic party would take over the city. My thoughts were naturally of all the proceedings, food, clothing and gas rations, permits, the loss of freedom of speech, religion, concentration camps, etc. But what were the thoughts of my children? To find out, I asked them and they were as follows. Bob, age 14, said: "Well, baseball season is on and I hope when I enter high school next fall I can get on their team." Then I asked Dick, age 11: "Gosh, mom, I'm

thinking of ever so many things—you know school will be out in a couple of weeks and that means fishing, swimming and maybe a new bike to ride around on." And Louis, who is 7 years old, said: "Oh, I'm thinking of my next allowance and I'm going to buy five flying saucers, they're the new bubble gum they just got in at the store." And I didn't have to ask my 2-year-old daughter what was on her mind, sitting in her high chair, her eyes flashing, pigtails bobbing and simply furious because none of her brothers knew what "mow butta on me bwed" meant. I wished you could have seen her grateful smile when I put more butter on her bread. Then a glance at the clock, the boys grabbed their hats and coats and with a 'Bye Mom' dashed to school.

Then the usual, washing the breakfast dishes, making beds, dusting and marketing. After lunch I glanced at the day's mail, the daily paper, a letter from grandma, your issue of the Red Star and the telephone bill. The telephone bill always brings a smile to my face for I know already what's in store for me when the man of the house opens it. It's the same with every telephone bill. He hardly glances at the amount of the calls or their charges, but will notice the tax with raised eyebrows and again I'll hear of how unfair he thinks it is for me to be taxed when I'm not feeling well and call up to have my groceries delivered, or for him to have been taxed when he called the hospital 4 times in 5 hours to find out how his son was getting along after a tonsilectomy.

It was then that I realized what a wonderful country the United States of America is, how very proud I was to be its citizen and that all my loved ones were also citizens. That Bob could play baseball in high school, instead of a strict military schooling under a communistic rule; that Dick in his summer vacation could swim, fish and dream of riding a new bike. That flying saucers were in the form of bubble gum, and there's plenty of butter on the table to satisfy my daughter. That the man of the house could openly complain about the telephone taxes without being put in a concentration camp. Yes, indeed, this is a wonderful country to be from and to be in.

The day is almost over, the children in bed and I'm so absorbed in writing all this that I didn't hear my husband addressing me until I felt his hand on my shoulder and said: "Honey, writing your biography?" I looked up at him, smiled, and asked him to read what I had written. After reading it he, too, said: "Yes indeed, this sure is a wonderful country, and honey, why don't you call Stalin up and tell him what a heel we think he is." And all I could think of was to say: "But dear, think of the telephone tax on a call to Russia."

JOSEPHINE KOTORA.

Which Way Toward Peace and Freedom?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include an address given by me at the thirty-fifth annual convention of Kiwanis International at Miami, Fla., on May 8, 1950:

WHICH WAY TO PEACE AND FREEDOM?

Throughout the whole world today a fierce economic, political, and ideological struggle is being waged whose outcome will determine who really won World War II and whether, God forbid, there is to be world war III.

In any time of uncertainty and danger, the first and most essential thing to do is to go back to fundamentals, make sure of our bearings, establish priorities.

What must be the first concern of any intelligent nation? Its security.

How can a nation best promote its security? There are two main methods. One is to try by all proper means to prevent the development or expansion of any nation or group of nations hostile to it. The other is to keep itself strong and to try by all legitimate means to keep as many other nations as possible strong and friendly to itself. In short, the first job of our diplomacy is to try to keep our side as big and powerful and united as possible, and to try by every legitimate means to keep all actual and potential enemies as small and weak and divided as possible. In a jungle world, such as we now live in, survival depends to a large degree on the ability to distinguish friend from enemy.

For many decades our forefathers saw that truth clearly in Asia. They realized that it was important to our security that the opposite shores of the Pacific be in the hands of friends and not under the control of enemies or potential enemies. That was the key consideration underlying our insistence for almost a century on the genuine independence of China, no matter what kind of government it had—the open-door policy.

We did not see it in Europe. For more than 100 years our policy was: Have as little to do with Europe as possible; retain our freedom of action; do not get entangled in any permanent alliance with any nation or nations there. Then we got into two World Wars in one generation, in part because intelligent concern for our own security dictated that we not allow the opposite shores of the Atlantic to come under the control of forces hostile to us and to everything we believe in and stand for. We are now acutely aware of the necessity of having friends on our side in Europe. But, oddly enough, at the very time we were belatedly discovering this on our east, we forgot it on our west and were complacently watching China come under the control first of one enemy, Japan, and then of another, the Soviet Union. I have never been able to understand why our Government cannot get policies that make sense in both oceans at the same time.

For 10 years the world tried to get peace with Hitler and the Japanese militarists by ignoring or appeasing them. It did not lead to peace and freedom. It led straight to war and perilously near to slavery.

No sooner were the aggressions of Hitler and the Japanese militarists defeated than we forgot the painful lesson and continued to appease everywhere another aggressor, world communism directed by the Kremlin—far more dangerous than Hitler or Japan, because it has greater resources and manpower and is so much more clever. We tried to buy the Soviets off by yielding to their demands and pressures. Despite the repeated and forthright declarations by Communist leaders, in the Kremlin and elsewhere, that their goal is elimination of every non-Communist government, we refused to believe it. Our own leaders pretended that Communists are not international gangsters, but just Jeffersonian Democrats. To prove to them our own good intentions and calm their alleged fears, we scrapped our enormous military superiority within 6 months after VJ-day. We offered the atomic bomb to all on terms of complete equality with ourselves. We also scrapped a lot of our principles and our public commitments, including those in the Atlantic Charter. In private conferences with Soviet leaders, we divided up other peoples' rights and territory—including those of loyal allies like Poland and China. To try to win over our avowed enemies, we sacrificed our proved friends. Such conduct, of course, did not lead to better relations; they grew steadily worse.

Finally, 3 years ago, our Government began to wake up to the fact that the Soviet Union is not a peace-loving democracy and does not respond to reasonableness. Step by step we have embarked on a fivefold program with relation to Europe, which I believe is sound as far as it goes and has promise of success if continued firmly there and expanded to include Asia.

First, rebuilding enough of our scrapped military strength to fulfill our commitments in Germany and Japan and to meet any probable emergencies or dangers. It is painfully clear that strength here at home is indispensable if we hope to have any influence at all with the Kremlin.

Second, resistance to any further spread in Europe and the Near East of the glacier of tyranny moving out of the Soviet Union into those areas. This began with the program of military aid to Greece and Turkey.

Third, economic assistance on a cooperative basis to certain independent European nations struggling to recover their economic stability and overcome Communist efforts to weaken and subjugate them from within—the Marshall plan.

Fourth, military assistance to certain western European nations—the North Atlantic Pact. From the beginning of the economic recovery program it was apparent that it could not move ahead at full speed without this additional step—a mutual defense program. A sense of security is essential if the people of Europe are to invest their resources in long-range productive enterprises, and put everything they have into the recovery effort. In fact, economic development without military security only increases their peril because they become so much more tempting a prize for a potential aggressor. No one of the nations of western Europe alone, nor all of them together, can become strong enough in the next few years to withstand Russian attack. They cannot achieve either military security or economic recovery, except by making a most vigorous collective as well as individual attack upon their problems—with our active support and assistance based on this sound and simple principle: we help those who will help themselves—increased production; and help each other—increased trade within Europe including Western Germany; and thereby help us. They cannot recover without our assistance; but even with our aid they cannot recover without far greater unity among themselves, both economic and military, than they have yet achieved. I hope and trust they will proceed more rapidly in that direction during the coming year.

But success in these mighty endeavors in Europe, even if completely successful there, cannot be enough. It is daydreaming to imagine the Soviets will alter their policies enough to come to real agreement with us on traffic rules for carrying on peaceful relations between their world and ours, as long as they are winning anywhere—and they are winning spectacularly in Asia.

For more than 3 years the Congress has tried in vain to get the administration to adopt and vigorously pursue policies in Asia similar to those it had adopted in Europe—while there still was time to prevent the present developments in China which constitute a catastrophe beyond estimation, both to our own security, to any hope of being able to reduce our military budget to manageable proportions, and to any prospect of having a balance of power in the world so strongly favorable to the free world that it can perhaps influence the Soviets toward cooperation rather than attempted conquest.

UNIVERSITY OF MICHIGAN LIBRARIES

Tragically, our Government has followed opposite policies on the opposite sides of the world. To European nations striving to resist the Communist aggression, from within or from without, it said, "We will help you only if you keep the Communists out of your government."

To Chinese striving to resist Communist aggression our Government said, "We will help you only if you take the Communists in." The Chinese being somewhat simple-minded have had difficulty in understanding that. I hope you understand it.

In Europe we adopted a policy of resistance to communism and assistance to freedom—and are making real headway; in Asia we have followed the incredible policy of trying to appease communism, or of only half-hearted resistance, or of wait and see—with total disaster.

Unless immediately—and I have warned for 5 years that if and when China goes down completely, it may be too late—there is a drastic reversal of policy in Asia similar to that of 3 years ago in Europe, history can only record that we defeated Japan, but Russia won the war—certainly in the Pacific and not improperly in Europe, too. We and the free world lost it.

With China conquered and Communist satellites all along Russia's Asiatic border, she is free to turn to Europe or the Middle East without peril of a two-front war. She certainly will do so—in fact, already is. For the second time within a decade we are faced with the prospect of a world war because of the very same mistake—failure to appreciate how imperative it is to our own security that the opposite shores of the Pacific as well as of the Atlantic be in the hands of friends, not enemies.

Just as the decisive area in determining the enslavement or survival of a free Europe is Germany, so the crux of the problem of our security in Asia always has been and still is China. First, to mention a few of the reasons—because it occupies the strategically advantageous central position in east Asia. Second, because of its long border with Russia, which can serve as either an asset or a liability to Soviet plans for domination depending on whether the border is in the hands of friends of the Soviet Union or friends of ourselves. Third, because of China's vast manpower and resources. Fourth, because of Japan's dependence on China for materials and markets. Fifth, because of the influential role China has played for milleniums in determining the history of east Asia.

For several years administration spokesmen have talked almost casually of writing China off and then keeping the countries around her free. That is like letting the hub of a wheel be chopped out and imagining we can save or hold together the individual spokes—Korea, Japan, the Philippines, Indochina, Siam, Malaya, Indonesia, Burma, and India. Or to change the figure—how are you going to make much out of these countries which are the fingers, if China, which is the hand, is gone?

What is long overdue is a change of our basic policy toward Communist expansion in Asia from appease to oppose, just as we made such a change 3 years ago in Europe. The risk is greater if we do not make such an effort than if we do. For instance, the Communists are now at the doors of Hong Kong. One way for them to win the support, or at least the approval, of almost every Chinese, is for them to get Hong Kong, whether by boycott or attack. They will make that attempt whenever it becomes expedient to do so. Shall we then help white men shoot down Chinese and unite all Asia against us?

Again, the Chinese Reds are now in direct contact with strong Communist forces in Indochina. If they get all China subdued and organized, they can then move south in strength which cannot be stopped except by direct American aid to Frenchmen killing Asians. That could set Asia afire. Siam, Malaya, Singapore, and all the rest would almost certainly go under Communist control. Then how would France and England and Holland ever recover? England's largest source of dollars has been tin and rubber from Malaya. How could she become self-supporting with the loss of that source of the hard currency foreign exchange on which her very survival depends—unless we are able and willing to support her indefinitely? Our problems in China heretofore and in Asia now are as nothing compared to the difficulties complete conquest of China and Formosa will bring to us—in Europe as well as Asia.

In short, the establishment by the Communists of complete control in China will permit them to shift their efforts from the hub to the spokes in a way that will constitute a mortal peril to Korea, the Philippines, and all southeast Asia. Loss of southeast Asia will gravely endanger, probably make impossible, European self-support. Failure of western Europe to recover will constitute an obvious peril to ourselves.

Therefore, our first and most important task in Asia—not more important than our task in Europe but not less important—still is to try to keep the Communists from gaining complete mastery of China and Formosa. Opposition to the Communists within China proper is greater today than ever before. People there know the reality now, not the utopian propaganda that still beguiles some Americans. The farmers, workers, intellectuals, are poorer than ever before—and enslaved besides. Even the students are beginning to lose their illusions. There are known to be half a million guerrillas still resisting. We should take advantage of this reaction and move at once to encourage the Chinese to keep the Reds so busy in China that they will not be able to give full assistance to Communist forces in the countries on her borders, until we can perhaps be able to improve conditions in those countries.

The stubborn refusal of the Chinese Government to collapse according to the schedule our State Department has been periodically announcing for 6 years, directly or through inspired writers, has already won us more than a year of invaluable time in which much progress has been made in strengthening three countries—Indochina, Burma, and Indonesia. If Chiang Kai-shek and other Chinese who still resist no matter what the odds, can manage to hold on a while longer, despite our denunciations of them, then perhaps with the return of Mr. Jessup from his leisurely trip to Japan, the Philippines, Bangkok, and way stations, the paralysis of policy planners in Washington can be ended, and a positive program be thought up and inaugurated. If we make no effective effort to assist the armed forces which already exist in China and Formosa, how will we aid forces which don't exist in the neighboring countries?

Maybe even the point 4 program can become something more than words, if only continued Chinese resistance will buy us another year or so.

On the other hand, once the last stronghold of the Chinese Government, Formosa, is overwhelmed by the Communists, it will not make much difference whether we get a China policy or not, or even an Asia policy. The followers of the Kremlin will have power in China that cannot be challenged in any foreseeable future, no matter how unhappy or angry the Chinese people may be. American influence in that vast area will be almost a thing of the past. We will have suffered the greatest defeat in our history. Pearl Harbor was puny by comparison. It is relatively easy to rebuild a fleet; how will you recapture a continent?

But as long as Formosa stands as the final bastion of the free Chinese and resistance continues on the mainland, there is still a chance for the United States to play a decisive role in preventing such a catastrophe to our own interests. A decent concern for our security should dictate that we help the free Chinese maintain on Formosa the legitimate Government of the Republic of China, in order (1) to maintain a symbol of hope and encouragement to the hundreds of millions of our wartime allies now behind the Asian iron curtain; (2) to strengthen resistance to Communist seizure of Formosa which would give Russia such a valuable air and submarine base in the heart of our western Pacific security system; (3) to encourage Chinese to work toward eventually removing China from the Soviet side of the balance and returning her to the side of the free nations; and (4) to buy us time.

What is necessary to achieve these ends? The first requirement is that we wake up to the true nature of the Communist movement in China and to the fact that its real target is ourselves. The State Department and a handful of writers on China have for years followed the line that we should not give effective aid to the Government of China, but rather should be neutral in what they misrepresented as just a civil war, a war between alleged feudalism and alleged democracy; or should even favor the Communists, because, so they said, there was some hope in the Communists and none in the Chinese Government.

Many of us have maintained the opposite, namely, that there was and still is some hope in the Chinese Government, and none in the Communists, because the Communists are committed to the Kremlin, to dictatorship and to world conquest, including conquest of ourselves. Whatever confusion may have existed on this point heretofore, surely the facts are clear today—even to the blindest.

A policy of supporting the Chinese Government and all those who are resisting Communist subjugation will not require a large expenditure of effort, money, or materials on the part of the American Government and people as compared to what we are doing in Europe and to what it will cost us later if we do not make such an effort now.

It will, however, require positive action and a genuine determination to find ways to help effectively. Until there is such a will on our part, there can, of course, be no way. The biggest reason for our debacles to date is that there has been no will in Washington to discover and do the things necessary to prevent them.

Second, we should not grant diplomatic recognition to the Communist regime at Peking. Such recognition would bring us no benefits, and would greatly weaken the will-to-resist of the Chinese already under the Communists on the mainland, the free Chinese in Formosa, and the strong communities of Chinese in all the countries of southeast Asia. It would shake the confidence in us of other peoples in Asia—those still undecided. Our greatest immediate stake in Asia is to keep these seven or eight hundred million people on our side. If they witness official abandonment by the powerful United States of an ally which stood by us during the nightmare period following Pearl Harbor, can they then be expected to have any faith in American declarations that we will help resist the spread of Communist aggression beyond China into their own territories? Why should they resist communism when to do so brings trouble from their Communist minorities and no assurance of aid from the democracies; whereas going over to the Reds brings immediate Russian support, and then

recognition, trade and good relations with the democracies too. In short, recognition by us would prove to all that the way to get help from both sides is to go Communist. That is the real meaning and the pro-Communist effect of the negative policies in Asia advocated for so many years by the Lattimores, Fairbanks, Snows, and Peffers, the Institute of Pacific Relations and the Foreign Policy Association, as well as the Far Eastern Division of the State Department.

Furthermore, to recognize the Communist regime would put an avowed enemy instead of a proved friend in China's seat on the United Nations Security Council. It would put enemies instead of friends in all Chinese embassies, legations, and consulates all over the world, carrying on espionage, intrigue, and propaganda against ourselves in the very midst of the countries which we hope to keep out of their control. Surely that would not be in the interest of our country or of peace and freedom.

Third, we should make a forthright statement of support of the Chinese Government and all other anti-Communist forces in China in their struggle to remain free. Can anyone remember a single kind word for China from our Government since VJ-day, or one of understanding, sympathy, and encouragement? More than anything else, the Chinese—exhausted from over 12 years of war and invasion, discouraged because of double-crosses and abandonment by their allies—need moral support, the same sort of support we have given to the Greeks, Italians, Turks, and others in Europe engaged in exactly similar fights to prevent being taken over by Communists and made Soviet satellites. Some of those governments do not come up to our standards, either.

Western sentimentalists and shrewd pro-Communist propagandists harp on the theme that such action in China would aline us with a reactionary and undemocratic government and thereby injure our moral standing in Asia. Well, who thinks that after Yalta we have any moral standing in Asia, except in Japan, Korea, and the Philippines, and it is slipping rapidly in the latter. Few of the peoples of Asia have the slightest notion of what we mean by democracy. But to a man they understand the meaning of loyalty and faithfulness to friends. They know that, whatever the weaknesses and shortcomings of the Chinese Government, its loyalty to the United States has never been questioned.

They also know that, whatever the strengths or alleged virtues of the Communists, they are avowed enemies of the United States. Do you imagine we will hold the confidence of Asians, or win new allies there, by continued unfaithfulness to an old ally, China, which itself has been wholly faithful to us? I warn you that few, if any, in Asia are going to put much trust in the United States unless we change our policies, and fast. They may well conclude that we have lost the capacity to distinguish friend from enemy and are therefore too immature and undependable to tie themselves to.

Surely it cannot be wrong for people to strive to remain free—or for the land of the free to be openly on the side of those who are so striving, and to give them moral support and encouragement.

Fourth, we should extend effective military aid to the defenders of Formosa. By effective military aid I mean the same sort of military assistance program we have carried out successfully in Greece, but have not even tried in China since the recall of General Wedemeyer in early 1946—four long years.

Effective military aid includes, first of all, putting in over-all charge of America's security in that part of the world, the most experienced and successful man we have in dealing with east Asia. That man, of course, is General MacArthur.

It includes some top-flight American military spark plugs, like General Wedemeyer, Admiral Cooke, Admiral Badger, with adequate American staffs to train and advise the Chinese armed forces at all levels—and in strategy, tactics, and operations—which our previous mission in China was not permitted by our Government to do.

Surely it is of some significance that the seven American admirals, all men with brilliant records—Yarnell, Hart, Barbey, Kincaid, Cooke, Badger, and now Radford—who in succession have been in command of our Asiatic Fleet, have been unanimous in believing that such an effort should be made and could be successful, if made with a firm will to win victories rather than just to explain defeats. Generals MacArthur, Wedemeyer, and Chennault believe the same.

These men are hardly amateurs or armchair theorists or sentimentalists. Should we follow the judgment and advice of those who have been most successful in dealing with Asia? Or follow the judgment and advice of those who have been least successful—Generals Stilwell, Marshall, and Barr—and a few dozen pro-leftist writers, lecturers, and State Department men led by Alger Hiss who was a keyman in the Far East division from 1939 to 1944 when the policy pattern and the propaganda line which lost China to Russia were being established? These are the men who tell you on every occasion that nothing can be done. How do they know? They have never tried themselves or allowed others to try.

Effective military aid for Formosa includes a relatively small amount of munitions, light arms, equipment, and supplies carefully planned for the particular type of operation needed. It includes spare parts and fuel for the Chinese air force and navy, and a few hundred of our World War II planes now lined up on Okinawa and never to be used again by us. We are giving some to the Philippine air force. Why not to the Chinese? Perhaps 50,000 World War I type rifles and ammunition for them may be needed in addition to the 130,000 rifles already sent under the program the Congress voted in 1948. Money for all these has long been available. The road block has never been in Congress.

A military-aid program does not include American combat troops. I do not know anyone who has ever suggested that we should send American combat troops to Formosa, or that we should occupy it with American forces, even though the State Department frequently engages in shooting down that straw man set up by itself. It would be neither justifiable nor advantageous for the United States to occupy or seize Formosa for herself; but it is extremely important to our security that it be denied to our enemies. The way to accomplish that end, and at the same time to strengthen the spirit of resistance among all Chinese and other free peoples in Asia, is to help the Chinese and Formosans hold their island, as many of our best military students of the problem believe they still can do with such aid, although the time left is short indeed.

At this point someone always brings up the argument that we have given lots of aid and it was useless. It is unfortunate that so few people know enough about the facts in China to be able to refute the half-truths, even lies, on which such attempted explanations of our own failures are usually based. Some of them are:

1. That the Chinese have no will to fight. But in 1946 General Marshall was out there berating them because they had too much will to fight, and for a year insisted they cease fire, and embrace the Reds instead. We ourselves did more than anything else to destroy the will to fight, for which we now criticize them.

2. That all our aid has been wasted. The fact is that the Communists have officially admitted that Chinese Government troops killed 243,000 of their troops and wounded 650,000 more in the 3-year period, 1946–49, which is more than the Germans and Japanese were able to do to us in 3½ years. Apparently much of our aid was used very effectively indeed.

3. That we have given the central government enormous aid. Unfortunately it has not been possible to find out just how much of what items were actually delivered to whom in China on what date. Our Government talks in dollar figures, using the original cost plus transportation of a lot of stuff which was sent out by us for the war against Japan and later sold to the Chinese at a higher rate than we charged most of our other allies, although in the words of an American admiral on the ground, "at least half of it was junk." Besides most of it was not suited for the kind of guerrilla operations needed in China.

Since VJ-day all the military aid that has actually been delivered to China is substantially as follows:

One hundred and five million four hundred thousand dollars, mostly in 1945. Almost nothing in 1946, 1947, and the first 10 months of 1948—the three crucial years during which the decisive shift in the relative strengths of government forces and Communist forces in China took place.

One hundred and twenty-five million dollars' worth of new material since November 1948.

One hundred and forty-one million three hundred thousand dollars—the original cost of 131 old naval vessels which were turned over to China, partly because they were not valuable enough to justify our bringing them home from the far Pacific to put in moth balls here.

Total, at original cost prices, $371,700,000.

In addition, $335,000,000 was figured for services and expenses—mostly transporting Chinese troops from southwest China and Burma to eastern and northern China to accept the Japanese surrender. This represented a saving, not an outlay for the United States, because if we had not transported Chinese troops to take over from the Japanese, we would have had to send in and maintain American troops to do the job—at far greater cost.

Furthermore, when military aid was voted by Congress in April 1948, the administration systematically sabotaged it by delays, overcharges, and unbalanced shipments. For example, the Chinese were charged $85 per thousand for old .30-caliber cartridges as compared to $4.60 per thousand charged Greece and Turkey for the same type of ammunition whose original cost to us had been $46 a thousand. That is, $1 of American military aid for Greece delivered 220 bullets; but $1 of American aid for China delivered only 12 bullets. As a result of these and similar overcharges, China, with a population of 450,000,000, actually received less useful military supplies than Greece with a population of 7,000,000.

The further fact is blissfully ignored that to send even a surplus of some of the items essential for a given operation, but little or none of the other essential items may be useless, no matter how many millions the items which were sent had cost.

Again, the charge is made that the Chinese would never take our advice. The fact is that their biggest errors were the times when they did take our advice, such as agreeing to our iniquitous Yalta deal, giving Russia control of Manchuria after we had promised at Cairo it would be returned to China, and agreeing to the truce with the Communists in January 1946, when the

UNIVERSITY OF MICHIGAN LIBRARIES

government forces had overwhelming military superiority, which truce the Communists used to expand their holdings fivefold—from 60 counties to more than 300. I can give you a dozen more instances if you desire. What kind of sportsmanship, not to mention integrity, is it to denounce the Chinese for the inevitable bad results of decisions which we made, not they?

In short, what China has most needed all along and most needs now is not more aid but proper aid. Proper aid is the kind we gave Greece, but have not given China since 1945. Munitions without such American advice and assistance in their use cannot succeed any more than advice without munitions could succeed.

If we had tried in China the sort of policy we have followed successfully in Greece, or if we had followed the recommendations made by General Wedemeyer almost 3 years ago, and still failed, then neither I nor any other person could say a word of criticism. But we have not tried. How does anyone know whether we can succeed or not, until we do try?

As a fifth component of an Asia policy, we should continue to give economic assistance to the Chinese Government on Formosa. One of the reasons the economy of the island is sorely strained is because it is having to export materials needed for home consumption, in order to get foreign exchange to buy commodities like cotton and oil which must be obtained from abroad. If we will help provide such commodities to Formosa—the money has been available for 2 years—exactly as we are helping provide them to Korea, Japan, and western Europe, the economy of Formosa can be made reasonably stable. Ordinarily it has a favorable balance of trade, in sharp contrast to that of England, for example, which we are helping even though it is doubtful whether it can ever again become self-supporting.

Economic assistance includes the so-called point 4 program of industrial development and technical assistance in the parts of Asia still free. We must get it going at once if it is to be of any value. It cannot be expected to produce substantial physical results, within several years, but the psychological lift could be tremendous.

Sixth, we should give leadership, encouragement, and assistance to the free peoples of east Asia in their proposal to get together in a mutual assistance defense pact, such as we have sponsored in the North Atlantic. Without some such cooperative effort to defend the whole area there is every reason to expect that the Communists will be able to pick the countries off, one by one. And let me repeat, if England, Greece, and Holland are deprived of access to the resources and markets of southeast Asia on a mutually beneficial basis, what chance is there for them and the rest of western Europe to become self-supporting? If we are then compelled to continue beyond 1952 the heavy burden of supporting the countries of western Europe, how long can we ourselves remain solvent and safe?

The Congress last year wrote into the declaration of policy in the Mutual Defense Assistance Act—the so-called military-aid program for Europe—a statement urging American leadership for organizing in Asia something similar to what we have helped develop in Europe.

That became the law of the land on October 6, 1949. Yet, the Secretary of State admitted recently before my committee—Foreign Affairs—that nothing had been done by his Department to implement the policy declared by the Congress. Why? It is unexplained, and, to me, unexplainable. Apparently, we are still waiting for more dust to settle—which means waiting for the patient to die. What, pray tell, can be done then?

That brings me to the compelling reason why I believe we must adopt in Asia some such positive policy as I have outlined in place of the wait-and-see, do-nothing-effective no-policy our Government has followed these last 5 years with such spectacular benefit to the Communists and such disastrous results to ourselves. That compelling reason is self-preservation.

I am not and never have been interested in any persons, groups, or parties in China or Asia. I am interested in the security of the United States of America, and in freedom, world order, and peace. It is the job of responsible American officials to find ways and means to achieve those goals; not excuses for not achieving them. Those who think nothing effective can be done in China, should step aside or be removed to make way for those who believe something effective can be done and must be done—and now.

It is not enough just to recite the weaknesses of China—the five adjectives which the apologists of our Government's negative policies always use as their excuse for not giving effective aid, namely that the Government of China is "inept, incompetent, inefficient, undemocratic, and corrupt." Certainly those conditions exist in China, just as they do in every Asian country—and everywhere else in greater or less degree, especially after long exhausting wars. They are the problems it is the business of responsible statesmanship to solve; not the alibi for failure to solve them, or for doing nothing.

The pro-Communists in this country are now skillfully promoting the same line with respect to Korea and the Philippines seeking to discredit those governments also and persuade us to forget again where our own self-interest lies. When they are ready to take over India the same line will begin with regard to its government which will become Fascist, reactionary, feudal, undemocratic, corrupt, and incompetent.

On the other side, I am fully aware of all the myths which have been so skillfully propagated regarding the Communists in China: For example, that they are not really Communists, but just agrarian reformers, patriotic peasants leading spontaneous revolutionary forces against alleged warlordism, landlordism, and feudalism; that they are not connected with or subservient to the Soviet Union; that they won't be able to organize and administer a government in China without our help, which will supposedly make them susceptible to our influence; that they will not be able to convert the Chinese to communism; that they will not be able to solve China's economic problems; that they will probably develop Titoism; that they will have to cooperate with the west. All of these myths have proved or are being proved cruel hoaxes. They were designed not to tell the truth, but to lull us to sleep while the Communists were getting control of China. They have been exceedingly successful.

If we cannot decide what is best in China and Asia because we think neither side is good, then let us decide what is worst, as a physician does when confronted with no good alternatives. What is the worst thing that can happen in Asia? There can be no question about the answer to that. The worst thing from the standpoint of our own interests, those of the people of Asia, and of world peace, is for China and then the other countries to come wholly under the Communists and become new satellites of Russia. Therefore, that is the thing which we must, if possible, prevent.

The first requirement of our security in the Pacific is not democratic governments or even better governments, but independent governments. The present disaster began when we abandoned in 1945, starting at Yalta, our historic policy of supporting resolutely "the sovereignty, the independence, the territorial and administrative integrity of China." That had been our consistent and sound policy previously—whether under John Hay in 1899, Woodrow Wilson in 1915, Charles Evans Hughes in 1922, Hoover and Stimson in 1931 or Roosevelt and Hull in 1941—and no matter how good or bad a government China had at the time.

We got off the track because from 1943 on some officials high in our Government for some unexplained reason failed to realize that the Communist movement in China and Asia is and always has been an instrument of Soviet aggression, and allowed themselves to be beguiled into thinking that it was just one faction in an internal conflict which was none of our business. Now it is plain to all that the Communists have as their aim not just China, but all of Asia and Europe, and then ourselves.

In such a situation it has always seemed to me the decision as to what we should do ought to be extremely simple: We should oppose whatever assists our mortal enemy; we should assist whatever opposes that mortal enemy. However great the risks and difficulties of such a positive policy may be, the risks of a negative and defeatist policy of doing-nothing-effective are greater.

However late it is today, it will be still later tomorrow. However much it will cost to make the effort now, our choice is not between that and something less; it is between that and something more. Which do we want?

There are two lessons we could still learn from our experience in Europe if we would. The first is that when Communist expansion is stopped, it begins to fall apart, because it cannot deliver on its fancy promises. The second is that it cannot be stopped except by resistance all along the line of its advance. That requires assistance to all in its path who will resist, even though some of the governments involved do not meet with our full approval. If we will apply those lessons with imagination and resolution in Asia as we are in Europe, the situation may still be retrieved. There is hope if we try; there is none if we don't try.

We have learned that to keep western Europe free there must be a regional effort—assistance to all in the given area. If we would keep Asia free, there must be a program of regional defense there also.

Ultimately, and soon, there must be global defense against the strong cruel enemy we and the free peoples of the world face; or else all of us, not just weakened and exhausted China and backward Asia, will fall before its ruthless and skillful onslaughts from within and without. Must we once more dawdle and daydream until after the blow actually falls, and then have to fight for our own survival under the most difficult circumstances possible?

That brings us to the last step in the overall foreign-policy program on which our Government has embarked and which is necessary if we hope to influence the thinking and the actions of both friends and enemies. The four steps I have already discussed—rearm, resist Communist expansion in Europe, economic and military assistance in Europe, Japan, and Korea—are mainly defensive or negative. We must have a positive program also. In addition to firm opposition to further extension of the Soviet system based on compulsion, we must gain a sense of mission to spread throughout the world our system based on free and voluntary cooperation. At last we are beginning to give to other countries a more adequate presentation of the thrilling story of what has happened here and can happen with them also under freedom. Through press, radio, films, books, and magazines, and exchange of teachers, students, scientists, and technicians, we must give hope to the oppressed peoples of the world and the undecided peoples by showing

them a better alternative—based on performance, not just promises. Our broadcasts should be called not the Voice of America, but the "voice of freedom." What has happened in the United States and Canada is not because we are Americans but because we have been free. The most explosive and dynamic idea ever turned loose in history is human freedom. The desperate measures Russia is taking to keep the story of freedom from getting through to those under her control and her own stupendous efforts in the propaganda field are the eloquent proof of how great is her faith in the power of ideas. The Russian rulers know what one man, Karl Marx, was able to start with an idea—and what two other men, Lenin and Stalin, have been able to accomplish with that idea.

They know what another man, Hitler, did with an idea.

They know what another man, St. Paul, did with an idea.

They also know what 100 other men and women, the Pilgrims, did when they came to this country over 300 years ago, with their idea—political liberty.

The greatest heroes in Russia are not scientists or industrial magnates or even generals. The heroes in Russia, and the highest paid persons in the land, are the skillful users of words—those who know how to take an idea, and no matter whether true or false, present it in attractive, convincing form. They have learned it is their most potent and effective weapon throughout the world, in softening people up preparatory to taking them over by force, which is the only means by which they have actually gained control of any country yet, beginning with Russia.

Why should we be less effective in getting across our basic ideas? We do not have to sell falsehoods about America. But we do have to present the facts about it—and present them repeatedly and convincingly, emphasizing the great advantages that have resulted under freedom—without in the least concealing the imperfections or lessening our efforts to correct them. Jesus did not say just "the truth shall make you free." Rather, he said, "Ye shall know the truth, and the truth shall make you free." How will they know if we do not do a far better job of telling it?

When our system is such that under it 7 percent of the people of the world have created more wealth and distributed it more widely than all the other 93 percent put together, is it not shameful that it is presented so inadequately that many people, not only abroad, but here at home, can be persuaded that it is progress, it is liberal, to advocate abandoning the system under which the 7 percent have accomplished so much and go back, not ahead, to one or another of the systems under which the 93 percent still struggle and suffer?

Why should anyone be so almost apologetic about a system which, while far from perfect, is still incomparably the best this earth has ever known—judged solely by results for human beings?

All of the above measures—military, economic, and ideological—are essential elements of a world policy—but they are not enough. They merely buy time for a final step—give us one more chance to get the world organized politically on a sounder basis.

If we hope to win the fierce economic and ideological war now raging throughout the world, before it degenerates into an atomic war with unforeseeable destruction, we must move boldly and imaginatively to try to strengthen the world organization so that it can handle effectively all threats to the peace from whatever source.

Concern for our own security has compelled us to assume in the present emergency the burden of assisting certain nations under Communist assault. But we cannot long carry that burden alone. We have neither the resources nor the wisdom.

The real task is to stop the assault. The peaceful peoples of the world placed their faith in the United Nations as the agency to do that job. The experience of the last 5 years has demonstrated that in its present form the United Nations cannot do it. In fact it is so constructed that any one of the Big Five, by its veto, can use the United Nations machinery to prevent the establishment of a just and peaceful order—to defeat the very thing it supposedly was set up to guarantee.

Most Americans were too naive to realize and too trustful to suspect that the Soviet rulers were coldly planning to use the big-power veto not to block war—which was our concept of its function—but to block peace. They have not used the veto once to prevent war or sanctions. They have used it more than 40 times to defeat agreements most of the free nations wanted because they were in the direction of peace.

At Tehran, Yalta, Potsdam, and elsewhere some of our leaders, in order to get Russia to come into the United Nations, yielded to her on matters of principle and even on our own solemn pledges to others, apparently assuming that if Russia joined it would be for the same reason we and others joined, namely, to help solve world problems. But it soon became clear to all who would see, that the Soviet Government came in for precisely the opposite reason—not to get agreement, but to ensure disagreement; not to make the United Nations work, but to be in the best possible position to make sure that it does not work. Why?

The reason is perfectly clear. The Kremlin already has a world organization of its own—the Communist Party. It has more than a dozen countries under its complete control, plus trained, disciplined units in every other country. Its world organization is already functioning, at full speed. It intends to win, and to do so it must keep any other world organization crippled and ineffective, which the veto machinery, drafted by Alger Hiss, enables it to do.

The remedy to such an intolerable situation is not to abandon the United Nations, or to continue to bypass it; but rather to improve it. We must get its structure modified so that it can and will work—with Russian cooperation if possible, but without it if necessary.

On one hand, we must initiate action toward getting the Charter itself amended to correct demonstrated defects. We should declare and pursue a policy of endeavoring to strengthen the United Nations and seek its development into some sort of world organization, open to all nations, with carefully defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law.

Suppose Russia will not agree to Charter amendments that would make all members subject to the same world law, and vetoes such amendments. I have no doubt that her present leaders would do that—but I shall let them make that decision and announce it, not we make it for them. If they decide to exclude themselves from cooperation, then we do not need to withdraw from the UN or to drive the Soviets or anyone else out. We should just organize on a closer basis with all the nations that will agree—not outside the United Nations, but inside it.

That is, while seeking to strengthen the United Nations on the universal level, we must also work for better organization on a less-than-universal level within the organization. Just as the Communist-dominated members of the United Nations have always been "a club within the club," so, under article 51 of the Charter, all the free nations—beginning with the 12 in the Atlantic Pact but not limited to them—can unite firmly for collective self-defense in another "club within the club"—leaving the door open for Russia and any others to join if and when they are willing to agree and abide by the rules.

That is what our forefathers did at the Constitutional Convention. They did not secede from the Confederation, or try to drive out those who did not agree with the new proposal. They simply drew up a tighter, more workable plan of organization, and provided that whenever 9 of the 13 States ratified it, the new club would be set up—others to join or not, as they wished. All did within about a year.

As long as we indicate we will not do anything unless or until Russia agrees, of course she will not agree. Why should she?

But if we and the other free peoples demonstrate to the Russians, quickly, that we can and, if necessary, will move ahead without them, there is a chance—I suspect the only chance—that we may find it possible to get along better with them.

Whenever enough of the peaceful nations get together in a workable organization that makes it clear to the men in the Kremlin, first, that they do not need to go to war to get security or satisfaction of any legitimate grievances; and, second, that they cannot win even if they do go to war—at that point, and probably only at that point, is there any likelihood that they will begin to come along, because there would be nothing to gain and much to lose by refusing.

It is plain that we cannot get them to change from obstructionism to cooperation by persuasion, or exhortations, or bribery, or secret deals, or denunciations. These have all been tried in vain. The men in the Kremlin can be expected to cooperate only when we confront them with a set of circumstances where agreement is more advantageous to them than continued disagreement or attempted conquest.

No great military expansion in history has ever stopped until it was checked. Neither will or can the Kremlin's. War with it is inevitable unless we can check it by other means—or are willing to surrender and be enslaved. The only other means is a giant coalition of the free nations—not, I repeat, outside the United Nations but inside it.

The weaknesses which have brought our country to this ominous hour have not been primarily military or economic. Our greatest failures have been in the political and ideological and moral fields. Because for so long we had physical separation from the rest of the world, our young men and women were not challenged to become specialists in international relations and masters of the arts of diplomacy. Understandably we focused our efforts on the great task of developing this vast virgin continent and its resources.

As a result, how many Americans do we have in the field of diplomacy that are the equivalent of Marshall, MacArthur, Nimitz, Eisenhower, Spaatz, and scores of others in the military field? Or of the Fords, Firestones, Edisons, Ketterings, Rockefellers, and hundreds of other giants in industry and finance?

This grave deficiency in our human resources is not the result of anyone's design. It is the result of everyone's neglect. We have tended to concentrate so largely on our domestic life that we failed to realize that whether it is to have a chance to continue depends to a great degree on what happens abroad—or rather, on how effective we can become in influencing what happens abroad in directions favorable to world order, peace, and freedom. I congratulate Kiwanis for its magnificent program for youth, and urge you to challenge and train them to understand better the nature of the world in which they live, America's place in it, the conditions necessary for our survival, and how to fulfill the conditions.

UNIVERSITY OF MICHIGAN LIBRARIES

Our hopes of avoiding disaster lie in mobilizing to the utmost our strength and skill in political, ideological, and moral fields, as well as economic and military. We will win only if we believe so intensely in those basic principles of freedom and federation on which the Nation was founded and which are responsible for its greatness, that we can outthink, outwork, outsacrifice, and outlast those whose world is founded on lies and violence.

Our difficulties are not insurmountable if we can develop, here and among the other free peoples, a moral compulsion to build in the world the sort of decent order which our forefathers had the will to build in these United States—the will to make our system work here at home and to spread it abroad.

It comes down to how sound and strong and deep is our faith. What our Nation and the world must have if they are to be saved is what Lincoln prayed for at Gettysburg. "Under God, a new birth of freedom,"—a new understanding of freedom—a new dedication to it.

Our fathers built the finest material civilization the world has ever seen—precisely because they sought first the dignity and freedom of individual man as a spiritual being. Because they put that first, not second, the political and economic system they established was one which released, as had never been done in any other time or place, the creative capacities that are in ordinary men everywhere. Thereby has our progress been achieved.

Shall we now focus our effort just on trying to preserve the material results? Or on reproducing the spiritual causes?

With all my heart I believe that the Constitution of the United States and the system of government by voluntary federation which our fathers established here, are the best set of political ideas ever put together in one place in the world's history. I think they are the hope of mankind. Our freedom and our peace depend upon the spread of those ideas—everywhere.

Aggressive citizenship to achieve these goals is indeed the safeguard of freedom, as your motto puts it. It is the only way we can ultimately turn back the tide of totalitarianism and tyranny which is sweeping over the earth and secure the blessings of liberty for ourselves and our posterity.

A Fighting Faith in America

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I insert an address delivered by a young man in my congressional district, Mr. Eddie Menasco. This was a prize-winning oration in an annual oratorical content held at the Eastern Oklahoma Agricultural and Mechanical College at Wilburton, Okla. The oration follows:

A FIGHTING FAITH IN AMERICA

Fear has won a beachhead in America, and the people of this country, although victorious in history's most devastating wars, are retreating before the shadows of an uneasy peace. Fear, unknown in war, is producing an astonishing paradox in the richest and strongest nation in the world—it is persuading the American people to talk themselves into a depression.

A defeatist attitude is encountered on all sides—from board rooms to barrooms. Whether it's a group of clerks in a cafeteria, or a group of corporation big-shots at a banquet, the main dish is likely to be despondency, seasoned with dire rumors, and garnished with gloomy statistics.

These dim views of America's economic health have apparently gained wide acceptance, although the facts of America's economic strength are known to everyone. On the radio, in magazines, in our newspapers, the basic soundness of America's economic position has been clearly pointed out. Because they do not fit into the melancholy fashions of the hour, such statements fail to register on the public mind. But they are startling facts and should be repeated again and again. Here they are:

1. Fifty-nine million workers on the job.
2. Two hundred billion dollars in liquid savings.
3. Two-hundred-and-fifteen-billion-dollar personal income for 1949.
4. High purchasing power—53 percent greater than prewar.

It would seem preposterous that anyone could manipulate these figures and come up with an answer that equals disaster. Yet, that is precisely what many Americans are doing. By emotional arithmetic, these viewers-with-alarm add two and two and get zero. But the record they scan is their own fever chart—not the record of America's economic health and vigor.

Now, you and I know that as a Nation we cannot afford to be economic hypochondriacs, because a country, like an individual, can worry itself sick.

The reaction of many Americans to the problems of this postwar period suggests something Thomas Jefferson wrote to John Adams in April 1816.

Jefferson wrote:

"I think, with you, that it is a good world. * * * There are, indeed, gloomy and hypochondriac minds, disgusted with the present, and despairing of the future; always counting the worst will happen, because it may happen. To these I say: What grief has been caused by the evils that never happened. I steer my bark with hope in the head leaving fear astern."

Today's counterparts of these gloomy individuals confuse fears with facts. Through knowing, in their hearts, the essential health and vitality of our free economy, they yield weakly to the counsels of despair. Seized with the jabber-jitters, they prattle about depression and collapse.

But how can we confuse shadows with realities? With our spiritual heritage, and with vast material resources at our command, how can we compromise our future by a liaison with fear?

The answer is lack of faith—for, only through a lack of faith in America and in ourselves, could we mark down the world's most dynamic economy.

Too many of us have accepted jabber-jitter estimates of what is wrong with America, such as welfare state, or any Government-provided benefits for that matter, instead of finding out for ourselves what is right with America, or what are some of the good points about our policy of government.

No one can deny that America faces many grave problems today, both at home and abroad. No one can deny that American business has an ample share of these problems which it must solve itself, if it is to continue its robust tradition of individual competitive enterprise. But I do deny, and most emphatically, that these problems present any logical reason for doubt. I deny that challenge is a cause for fear.

There is all the difference in the world between being aware of complex problems and being afraid of them. This moment demands a clear-eyed appraisal of the facts—not an emotional concern with shadows.

The history of America is an inspiring saga of great problems superbly overcome; of serious setbacks serving only as new beginnings for even greater achievements. I reject the thought that at the midpoint in this twentieth century, we will reverse the course of that history.

Not as a politician, not as a historian, not as an economist, but as a citizen, I call for a renewal of faith in the vitality of our American way of life.

By faith in America, I do not mean a listless reverence for the past or a mere submission to the present. By faith, I mean a certainty based on the principles for which America stands, by which it has progressed, and through which it will realize its full potential of greatness in the future. Faith in America is not blind acceptance of things as they are—it is the belief that we, in America, can make them better.

In declaring that today's opportunities can be made the basis for magnificent progress and achievement, I am simply expressing a citizen's estimate of what he sees through his own eyes. And what I see today, gives me unlimited confidence in tomorrow. Because for every minor symptom of decline, there are a hundred major elements of economic stability.

Now, of course, nothing in this world is perfect and the American economy is no exception. But, if we were perfect, there would be nothing left for us to do—and we can be well assured there is a great job to be done.

This may surprise those of us who believe that simply because we have the highest living standard in the world, we have everything we need. Some of us have become complacent through reading statistics about the number of bathtubs and telephones, motor cars, and radios, owned by Americans as compared with Russians.

Such comparisons are significant—yes. But they are phenomenal only by the Communist standard. By American standards they are not nearly good enough. Let's face the cold facts.

Twenty-seven million Americans have no kitchen sinks.

Eighteen million Americans lack vacuum cleaners.

One million American families need new homes this year.

Forty million Americans have neither bathtub nor shower.

So, let's not talk about what we've got. Let's be more concerned with what we haven't got. We must be concerned for two reasons: First, because these are human needs that should be met; and, second, because these needs provide dramatic illustration of the fact that we haven't finished anything—we're only beginning.

As Woodrow Wilson once said, "America is not anything, if it consists of each of us. It is something only if it consists of all of us; and it can consist of all of us only when our spirits are banded together in a common enterprise."

Today, our common enterprise is clear—let us go forward together, and, by bold action, reaffirm our faith in America and in ourselves—we, the people, who are America.

Inside Your Congress—True Liberalism and Human Welfare

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. GWINN. Mr. Speaker, at every whistle stop on his way to the West, Mr. Truman is asking the people to put their

faith not in themselves but in a little group of governing men. They are being promised that if they will submit to that group's management, control, and taxation they will double their income and have more houses and food, a higher culture, and better health. For nearly 160 years prior to this trip the freedom of the individual from such governing men had been a fighting matter. Every individual's liberty to be responsible for himself was thought to be absolutely essential to every American. He had no faith in anybody, even a President, to do better for him than he could for himself.

We have been taught up to now that the progress of people has been in direct ratio to the freedom enjoyed by them. Freedom was thought to be a precious substance like the precious elements in sunlight and air, in rain, in soil. When its elements were released and free, it was explosive like atomic energy itself, mysterious and capable of the most amazing results. Prior to the American discovery of liberty, for a thousand years, there had been no appreciable change in the condition of men. There had been famines about every 10 years. There were as many or more babies born as there are today but they died of hunger and cold. Life was the lifelong drab existence of grubbing in the earth for a bare subsistence. There was no surplus as it is known today. That experience of surplus is strictly associated with the American era of freedom. From the beginning of time down to the era of liberty not more than a billion people ever subsisted on the earth. There was no improvement in the cradle and the flail for a thousand years. In a little more than a century of liberty the population has doubled because of invention and science and an era of comparative peace under free enterprise.

What about the choice he must make now? Are the ideas, and inventions, the production and the surplus of the free to be slowed up and reduced by our governing men? Is it sensible for us to put our faith in our governing men who have no inventive, creative or productive capacity? Have they made any contributions to science? Can they add to the number and quality of houses and our foods? Can they extend our life and add to the health we enjoy? How about television and penicillin and poetry? None of these have come from our governing men yet.

If the free mind and spirit is the only substance from which they came, then everyone of us is concerned to protect the liberties of inventive and creative men. We all depend on them. Must we not therefore protect them against governing men who want to supervise, control, inspect, compel, and tax them? These governing men always work and fight to expand the power of their Government and to expand their business of governing. By so doing they always reduce the individual's freedom, his capacity, his productivity, his means of serving us.

Freedom is a word all too casually used. Its meaning was clear in 1776. In 1950 it is foggy and needs rethinking. Freedom is no musty sentimentality to sing hymns or write poetry about. Nor is it a constitutional game to be played by the powerful against the weak. Freedom is a most practical utility, precious to all conditions of humans. It is in truth the very practical source of food and houses and health and the good life, especially for the needy. Unless the imaginative, productive, inventive free individual produces a surplus over and above his own needs, there can be nothing for the needy.

Our governing men by the record of the Patent Office do not discover, invent or produce. In fact they are always destructive forces, unless they are confined to the maintenance, protection, and glorification of individual liberty. On the liberty of our individual free citizens depends even our safety from foreign enemies. The Patent Office again shows that our governing men have produced no instrument vital in the winning of a single war from the beginning of our history. We won because a farmer in Virginia dropped his old cradle and gave us the reaper, two bicycle makers from Ohio flew. A poor tinkerer from his mother's kitchen put a whole world on wheels.

Shall we keep our faith in ourselves under God and reject the false promises in exchange for our liberties?

Laurens, S. C., Wins Safety Award for Pedestrians

EXTENSION OF REMARKS
OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. BRYSON. Mr. Speaker, the city of Laurens, county seat of Laurens County, S. C., one of the smaller but more progressive counties in my district, has again won an outstanding national honor. Surely, other cities, both large and small, would do well to follow the example of Laurens. As a part of my remarks, I attach hereto an editorial and other newspaper clippings:

LAURENS WINS SAFETY AWARD FOR PEDESTRIANS

Laurens has been named a grand award winner in the eleventh annual national pedestrian protection contest.

The selection was announced in Charlotte, N. C., Monday by Coleman W. Roberts, president of the Carolina Motor Club. The contest was sponsored by the American Automobile Association.

Laurens, which last year won first place for cities under 10,000 population, took top honors this year with the grand award for all cities under 100,000. San Francisco won the grand award for cities over 100,000 and Connecticut won the grand award for States.

Other Carolina cities placed in the contest, the Associated Press reported. Special citations for pedestrian programs went to both States and to the cities of Greenville, S. C., and Asheville, N. C., Easley, Marion, Union and Newberry, S. C., and Hamlet and Canton, N. C., received special citations for their accident records.

Entries in the contest were received from 1,627 cities throughout the Nation. There were 882 cities under 100,000 which entered the contest.

The 10-man committee of judges pointed to Laurens' record of no pedestrian deaths and noted the town's well-balanced pedestrian protection program.

The board of judges recognized the work of Chief W. R. Ivey of the Laurens Police Department, one of the key figures in the city's pedestrian safety record. Lt. George E. Hurteau, Jr., of the safety section of the South Carolina State Highway Patrol, was recognized for outstanding leadership in pedestrian protection.

LAURENS' FINE RECORD

Last year Laurens won top honors for cities under 10,000 population in the American Automobile Association's national pedestrian-protection contest. That was a splendid showing, for quite a few small cities and towns are in that category.

But Laurens wasn't content to take honors among the small-fry communities of the Nation and this year that safety-conscious and enterprising city of less than 7,000 in the census count of 10 years ago stepped out and won the grand award for all cities under 100,000.

South Carolina cities made a good showing in the contest with Greenville, Easley, Marion, Union, and Newberry receiving special citations for pedestrian-protection programs. But these and other municipalities of the State bow to Laurens for showing the way for the 882 cities under 100,000 over which Greenville's esteemed neighbor scored its impressive victory.

Laurens, it is recalled, made an impressive record with respect to traffic fatalities until a recent automobile-train collision marred a perfect score of several years' duration.

The award which Laurens received a few days ago was for the city's effective pedestrian-protection program. The board of judges specifically recognized the work of Chief W. R. Ivey, of the Laurens police department.

Other communities which are interested in improving their safety programs ought to be able to get some pointers from him and his associates at Laurens. Hats off to all the folks down there who have a part in the city's safety record.

LAURENS SMALLEST TOWN IN UNITED STATES TO WIN GRAND AWARD—OFFICIALS NOTIFIED OF NATIONAL PEDESTRIAN SAFETY AWARD RECORD

(By Manuel J. Rogers)

LAURENS, May 9.—The city of Laurens is the first city in the South to win the national grand award for pedestrian safety.

Laurens also is the smallest municipality in the United States ever to win the grand award and is the first town in the United States to win two consecutive awards.

Laurens won first place last year for towns under 10,000, but this year won the grand award for towns under 100,000 population.

OFFICIALS NOTIFIED

Chief of Police W. R. Ivey and Mayor W. T. Bolt have been notified of the high honor won as the result of efforts of the police department and will be notified soon of the date on which the official plaque will be presented.

To win the grand award Laurens had to take first place in all eight categories under which judging was carried on. These include death and injury records (no deaths, only four pedestrians injured), accident records, legislation and enforcement, engineering, organization of police department, school safety program, public information, and exhibits.

Under the school safety program signs have been placed in streets at school crossings, schoolboy patrols have been organized with the aid of Capt. L. R. Keeble of the Laurens Police Department and Corp. E. E. Bedenbaugh, State highway patrol, movies

UNIVERSITY OF MICHIGAN LIBRARIES

on safety have been shown, bicycle safety clubs have been sponsored and other means have been employed for impressing the importance of safety on the children. The midget football team at the school has been coached by a policeman, Elmore Roberts.

Merchants cooperated by distribution of pamphlets and otherwise.

Pamphlets on safety have been distributed through all available means with the result that about 700,000 pamphlets and slogans have been placed in the hands of the public during the year. City water bills and electric bills of the Laurens Electric Cooperative, Inc., have been stamped with safety slogans. Chief Ivey drew special praise from the board of judges for his work in organizing the police department and carrying on the safety program. Today Chief Ivey praised the cooperation of merchants and citizens generally for the unusual record that has been established.

Mayor Bolt was elated over news that Laurens had won the honor.

PROUD OF CITY

"I am immeasurably proud of our city," he said. "I am proud of its police department and of its citizens for having won this Nation-wide recognition for the second successive year for its safety record. We even did better than our 1948 record, for in 1949 we also won the grand award in which the competition was among all cities under 100,000 population.

"The record of Chief Ivey during all of his years' service in the city of Laurens is climaxed by this signal recognition. He has shown himself well qualified in organizing and administering the complex affairs of the police department, and in gaining the cooperation of the entire citizenship in this safety campaign.

"Captain Keeble of the Laurens Police Department also deserves commendation for his having organized the material, photographs, and exhibits in making the most attractive presentation of our accomplishments. I also want to publicly thank every member of our police department and each of our Laurens residents and the visitors to our city who cooperated in helping us win this award."

George Attix, secretary of the Laurens Chamber of Commerce, commended the work of the police and citizens.

"As a safety engineer for 5 years," he said, "I can say that such a record as Laurens has made did not 'just happen.' It is the result of a lot of hard and consistent work.

"Our police department took the lead in this safety drive but our citizens and the people of our community also played an important part by responding to this leadership in that they cooperated and became safety conscious."

LAURENS WINS SAFETY AWARD

CHARLOTTE, N. C., May 8.—Laurens, S. C., has been named a grand award winner in the eleventh annual national pedestrian protection contest.

The selection was announced here today by Coleman W. Roberts, president of the Carolina Motor Club. The contest was sponsored by the American Automobile Association.

Laurens, which last year won first place for cities under 10,000 population, took top honors this year with the grand award for all cities under 100,000. San Francisco won the grand award for cities over 100,000 and Connecticut won the grand award for States.

Other Carolina cities placed in the contest. Special citations for pedestrian programs went to both States and to the cities of Greenville, S. C., and Asheville, N. C. Easley, Marion, Union, and Newberry, S. C., and Hamlet and Canton, N. C., received special citations for their accident records.

Entries in the contest were received from 1,627 cities throughout the Nation. There were 882 cities under 100,000 which entered the contest.

The 10-man committee of judges pointed to Laurens' record of no pedestrian deaths and noted the town's well-balanced pedestrian protection program.

The board of judges recognized the work of Chief W. R. Ivey, of the Laurens Police Department, one of the key figures in the city's pedestrian safety record. Lt. George E. Hurteau, Jr., of the safety section of the South Carolina State Highway Patrol, was recognized for outstanding leadership in pedestrian protection.

President Truman's Speech at Broken Bow, Nebr., on May 8, 1950

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. O'SULLIVAN. Mr. Speaker, on May the 8th, while making his western tour, our great President, Harry S. Truman, had occasion to be welcomed by the mayor of Broken Bow, Nebr., and in answer to the welcome of the mayor, had occasion to make the following remarks:

Thank you very much, Mr. Mayor. I have been traveling all day through Illinois, Iowa, and Nebraska, talking to people on the problems which this country faces. Somebody told me that this great city of Broken Bow had twenty-eight hundred people in it. It looks to me as if there are twenty-eight thousand here tonight. It has been a wonderful day for me to see all of you get out in this great agricultural area through which I have traveled.

I grew up on a farm in Missouri, and know first-hand what it is like. Of course, I am not up to date on the subject. You see, I lived on the farm from 1905 until 1917 when the First World War broke out, so I guess I would be a little out of date now.

I used to milk cows by hand. I used to plow with a four-horse team instead of a tractor. I used to sow wheat with a drill that had only 12 hoes on it, and I used to cut wheat on a binder that cut 8 feet wide. I would be completely out of date now, and I understand that because I have two nephews on the same farm that get much more out of that farm than I ever did. But they do it with machinery. They milk cows by machine, and they plow with a tractor and they plant with a tractor, and they bale hay with a tractor. I don't think that those boys could follow me up a corn row to save their lives, because they ride and I walked.

We have been doing a lot in recent years to make country life easier and happier—just like I have been telling you. One of the most important things has been to bring electricity to the farms. Electricity is a great liberator. On thousands of farms all over the country, electricity provides light, it pumps water, grinds feed, and milks cows—I used to milk them by hand—it provides power for your farm implement repair shops.

Your REA-financed cooperatives in this area are helping to bring more cheap electricity which will make life on the farm much easier.

Fifteen years ago, before we started the rural electrification program, only 1 out of every 10 farm families had electricity. Now 8 out of every 10 of the Nation's farms are electrified. That is real progress. I was in the Senate when the REA thing came up, and you should have heard the roar, you should have heard the quarrels that were carried on by people who said it was regimentation, that it shouldn't happen, that there was something wrong, that farmers shouldn't have cheap electricity. But you are getting it, and I am mighty happy that you did. I was on the investigating committee that looked after the holding companies who controlled nearly all of the electrical organizations in the country. People were not interested in giving the farmers electricity, so we started the REA, and now you have it.

I am glad to see that Congress has now authorized loans to expand rural telephone facilities. That is another step forward. This is meeting the same kind of opposition.

There are many other ways in which the Government is working with you to improve country life in the United States. We want to see that children have decent educational opportunities in rural areas, especially where they have long distances to go to school.

I am very much interested in the improvement of farm housing. The Housing Act that was finally passed last year—after the people replaced the Eightieth Congress with the Eighty-first—is helping to build better farm homes right now.

I regard Government expenditures for the improvement of rural life as an investment in the future of this great country. The next time you hear somebody talk about high Government expenditures remind him that when we spend money for raising the standard of living on the farm we are contributing to a greater nation, and that is the best way to preserve world peace.

Today is my birthday, and you people in Broken Bow have helped make my birthday a happy one by this fine reception—a remarkable one at this time of night—and I can't tell you how much I appreciate it.

I came out here to report to you. Two years ago I was riding around all over the country—in fact, I went 31,700 miles—and I spoke to about 7,000,000 people and I spoke to about 15,000,000 more over the radio, and they believed me. They elected me President of the United States in 1948.

And I am coming back now to talk to you and let you look at me and see if you think I have gone "high hat" on you. I am still working for your welfare and benefit, I am your servant. That is the reason I am taking this trip across the country. I want you to know what I think; what I am trying to do; that I am trying to carry out those things that are for the best interests of all the people; that will contribute to getting peace in the world that will be permanent; that is the thing I am interested in.

I fought in the First World War and I tried to fight in this one. You know, I went down to see General Marshall, when I was a United States Senator, and I was a field artillery captain in the First World War and had been studying field artillery and they had made me a colonel in the Reserve Corps up to then, and I said, "General, I would like very much to have a chance to work in this war as a field artillery colonel." This was just after we had passed the first Draft Act in 1940, and the general pulled his specs down on his nose like this and he looked at me over them and said, "Senator, how old are you?" And I said, "Well, I'm 56 years old." And he said, "You're too damned old. You'd better stay home and work in the Senate." Well, I did.

After events moved around, through no arrangement on my part, I became President of the United States and General Marshall was Chief of Staff. He was out in my office one day and my secretary, Mr. Connelly, said, "General, if the man in the other room—

which happened to be me—were to ask the same question now that he did in 1940, what would you say?" And the general said, "Well, I would tell him the same thing, only I would be a little more diplomatic about it."

I appreciate the cordial welcome which I have received in Illinois, Iowa, and Nebraska today. I think it shows that people understand what goes on in their Government, and I think the best way for you to understand that is for me to come out and report to you. That is what I am doing. I am here to find out how you feel about things. I am here to find out what ought to be done for the welfare of the country, and that is what I am trying to do. I am your public servant, hired by you in the election of 1948, and I hope that when we get through with this trip most of the people in the United States will understand that I am only working in the public interest and for your benefit and for the peace of the world. I can't tell you how much I appreciate this wonderful welcome here in Broken Bow, Nebr. Thank you very much.

Petroleum Imports

EXTENSION OF REMARKS
OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the RECORD a statement on petroleum imports presented at the midyear meeting of the Independent Petroleum Association of America, held at Los Angeles, Calif., on May 7 to 9, 1950.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON PETROLEUM IMPORTS BY THE DIRECTORS OF THE INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA AT MIDYEAR MEETING IN LOS ANGELES, CALIF., MAY 7, 8, 9, 1950

The continued and increasing high rate of imports of foreign petroleum and its products into the United States presents a problem of growing seriousness to the domestic oil producers and to our Nation. The directors of the Independent Petroleum Association of America are gravely concerned. This concern is based upon the serious injury, reaching far beyond the oil industry itself, now being inflicted upon the domestic economy and, of even greater importance, the weakening of the national security on which the American people rely.

An an element of the industry directly concerned with this problem, the independent oil producers recognize their responsibility to fully, fairly, and fearlessly make known to the American people and their representatives in Government the disastrous consequences of the continuation of the present excessive rate of imports.

Imports of oil currently are averaging in excess of 800,000 barrels daily. This reflects an increase of about 30 percent over 1949 and 60 percent over 1948. This rate of increase is alarming. It becomes of even greater importance when coupled with the rapid decline in exports of oil. As is shown in the attached sheet, containing the latest information on imports, foreign oil not only has displaced domestic oil from the foreign markets of the world but, in addition, has invaded the home market.

The resulting loss in income and purchasing power suffered by the domestic oil-producing industry is multiplied into a loss of billions of dollars that would otherwise be available for taxes, payrolls, and the goods and services of other industries throughout the Nation. This means a lower national income with additional and increasing unemployment, not only for the oil industry but for every industry and millions of citizens in every State.

The rapid trend in the displacement of the domestic oil industry must be corrected if the welfare of the American people in their peacetime pursuits and in their preparation against military conflict is to be best served.

Since World War II the domestic oil industry has demonstrated its ability to fully meet the requirements of our economy and to provide beyond such needs a reserve producing capacity to be readily available to our military in event of emergency. Today known reserves of oil are at an all-time high in the United States. Results attained during recent years show that there is no decline in the domestic industry's ability to find and develop new reserves of oil. In addition to being able to meet our daily peacetime needs, the domestic industry today has a reserve producing capacity of about 1,000,000 barrels daily. This reserve capacity can and will be increased if the domestic industry is not hampered by unsound policies such as excessive imports.

The facts concerning the import problem have been fully presented to all concerned including officials and agencies of the Federal Government.

The solution to the problem first is the responsibility of the few importing companies which enjoy the protection and benefits of the American way of life. The importing companies dominating the world oil industry outside the United States are the Standard Oil Co. (N. J.), Socony-Vacuum Oil Co., Standard Oil Co. of California, Gulf Oil Corp., the Texas Co., and the Dutch-Shell group. Although promises by these companies that imports would not be permitted to injure the domestic industry and endanger the national security have been forthcoming now for many months, voluntary corrective action has not been forthcoming. Continued increases in imports to the current all-time high levels demonstrates that the importing companies cannot be relied upon in effectuating a solution of the problem.

During this meeting of the directors of this association, officials of most of the large importing companies have, at our request, advised us as to their present views on oil imports. The consensus of these views is that imports have not injured the national welfare and security. We disagree most strongly with that conclusion. We consider it further evidence of the futility of relying upon the importing companies for a solution of the import problem.

Since the importing companies have claimed their actions as having been partially inspired by the attitude and encouragement of certain officials and administrative agencies of the Federal Government, such officials and agencies must assume responsibility for action that will lead to early correction of the problem. The State Department and Tariff Commission have been urged repeatedly to recognize and take corrective action but they have adamantly refused to even recognize that a problem exists. On the contrary representatives of the State Department recently have demonstrated a subservient fidelity to the cause of the importing companies. Their position in defense of the current rate of imports has been an echo of that of the importing companies. This demonstrates the futility of longer hoping for, or depending upon, either the importing companies or the State Department for any relief.

Not only has the State Department failed to recognize the critical oil-import problem—it has actively pursued a program that means the certain destruction of American wage levels and American industrial activity throughout our entire economy. The Department has continued to promote a vast expansion in foreign oil producing and refining facilities, financed by American taxpayers' dollars, which if unrestrained will return home to invade and destroy the United States economy. In its blind efforts to close the dollar gap in world trade, the State Department has been indifferent toward the well-being of American labor and basic domestic industries, particularly oil. If all other industries had suffered injury comparable to that already inflicted upon the domestic oil producers, there would be no dollar gap as oil imports now far exceed oil exports. This inequitable burden being carried by the oil-producing industry in this country continues in disregard of its harmful effects upon our self-sufficiency as to oil.

In view of the failure to find the solution to the import problem through industry discipline or administrative action, the American people and the elements of our economy directly and indirectly affected must turn to the legislative branch of our Government for relief. The Congress has a consistent and continuous record of providing corrective measures needed in preventing undue industry aggressiveness and administrative indifference from endangering our economic welfare and national security. It again is now our only source for relief from the import problem.

There are now pending before the Congress several specific proposals for seeking relief from excessive imports. These proposals present three methods of solution: (1) establishment of a quota on imports of oil, (2) increasing the excise duty on imports of oil, and (3) providing a quantity balance between exports and imports of oil.

It is believed that any one of these three methods would provide relief from the present destructive situation. The Congress is urged to immediately give consideration to the proposals now before it and, in its wisdom, to enact into law the corrective method deemed most appropriate and effective.

UNITED STATES OIL IMPORTS IN 1950

Increasing imports of foreign crude petroleum and refined products are taking over the oil markets of this country, displacing and weakening the domestic oil industry, and thereby jeopardizing the Nation's safety and economic welfare. The following facts, based on Government statistics, support this conclusion. They show the problem is more serious today than at any time in the past.

1. Because of a world surplus of oil, imports into the United States have more than doubled since 1946, while exports have declined by about 35 percent. During the first quarter of 1950, the Nation was a net importer of oil to the extent of 555,000 barrels daily in contrast to net exports of 42,000 barrels per day in 1946. This is a trend toward greater and greater dependency on foreign sources of oil.

2. Increased imports are taking a larger and larger share of the United States oil market. Imports are now supplying 13.1 percent as compared with 6.9 percent in 1946.

3. In the face of increased imports, domestic production has been displaced and curtailed. United States production is 8 percent below the 1948 average and more than

UNIVERSITY OF MICHIGAN LIBRARIES

1,000,000 barrels daily below efficient capacity. The loss in income to the United States oil producers as compared with 1948 amounts to approximately $1,400,000 per day, or more than $500,000,000 per year. The experience of the industry proves conclusively that loss in income means less exploration and development activity, less new oil discovered, and less productive capacity to meet the Nation's future oil needs.

The strength of basic industries in the United States is the best assurance of national security and world peace. Imports are seriously injuring the domestic oil industry, one of the most essential of our basic industries. The public interest demands a sound national policy as to petroleum imports.

United States petroleum imports versus exports

[Barrels daily]

	Imports of crude and products	Exports of crude and products	Net exports or (net imports)
Year 1946	377,000	419,000	42,000
Year 1947	436,000	450,000	14,000
Year 1948	514,000	368,000	(146,000)
Year 1949	641,000	327,000	(314,000)
First quarter, 1950	820,000	265,000	(555,000)

Total United States petroleum supply

	Domestic production of crude and natural gasoline		Imports of crude and products	
	Barrels daily	Percent of total supply	Barrels daily	Percent of total supply
Year 1946	5,073,000	93.1	377,000	6.9
Year 1947	5,452,000	92.6	436,000	7.4
Year 1948	5,922,000	92.0	514,000	8.0
Year 1949	5,470,000	89.5	641,000	10.5
1st quarter, 1950	5,450,000	86.9	820,000	13.1

Speeches by the President at Wendover and Rawlings, Wyo.

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the RECORD the speech delivered by the President of the United States at Wendover, Wyo., on May 9, 1950, and the speech delivered by him at Rawlings, Wyo., later on the same day.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

REMARKS OF THE PRESIDENT AT WENDOVER, WYO., MAY 9, 1950

I am going to tell you a story about Wyoming. I had a most wonderful meeting in Casper this morning. Your Governor was there as host for the State of Wyoming. My good friend JOE O'MAHONEY introduced me. JOE is one of the real Senators, who knows what it's all about. It was a pleasure for me to have him introduce me. I served in the Senate for a long time with JOE, and I know him. He's all right.

It is always good to come back out West, especially at this time of year. One reason I like Wyoming is the fact that you have a long tradition of really forward-looking, progressive legislation. Wyoming, as you certainly know, was the first State to give women the right to vote. And you had a woman Governor, who now runs the Mint of the United States; and every time I see her—and she is on this train—I ask her if she brought me a bag full of money. She never has.

Can you imagine what some of the stuffy reactionary easterners had to say about the fact that you had woman suffrage out here? Listen—listen to this—you will like this, you will want to remember it. The editor of a prominent magazine published in New York said about Wyoming, when you gave women the right to vote—now this is a quote: "This unblushing female socialism defies alike the apostles and prophets." The editor said, "Nothing could be more antibiblical than letting women vote."

So you see that the cry of socialism is as old as the hills. They used it against woman suffrage, against the Federal Reserve Act, against social security, and they are trying to use it again today, but I know you are not going to let them fool you any more than they fooled you when the State of Wyoming brought about woman suffrage as a pioneer in the United States.

Now every woman in every State can vote, and the country is much better off for that reason.

But the old fogies didn't think so, and there are still old fogies whenever you start anything new, I don't care what it is. You will find some people who think we had better stay with things as they are.

Just a few days ago I have been having press conferences in my office, and it is an oval room; it is kind of circular, and it is stuffy and you can't hear; and when you get in two or three hundred men in there, the fellows in the back row can't see me and they can't hear what is going on.

So I decided to set up a place to hold press conferences where all the boys could sit down and make their notes, and they could see me and they could hear what I had to say, and I could find out who was asking the question.

And, you know, some of them were just exactly like the old fogies who were opposed to woman suffrage; they didn't want to do it; they said it wasn't any good.

Well, we tried it twice, and I don't think they will want to change back. So progress has to be made by people who can see forward, who can look forward and see what the results can be if some slight change is made in the status quo. That is what the people who are looking forward to the welfare of the United States stand for. And I am out here, going across the United States—and I will go almost all the way across from Washington to Grand Coulee Dam and back again—trying to tell the people that I believe in change when it is for the welfare of all the people.

I am going to keep right on working for better houses, better schools, a better educational program, a better labor and social-security laws, and I don't intend to be scared away by anybody who calls that program socialism.

I always look back and think that what I am trying to do is no more socialistic than was woman suffrage in Wyoming when you passed it.

Thank you very much.

REMARKS OF THE PRESIDENT AT RAWLINS, WYO., MAY 9, 1950

Thank you very much. I have always enjoyed my visits to this section of the country. I have had a wonderful day today. I started in Casper, Wendover, Cheyenne, and Laramie. The Governor of Wyoming and Senator O'MAHONEY met me in Casper, and I was highly pleased and gratified that those two gentlemen were there. I have had a great day. I like your scenery. I appreciate your hospitality more than I do your scenery. I was in Rawlins 2 years ago, late on Sunday evening, and I am glad to be back again. At that time I could not make you a speech because it was Sunday.

I am sorry I will not be able to visit your great project to the northeast, the Kortes Dam, which we dedicated this morning in Casper. The people of Carbon County have reason to be proud of this dam. Kortes and Seminoe Dam will soon be furnishing power to this whole section, enough power for real industrial expansion.

Of course, these dams won't benefit just industry, they will help everybody—those of you in cities and those of you who live on ranches.

For a long time this State has been great livestock country. It produces an important part of the Nation's supply of meat, wool, and leather. And I have an idea that your livestock industry is going to be even more important in the future than it has been in the past. We had steaks tonight for dinner, and the Senator assured me that they were Wyoming steaks. I think they came from Kansas City.

Compared with the people of other countries, we Americans have good diets. But there is still room for improvement. The main thing we need for that purpose is more livestock products.

I am confident that the farmers and ranchers of Wyoming want to produce the abundance of livestock that we need. That is evident not only from the emphasis on sheep and cattle that has been traditional out here but also from your progress in water and range conservation.

Now I started yesterday at Lincoln, Nebr., on what I think is an economic program for this section of the country, from the Appalachian Mountains to the Pacific coast; and if you will pay close attention to the speeches which I delivered across the great State of Iowa and in Lincoln, Nebr., and this morning in Casper and Cheyenne, and at Laramie tonight, you will find just exactly what I think is necessary to continue this country as the greatest republic in the history of the world.

You people in this area naturally have a particular interest in sheep and wool. In wool production, Wyoming ranks at or very near the top among the 48 States. I know that when the war came along you had a terrific wool problem. You were helped out of that situation by the Government purchase program for wool. If you will think back, you will remember that in those days wool growers had virtually nobody except the Government to sell to.

The Government-owned stocks of wool are now down to about 20,000,000 pounds. Three years ago they totaled more than 500,000,000 pounds. Now I want to point out that these stocks were disposed of in trade channels and in such a way as to protect domestic wool prices.

Last year, the Congress passed new legislation that strengthened the wool program. Under this program, we have set the support level for wool at the maximum, 90 percent of parity. We are going to keep on making whatever efforts are necessary to give the wool growers of this country a really workable program.

This is part of our objective to build a strong and prosperous United States of America, so that we can preserve our own freedom and help to strengthen the cause of freedom all over the world.

It has been a real pleasure to visit with you here in Rawlins, and I hope to come back before very long on a political trip. This is a nonpolitical trip.

Hawaii's Claim to Statehood

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the statement which I made before the Committee on Interior and Insular Affairs with reference to Hawaii's claim to statehood.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the Interior and Insular Affairs Committee, Hawaii's claim to statehood is so overwhelming that it cannot in justice be longer delayed.

One hundred and two years ago the State I have the honor to represent came under the American flag. Two years later California was admitted into the Union without going through the apprenticeship of Territorial government. For a century we have been the closest neighbor to Hawaii and have some claim to knowing her best. It is with great pleasure that I appear today to plead her cause without any reservation whatsoever.

Hawaii has been an organized Territory for a longer period than any of the organized Territories ultimately admitted to statehood, with the single exception of New Mexico. With the lone exception of Oklahoma, it has more population than any of the others had at the time of their admission into the Union. Today it has more population than six of our States and is within close proximity to the totals residing in four more. In fiscal year 1947, Hawaii contributed in Federal taxes more than 12 of our States.

By official vote of her people she has requested admission into the Union. Certainly no individual poll of a few hundred people, a part of whom remain anonymous, can outweigh the recorded vote of the people.

I am firmly convinced that Communist activity is a no greater problem than it is in many other areas of our country. Because Hawaii happens to have some of these termites is no valid argument for delaying her admission as a State. To the contrary statehood will better fortify her people in dealing with a problem which is not just Nation-wide but is world-wide in character.

The record of loyalty in peace and war by the people of the Territory of Hawaii cannot be challenged.

Both the Democratic and Republican platforms have pledged their support to statehood on several occasions.

For the reasons I have outlined and which will be covered more fully by other witnesses I believe that Hawaii should become a State now, without further delay.

However, there is another reason which should not be overlooked by the Congress or the American people.

The free way of life is under pressure from the Elbe to the China Sea. Six hundred million people are behind the Communist iron curtain as we meet here on this first day of May 1950. In the Far East several hundred million more hang in the balance. International communism is on the march and this may be the year of decision that will determine whether or not it will move on to new destruction or will recede in the face of the determination to maintain their way of life by a free world of freemen.

The people of Hawaii have much to offer in helping to interpret the spirit of America to the Far East, containing more than half of the world's population. They can do equally as much in helping the United States to understand the complex problems of that vast area of the world. Never before was it more important to the peace of the world and the very security of this Nation that such mutual understanding be achieved.

We dare not remain static while communism becomes the dynamic force in the world. To the contrary from the Arctic to the mid-Pacific we should resolutely and effectively proclaim to the world that these American citizens in our two organized Territories are no longer to be stateless persons.

Now is the time for us to clearly point out that the people in both these great Pacific territories, which are vital to the defense of the Pacific flank of the continental United States, are not just wards in a distant orphanage but are integral parts of the American family of States. We will no more tolerate an incursion against either Hawaii or Alaska than we would against any part of our Union.

Nineteen hundred and fifty is a year of decision for us, also let us not fiddle and faddle on the issue of statehood. If we fumble the ball now and let the play be taken away from us by those who detest the free way of life future generations may wonder what happened to the youth and vigor that made America great.

This year may well become one of the great turning points of history. We must not be complacent and self-satisfied for therein will be found the seeds of decay.

In life there is no such thing as a status quo. Individuals and governments either grow or they go into a decline and others rise to take their places. As a nation our country is still young. New horizons are still ahead of us.

In your hands rests a fateful decision. You can do much to serve notice on the world that America still retains the spirit and vigor of the pioneer. By your action you can help demonstrate that we have the vision and the faith to know that our new forty-ninth and fiftieth States are but at the threshold of a great development whose horizons are limited only by what a free and enterprising people can achieve when admitted to a full partnership under the Constitution of the United States.

Second Anniversary of Establishment of Israel

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD the address delivered by Hon. Thomas E. Dewey, Governor of New York, at the mass demonstration and pageant sponsored by the Zionist Organization of America in celebration of the second anniversary of the establishment of the State of Israel, held at Madison Square Garden, New York City, Thursday, May 11, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to be here tonight to express the affectionate greetings of the people of the Empire State to the people of the State of Israel. In the short space of 2 years, a fledgling republic has grown to be a lusty child. As one who has spent quite a few years in the intricate business of modern government, I take my hat off to the men and women who have built so well in Israel.

We all know the difficulties and problems that beset the infant nation at its birth. Conceived in a great moral decision of the United Nations, it was born in the midst of strife. As it opened its eyes, it was met with the aggressive attack of seven Arab States.

The story of the military miracle performed by this handful of valiant men and women of Israel is one that will long live in history. It represents one of those high points in history when naked courage and will to live succeeded against the most tremendous odds. The world is truly proud of that kind of heroic achievement.

But the purpose of the people of Israel was not to gain laurels, by force of arms. It was rather to dedicate their future to the ways of peace. In the constructive achievements of the past 2 years, its people and all who helped them from abroad can take pride in the accomplishments to date. The government has been organized, its civil functions are being magnificently performed, and it has taken its place in the family of nations. It has begun to develop infant industries.

During all this period of struggle, the new State opened its frontiers to migrants from the four corners of the globe. It has taken this immigration in its stride. That immigration is not all self-supporting. It must include the aged and the children. It must include the weak and the sick and the hungry to whom Israel was their only goal. All this burden would be grave enough for an established nation. For this young republic, it represents a problem of the first magnitude. Your help—our help—can contribute the means for supporting these welcome newcomers. This may not be the time or the place, but I do bespeak your urgent help to the great cause of the United Jewish Appeal.

There is another matter of major importance at this juncture of events. That is the problem of arms—arms to protect the people and the homes of Israel. I speak of this question from the point of view of American security. Any trouble in any of the troubled spots of the world is a menace to American security. Any aggressive action that threatens the peace of an area threatens the peace of the world.

Israel stands in the center of the Near East. It is on the shores of the Mediterranean linking the west and the east. Any warlike action in that part of the world would only be an invitation to that kind of unrest and trouble that certain countries of the world want.

We in America want peace and stability. Some of the Arab nations in the past year have acquired modern arms, planes, and tanks. They have weapons which can serve not only for defense but for aggressive offense as well. Arms in the hands of any nation should only be used for defense of the peace. It makes no sense to leave the Israelis in a position of relative weakness. A weak Israel, like a weak Europe, or a weak America, is only an invitation to aggression. It is perfectly clear that Israel must be armed so that it can defend its frontiers against aggression. It is clear that making Israel strong is the surest guaranty to peace in the Near East.

With adequate defense, with the security of its frontiers protected, the people of Israel will move forward to a new and better day. They will stand with the free nations of the world, eager to resist the onslaught of totalitarianism. In their striving for better things and for a better life, we in America can render great and sympathetic aid. We can give them encouragement as friends and neighbors in the world community.

UNIVERSITY OF MICHIGAN LIBRARIES

We can give them skills. We can help them with capital.

In joining this great celebration, all of us here tonight are doing more than extending our good wishes to the people of Israel. We are telling them we believe in what they are doing. We are telling them we will help them and stick with them in our mutual struggle for a free and peaceful world.

Unreasonable Restraints by Labor Monopolies

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from this week's issue of Collier's endorsing my bill, S. 2912, to prevent unreasonable restraint of production or control of prices by labor monopolies. This bill was introduced on January 23, 1950. If the Senate, the House, and the White House had acted promptly on it, I believe it is safe to assume that the present crippling railroad strike would not have occurred.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S TO KEEP JOHN L. FROM DOING IT AGAIN?

According to journalistic tradition, this is not the time for an editorial on John L. Lewis. Such editorials are customarily written when Mr. Lewis has ordered his United Mine Workers to stay home, when hundreds of thousands on nonminers are thrown out of work by his decision, when the public and the Government are in a lather of indignation at Mr. Lewis' defiance of law, order, courts, Congress, and all rules of social responsibility.

It is also customary to forget Mr. Lewis between crises, like the one from which the country recently emerged. In that one Mr. Lewis indulged in almost a full year of uncertainty, contention, and confusion. Now the miners are again at work. But the problem remains.

The problem is well illustrated by an incident of last November. Mr. Lewis had just begun some fruitless talks with the head Government conciliator, Cyrus Ching. Reporters were pressing for a statement from the mine leader, who was playing hide-and-seek with them in taxicabs, elevators, and hotel lobbies. When he finally was cornered he told the press that they were "making a hippodrome of my private business." Thus Mr. Lewis disclosed his own estimate of his power and position. To him, the Government's effort to restore stability to a vital basic industry was a strictly personal matter in which the public had no right to intrude.

Perhaps it is impossible to bring normal vision to a man so blinded by egoism. But at least something must and can be done to curb his power before another crisis develops.

Mr. Lewis has not only denied miners and others the right to work. He has not only forced the country periodically to dance to his tune. He has seriously compounded the coal industry's trouble in adjusting itself to current realities. Coal no longer monopolizes the fuel market. The competition of oil and gas may have been inevitable. But the uncertainty of supply and price that Mr. Lewis has created gives coal's competitors an added advantage, and endangers the livelihood of thousands of his own union members.

Two things are needed to correct this situation. The first is legislation—legislation which will make John L. Lewis' actions subject to law without penalizing the miners.

We do not think that fair-minded Americans begrudge coal miners the substantial pay that they have gained under Mr. Lewis' leadership, for a dirty, dangerous job. We think that they can understand the miners' loyalty to him, even though they may feel, as we do, that the union paid a heavy price for its rewards when it surrendered its rights of self-regulation to a dictatorship over its members' economic life.

But we also think that the miners need protection no less than the mine operators and the public. Their right to work must be safeguarded when they choose to obey their country's courts rather than the orders of their economic lord and master. Such protection demands the immediate concern of the Government.

President Truman made a gesture of Government concern when, at the end of the latest coal strike, he asked Congress to set up a commission to study the basic problems of coal. We think the country needs another coal study about as much as it needs another coal strike

An exhaustive survey of the industry's problems was made nearly 30 years ago. During the 3 years that the coal industry was administered under the Guffey Act, the Interior Department collected thousands of pages of statistics. Last summer a congressional committee devoted 6 weeks of study to coal and coal strikes. What is needed now is action, not study. And action has been proposed in a bill introduced by Senator ROBERTSON of Virginia.

The Senator would simply make the United Mine Workers and all unions subject to the Sherman and Clayton Antitrust Acts. His bill would, in effect, reverse a Supreme Court decision of 1941 which freed labor unions from virtually all legal penalties so long as the unions acted in their own interests and not in conjunction with nonlabor groups.

Senator ROBERTSON'S bill is fair and reasonable. It does not consider human labor "an article or commodity of commerce." It does not restrain other union activities. It does not ban industry-wide bargaining. It does not permit employers to seek injunctions, but reserves that right to the Department of Justice.

Collier's thinks that the Robertson bill should be enacted. But even if that is done, there must be a will to enforce it. That will was notably absent in the recent coal strike.

Mr. Truman's repugnance to the Taft-Hartley law is well known. His late and reluctant use of it did nothing to ease the crisis or speed its solution. He delayed offending the Taft-Hartley opponents by invoking the law when it should have been invoked. He gambled that he could continue his political opposition to it without bringing on total economic paralysis. He gambled that the public would forget, before the November elections, the kicking around that it took. He knows that a powerful union official nurses hurt feelings longer than the average voter does.

But we don't think it will be easy for any politician to gamble with the Robertson bill without risking the embarrassing accusation that he is encouraging labor dictatorship for the sake of winning votes. Mr. Lewis and his peers in labor may dislike this bill, too. But at least they cannot shout "slavery" and "fascism" at a law which prohibits both business and labor from committing the same sin. And the common penalty for offenders—treble damages to the injured party—might make Mr. Lewis think twice before applying his thumb to his nose.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that two articles published in the New York Times of today, one beginning on page 1 and extending to page 21 entitled "Rail Strike Jobless Increase—Two Trains Shot At, Fireman Hit," and the other article appearing on page 20, and being entitled "Many Cities Feel First Effects of Railroad Tie-Up," in which article is set forth a series of telegraphic messages from various cities in the United States, may be incorporated in the Appendix of the RECORD of today.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

RAIL STRIKE JOBLESS INCREASE—TWO TRAINS SHOT AT, FIREMAN HIT—KNOXVILLE PICKETS REPORT THEY WERE STONED—NO PROGRESS REPORTED IN RESOLVING DISPUTES WITH FOUR ROADS

CHICAGO, May 11.—The second day of the railroad strike brought gradually increasing unemployment, two instances of shooting at trains operated in defiance of the strike, and no progress in resolving the strike deadlock.

In the shooting, an employee of the strikbound Southern Railway received a flesh wound in the arm while acting as a fireman on a freight train approaching Knoxville, Tenn. Also, picketing firemen reported they were stoned near Knoxville.

A large increase in unemployment loomed over the week end, as the four struck railroads notified between 150,000 and 200,000 of their nonstriking employees of impending furloughs.

In Chicago, Francis A. O'Neill, Jr., chairman of the National Railway Mediation Board, denied reports that the dispute would be taken to Washington. He said no conferences were scheduled, however, with either the railroads or the striking Brotherhood of Locomotive Firemen and Enginemen.

In Washington, John R. Steelman, assistant to President Truman, denied reports that any White House meetings were scheduled with either party.

The deadlocked issue is the demand of the union that a second fireman be assigned to multiple-unit Diesel locomotives. Two Presidential fact-finding boards have found this demand not justified, one in 1943 and one last fall.

The walkout began yesterday at 6 a. m., when 18,000 firemen struck against the Pennsylvania Railroad west and north of Harrisburg, the New York Central west of Buffalo, and the entire systems of the Atchison, Topeka & Santa Fe and the Southern Railway.

Today's shooting incidents took place at and near Knoxville, Tenn., where two freight trains of the Southern Railway were fired on. D. W. Brosnan, general manager of the railroad's central lines, at Knoxville, said one shot was fired at each train.

The brotherhood here denied responsibility for the shootings and for unspecified acts of sabotage which Mr. Brosnan reported.

FURLOUGHS DUE TODAY

Economic consequences arising in the second day of the strike were dominated by imminent lay-offs on the affected railroads.

The Pennsylvania will furlough at 8 a. m. tomorrow 85,000 of its 120,000 employees, including 3,700 striking firemen.

The New York Central has announced the furloughing of 25,000 of its 103,000 operating personnel, plus 20,000 clerical workers, adding that further lay-offs are probable by this week end.

The Southern Railway is expected to furlough most of its 38,000 employees.

The Santa Fe is notifying an unspecified number of its employees of furloughs.

Picket lines set up by the firemen varied from point to point, according to the brotherhood. In some instances they confronted members of other operating brotherhoods reporting for work, such as engineers, conductors, trainmen, and switchmen. In others the lines did not affect other employees than firemen.

The other railroad brotherhoods, notably the Locomotive Engineers, who have sought to place a second engineer on the big Diesels, are taking no part in the strike except as it involves crossing firemen's picket lines. This is because the brotherhoods are independent of each other, and are not bound by each other's actions, although they may agree to act in concert on common problems. The engineers' demand for a second engineer on Diesels has been turned down by a fact-finding board.

STRIKE CALLED EFFECTIVE

A spokesman for the firemen's union reported the strike continued completely effective this afternoon.

The New York Central and the Sante Fe, however, reported that they had dispatched passenger and mail trains from Chicago, presumably using qualified supervisory employees as firemen. The New York Central said it had sent out three passenger trains today, to New York, Boston, and Detroit; two freight trains to Buffalo, and two mail trains. The Santa Fe dispatched passenger trains to Los Angeles, Kansas City, and Galveston, and an unspecified number of freight trains.

Ernest E. Norris, president of the Southern Railway, announced that "the situation in our yards is improving and we are accepting an increasing volume of traffic." This is being moved as crews are available, he said, adding that "many of our firemen did not go out."

The Pennsylvania has stopped operations altogether in the strike zone.

MANY CITIES FEEL FIRST EFFECTS OF RAILROAD TIE-UP

BUFFALO, N. Y., May 11.—Several plant shut-downs and a growing backlog of freight shipments today gave evidence of the spreading effects of the rail strike on this major industrial area.

Although only 2 of the 11 trunk lines serving this rail center are directly affected by the firemen's strike, they are the ones normally carrying the bulk of the shipments. They are the New York Central and the Pennsylvania.

The Pennsylvania made no attempt to operate here, while the New York Central drafted emergency crews to maintain partial service.

Some freight shipments normally handled by these two lines are being diverted to other carriers, both rail and truck. Extra airliners and busses are helping to carry the passenger overflow.

The first serious industrial effects of the strike were felt in the milling industry today. A flour mill and a feed mill were closed and another flour mill will shut down tomorrow, making idle nearly 500 mill workers altogether.

Miles R. Dwyer, New York Central superintendent here, said supervisory personnel were being used to operate trains. He estimated freight traffic west of here was off 70 percent. New York Central lines east of Buffalo are unaffected by the strike.

TWO TRAINS UNDER FIRE

KNOXVILLE, May 11.—Two Southern Railway trains were fired on here today and a fireman was wounded in the arm shortly after union pickets complained that they had been stoned at the Southern's John Sevier yards. A. F. Coleman suffered only a slight flesh wound. A crewman on a second train escaped injury when another bullet was deflected by a timetable he was carrying in his pocket. Both bullets were reported to have been fired from a .22-caliber rifle.

Strikers reported that workers within the yards stoned pickets at 4:30 a. m. Passenger service was at a standstill and doors of the passenger station have been nailed up since the strike began.

The strike caught 54,000 newly hatched baby chicks packaged and ready for shipment on railway property.

The hatchery is in the midst of its hatching season and an estimated 500,000 chicks will make their appearance each week.

Several thousand Tennessee and Georgia schoolboys, members of the junior safety patrols, learned that their trips to Washington had been canceled because of the railroad strike.

HARRISBURG TRAFFIC DROPS

HARRISBURG, PA., May 11.—This railway crossroads city has suddenly become the end of the line. The normal flow of 180 trains a day has dropped to 20.

Harrisburg is the Pennsylvania's first division point west of Philadelphia and the junction of the Baltimore-Buffalo north-south feeder line with the main east-west trunk route.

To the east, the main lines are electrified and the Diesel engines on which firemen contend a third crewman is necessary are not an important part of the service. But eastbound traffic has been sharply curtailed.

The stoppage of rail freight has begun to affect other industries here. Steel plants have warned of impending lay-offs of thousands of workers if the strike is prolonged.

FOURTEEN MINES CLOSED

PITTSBURGH, May 11.—This industrial region is beginning to feel the effects of a rail strike that has cut off the service of the Pennsylvania Railroad west of Harrisburg.

In western Pennsylvania 14 coal mines, employing about 5,000 miners, have shut down, resulting in a loss of daily production of 24,000 tons.

The strike has had a noticeable but not a serious effect on travel, food shipments, and mail deliveries in this area.

The furloughing of clerks, shopmen, and trainmen in the Pennsylvania system will start today, releasing 85,000 of the company's 125,000 employees.

There is sufficient produce and meat on hand in Pittsburgh to last over Sunday. Parcel post deliveries have been delayed 12 to 24 hours.

City hotels are crowded to capacity because of businessmen and travelers stranded by the strike. Airlines have increased flights.

AUTO WORKERS LAID OFF

DETROIT, May 11.—The first mass layoff in Michigan resulting from the railroad strike was reported today when the General Motors body plant at Grand Rapids furloughed 500 men.

General Motors uses Pennsylvania Railroad lines at Grand Rapids to move its finished product. Another body plant there, operated by Nash-Kelvinator, said it would be able to store its product for the time being.

The threat to Detroit area industry was serious but less so than first reported. Chrysler Corp., reopening just this week after its 100-day strike, countered earlier reports of an impending shutdown by continuing to hire new employees.

Ford, Hudson, Packard, and nearly all other large industries in the area say they will produce as long as possible, but they will be affected in a matter of days. Kaiser-Frazer, at Willow Run, an exception, uses motor cargo carriers almost exclusively and will not be affected nearly so soon.

No shortages have been reported in foods and other human essentials.

ST. LOUIS EFFECTS DELAYED

ST. LOUIS, May 11.—First industrial lay-offs came to this area today as a result of the rail strike. Generally, however, officials believed it would be a week or more before widespread effects are noticeable, although New York Central, Pennsylvania and Southern Railway lines serve the area.

Ford Motor Co.'s Lincoln-Mercury assembly plant at Robertsville announced a cut workweek for 1,500 workers from 6 days to 5. Lay-offs were small and scattered.

RAIL SHOPS CLOSED

SANTA FE, May 11.—The Atchison, Topeka & Santa Fe Railway, closing its divisional shops at Albuquerque, today threw between 800 and 1,200 men out of work in addition to the strikers.

As New Mexico has no heavy industries, Vincent Jaeger, executive secretary of the economic development commission, said the chief immediate effect of the strike will be to curtail shipments of potash, copper, and other minerals.

SEVEN THOUSAND IDLE IN COLUMBUS

COLUMBUS, Ohio, May 11.—Approximately 5,500 Pennsylvania Railroad employees here received lay-off notices today, bringing to 7,000 the number of railroaders made idle in this area by the strike.

Pennsylvania and New York Central divisions have shut down operations completely.

Passenger-train service here has been cut from a normal 60 trains daily to 8. These are operated by the Baltimore & Ohio and Norfolk and Western. Passengers for the four Norfolk and Western trains are transported by taxi to the eastern part of the city because firemen refuse to work on tracks to Union Station, leased from the Pennsylvania. Four passenger trains operated by the Chesapeake and Ohio were stopped for this reason.

Railway Mail Service has hired extra trucks to carry mail to small central Ohio towns. Bus companies have extra busses on many schedules and Trans-World Airlines and American Airlines have added extra flights.

The Pennsylvania has about 6,500 idle cars, 3½ times the usual number, in local yards, many loaded with perishable foods. New York Central divisions reported about 600 idle cars.

PENNSYLVANIA OFFICES CLOSED

PHILADELPHIA, May 11.—A Pennsylvania Railroad spokesman reported today that the road is making no effort to operate any trains in the strike area west and north of Harrisburg, and virtually all departments and offices throughout the area are being closed.

CINCINNATI LOSES TRAINS

CINCINNATI, May 11.—The railroad strike has caused the Southern Railway to remove all eight passenger trains that normally pass daily through Cincinnati and approximately 50 percent of the 100 freight trains, the road said today.

On the three roads affected here, a total of approximately 1,300 men were on furlough today.

ATLANTA SITUATION BETTER

ATLANTA, May 11.—The Atlanta passenger and freight situation on the Southern Railway was described late today as much better than it was yesterday.

Although the Southern has laid off 1,000 workers in this area, H. W. Bondurant, a

UNIVERSITY OF MICHIGAN LIBRARIES

vice president, said the railway would restore its New York-New Orleans Crescent to service through Atlanta on Friday.

White-collar supervisors from Augusta, Macon, and other Georgia cities have been brought into Atlanta to shuttle freight in the big Inman yards here.

So far, a survey showed here, the strike has not yet had any crippling effect upon industries in the area.

CLEVELAND, May 11.—The New York Central Railroad tonight ordered an almost complete shutdown of its Cleveland facilities. About 4,500 of the road's 5,000 employees in this area were affected.

Earlier today the Pennsylvania furloughed approximately 950 employees.

Acting Postmaster Joseph Prosser said he had decided to delay for at least 24 hours a threatened embargo on parcel post shipments.

The Railway Express agency here is accepting no shipments for cities served exclusively by the struck railroads.

Two Cleveland concerns that yesterday laid off 5,000 employees recalled several hundred today after arrangements were made to move some finished products by truck. The concerns are the Fisher Body Division of General Motors, which laid off 3,500, and the Midland Steel Products Co., which furloughed 1,500.

Other Cleveland concerns are delaying layoffs in the hope of a settlement before the end of this week. In the event that the strike runs into next week, additional industrial layoffs of about 12,500 are expected.

The New York Central operated two mail trains and the Pacemaker to New York tonight. The Pennsylvania is not attempting to operate any trains.

Importation of Czech-Made Shoes

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Czech Shoe Probe," published in the Boston Traveler of May 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CZECH SHOE PROBE

No more Czech-made shoes will be dumped in the United States. This is the gratifying result of the campaign of the New England Shoe and Leather Association. It takes the form of instructions to the United States appraisers of merchandise at the various ports to withhold appraisement of shoes from Czechoslovakia according to the terms of the Anti-Dumping Act of 1921.

The New England association has evidence at hand that shoes costing the equivalent of $7.50 in Czechoslovakia are being retailed at $2 in this country. Obviously that sort of business is not covered either by the laws of economics or the national objective of promoting foreign trade. Czechoslovakia is now a Russian satellite. It would be hard to find anything better calculated to help the Red cause than to cause unemployment and unrest in the United States by flooding us with the products of iron-curtain slave labor. It is one of the cold-war strategies against which we must be ever on guard.

National Citizenship Week—Understanding Checks and Balances

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I have before me a very interesting editorial, published in the Washington Times-Herald in its edition of Thursday, May 11, pertaining to the Fifth National Citizenship Conference to be held here from May 22 to May 24. I ask unanimous consent that there be printed in the Appendix of the RECORD the text of this editorial, as well as the text of a statement which I have prepared on the subject of having Americans inform themselves about their Government, their economic system, and way of life, through books and other helpful literature.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 11, 1950]

GOOD CITIZEN QUIZ

The citizenship committee of the National Education Association has put out a 14-question test by which you can help yourself decide whether you are a good citizen.

The questions will be discussed at the fifth national citizenship conference to be held here May 22 to 24. Some of the questions deal with things Washington residents hear about but have no opportunity to indulge in.

WHAT PART DO YOU TAKE?

They have to do with voting and registering and getting others out to vote and naming your Senators and Representatives. On the other hand, there are several questions in the quiz which are worth while for every Washingtonian to check himself on, such as:

"Can you give one good argument for or against any major bill before Congress, such as the farm bill, admission of DP's, or extension of social security?

"Can you list at least three of the rights guaranteed by the Bill of Rights in the Constitution?

"Are you an active member of any civic organization, such as citizens association, parent-teacher association, chamber of commerce, professional organization, labor union, service club, or League of Women Voters?

"Did you work on any local drives for welfare funds, civic improvement or the like?"

What are your answers to these questions?

SUPPLEMENTARY STATEMENT BY SENATOR WILEY ON UNDERSTANDING AMERICA

"What is the American way of which we hear so much?" "What is the free-enterprise system?" "What is this thing called the welfare state?" "What is Government paternalism?" "What are capitalism, socialism, communism?"

Mr. President, these are elementary questions, but it seems to me that every one of us can benefit by really knowing the answers to those questions. All of us take so many things for granted. We assume we know so much that I am afraid that we often lose sight of the real meaning behind the terms we use so glibly.

I have brought out that fact particularly whenever it has been my pleasure to address naturalization ceremonies before individuals actually take the oath of citizenship. In my statements at these inspiring ceremonies I have tried to point out that it is up to every citizen-to-be to truly understand his adopted land and its Government.

Mr. President, it is equally incumbent and far more so for those of us—including myself—who were blessed by being born in this wonderful land to understand our way of life, to be familiar with the true definitions of the terms I have mentioned, to appreciate the dynamic system of checks and balances in our Constitution, in our economic, political, and social life.

The national citizenship conferences are an excellent way by which every citizen can learn and relearn the truths of America.

"Give light, and the people will find their own way." This has always been the American ideal. All of us who believe in America and in its concepts of freedom are more firmly convinced than ever before that so long as the American people are presented with the facts they will be more than competent to make wise decisions on the basis of those facts.

CIVIC LEADERS HAVE RESPONSIBILITY TO INFORM

There is no more important challenge, therefore, to the civic leaders of America than to try to convey those facts to the American people, to try to convey true definitions of terms used so frequently today. It is particularly necessary that our people become acquainted with the little-understood economic facts of our American way of life—how we produce goods, how we distribute them, how we have attained the highest standard of living in the world. And moreover, it is particularly important that when the American people read this story that it be in a simple, clear form rather than in "jawbreaking" 15-syllable words which might be better entombed in a museum than submitted to the average American.

For that reason, I am particularly glad to have recently read the book, How To Stay Rich—The Story of Democratic American Capitalism, by Dr. Ernest L. Klein, of Chicago. This book (published by Farrar, Straus & Co., of New York) really tells how we can stay wealthy as a people, how we can continue to enjoy more conveniences, more comforts, more luxuries which are ever more widely distributed among the great masses of our people than anywhere else on earth, now or at any time in the 2,000 years of the present era.

Yes, I am particularly delighted that the message of this book is presented so simply, so clearly that the people can really find their way.

I hope that every businessman in the United States will read this book—every chamber of commerce, every trade organization, every civic group and service club, every librarian, every educator. I state this because I think that they will individually and collectively benefit from the book. And, too, I say it without detracting in any way from other helpful pieces of literature.

I have always felt it to be my job as a legislator to try to help shed light on important public affairs. I feel it is a legislator's responsibility, in turn, to utilize for this purpose every sound instrument, whether it be books, magazine articles, or newspaper editorials dedicated and devoted to the

I do not say that I agree with every single point made in the book, nor for that matter, that its readers will. Far from it, for, on the contrary, Dr. Klein would be the very first to state that healthy differences of opinion are constructive and all he is interested in is that there should be agreeemnt on the fundamentals of the free-enterprise system.

WE MUST BE ACTIVELY FOR OUR SYSTEM

Commenting upon the challenge which our way of life faces, Dr. Klein states:

"Silence will not help.

"Neither will destructive criticism of other systems serve to save our own.

"Being against communism or against anything else is not sufficient.

"We must be for something; we must be for democratic American capitalism.

"To be enthusiastically for democratic capitalism, we must improve our general understanding of it."

The topics covered in this book are as alive as tomorrow morning's newspaper headlines. The very issue now being debated on the Senate floor—compulsory FEPC legislation—is discussed in the book on page 159. The issue of socialized medicine is discussed immediately thereafter. In commenting upon these problems, Dr. Klein points out that one of the first steps toward totalitarianism is the assumption of governmental omniscience, the assumption that the Government knows everything and can do everything—that it can extract the citizens' money on the assumption that the citizen is too ignorant to dispose of his own assets.

Among other points mentioned in the book is the fallacy of a tax policy based upon destroying the very men who have helped create wealth and jobs, the fallacy of Government competing with private enterprise, the fact that ours is not just a profit system, but a profit-and-loss system in which a certain number of failures is almost inevitable, although we must try to make provision for the incompetent, the indigent, the disabled, the aged, the unemployed.

I was particularly interested in Dr. Klein's wisely pointing out that, amazingly enough, industries have been called to account by congressional committees in order to justify profits. In other words, the very basis of the American system is being questioned by those who do not appreciate the fact that industry must have profits if there is to be a free America and if there are to be American jobs.

Dr. Klein, a distinguished businessman, veteran, a widely traveled expert in government and industry, cuts to the very heart of the problem of the central issue of our times—just how far the Government should go in intervening in the lives of our citizens—whether government should become in effect a contestant in the economic game or whether it should remain (as he and I and all thinking Americans believe) as an umpire merely setting certain minimum rules of the game.

ENEMIES OF AMERICA FLOOD OUT HOSTILE LITERATURE

We know that the enemies of the American way continue to spew forth great floods of words in opposition to the American system. Always they couch their proposals in terms of glittering generalities. This book, however, shows the true meaning behind the false face of the enemies of the American way.

Every one of us, of course, faces the problem these days of having so many things to read, so many things to do, that it is hard to concentrate on the most important things. I, for one, feel however that every one of us who are living today is a trustee of America's future, a trustee of this priceless system of private initiative and private profit. As trustees we are guardians, and it is up to us to pass on our heritage to the American people intact and unimpaired. I think that How To Stay Rich—The Story of Democratic American Capitalism contributes to that end and for that reason, and that reason only, I am happy to invite attention to it.

Every day should in summary be citizenship day, a day of true rededication to American ideals.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that into the Appendix of the RECORD there shall go an article entitled "Lay-Offs Near 158,000 Mark in Rail Strike," published in the Baltimore Sun of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAY-OFFS NEAR 158,000 MARK IN RAIL STRIKE—PENNSYLVANIA RAILROAD TO DROP 80,000 BY TODAY—COAL OUTPUT REDUCED BY TIE-UP

CHICAGO, May 11.—Scattered violence and mass lay-offs today marked the second day of the Nation's biggest rail strike in 4 years.

Unemployment grew swiftly on the railroads and in the coal mines, and many industrial concerns reported they would be affected in a few days.

With no peace moves in sight, the strike of 18,000 firemen on four key rail lines began a crushing squeeze on employment and industry.

The four lines concerned ordered lay-offs that will leave more than 150,000 railroad workers idle by tomorrow morning.

Two freight trains were reported ambushed and fired upon near Knoxville, Tenn. An acting fireman on one train was shot in the arm. A spokesman for the Southern Central Lines said four shots were fired at one train, and about 15 minutes later a bullet pierced the locomotive of a second.

PICKETS DENY FIRING

Pickets outside the Knoxville yards denied they fired any shots or even were armed but claimed they were stoned. They said the stones came from the railroad yard.

An air-brake tester for the New York Central Railroad reported he was slugged with an iron bar when he attempted to make a routine inspection of a locomotive at Mishawaka, Ind. Police said a supervisory employee working the job of a striking fireman apparently failed to recognize him.

A New York Central freight train was stoned at Elkhart, Ind., but Capt. John K. Bergman, of the railroad police, blamed the incident on persons not connected with the railroad.

The dispute was deadlocked so completely that the National (Railway) Mediation Board was simply standing by—available for consultation if either side wants them.

The Pennsylvania Railroad said it would lay off 80,000 of its 125,000 employees by tomorrow morning.

The New York Central said 25,000 of its workers already were idle and that 15,000 more nonoperating employees would be laid off by tomorrow or Monday.

SANTA FE CLOSES SHOPS

The Santa Fe ordered its shops closed, affecting several thousand workers. The exact figures were not given.

The Southern Railway System said most of its 38,000 employees would be idle by tomorrow night.

The Southern estimated 18,000 of its employees already were out of work because of the strike.

The Brotherhood of Locomotive Firemen and Enginemen called a strike against these lines yesterday to support its demands for an extra fireman on certain Diesel locomotives. About 18,000 firemen walked out.

At Washington, J. Monroe Johnson, Chairman of the Interstate Commerce Commission, said the strike was creating an emergency in the cross-country movement of railroad freight cars.

COAL MINES SHUT DOWN

He expressed concern that a continuation of the walk-out might seriously affect movement of the winter wheat crop by interrupting the normal seasonal flow of cars to the Midwest to take out the harvest.

The strike has knocked out 12 percent of western Pennsylvania's coal output so far. Fourteen big mines and several small mines with an estimated combined daily output of 35,000 tons shut down because there were no empty cars to carry away the mined coal. The number of idle Pennsylvania miners may rise to 55,000 next week. The strike-bound Pennsylvania Railroad serves about 25 percent of the western Pennsylvania mines.

Detroit's automobile industry has not yet been affected, but most manufacturers say some trouble is likely if the strike lasts more than a week. Chrysler Corp., just back in production after a 100-day strike, said it might have to curtail operations sharply next week.

HOSPITAL BUILDING SLOWED

Produce and livestock markets reported they were feeling the pinch. Construction of a $20,000,000 veterans' hospital in Pittsburgh was slowed by the rail strike.

In the Buffalo area, the Nation's largest milling center, one feed mill and one flour mill shut down. A. Thomas Easley, general manager of International Milling, the city's third largest mill, said operations were continuing by truck, but added: "We can't go on like this indefinitely."

At a news conference today, Daniel P. Loomis, chairman of the Association of Western Railways, denied a union charge that the carriers normally used 5,000 supervisory personnel to do the work of a second fireman on big Diesels. He said this special personnel spends only a short time on the trains to check equipment.

The union said yesterday it had modified its original demand for an extra fireman on all big Diesels. The union said it is asking for the extra fireman only on fast, long-distance passenger Diesels.

WON'T GIVE IN

Discussing this, Loomis said: "If we gave in on that issue, the next move by the union would be the freight trains. We have no intention of giving in on that point."

Members of the National (Railway) Mediation Board are planning to remain in Chicago several days, but have scheduled no conferences. The board gave up the peace struggle as hopeless.

The Coffee Situation—Latin American Letter

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Hanson's Latin American Letter of May 13, 1950, which deals with certain investigations

UNIVERSITY OF MICHIGAN LIBRARIES

being conducted by a subcommittee of the Committee on Agriculture.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, *May 13, 1950.*

Considerable uncertainty still surrounds the estimates of dollar-exchange receipts from coffee. Colombia showed a $15,000,000 unfavorable balance of payments March 1 to April 5, which wiped out the $14,000,000 balance previously accumulated. The unattractiveness of coffee at the minimum prices set by the federation combined with excessive exuberance in issuance of extra-quota licenses to bring this set-back. It is true that the federation counts on moving coffee heavily at very high prices during the summer, but all appraisals of exchange availabilities for the coffee-producing countries hang precariously on the ability of the countries to support speculators in Brazilian coffee. That ability may not be as great as some currently think.

Last week a radio broadcast out of Sao Paulo blasted Anderson Clayton for allegedly seeking to push coffee prices down in Brazil until the crop had been bought up, after which it would work for high prices and sell at great profits. There is apparently a failure on the part of the Brazilians to understand that American interests are actually engaged in trying to influence the market on the up side, that the public statements out of New York have been bullish. Admittedly, the motivation in this whole business is very obscure, and must require digging even by Government investigators. For instance, it is easy to understand that the speculator—whether Brazilian or American—is interested in quick profits on a single crop. But the interest of the grower and of the American coffee trade consists in selling at prices that will insure steadily expanding markets for Latin American coffee. When the actions of these people seem to militate against that objective, it is inevitable that questions must be raised as to motivation.

Here is an example of the typical confusion. Last week the head of the A. & P. coffee subsidiary, the world's largest outlet for coffee, was quoted as asserting that consumption will have to shrink by more than a mere 10 to 15 percent before prices can be appreciably lower. Let us examine this public statement carefully. It has been repeatedly asserted before the Gillette subcommittee that one of the major factors accounting for the tremendous autumn 1949 rise in coffee prices was the liquidation of Brazilian stocks that had been overhanging the market. Now, these stocks had at the beginning of 1949 been put at 3,000,000 bags or less. At the beginning of the crucial period when the impact of the well-known influences caused the market to shoot upward, the stocks stood at perhaps 700,000 bags, and it is the announcement of liquidation of these 700,000 bags which was cited to the committee as the significant factor. Note well: the existence or nonexistence of only 700,000 bags of coffee, much of it of unsuitable quality for dollar markets, was cited as a vital factor in causing almost a doubling of coffee prices.

Now, the A. & P. asserts that a drop in consumption of more than 3,000,000 bags per year would not suffice to influence prices appreciably. It would not be a major factor in the market. It would take more than a 15 percent drop in consumption to do the trick. Does that make sense? Get the picture: (a) A commodity market in which prices are perched precariously at unprecedented levels. (b) A drop of 15 percent in consumption coming at the peak of prosperity in the United States, with every reason to expect that at the first break away from our high level of prosperity consumers might be stimulated to check their consumption further. (c) Is it conceivable that in a market in which definite manipulation is not under way, the free play of demand and supply would not cause a 15 percent drop in consumption to have appreciable influence on price? Especially when veteran traders have testified that a change of less than 4 percent on the supply side was a major factor in causing prices almost to double in a period of 2 months.

This is not to imply that the coffee trade will not be able to achieve a larger cut in consumption than has already taken place. It is entirely possible to discourage consumption in the United States further, if the trade continues present tactics. An official of the United States Department of Agriculture told us last Friday that there has been an increased show of interest by consumers in ways and means of economizing on coffee. The official pointed out to us that the Department's recommendations for amount of coffee used per cup, based on its experience, are 35 percent lower than what the Pan American Coffee Bureau has been propagandizing for consumption per cup of coffee. The same official noted that sales of chicory are increasing in the Washington area, told us the interesting fact that one of the great nationally known restaurants in Washington used chicory in its coffee preparation.

Since the Gillette committee is a subcommittee of the Senate Agriculture Committee, it could presumably encourage the Department of Agriculture to assist consumers with expert advice on coffee, to offset the propaganda of the Pan American Coffee Bureau, to the detriment of grower and coffee trade alike. It is a fearful error for any speculative group to believe that the United States is powerless to act in the face of any half-billion-dollar-a-year challenge to its purchasing power.

What is unfortunate in the Brazilian situation is that the Brazilian Government's activities are being directed at protection of a small group of speculators. The tactics are already indicated. A speeding up of barter arrangements with Europe in order to unload more coffee there and prevent surpluses, and release of more coffee for local Brazilian consumption with government subsidy. But it must be remembered that such activity has at best temporary effects on the commodity market. Ordinarily, markets discount the difference between a price in free dollars and a price in terms of German harmonicas or French unessentials or British overpriced goods. And subsidization of local markets is a strain on budgets already badly out of balance.

Eventually it is probable that the likely effect of war on the coffee market will be cited in the effort to firm markets at current levels. The Swiss are already reported to be interested in piling up stocks against the contingency of war. It should be noted, however, that war would be a bearish factor, after the first few weeks. When war comes, there will be a great deal less coffee imported into the United States under the regimentation of total war, and western Europe is not going to be importing coffee.

In October 1945 a prominent New York coffee house took large advertisements in the Washington Post. The purpose was to urge that Congress should promptly undertake a thorough investigation of the whole coffee problem as part of its duty to the American people. The ad went on: "CLINTON ANDERSON was appointed Secretary of Agriculture because he aggressively sought the truth about this country's food situation. Since coffee is not grown in the United States it was not made the subject of those public hearings and debate. Unfortunately, the truth about coffee seems to have been a secret deeply guarded from the American public."

Curiously enough, the secret is once again being guarded from the American public. If certain market practices had been more carefully scrutinized in 1945, there might be less occasion for an investigation today.

Community Leadership Counts

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1950

Mr. JAVITS. Mr. Speaker, the fundamental bases of American life rest in our communities and although New York is often regarded as a vast aggregation of people it is not but rather a large group of communities each with its own character, its own local pride and its own achievements. It is in this spirit that the appended address by Mr. Floyd Cramer, president of the Washington Heights Federal Savings and Loan Association in my district, vice president of the New York State Savings and Loan League and a distinguished citizen of my district becomes so important. For Mr. Cramer was engaged in forwarding a community activity to establish a recreation center for elderly persons, a vitally necessary community activity in our present society, and one which would not be based on seeking Government aid. The nonsectarian character of this activity is also significant. The contemplated center is sponsored by the Jewish Community Council of my district and is not to be sectarian in operation, and Mr. Cramer himself is non-Jewish. I trust that the feeling of community responsibility and its vital place in our national life inherent in the remarks of Mr. Cramer will be of interest to members:

ADDRESS OF FLOYD CRAMER AT A DINNER IN HIS HONOR TENDERED BY THE JEWISH COMMUNITY COUNCIL OF WASHINGTON HEIGHTS AND INWOOD, INC., NEW YORK CITY, MARCH 16, 1950

I am deeply grateful to the communities of Washington Heights, Inwood, and surrounding vicinities for the honor bestowed upon me here tonight. I am especially grateful to the Jewish Community Council of Washington Heights and Inwood, who sponsored this dinner and to all the individuals who worked so hard to make it a success. I congratulate those of you who are endeavoring to create a recreation center for elderly persons, to which cause the proceeds of this dinner are to go, for your civic-mindedness and charitable outlook. I wish you success and pledge myself to help you to the best of my ability.

I would be less than human were I not to take note of the kindly remarks that have been made here this evening. You may be sure that I am also appreciative of the honors conferred upon me by these distinguished gentlemen. As for the handsome bronze plaque which your president has just presented to me I am completely unable to properly thank you. I am moved beyond words that you should present to he, a non-Jew, this great tribute. I can only say that I will keep it with me and that I will remember the thoughts that go with it as long as I remain on this earth.

But that which moves me more than anything else is the manner in which the people of our communities work together. It may seem odd to some persons that I should be given a dinner by a Jewish group with individual sponsors coming from all faiths. But to those of us who know Washington Heights, Inwood, and vicinity there is nothing unusual about it. I have been observing it for 20 years and have come to take it for granted.

It is not, however, done in all communities and is the crux of our social problems in the country as a whole. Failure of religious and cultural groups to work together in attacking community problems is causing a breakdown of local government. Many problems have been dumped into the hands of national authorities because of inability to solve them at home. This inability generally arises not so much for local lethargy or unwillingness as from lack of a coordinated effort on the part of all groups.

It is because I feel so strongly on this subject that I take the liberty of bringing it up here this evening. In fact, with your kind permission, I am going to expand it briefly. I am going to expand it enough to show you, I hope, where a great opportunity awaits us Americans. There are now about 150,000,000 of us in this country. We are the largest group of informed, well-fed, free and independent people on the face of the earth. Although we are only a small fraction of the 2,000,000,000 persons who reside on this planet, we possess the tools and equipment, the technical know-how to feed, clothe and house them all if we were called upon to do so. Never before in the annals of human history were so few so important.

Yet, despite all this, we find actual shortages of the necessities of life right in our midst. Try and find, for example, an apartment. I also seem to have a faint recollection of someone not having enough coal. Obviously, our enormous means of production are not functioning as they should.

If you ask me why this is so I can only answer that, in my opinion, a tug-of-war between powerful groups in our economic arena is now in a stalemate. Until we sweat this out there will continue to be shortages and economic strife from which few will prosper.

The simple truth is that various groups working at odds with one another whether in community affairs or in Nation-wide industries do no one any good. No one, no group can in the long run benefit at the expense of society as a whole. Any temporary gain at the expense of others must eventually prove a liability and a handicap.

Conversely, any bona fide improvement in the status of any group gained not at the expense of others helps the community as a whole. The success, for example, of the current drive for funds of the United Jewish Appeal is a victory not only for Jews but for all members of the community. Any improvements in the living standards of any particular group is an actual dollar-and-cent victory for all. Every slight gain by Negroes in the South spreads out to help not only whites in that region but actually the whole country.

In the struggle between management and labor we have had demonstrated for us the fact that no economic class can benefit at the expense of others. Up until about a generation ago—and unfortunately up to now in some instances—the theory was seriously held that management should get its labor for as little as possible and that no social responsibility whatsoever rested on the shoulders of employers. Now we have learned that this is false. The hunger and misery of unemployed or underpaid workers can quickly bring down the houses of the masters.

Undue power and abuse of it by labor can just as quickly destroy the jobs and well-being of those who compose the ranks of labor. It matters little who the aggressor is in a labor dispute. Any unfairness on either side is detrimental to both sides.

Now I realize that we live in a democracy and that in a democracy individuals and groups of individuals must fight for what they want. There is no paternalistic power at the top to mete out to each his just desserts. But I submit to you that in order to make our democracy work we must never lose sight of the common welfare of all of us. We must think of what is good for America.

This cannot be legislated. It cannot be decreed by anyone. It must come from the one sovereign power in our land—the people.

You and I in our respective communities must learn to respect each other and each other's interests. Jew and gentile must work together. Negro and white must work together. Business and the community must work together. Labor and management must work together. If we can do this—and I think we can—we will literally have heaven on earth. We have the people. We have the know-how. We have the tools. It's up to us.

And so, ladies and gentlemen, when I congratulate Washington Heights and vicinity for working together on its problems I really have reason for doing so.

During the last war we, a mere fraction of the peoples alined against the common enemy, furnished not only more than average manpower in the field but we were, as our President said, the "arsenal of democracy." Out of our shops, our plants, indeed out of the genius and industry of our people, there came the overwhelmingly large bulk of the tools of war that were used on the allied side. During hostilities and since their cessation American food has sustained life in large areas of the world beyond our borders. We are indeed today not only feeding but furnishing the supplies of peaceful industry and possibly of another war to most of mankind outside the so-called iron curtain.

I mention these things not critically but to emphasize the tremendous ability of our Nation. I mention them to show you, I hope, how full could be the lives of you and I and and the remainder of our people. You and I and all of us could live in a Shangri-La if we could only forget our petty differences throughout the country and work as one great citizenry for our common welfare.

But we cannot do it by working at odds with one another. We can only do it by working together in that great brotherhood which God intended for us. Jew, Gentile, Catholic, Protestant, Negro, white—it matters not. Unless we can mold them all into one great society we cannot possibly provide the world leadership that is so necessary today. (It is interesting to note in this connection that the white population of the world is about the same percentagewise as is the Negro population of the United States.)

But, my friends, if we can do it—if we can work together—there is much in store for us. Not only will we have the material things with which to enjoy ourselves, but we will acquire that spiritual confidence in ourselves which comes to men and women of good will. As individuals we will be sure of ourselves, and as a nation we will fear no aggressor. We will acquire a new purpose in life.

By way of closing, I would like to remind you that a great man once lived in this land who accomplished much by teaching and practicing the brotherhood of man. He was born 141 years ago and he lived long enough to eliminate human bondage from within our borders. He has now been dead 85 years and much of his work remains unfinished. Ladies and gentlemen, I submit to you that there is no greater heritage for the American than the opportunity to work on the completion of Abraham Lincoln's mission. It will do much for you as individuals. It will give you a spiritual strength that will enable you to face your daily problems with a confidence that knows no failure. I recommend it to you.

And now, to each of you let me thank you personally for the great honor you have bestowed upon me here tonight. May you enjoy yourself for the remainder of the evening, and may God bless you.

Johann Sebastian Bach

EXTENSION OF REMARKS
OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mrs. HARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the Members of this body that this year the musical world is paying tribute to Johann Sebastian Bach—1685–1750—in recognition of the bicentennial of his death. In this connection, I include a tribute prepared by a resident of Lebanon, Ind., Mr. Herschell C. Gregory, which follows:

BACH'S WORKS OF THE CÖTHEN PERIOD

(Written for the bicentennial of his death in 1750)

The life of Bach, like that of Beethoven, is divided into three creative periods. The first period ends in 1717 when he resigned a position as organist and cappellmeister at the court of Wilhelm Ernst, Duke of Saxe-Weimar, a position which he had held for 9 years. Bach gradually became dissatisfied with the Weimar position and from the beginning he did not like the idea of receiving the Duke, together with the rest of the court musicians in servile garb.

In 1716 Johann Samuel Drese, court conductor, died suddenly, but the position was not offered to Bach. George Philip Telemann refused it and Drese's son, a mediocre musician who was also in the service of the Duke was selected. This appointment wounded Bach's pride but he did not permit the disappointment to move him to give up an assured income without having another position in view. Later in the year the Duke's nephew, Duke Ernst August, was married at Weimar to the sister of Leopold, Prince of Anhalt-Cöthen, and the latter, a musical amateur of more than ordinary ability, was present for the wedding festivities, and having met Bach for the first time was impressed by his genius.

Prince Leopold was an ardent music lover. He played the violin, the viola-da-gamba, and the clavier, and was a competent singer. His love and appreciation of music brought him to an appreciation of Bach's great gifts and on hearing that the latter desired a new position, offered him the position of cappellmeister at his own court. Bach eagerly accepted the directorship, and in August 1717 sent his wife and children to Cöthen, a town some 80 miles northeast of Weimar, and 20 from Halle. When he demanded his release it incurred the disfavor of Duke Wilhelm Ernst, who ordered Bach arrested on November 6. He remained in jail until December 2, and was granted a "dishonorably discharged" which fact was made public.

On Christmas day 1717, Bach took up his new position in Cöthen at 400 thalers per annum. At Weimar the larger proportion of Bach's works in fugal form for the organ had been composed. There was little encouragement given to him for this type of

UNIVERSITY OF MICHIGAN LIBRARIES

work in his new position. Prince Leopold cared nothing for the organ, as his preferences were for orchestral and chamber music. The means at his disposal here were meager compared with those at Weimar. Bach had at his disposal some 18 musicians, 8 of whom were "chamber musicians" and who lived in Leopold's castle. The remainder were performers who resided in the neighborhood and who were given occasional employment. His orchestra consisted of strings, oboes, bassoons, horns, trumpets, and drums. Occasionally he also employed the oboe d'amore, oboe da caccia, and corno da caccia. There were also two voices and a dilapidated organ.

Some of the performers which constituted Prince Leopold's orchestra came from Berlin and their names are set forth in the draft of the salaries paid to the members. Dr. Charles Sanford Terry in his J. S. Bach, a biography, made some interesting comments concerning those who were priviledged to interpret the works that Bach composed during his life at Prince Leopold's court.

"The Protocal," he wrote, "records the names of those who first heard and performed the chamber music Bach produced at Cöthen, the sonatas, concertos, and orchestral suites. Imagination does not wander far from the path of probability in supposing that Josephus Spiess and Johann Ludwig Rose gave the first performance of the concerto for two violins, on some evening when the candles were lit in the great room between the high towers; that Schreiber and his colleague Krahl first sent their trumpets' rollicking notes to the rafters in the closing gigue of the Suite in D; that the Prince himself was active in the sonatas for clavier and violada-gamba; and that reinforced, as will be shown, by visiting players, the Capelle played the Brandenburg music before it was offered elsewhere. For its composition suffered little change as long a- Bach controlled it."

Bach's taste for the composition of religious music and that for organ had been thoroughly satisfied during his service at the court of the Duke of Saxe-Weimar, but it was little considered at Cöthen. Prince Leopold was a Calvinist and the austere services in his chapel offered no musical opportunities such as Bach, a Lutheran, loved so much. The desire for chamber and orchestral music that Prince Leopold affected, is a circumstance that accounts for the large amount of instrumental music Bach composed during his years of service i- Cöthen. His early training on the violin stood him in good stead at this time, for he produced works for violin, viola-da-gamba, and cello that only an experienced player could have written.

In addition to the works of Bach, compositions by Johann Fischer, Galuppi, Hasse, Vivaldi, Brescianello, Venturini, and others gave the prince the most pleasure when the concerts took place in the candle-lit hall of the castle. Rehearsals were held in Bach's apartments, which were probably in the castle and with Bach directing the music from the harpsichord, as was the custom in that period. We have Bach's own statement that the prince loved music, he was well acquainted with it; he understood it.

Among the important orchestral works of this period are four suites which consisted of groups of dances of the period, preceded by an overture, based on the French model, which founded by Lully began and ended with a slow section, and with a livelier section in between. We know that the first two suites were composed in Cöthen, but there is some uncertainty concerning the remainder. Spitta suggests that from the watermark on the music paper on which the third and fourth suites were composed that they may have been written during his long residence in Leipzig. However, this theory has been disputed by later authorities.

"It cannot be settled," wrote Albert Schweitzer, the Bach scholar, "whether the suites were written in Cöthen or in Leipzig. In any case Bach performed them not only before the prince of Cöthen, but also in the Telemann Musical Society at Leipzig, which he conducted from 1729 to 1736. He calls these works overtures, not suites or partitas, this being the customary name at that time for an orchestral suite, in which the introduction played the chief part. They are, however, just so much real partitas, as those in the 'Klavierübung,' except that the old dances—the allemande, the courante, and the sarabande—retire in favor of the newer and freer movements.

"The introductions are monumental movements, all constructed on the plan of the French overture. They begin with a stately section; to this succeeds a long and brilliant allegro; at the end the slow section returns. When Mendelssohn, in 1830, played to the old Goethe, on the piano, the verture of the first of the two suites in D major, the poet thought he saw a number of well-dressed people walking in a stately fashion down a great staircase. In 1838 Mendelssohn succeeded in getting them performed by the orchestra at the Gewandhaus, Leipzig. It was the first performance of any of these splendid works since Bach's death.

"In the dance melodies of these suites a fragment of a vanished world of grace and elegance has been preserved to us. They are the ideal picture of the Rococo period. Their charm resides in the perfection of their blending of strength and grace."

There was a feeling of cordial friendship at all times between Bach and Prince Leopold. When Leopold made a trip to Carlsbad, a fashionable resort of the German aristocracy, Bach and some members of his musical staff accompanied him. On one of these trips in 1719 Bach met a young Russian prince whose fad it was to collect concertos. This young prince was Christian Ludwig, Margraf of Brandenburg. He was a bachelor, living alternately in Berlin and on his estate at Malchow. He not only loved music, but he spent a large part of his income on it, and had acquired a remarkable collection of concertos by famous living composers. He maintained an orchestra which played for him the large collection of concertos and other works which occupied places in the court library. The chroniclers report that he was greatly struck by the abilities of Bach and gave him a commission to write some concertos for his orchestra. The concerto in that day did not imply a brilliant and difficult work for a solo instrument accompanied by orchestra, but a work used for a combination of instruments. Bach took his time in writing them, for it was in the spring of 1721 that he mailed the six concertos now known as the Brandenburg Concertos to Christian Ludwig. Apparently he felt that the Margraf's gesture was an empty one, so that there was no need to hurry. In mailing the new compositions Bach enclosed a letter written in French:

"MONSEIGNEUR: Two years ago, when I had the honor of playing before Your Royal Highness, I experienced your condescending interest in the insignificant talents with which heaven has gifted me and understood Your Royal Highness' gracious willingness to accept some pieces of my composition. In accordance with that condescending command, I take the liberty to present my most humble duty to Your Royal Highness in these concerti for various instruments, begging Your Highness not to judge them by the standards of your own refined taste, but to seek in them rather the expression of my profound respect and very humble obedience. In conclusion, Monseigneur, I most respectfully beg Your Royal Highness to continue your gracious favor toward me and to be assured that there is nothing I so much desire as to employ myself more worthily in your service.

"With the utmost fervor, Monseigneur, I subscribe myself,

"Your Royal Highness' most humble and most obedient servant,

"JEAN SEBASTIAN BACH.

"CÖTHEN, *March 24, 1721.*"

What Christian Ludwig wrote in reply to this letter or his opinion of the new works is not known but these concertos are without question the finest chamber music works composed by Bach during his 6 years in Cöthen. What he had really composed were experiments in various instrumental combinations and in instrumental colors.

In May 1720 Prince Leopold and Bach left for Carlsbad for a visit which was prolonged into July. On their return Bach discovered that his wife had died, leaving him with four children. (Three others had died in infancy.) On December 3, 1721, he married Anna Magdelena Wilcken, a union which proved very happy. She was the daughter of a court trumpeter and possessed an excellent soprano voice. She assisted him in copying his compositions, and it was for her that he wrote some of the French suites which are preserved today copied in her own clear hand. Bach also composed the celebrated Büchlein for his helpmate, from which came many of the delightful little pieces through which young people to this day gain first acquaintance with Bach.

Toward the latter part of 1720, Bach journeyed to Hamburg for another visit with Jan Adams Reinken, who was organist of the Katherinenkirche in that city. Reinken, then 97 years of age, heard Bach improvise on the sixteenth century melody, Upon the Rivers of Babylon, and remarked, "I did think that this art would die with me, but I see that you will keep it alive."

Bach composed fugues for the violin without accompaniment during his stay with Prince Leopold. He wrote only three, and he never tried to make music again in just the same way, but with these three he worked three separate miracles and created three fabrics of beauty the like of which are not to be found anywhere else. Several conditions made it possible for him to write fugues for the violin at this time, of which only two need be mentioned; one the German manner of playing the instrument, the other the survival in his art, even at this comparatively advanced period, of an early manner of fugal composition. The Cöthen period was like a special dispensation of fate to guarantee the full development of Bach's genius. By compelling him to pay exclusive attention to instrumental music, it drove him to an exhaustive assimilative study of the art of Italy, which was then the home of music of this class, its chosen instrument being the violin.

The Italians played with a bow where, as in the modern bow the hairs are screwed to the stick. This kind of bow makes for brilliance, clarity, and power; but it never lets the player touch more than two strings simultaneously, and often makes playing on those two a difficult task. The Germans played with a bow where the hairs were held by the fingers. The player could therefore relax the hairs at will, so that three, and even four strings could be struck at once. Also their bridge was lower so that the four strings were less sharply arched. The German tone was soft, but the harmony was full; and that agreed with the German temperament as did the polyphony their easier double- and treble-stropping made practicable.

The G-minor fugue with the prelude was probably composed in 1720, while Bach was

in Hamburg, while the G-minor fantasia and fugue according to Sir Hubert Parry belongs to the middle period of Bach's life and composed at the end of the Weimar period or whole he was at Cöthen. The six sonatas for violin solo were almost certainly written in this period as well as part of the six organ sonatas. The cello sonatas, works for violin and clavier, at least some of the partitas for solo violin, the D-minor concerto for two violins and string orchestra, the D-minor piano concerto, the three violin concertos, the six English and six French suites for piano, part of the sonatas and suites for violin and cello, the two-part inventions for piano and a series of occasional cantatas, especially for the Duke's birthdays and for New Year's Day were believed to have been composed during the 1717–23 period.

In 1722 Bach wrote the first part of his famous well-tempered clavier which some writers have called the testament of the new dispensation. He wrote out three or four copies of the original "24" and used the numbers in his home music and in his teaching. He would play a few of them to his pupils; and one pupil, Heinrich Gerber, tells us that Bach on no less than three occasions played the entire 24 to him from start to finish. Modern music dates from the moment Bach made equal temperament practical. If he or someone else had not done that we would not have the great music of Beethoven, Wagner, Mozart, Brahms, and Strauss.

Soon after Bach was married for the second time Prince Leopold married the daughter of the Prince of Anhalt-Bemberg. The Princess was frivolous, disliked her husband's musical activities, his attachment to Bach, and made her feelings known to all concerned. Bach sensing the trouble began to look for another position and in 1722 his name was presented to the Leipzig Town Council as one of the six candidates for the position of cantor of the Leipzig Thomas School, left vacant by the death of Johann Kuhnau. He was tried as a candidate on Quinquagesima Sunday, February 7, 1723 and ran second in the competition; but Christoph Graupner who won first place, withdrew, and Bach automatically entered upon the post.

In 1730 Bach wrote a letter to his friend Erdmann regarding his work of the Cöthen period. "I had there," he wrote, "a gracious, music-loving and discriminating prince, with whom I hoped to end my days, but it happened that my master married a Barenburg princess whose tastes were not in accordance with her lord's. She delighted in gaieties and worldly pleasures and gradually weaned my master from the loving interest he had ever shown toward our glorious art. And so God arranged that the post of cantor at St. Thomas' School should fall vacant. At first I did not think it becoming to relinquish the dignified office of Cappellmeister for that of a modest cantor. For this reason, therefore, I took 3 months to consider the future and was at last induced to accept, as my sons were inclined to be studious and I was desirous of affording them an opportunity of gratifying their bent by entering them in the school; and thus, in the name of the Most High, I ventured and came to Leipzig."

The Cöthen period does not mark Bach's greatest achievements, but it was a period in which much material was composed, and which is still the delight of concertgoers. Bach was distinctly a family man and went about his business undisturbed by whining babies, writing little tunes for his wife Anna Magdalena, and for his boys when they grew up. The preludes, fugues, toccatas, etc., for organ which remain the daily food for all good organists, as well as the suites, overtures, etc., for orchestra and various concert pieces composed for patrons and friends speak a language which goes straight to the heart of all people. He must be considered as the last of the great mediaeval craftsmen, men who did their work because they had to, and did it well because they loved it.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, if the Senate is about to recess—and I have no objection to that—I should like to ask unanimous consent to have an article inserted in the Appendix of the RECORD. The article is entitled "Cheaper Food—Promise or Political Lure?" written by Allan B. Kline, and published in the Collier's magazine for May 13, 1950. Mr. Kline is president of the National Farm Bureau. I am informed that the article will take approximately two and a half pages of the CONGRESSIONAL RECORD and that the cost will be $205. Mr. President, I have read the article and it is about as good an explanation of the Brannan farm plan as any article I have read or any explanation that I have heard, and I think it would be well worth having it printed in the RECORD, so that more people may have an opportunity to read the article than would be the case otherwise. For that reason, Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

Mr. LONG. Mr. President, in that connection I wish to say that certainly I agree that this is a very carefully thought out article. I believe it should be required reading for anyone who wishes to understand the Brannan plan. It is probably one of the best articles on farm legislation which the junior Senator from Louisiana has had occasion to read in a long time. I would recommend it to all Senators. I agree with the Senator from Minnesota that it is certainly worth many times the cost of printing the article in the RECORD.

Mr. THYE. Mr. President, it is not a caustic article; it does not attack the Brannan farm program. It proceeds in an intelligent manner to make an explanation on the effect of the Brannan farm program as it would be applied to any phase of farm operation or our agricultural economy. I think it is well worth being printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHEAPER FOOD: PROMISE OR POLITICAL LURE?

(By Allan B. Kline)

If the American people want to keep on getting plenty of good food at fair prices, they should not swallow the sugar-coated pill known as the Brannan plan. This plan, if adopted, would be a raw deal for farmers and consumers alike. It won't stand the test of analysis. It won't give us cheap food.

The way to continue getting adequate supplies of good food at reasonable prices lies in high production per farmer and steadily increasing efficiency in farm production.

This has been our way up to now, and it is a way of progress. In 1850 the average American farm worker produced enough food for 5 people; in 1920, enough for 10; and by 1945, for 15. Common sense dictates that we should improve on our past successes, not take an entirely different course. The course being charted for us by Secretary of Agriculture Charles F. Brannan would beeline the farmers of this country in the direction of stabilized poverty.

Few consumers are aware of some significant Bureau of Labor Statistics figures which show that the prices they pay for food, when measured in the length of time they have to work to purchase that food, are lower than in any other major country. To earn enough to buy a pound of butter the average American works 32 minutes, the Canadian 45 minutes, the Frenchman 146 minutes, and the Russian 542 minutes. To earn enough to buy a pound of ham an American works 28 minutes, a Frenchman 80 minutes, an Englishman 44 minutes, and a Swiss 116 minutes. For just 4 minutes of working time an American can buy a pound of flour. The Chilean must work 13 minutes, the Frenchman 20, and the Russian 52.

Mr. Brannan has described his plan as one to give farmers "the opportunity to earn a reasonable return for abundant production" and at the same time give "taxpayers their money's worth."

A more accurate description of this utopian panacea would, I think, be "the promise of a Government-guaranteed profit for the farmer, cheap food for the consumer, and it won't cost anybody much."

SUSPICION IS JUSTIFIABLE

The Brannan plan has no antecedents in the platforms of either major political party. It was contrived without consultation with either congressional or farm organization leaders. One might appropriately ask: Is it really a farm program, or is it the most ingenious, insidious, and disarming political lure of our generation?

When the Secretary and those paid Department of Agriculture employees who are serving as salesmen for the Brannan plan talk to farmers, they talk about prices. Price is the core of the plan. Stripped of fancy language, the Brannan proposal is that Government farm price supports be high enough not only to maintain, but actually increase, the present surplus-yielding volume of production. Consumers allegedly would get food for the low price it might bring in a surplus-glutted market. Farmers supposedly would get, in the form of checks from Washington, the difference between these depressed market prices and the so-called Government-guaranteed prices.

When Mr. Brannan submitted his plan to the House Agriculture Committee on April 7, 1949, he said it was "not likely to startle anyone" because "I have no revolutionary ideas to present to you." In the sense that his scheme embraces elements that have been tried in a limited way, it is true that it is not new or startling. But in its total philosophy, the Brannan plan is a revolutionary departure from the basic concepts which up to now have been the foundation structure of the American economy.

Farmers view price supports as the counterpart of minimum wages for labor. They want to fit a price-support program into our peculiarly successful regulated free-enterprise system. They believe farm programs should be directed toward maintaining a fair-exchange relationship between the prices

UNIVERSITY OF MICHIGAN LIBRARIES

of things farmers sell and the cost of things farmers buy.

The American Farm Bureau Federation does not consider it the Government's responsibility to guarantee profitable prices to any group. Instead, we view farm price supports as an appropriate and necessary protection against unreasonable price declines, which, if allowed to continue unchecked, would adversely affect the general welfare.

The Brannan plan is something altogether different. Under it the farmer's only hope for a fair income would depend on Government hand-outs via annual appropriations by Congress. Certainly it would be dangerously shortsighted to stake the future of agriculture on the mere hope that the funds would be voted each year.

Farmers are a minority group, about 19 percent of our population. Give the Nation a little adversity, and the farmer's chance of getting the sort of appropriations that would be required under the Brannan plan would be about as good as the well-known snowball in—you know where.

If the plan is put in operation on the basis on which it has been presented to farmers, very large congressional appropriations would be needed. Mr. Brannan to date has failed to comply with repeated congressional requests for an estimate of the annual appropriations that would be needed under his proposal. But recent estimates by congressional leaders and farm economists of the annual cost to taxpayers of the Brannan plan range from $6,000,000,000 to $19,000,000,000.

What would have happened to the 1949 potato crop if the Secretary's proposal had been in effect? Twenty-one percent more potatoes would have gone to market. Leading farm economists agree that these added potatoes would have driven the farm price down 35 to 50 percent. The average market price of potatoes in 1949 was $1.40 a bushel. A 35-percent drop would have pushed the average farm price down to 90 cents a bushel. But the Brannan plan support standard would have set the Government guaranty to farmers at $1.59 a bushel, a cost of 69 cents a bushel to be paid farmers out of the Federal Treasury.

This would have meant a total cost to taxpayers of about $277,000,000—three times the cost of the actual 1949 potato support program. While the present program needs correcting, there ought to be a better way to do it than to ask the taxpayer to jump out of the frying pan into the fire.

"Production payments," as proposed in the Brannan plan, cannot be accurately appraised without taking into account the level of prices allegedly guaranteed. Under the plan, this level is so high that it would be bound to cause a vast expansion in agricultural production, and unmanageable surpluses would result. A year or two of this might well drive farm prices so low as to make all the farmer's net income, and more, dependent upon his ability to get a Government check.

Take the case of a hog farmer. I am one. I know about hogs; I like them and they seem to like me. They paid for my family farm in Iowa. Under the Brannan plan, hog producers would be guaranteed prices high enough to cause them to step up production 20 to 25 percent.

The Government presumably would make up the difference between the market price and the price it promises farmers.

ENSLAVED BY THE SUBSIDY

This Government check would represent probably all the hog farmer's net income and possibly part of his costs. What would this mean to him? What would happen if the check didn't come through? It wouldn't involve just his ability to build a new barn or buy a new car. It would involve the difference between his staying in business and going broke; it would determine his ability to feed and clothe his family.

If I were a Government official looking for a way to bring the American farmer under my thumb, I'd use that method. When the time came, the farmer would either do as he was told, or would fold up for lack of a subsidy check.

The Brannan plan's income standard, as presented to Congress, proposes to set a price for hogs at about $19 per hundred pounds and a price of $1.46 for a bushel of corn. This is a corn-hog ratio of 13 to 1—13 bushels of corn would be worth 100 pounds of pork. In theory this is decidedly favorable to the hog raiser, who certainly would step up production, knowing he could raise or buy corn for $1.46 and get a return of $19 for his hogs.

But do you think the Government could let a man raise all the hogs he wanted to raise at that kind of price? Of course not. Production would have to be controlled.

And these production curbs would have to be applied to other producers—poultrymen, dairymen, cattlemen and so forth.

The plan is pictured as being all things to all men. About his "income support standard," which would replace the present parity formula and provide the basis for guaranteed prices to farmers, Mr. Brannan says:

"This income support standard simply represents a realistic minimum below which it is not in the interest of farmers or consumers to allow farm prices to fall, and above which I would hope to find most farm prices most of the time." He adds that his proposed production payments "would allow farm income to remain at a high enough level to sustain abundant production while retail prices sought their supply-and-demand level in the market place. This level is bound to be reasonable for consumers because of the large supplies brought out."

But on the other hand the Secretary says:

"It is obvious, of course, that the use of production payments must be qualified in such a manner as to avoid extremely depressed prices in the market place, or a wasteful use of soil resources."

In other words, one minute Mr. Brannan expects farm prices to be above the proposed support level. The next, he holds out to consumers the glittering prospect of cheap food—so cheap we would have to establish safeguards against extremely depressed prices.

Which is it? It can't be both.

Some cynics say the farmer is interested only in price. When he sees the Brannan plan in operation, they say, he will think everything is just fine—that all he'll have to do is sell his products, keep his sales slips, turn them over to the Government and get the rest of his money through a subsidy check.

We feel sure that this would neither add up to a satisfactory income for the individual farm family nor make for a satisfied farmer.

Under the Brannan plan continuous and rigid controls over production would be inevitable. The result would be a ceiling on opportunity in agriculture. More and more, the right to produce—inefficient and costly as it might be—would be parceled out on a per capita basis. This would discourage the people who try to discover new and shorter methods of producing abundantly. The farmers would be lined up, and if one stuck his head above the others, he would be pushed down.

That is a policy of defeatism—a policy of supervised poverty for farmers. You can stabilize things so that it takes a long time to starve, but that doesn't create the dynamic agriculture essential to an expanding national economy.

During the war I visited a farmer in Scotland who had about 800 acres. He was a good farmer, a very good one. He asked how big my farm was and how many hogs I had. I told him 440 acres and five or six hundred head. He asked how many men I hired, and I said two. He had 62 men on his place and he could not believe that 2 men could take care of that many hogs.

My reply was, "We don't let two men waste time taking care of those hogs. It takes one of them a couple of hours a day."

High income for farmers depends upon the same kind of thing that it takes to get high income for other people—high production per man. You are not going to have a happy and prosperous farm people, individual farmers doing better all the time, unless you have increasing production per man.

This does not mean producing surpluses regardless of demand. It does mean making certain that we increase, rather than decrease, efficiency on American farms. If there are too many people in agriculture for all to earn a good living, then the national interest will be served best by providing other job opportunities for those farmers who cannot farm efficiently.

Go into any rural community, and if you find production per man very low, you will find the standard of living also low.

A BONUS FOR INEFFICIENCY

A high level of prices promised in the Brannan plan would tend to "freeze" in agriculture the inefficient producers. About half the people who live on farms produce 90 percent of the food and fiber that get into the channels of trade. Would a scheme like Mr. Brannan's be of much help to the other half, who produce only 10 percent of the commodities going into trade?

Suppose you lived in an area where the gross annual income averaged $800 per family. Say you got a guaranteed 10 or 15 percent increase in price for your products. What have you got? Another $80 or $100. What can you do with that? It wouldn't go far toward buying a new wardrobe, a new car, or sending the children to college.

The answer to this low-income problem is not price—whether figured by the present farm-parity formula or by Mr. Brannan's plan. The answer lies in increased opportunity to earn a higher total income. Much of this opportunity probably will have to be found outside of agriculture.

How would the consumer fare under the Brannan plan?

First, let's put the food picture in the proper perspective. Many customers don't know that food is relatively cheap in America. This does not mean that there isn't still room for improvement in production and distribution in America, but it does mean that—before we discard it—we ought to take a second look at the system which currently ranks at the top of the list of all nations in results.

In 1935–39, American consumers spent 23 percent of their disposable income for food; they could buy the same diet at today's prices for 19 percent of their income. Today they are spending 27 percent—but they are eating better.

RETAIL FOOD COSTS REDUCED

Food prices have come down substantially. At prices prevailing in July 1948, the average annual retail cost of the market basket of food for a family of three average consumers was $712. In October 1949 the same quantity of food could be bought for $637—a drop of $75.

It is interesting to observe that of this $75 drop the farmer absorbed $69, while charges made for services performed after the food left the farms declined only $6. Farmers receive an average of less than 50 cents of the consumer's dollar. The rest goes to pay for the freight, labor, wholesaling, processing, packaging, taxes, etc., between the farm and the ultimate consumer.

There is nothing in the Brannan plan that would reduce these after-the-farm costs which take the other half of the present-day food dollar—and it is well to remember that.

Under the plan someone would have to put up the dollars to pay the Government's

guaranty on my hogs, the Wisconsin farmer's milk, the New York farmer's eggs, the Californian's fruits and vegetables, the Texan's beef.

Suppose you pay the grocery store 40 cents a dozen for eggs and 15 cents a quart for milk, while the Government is paying the farmer prices which ordinarily would cause consumers to pay 60 cents for the same eggs and 20 cents for the milk.

Is your transaction finished? Let's not kid ourselves. Come March 15 and you'll have to make another ante on your grocery bill by way of your income tax—just as the farmer will have to turn back part of his check. Those Government payments would have to come from somewhere, and there is but one source—the taxpayers—which means all of us.

Never forget that you can't send a dollar to Washington and get it all back. That is a costly journey. Folks would be much better off to pay for their food at the grocery store.

The real cost of food—what the consumer pays both directly and in taxes—would rise immediately if the Brannan plan were in effect. Under Mr. Brannan's formula, for example, the income support standard price for hogs—$19 a hundred pounds—was more than $3 per hundred pounds above the actual average price of hogs last October, November, December, and January.

This means that taxpayers would have had to put out more than $3 a hundred pounds on hogs compared to what they actually did pay in these 4 months.

If the Brannan plan had been in effect in 1949, and hogs had sold at the average support price in effect in the fall of 1949 and winter of 1950, the production payments needed to bring farm prices on the hogs actually marketed to the Brannan support level would have cost taxpayers about $465,000,000. Under the same conditions the present support program wouldn't cost taxpayers a thin dime.

Furthermore, if the incentive prices promised by the plan increased production and marketing—and they would—the taxpayers would have to ante up for all the further declines in market prices—plus, of course, the cost of administration and the difficulty of getting along with the expanded bureaucracy involved.

Although there has been a support price on hogs, the Government hasn't had to make more than a token purchase, because market prices have been generally above support levels. Incidentally, there hasn't been, and there isn't today, any support price on beef, veal, and lamb. The Brannan proposal would provide supports and authorize controls for all of these.

The tentacles of a Brannan plan would spread. If you promise a high and profitable price to farmers, and cheap food to consumers, a lot of people other than farmers are likely to become involved.

What if the plan had been in effect during the recent 18-month period when the price of wheat to farmers fell 30 percent and the price of bread increased? Would not there have been a great temptation for the Government to step into the marketing, distribution and baking fields to try to make good on its promise that it could guarantee consumers cheap food by letting farm prices drop?

Let such situations develop in many commodities and the Government would have to take over transportation and distribution in order to control prices to consumers.

Labor, too, would get caught in the mesh. Unions would find themselves with a Brannan plan. It might take a while, but it would come.

It is quite possible that a paternalistic government for a time might give one group more than it earns. There are plenty of examples. But, if this is to remain a Nation of freemen, it is quite impossible politically for it to be done over the long pull.

WE GET ONLY WHAT WE EARN

Eventually, if all groups get in on the something-for-nothing take, we all will find ourselves poorer. In the final analysis, what all of us get is what all of us earn; no more.

We in the Farm Bureau are not contending that all consumer subsidies are bad. Several of them, when operated on the basis of need, make sense; a sound food stamp plan and the school-lunch program are examples. We should continue to study ways of raising dietary standards of the poorer-fed. At the same time we should be constantly trying to find new opportunities for them to earn a more adequate income.

But paying a part of everybody's grocery bill out of taxes would be mighty costly and extremely dangerous.

Farmers definitely want and need a sound farm program. Why? Because farm production is relatively stable, while farm prices fluctuate widely. In contrast, in a highly organized industrial economy, industrial prices and wage rates remain relatively stable while production and employment levels fluctuate.

Farm prices go up faster and further than the general price level, and farm costs go up more slowly. But farm prices drop faster and further than the general price level, and costs come down more slowly; and this makes farming especially vulnerable to swings in the business cycle.

It is in the general interest to provide a farm program which will put a brake on a downward swing in farm prices. Likewise, it is in the consumer's interest because it is his best possible assurance of a continuing supply of good food at reasonable prices.

But in considering what kind of farm program is best, we must remember one basic fact: The basis for rural prosperity is, first and foremost, high production per man and a well-distributed real income in the rest of the economy.

Nonfarm people are most of the people. They are the farmer's market; they produce his real wages. If factories are humming, employment is high, industrial labor is productive and well-paid, the stores will be filled with goods, and services will be freely available at reasonable prices. Demand for the farmer's produce will be strong.

This is the basis for real farm prosperity. You can't pull the farmer up by his suspenders if most of the people are hard up.

It is vital, then, that we maintain an expanding economy. There must be high productivity and full employment. We must exhaust every opportunity to stabilize the general price level. As we accomplish this, we reduce the need for commodity-by-commodity Government programs.

Too, we need desperately to maintain sizable exports of crops like cotton, wheat, tobacco, dried fruit, and lard. To do this we must develop an affirmative import-trade policy and aggressively seek the widespread public support such a policy deserves.

American agriculture can produce more than America can consume. To restrict our output purely to the needs of the domestic market is to sell American agriculture short. A desirable farm program should be designed to fit into a dynamic, expanding domestic and world economy.

By causing the level of price supports to vary with the supply of, and the demand for, each agricultural commodity we can provide farmers a cushion against unreasonable price declines. Flexible-price supports would assure consumers at home and abroad of the continued opportunity to share in the abundant output, efficiently produced, of American farms. The underlying philosophy of the present farm program, which has evolved out of our experiences since 1933, is consistent with this objective.

Flexible-price supports would stimulate production of livestock and livestock products, which would conserve the soil and upgrade the American diet. By permitting a downward adjustment in support prices when supplies become burdensome, the flexible program would encourage farmers to shift land from production of grain crops to grasses and legumes and promote better land use. At the same time, lower support prices for surplus grains would encourage grain feeding of livestock—resulting in more and better livestock.

WHEAT SURPLUS AND LIVESTOCK

An indication of how increased livestock production can eliminate grain surpluses is contained in a recent study made at Michigan State College. It shows that an increase of about 2 percent in our livestock production would have more than absorbed our surplus stocks of wheat in the period since 1930. Consumers should not miss the point that expanded production and use of livestock products make for better and more nutritious diets.

Farmers sincerely believe that flexible-price supports—endorsed in the 1948 platforms of both major political parties—would provide necessary safeguards to farmers, minimize the necessity of controls over production, and assure American consumers of a firm supply of nutritious food at reasonable prices.

The Agricultural Act of 1949, the present law, is not without defects. Its support prices are the highest in our peacetime history. Rigid price supports, temporarily continued on several commodities, are so high they will encourage overproduction and, at the same time, discourage both domestic consumption and export.

Thus, instead of increasing farm income, they may decrease it.

Congress postponed full application of the flexible price-support formula until January 1, 1952, and provided for the use of a dual parity yardstick through 1953. The American Farm Bureau Federation never agreed to this; we thought the flexible price supports should have gone into effect last year, as was originally proposed.

We in the Farm Bureau are convinced that the higher the level of price supports, the greater the controls and regimentation that will result. We recognize that some controls will be needed occasionally if we are to use price supports to protect farm prices against unreasonable declines. At the same time, with flexible price supports, we would hope to hold controls to a minimum.

The present farm program, approved by Congress in 1948 and amended in 1949, does provide a brake on sharp downturns in agricultural prices. This program ought to be given a chance to work. It has not yet had that chance.

The Brannan plan would stifle the farmer's initiative, and regiment him. It would bring a pyramided government piled onto the taxpayers' backs. It would in the long run mean lower per family income for farmers, higher-priced food for consumers and everybody would pay plenty.

Decentralizing the Federal Government

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, the spring 1950 issue of the distinguished quarterly

UNIVERSITY OF MICHIGAN LIBRARIES

journal Air Affairs published by the American Society of Air Affairs is devoted principally to a discussion of the implications of the atomic bomb. It is my pleasure to have contributed an article to this issue, based on a subject which I have taken up with Federal officials for practically the last 12 years, namely, decentralization of the Federal Government.

It is a subject which cynics have scoffed at and a subject which smug bureaucrats have ignored, but it is one which is increasingly coming to the fore in view of the critical world situation in which we find ourselves.

Incidentally the chairman of the board of the American Society of Air Affairs is the distinguished junior Senator from Vermont [Mr. FLANDERS]. The editor of Air Affairs is Mr. William D. Pardrige.

In the spring issue there are a series of very interesting articles by such outstanding Americans as Mr. Bernard Baruch, Mr. Seth W. Richardson, Gen. Carl Spaatz; the great explorer, Vilhjalmur Stefansson; the distinguished commentator, Mr. Quincy Wright; and my good friend, the able senior Senator from Utah [Mr. THOMAS], among others.

It is a pleasure to be in such expert company, but more important it is an honor to have contributed this piece on what I regard as a crucial issue.

I ask unanimous consent, therefore, that the text of the article which I contributed to the spring issue of Air Affairs, which has just come out, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DECENTRALIZING THE FEDERAL GOVERNMENT

(By ALEXANDER WILEY, United States Senator from Wisconsin)

"Those who fail to read and learn from the lessons of history and the mistakes of the past are condemned to repeat those mistakes."

Many times in American history we have indeed failed to read history's lessons and to profit by past mistakes, with the result that we have repeated our follies. We failed to prepare for World War I; consequently many of our ill-trained young men died unnecessarily. We failed to prepare adequately for World War II; result, Pearl Harbor and then mass "training" with dummy wooden weapons. Now, from this layman's standpoint at least, we are failing to prepare against the dread contingency of a third global conflict.

Obviously, I could not and would not think of condemning totally the present military planning of our defense chiefs—men who have devoted lifetimes to the service of their country. But at least in the single area of proposed up-to-the-minute planning and acting for dispersal of key Government agencies, I feel that I am fairly qualified to condemn the miserable stalling, buck-passing, and lack of imagination which have characterized the governmental approach to this crucial problem.

I

Dispersal of Federal installations inevitably involves three phases:

(a) The executive agencies.

(b) The legislative branch, meaning, basically, the Congress.

(c) The judicial branch, meaning, basically, the Supreme Court.

Dispersal of the key units in our 2,000,000-man executive branch becomes the major challenge, as against the comparatively lesser problem of dispersing the relatively few hundreds of key individuals involved in the other two branches of Government. But before proceeding let us analyze some of the basic premises of our thinking:

1. The United States is engaged in an ideological war against communism.

2. The entire literature of the Communist movement indicates that its leaders believe that an ideological war is but the opening phase of an eventual military conflict between the two rival ideas. These leaders thus hold, in spite of occasional soothing propaganda to the contrary, that communism and capitalism cannot coexist on a peaceful basis in the world.

3. Although we recognize that Communist literature and thinking lead to the Reds' fatalism about inevitable conflict, we in the United States are firmly committed to finding a path to peace. We have no alternative because we recognize that war would solve no basic issues and would only bring a more horrible holocaust of death, disaster, and chaos than mankind has ever known.

4. While striving for peace, it is our obligation to maintain the strongest possible defenses. Russia recognizes military strength of her potential enemies as the major deterrent against war. Her entire system of government is predicated upon the use or implied threat of force and violence. Therefore, she respects only the implied threat of force and violence on the part of other nations, as well as respecting their preparations against surprise blitzes.

5. Part of our armed strength lies necessarily in our preparations for civil defense. Thus, a weak civil defense means that our armed forces will lack effective backing-up on the home front, which is obviously suicidal.

6. In the event of an atomic emergency, it will be too late to decentralize Government. Key Federal installations will obviously be a prime initial target of atomic, even of bacteriological, attack. Experience shows that offices, files, and personnel cannot be moved in a few hours. Therefore, it is essential that ordinary decentralization begin now.

7. The difficulties of decentralization are so tremendous that obviously priority lists must be arranged so that agencies having greatest importance in an atomic struggle are dispersed first. Among such agencies are, of course, the Atomic Energy Commission, the central units of the Department of National Defense, the White House, etc.

Many other premises are involved in this line of thinking, but if the reader accepts the above assumptions, we may proceed together to explore this theme. I recognize that our minds almost rebel in turning our thoughts to this grim fact, but stern realism must be the order of the day.

Above all, in this process, we must view the problem not as an academic matter, not as an idle theory, but with a sense of urgency, a sense of emergency. That is the only kind of approach which will enable us to solve problems at the present stage which might otherwise seem insuperable.

II

Remember that when America dropped her atom bombs on Hiroshima and Nagasaki, obviously she had the alternative of laying an atomic egg on Tokyo. Just conceive what would have happened to Japan if in one fiery radio-active blast, the Emperor, the Japanese Diet, most of the key military and naval leaders, most of the Japanese civilian leaders had been obliterated from the face of the earth. Not only would Japan have been knocked out of the war, but in effect, Nippon would have been knocked out of the peace for generations to come. Clearly, it takes a long time to develop new leadership in a nation even after the guns have ceased firing and the scars of war heal.

Now think what that lesson means to a potential aggressor like Soviet Russia. It means that if she could destroy the 5,000 or so key leaders of America's Government, not only could Russia probably quickly and decisively win an atomic war, but she could make America most assuredly a vassal state for generations to come. Why? Because most of America's leadership would be destroyed and it would take a very long time before new leaders, coming up from the local and State governments, could adequately take over the helm of the Federal Government, even of a satellite state.

The master minds of the Kremlin, we may be sure, are aware of these facts. Certainly, Moscow radio will, in the future, as it has in the past, scream against alleged war mongering on our part because we simply have dared to mention these obvious possibilities. Naturally, Pravda and Izvestia would like America to lullaby herself to sleep. Uncle Joe would like us to concentrate exclusively and smugly on talk fests in the United Nations. He would like us to centralize more thousands of key workers in sardine-packed Washington. He would like us to put off to a nebulous tomorrow all talk of dispersal.

But dare we pursue this course of folly, wittingly making ourselves a perfect target for potentially fatal atomic blows? Of course not.

To be sure, we must continue our sincere efforts through the United Nations, particularly as regards possible international control (necessarily ironclad) of atomic energy; we must strengthen our Voice of America program to reach the Russian people directly. We must hold out a sincere hand of friendship to Russia's enslaved millions. We must maintain our poise, our calm, never submitting to hysteria or undue alarm. We must implement the North Atlantic Pact. We must not, we dare not, forget about preparations for Federal decentralization.

III

Over a relatively long period of time I have had quite a series of letter exchanges and talks on this subject with the National Defense Department and previously with its component departments. I have corresponded with the United States Bureau of the Budget, with the National Security Resources Board, with the White House, with the Munitions Board, and with literally dozens of other Government agencies, Cabinet Department heads, etc., trying to emphasize the necessity of adequate planning now for decentralization. I have stated throughout this correspondence that certainly I, as an individual, could not presume to suggest to them comprehensive and detailed plans by which even a single department of Government could be decentralized, let alone the entire executive branch, or legislative branch, or judicial branch. What I have sought is to stimulate the most constructive thinking on the part of our Government leaders, so that they, in turn, who are more familiar with their respective establishments, could plan and act now against the dread contingency of a possible future war.

It is not, of course, enough to have plans on paper for, let us say, moving the Joint Chiefs of Staff from Washington, D. C., or moving the Supreme Court, or the Congress, or any other key governmental unit. It is not enough to have elaborate conference table discussions in one's department. What is needed is actually to lay the physical basis for decentralization. What do I mean by that? Well, obviously space must actually be provided in advance for decentralized Government personnel, for file systems, for special secret vaults, for offices. There must

be provided in advance a modern-type system of communication—teletype, direct telephone lines and other modern communication instruments. Personnel must be retrained to handle tasks on a decentralized basis. Certainly, too, Budget offices will have to get busy immediately in order to reckon the new costs that will be involved, and appropriation requests will have to be made to the Congress.

Is any of this planning going on now? The public is completely in the dark as to the answer to this question. Now, we would not want to be let in on any necessarily secret plans, but surely there is sufficient nonsecret data that could be made available to us, meaning to Congress and the people.

I have, it should be noted, received all sorts of assurances that some master plans do exist. So, what? Will they be activated when the first five atom bombs have pulverized Washington and burned up all the master plans, themselves?

Not long ago Secretary of Defense Louis Johnson wrote to me that: "Recognizing the fact that it is not beyond the bounds of possibility for Washington to be the target of a devastating or damaging attack, and that the seat of Government might have to be moved as a result, it follows that plans should be prepared to cover this contingency. Such plans are in the course of preparation."

Secretary of Defense Johnson went on to explain: "Specifically, these plans include the movement of three service elements of the Department of Defense to other locations and the designation of successors to military command."

I have a good deal of respect for our Secretary, but what visible evidence is there that any concrete dispersal actions have actually been taken thus far? None. Instead, Government employment continues to remain at around 210,000 in our jammed Capital, not to mention other huge Federal installations in such obvious targets as New York, Philadelphia, and Chicago.

IV

Decentralization thus is seen to mean more than spreading out from Washington: it means spreading out from every other bloated metropolitan target. Luckily, for us, decentralization will serve not only our military defense purposes but will serve other social and economic goals that are obvious to any student of modern day American society. Having Federal units (and payrolls) in small towns of 5,000 or 10,000 or slightly larger will not only pump economic vitality into the financial blood streams of those communities; it will, far more importantly, bring Uncle Sam closer to the people, closer to the grass roots; it will reactivate the interest of our people in their Government.

Moreover, there will be more than sufficient relatively nonessential personnel always remaining in Washington so as to prevent it from becoming a ghost town or from having its own economic life unduly impaired.

Where should the moved Government units be relocated? Obviously, several factors will affect the decision. It is clear, for example, that the Dairy Division of the United States Department of Agriculture could be decentralized into the dairying heart of the Nation and that goes on a comparable basis for other farm units—the cotton units, the wheat unit, etc. In the instance of other Government departments like the Atomic Energy Commission, the answer is not so clear. It would, of course, be a mistake simply to decentralize units to the geographic heart of the Nation, because that would only result in a new type of centralization. We must consider not only the question of space and distance (in the light of possible Russian guided-missile and air attacks over the North Pole or via Alaska) but we must also consider the question of the proximity of available defenses—anti-aircraft, radar, guided-missile stations, etc., to protect given units of Government.

What of the Congress? Could it disperse its Members to, let us say, 30 or 40 centers and legislate by television? What of the President and his staff? Could they govern from a moving train? These are not questions to be answered lightly, for they should result in intense study.

The idea of a mobile Capitol or White House is neither new nor improbable. Military leaders have often conducted operations from armored trains. Is this not a worthwhile phase for study, considering the fact that enemy planes and rockets would certainly be seeking out any fixed location of Congress and the President, as well as the Supreme Court, and train mobility (and/or legislation by television) might be the only answer.

Now, no one is suggesting that the Chief Executive move into a train right now. But now is the time for the Goverment's General Services Administration and similar units, its public buildings office, etc., to start laying concrete plans.

While on this phase of concreteness, the question naturally arises: Precisely how can Congress initiate steps to speed decentralization? May I suggest answers:

(a) As I have repeatedly recommended, every committee of the Congress should consult with the agency officials within its particular jurisdiction on dispersal problems. Thus, the Senate and House Judiciary Committees should review the question with the Department of Justice, the Finance and Ways and Means Committees should do so with the Treasury Department and so on down the line. The Senate and House Appropriations Committees, controlling as they do the purse-strings, will have over-all financial jurisdiction of this problem.

(b) The major long-range instruments for decentralization should, I believe, consist of legislation already pending before the Congress to set up a "little Hoover Commission." I am proud to have been one of the original cosponsors of legislation designed to set up such a National Commission on Inter-Government Relations. The purpose of this Commission would be to analyze the present status of Federal, State, local relationships; Federal, State, local taxes; the problem of increased Federal grants-in-aid; the problem of increasing Federal power.

One of the major units under such amended legislation should, I believe, be a Council on Decentralization, consisting of the finest brains of American military and civilian life in our Federal, State, and local Governments. This Council on Decentralization should submit its suggestions on an over-all basis to Congress and its committees and should coordinate the decentralization work in each of the units of the Federal Government.

Implicit in the idea of such a council and commission is the concept that it is not enough merely to disperse Federal functions; rather, on a long-range basis, it will be essential that some so-called Federal functions be turned back entirely to the States and localities in order to reverse the trend of Uncle Sam assuming power over everything.

Legal questions will arise not only in this long-range approach, but the very minute one begins to assume that atom bombs might one day rain down on Washington and other cities, obliterating many incumbents in Federal positions and making regular type Congressional-Presidential-Supreme Court government perhaps impossible. Already, scholars have begun to explore the legal problems of government in atomic emergency;[1] far more work must be done along this line by legislators and legal experts.

[1] Rossiter, Clinton L., Constitutional Dictatorship in the Atomic Age, Review of Politics, October 1949.

CONCLUSION

One almost pauses after reviewing even these few possibilities, to wonder if all this thinking is worth while or whether it is all a Buck-Rogerish nightmare. However, realistic reflection will show that this problem is unfortunately all too necessary a subject for review. Of course, each of us would prefer to concentrate on the problems of peace, to consider appropriations for social services, for an improved standard of living rather than matters relating to war. The consequences of such exclusive pacific concern are, however, clear to any realistic observer of history.

The Father of our Country, George Washington, rightly advised that "to be prepared for war is one of the most effectual means of preserving the peace."

It is most fitting that I submit these thoughts to the readers of this renowned publication, Air Affairs, because fortunately American aviation and its leaders have provided some of the most constructive, imaginative minds in our country. The aviation pioneers who barnstormed in flying crates, the daring young souls who flew over Chateau-Thierry and the Meuse-Argonne in what turned out to be flaming coffins, these young eagles set a standard for constructive experimentation that has carried over into many other fields of American military and civilian experience. I personally take inspiration from the great record of American aviation pioneering, particularly because in all the annals of American flying, there is perhaps no more glorious saga then that of a great son of my own State of Wisconsin, Gen. William Mitchell, familiar to every follower of aviation science, tactics and warfare.

Billy Mitchell taught us to think in terms of the future in preparing defense, rather than to prepare only for the previous war.

What would Billy Mitchell suggest to us by way of preparation against atomic warfare? This is the sort of question which I ask America's military leaders to ponder. What would other great pioneers in the field of legislation, in the field of military science, civilian government, industrial mobilization suggest to us? The answer is up to you, my friends.

Haile Selassie and the Idaho Miner

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. WHITE of Idaho. Mr. Speaker, while we are paying over $5,000,000,000 a year in interest on the national debt, it is interesting to learn of our Government's liberality in disposing of the surplus money metal—silver that for some reason the Treasury refuses to put in circulation in this country to pay Government expenses and reduce the national debt. The record discloses we have sent Ethiopia 5,425,000 ounces of silver—which we have coined for them in our mint now fully presented in the following statement:

While the Idaho miners were digging their silver out of the ground to sell to the Government for 65 cents an ounce and pay their taxes, the Government was balancing its books on its silver purchases by revaluing half the silver it bought, and putting its revalued silver in circulation as money in paying Government expenses with silver dollars

UNIVERSITY OF MICHIGAN LIBRARIES

and silver certificates at exactly double the value it paid for the silver; and, at the same time, piled up the other half of the silver sterilized and unused.

Over in Ethiopia, Haile Selassie was driven from his throne and his country taken over by Mussolini and his Italian Government. After the war was won by the United States Army and the British military forces, Haile Selassie was restored to his throne without his striking a blow for the freedom of his people or giving any military assistance to the Allies.

With Haile Selassie back on his throne, our Government in its benevolence has taken from its supply of money metal and given Haile Selassie 5,425,000 ounces of silver which was coined into money by our mint and put into circulation in Ethiopia at $1.11 an ounce.

We are told that in making this donation, our Government went through the formality of an agreement for the ultimate return of all the silver sent over to Haile Selassie. However, to judge from the record, it does not appear that our Government intends to hold Ethiopia to their bargain.

The record discloses that the potential silver seigniorage table printed each month in the Treasury Bulletin has been reduced by the amount of the silver furnished Haile Selassie and the rest of the foreign countries that got our silver for their money needs during the war.

So we must assume that the silver dug out of the ground by the Idaho miners and sold to our Government for 65 cents per ounce and donated to Haile Selassie, who put it into circulation for 46 cents an ounce more than the Idaho miners got for it, will continue to supply the money function in Ethiopia and that Haile Selassie and his people will live happily ever after.

Question: What does free silver mean?

"Best Politician the Country Ever Had" Giving Himself a Real Test

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Lowell Mellett, which appeared in the Washington Evening Star of May 11, 1950:

ON THE OTHER HAND—"BEST POLITICIAN THE COUNTRY EVER HAD" GIVING HIMSELF A REAL TEST

(By Lowell Mellett)

President Truman's current excursion into the hinterland may reveal whether or not Presidential Candidate Harold Stassen spoke a half-truth the other day when he characterized Mr. Truman as the worst President and the best politician the country ever has had.

It could be a half-truth, but no more than that. The first half of the statement, of course, was only a bit of preposterous extravagance that might better have been omitted by the part-time politician, part-time university president. Aside from the matter of good taste, it raises again the question of Mr. Stassen's qualification for his own job—that of an educator. The wide-eyed students of Pennsylvania University must have been disturbed by the prexy's curious forgetfulness of history. The youngest among them are aware of the kind of Presidents we had as recently as the lamentable twenties, not to go back any farther, and some of the not-so-wide-eyed politicians of Stassen's own party would prefer not to invite comparisons with those Presidents.

POSSIBLE HALF-TRUTH

As for the possible half-truth, President Truman is now giving his proficiency as a politician the toughest of all tests. He is taking on a battle within his own party as a means toward helping the party to win this year and retain control of the Government. It is not a little battle; it takes in a lot of territory and involves sizable forces. Should he win and then obtain the fruits of his victory, history in due time will have opportunity to judge whether he was the worst of Presidents or one of the best; it will be compelled to recognize him as one of the most courageous, in any case.

For himself, the President is obviously willing to be the best of politicians, believing that if he is it will make him anything but the worst of Presidents.

The clue to the kind of politics the President is undertaking was given by his speech in Burlington, Iowa. "I will say one thing," he said, "and say it emphatically. The Eighty-first Congress has done a lot better than the Eightieth ever did and it is going to do a lot more than it has done up to date. The record of the Eighty-first Congress is not complete yet, but when it finally finishes its work and goes home, then I will be ready to come back and give you the full details, and let the chips fall where they may."

EFFECT ON HILL STARTLING

No other President in our time ever talked that kind of turkey to the members of his own party in Congress. The effect on Capitol Hill has been slightly startling.

Generally speaking the Democrats in Congress were happy to see the President take to the road, to see him seize the initiative for his party in this congressional campaign year. Some of them, however, determined to go their own way, regardless of the platform and other promises made in the party's name, are not so happy to have him take the initiative in the intraparty battle.

But even among the pussyfooters and the members fairly blind to the realities of this year's politics, there is recognition of the President's basic strategy. They know that he knows he cannot set the prairies afire again as he did in 1948 with promises, that this year the party will have to win on performance. What hurts is that the performance is up to themselves and that, as of today, they are away behind in their work.

Two years ago President Truman clinched his case against the Eightieth Congress by calling it back after it had adjourned with its work unfinished, just to dramatize its do-nothingness. There is nothing to prevent the President from keeping his own Congress here, campaign or no campaign, to force it to give him a record he can take to the country with some confidence.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, May 12 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that into the Appendix of the RECORD there may go an excerpt from the ticker tape of today, from Chicago, the opening portion of which says:

Strike-crippled railroads laid off 141,000 workers today.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

CHICAGO.—Strike-crippled railroads laid off 141,000 workers today and spokesmen said they expected the number of idle employees to mount to 2,000,000 by the end of the week.

Industries in the areas affected by the firemen's strike also began mass layoffs.

At Detroit, meanwhile, reports persisted that the New York Central planned to halt all operations for the duration of the strike, but a company official denied such plans.

The New York Central furloughed 40,000 employees and warned that another 10,000 might be out of work by Saturday. The Pennsylvania Railroad laid off 85,000 and the Southern Railroad, 16,000. The Santa Fe closed all of its shops, but did not announce the number of workers idled.

The strike by 18,000 members of the Brotherhood of Railroad Firemen and Enginemen went into its third day.

The National Railway Mediation Board is still in Chicago, hoping that negotiations might be renewed to bring about a settlement.

However, a railroad official said management negotiators would refuse to consider the union's modified demand for an additional man only on fast through trains because they regard it as a strategic move to "get a foot in the door" on the original demand.

Order of the Sisters of St. Anne

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. FURCOLO. Mr. Speaker, I have just been informed of a centennial celebration held in my district which I know will be of interest to the Members. The Sisters of St. Anne celebrated the one hundredth anniversary of the founding of their order with appropriate ceremonies, including a solemn high mass of thanksgiving at the Notre Dame Church, Easthampton, Mass., and, in view of the outstanding history of the order, I am proud to call it to the attention of the Members today.

The 75 nuns who are presently members of the Order of the Sisters of St. Anne, their guests and the residents of the area had a great deal to celebrate. This Order is composed mainly of teachers at the Notre Dame School in Easthampton, Mass., and, in the history of the school have taught many hundreds of residents of my district who have gone out into the world with this excellent educational background and have accredited themselves well in the American way. All of us in western Massachusetts are extremely proud of the devotion to duty of the members of the order and recognize their outstanding contribution to our area. They have dedicated their lives to helping others and the results of their efforts are ever present in the town of Easthampton and western

Massachusetts in the outstanding citizenry of their former students.

Therefore, it is a great pleasure for me to have this opportunity to make this known to my colleagues and I know all of you will join with me in congratulating the Sisters of St. Anne and wishing them every future success in their work.

James V. (for Victory) Buckley

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I am sure that on Monday, May 15, my colleagues on both sides of the aisle would wish to join with me in extending hearty good wishes and congratulations to the distinguished gentleman from Illinois [Mr. BUCKLEY], on the occasion of the fifty-eighth anniversary of his birth.

The Honorable JAMES V. BUCKLEY represents the fourth district of Illinois, beginning his service to the people of Chicago and nearby suburban areas with the Eighty-first Congress. He is known to many admiring constituents as JAMES V.—for Victory—BUCKLEY.

A happy circumstance of the day will be the presence of Mr. BUCKLEY in Chicago at the Jefferson Jubilee to join in the city's welcome to the President of the United States. President Truman celebrated his sixty-sixth anniversary on May 11, honoring which occasion Mr. BUCKLEY sent the following message:

The Honorable HARRY S. TRUMAN,
President of the United States,
White House:

Mr. President, congratulations on this anniversary of your birth. May future years promise abundant harvest as those passed have yielded the fruits of your good works, your great contributions to our Nation and our people as its President, counselor, and leader. In these days of reclamation of humanity from strife, prejudice, and misunderstanding you have demonstrated high purpose and worthy ideals in the service of your fellowman. May long life, happiness, strength, and wisdom to carry on be yours for all the years to come. May I add my sincere wishes that if you choose to run in 1952, victory will be yours by an overwhelming majority.

JAMES V. BUCKLEY,
Congressman, Fourth Illinois District.

Today, on the eve of his own birthday, our colleague from Illinois received this inspiring reply:

THE WHITE HOUSE,
ABOARD THE PRESIDENT'S TRAIN,
Washington, D. C., May 11, 1950.

Honorable JAMES V. BUCKLEY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BUCKLEY: I cannot tell you how much I appreciate your message felicitating me on my birthday. Such generous words of commendation and good wishes have touched me deeply.

My thanks for your confidence in my leadership, and kindest regards.

Very sincerely yours,

HARRY TRUMAN.

And now may I give, Mr. Speaker and my colleagues, a brief sketch of the background of our coworker from Illinois. The Honorable JAMES V.—for Victory—BUCKLEY was born and reared on a farm in Saginaw County, Mich., the fifth of a family of 11 children. He attended public schools in his home area. He began his business career in the automobile industry. Then, for more than 20 years, he was a builder, engaged in the construction of thousands of homes in the Calumet region of Cook County, Ill., following which, during the war, with materials at a priority, he went into warplant production service, becoming president of local union 714, UAW-CIO. I might add that our colleague was a pioneer in the field of labor-management relations and that today he continues to enjoy the prestige of leadership in this field. No one can know the Illinois Member without recognizing him as a man of excellent administrative and executive ability.

I might mention, also, the commendable civic spirit of the gentleman we honor. He is active in school, church, community, and State affairs, and gives generously of himself and his talents in service to his people and his Nation. We wish our distinguished friend a very happy birthday with many fruitful and prosperous years to come. May the V in his name always portend the victory ahead for the reign of human understanding, under wise and constructive laws in the interest of all the people, to which he has devoted a lifetime of service.

What We Must Do To Stay Free

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, last month it was my pleasure and privilege to address the annual membership meeting of the Executive-Foreman's Club of Elizabeth, N. J. I have been provided with a stenographic report of this address, together with a transcript of the questions and answers which followed it, and I ask leave of the Senate to insert this entire transcript in the Appendix of the RECORD, since many of those who were present have written to me asking whether it would be possible to secure copies of what was said.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT WE MUST DO TO STAY FREE

Mr. STEVENS (president, presiding). I am glad for this opportunity as I feel we really owe a debt of gratitude to one of the men at the head table this evening, a man who is to introduce our speaker and who has been a real friend of this club although he does not live in Elizabeth, but whenever we want a top-ranking man we call George Stringfellow, vice president and division manager of the Thomas A. Edison Co. in charge of the storage battery division over in West Orange, and George will say to me, "Emery, he will be there," and he has never failed us yet.

I think it is only fair that I should say just a word about Mr. Stringfellow himself. He is not going to be the speaker, and I suppose when I get through with this four-page or six-page document, whatever it is, you will think I was introducing the speaker. I am not. He is going to do that, but I think it is only fair to him that you should know something about him and what he has done for our club.

I told you that he is division manager and vice president of the Thomas A. Edison Co. in West Orange. He is a director of the Mine Safety Appliances Co. of Pittsburgh, a member of the board of directors of the Mining Congress.

I could go on with this because there are over a hundred things on here. I cannot read them all. He is a member of the American Iron and Steel Institute and the American Institute of Mining and Metallurgical Engineers.

I think one of the greatest achievements—it just happened not very long ago and I was very much interested in reading it in the newspapers—he was made an honorary member of the New Jersey Medical Society. He is not a medical man. He is one of the three laymen in 184 years who has been made a member of the American Medical Association—and that is no mean honor.

Let me skip over the Taxpayers' Association and a few other things. He is a member of the board of managers of the New Jersey Home for Disabled Soldiers at Menlo Park and the Edisons Pioneers and the Old Timers.

He is the chairman of the board of trustees of Ithaca College, Ithaca, N. Y. He has received an honorary degree of doctor of fine arts from Ithaca and received an honorary degree of doctor of laws from the South Jersey Law School.

Some of you will be interested to know that he served two terms as potentate of Salaam Temple.

He is a member of the Imperial Divan of the Shrine of North America. I think he has 5 years to go and he is going to be upstairs.

He is a member of the board of directors and vice chairman of the executive committee of the American Cancer Society, and I could mention other things in connection with the American Cancer Society. I mention that to show you that he is a very busy man and does take time out to cooperate with our club, even to the point of giving up part of his afternoon and evening to come down here to be with us tonight.

I am very happy to present to you "Doctor" George Stringfellow, who will present the Senator. [Applause.]

Mr. STRINGFELLOW. Mr. President, distinguished guests, Senator MUNDT, and my good friend Emery Stevens, proof that he is a friend of mine is the commercial he gave me. [Laughter.]

I think the greatest deficit in the world today is not money but intellectual integrity, and I know of no man in all the world who is more richly endowed with this precious ingredient than Emery Stevens. [Applause.]

It was Aristotle, that great lover of democracy, who, in his wisdom, once said, "The greatest compliment one can pay another is to say that he is a good citizen." I think Emery Stevens is a good citizen.

Of course, I am delighted to present to you your speaker tonight, but when I bring you a speaker I usually bring a picket line, and I can think of no greater endorsement. [Laughter.]

Last year, you recall, I brought BOB TAFT, and we waded right through the picket line. Tonight as I brought Senator MUNDT through the picket line, or vice versa, one of the professional pickets said, "There goes Stringfellow." [Laughter.]

UNIVERSITY OF MICHIGAN LIBRARIES

Now I could say much more about, and truthfully, too, about Senator MUNDT than I am going to say. This is a brief of the man's biography (illustrating a number of papers).

Senator MUNDT served 10 years in the lower House. He was elected and reelected five times and each time he was elected by a greater majority.

In 1948 he graduated to the upper House, or the United States Senate, and he led in his State the presidential candidate on his party ticket, Mr. Dewey, by about 50,000. Senator MUNDT is a man of courage, character, and the will to tell you how he feels and stands on almost any issue.

Following his address this evening, he will answer questions—and I said "answer questions." I hope you confine your remarks to questions. If you want to engage in a debate, make your own arrangements. [Laughter.]

I am going to ask you if you will not keep your remarks to questions, and sometimes that is hard to do.

Senator MUNDT has selected as his subject for this evening "What we must do to stay free."

It is indeed a pleasure for me and a great honor to present to you a real statesman and a true American who asks not who is right but what is right.

Senator MUNDT, Mr. President, Mr. Emery Stevens, Mr. George Stringfellow, and fellow Americans all: That was indeed a mighty fine and friendly and flattering introduction that I secured from Mr. Stringfellow, and I am deeply indebted to him for his thoughtfulness and his generosity. I am happy, too, that it was possible for me to get away from the hurly-burly activities of Washington this afternoon to come up here and break bread with you and to think out loud with this fine, distinguished aggregation of free wheeling and free enterprising Americans about some of the prodigious problems which plague and perplex us all in these trying times.

You know, down in Washington increasingly we who live there come to feel that we are a city of very important people. The city has a population now in its metropolitan area of a million human beings. As the Capital of this great free Republic it has become the focal point of world affairs and everybody down there is an important element in the capital city.

He either is important or thinks he is important, and it adds up to about the same thing either way. [Laughter.]

When you get off at Union Station and induce a taxicab driver to take you for 30 cents to the Statler Hotel or to the Senate Office Building or the White House—although I do not imagine many of you go to the White House—or wherever you happen to go for 30 cents in a taxicab ride, if you interrogate the taxicab driver about affairs, foreign or domestic, he will give you an apparently authentic answer without any doubt or mental reservations whatsoever on any subject that you care to ask him about. [Laughter.]

Every taxicab driver in Washington consequently is a mighty important individual. All the members of the House of Representatives down there virtually are candidates for the United States Senate, so they certainly are also mighty important people.

The Members of the Senate and the members of the President's Cabinet are all candidates for President, and so, consequently, they are mighty important people; and our Presidents of late years are coming to think that each of them is entitled to a lifetime lease on the White House, so they, too, are mighty important people. [Laughter.]

So, you see, we are an aggregation of important individuals, as we think down in Washington. One of the things I want to talk to you about tonight is this tendency on the part of people who are members of my fraternity, the political fraternity, to consider ourselves increasingly important.

I think it is an erroneous concept. I think the really important people of America are, or should be, individuals such as you in private business, in private professions—individuals who at one time in the history of this Republic were conceived to be the folks who ran the country. Unfortunately, in my opinion, in large part because of the lethargy on the part of ordinary individuals around the country, politicians and pressure groups and columnists and commentators today are running the Nation and you are increasingly finding yourselves less important and less influential in controlling the destiny of this Republic.

I think it is serious. I think you are partly to blame. I think unless you can correct the attitude which is universally sweeping across this country and which leaves public decisions almost exclusively to public men that we are going to continue in America to lose freedoms which once were so richly enjoyed by us all.

I know that down in Washington we can and should learn things from private individuals. A couple of months ago a man came down from Kalamazoo, Mich., to Washington. He was just an ordinary man, a "Joe Bloke" type of private citizen, but he had one peculiarity. He started out early in the morning the first day of his arrival handing out oversize tips to all the people that he met.

You may remember reading about him in the newspapers of the country. He gave the hat check girl at the Statler Hotel a $100 tip for checking his hat and coat. He went down into the Embassy Room and tipped the head waiter a couple of hundred dollars to get a good table and tipped the waiters who served him $100 apiece.

When the taxicab driver took him up to the Capitol the next morning he tipped the taxicab driver $200. He bought some finery for his family at Woodward & Lothrop's and tipped the saleslady $100, and was in the process of tipping the barber who had just completed shaving him and cutting his hair with $1,000 when, finally, the Metropolitan Police caught up with him, arrested him, and put him in jail not because, you understand, it is against the law to give money away down in Washington, but the politicians down there could not stand that kind of competition. [Laughter.]

As a matter of fact, I think they got him just in time. I understand that the President had the FBI looking for him; they were going to make him a member of the President's Cabinet. [Laughter.] I was kind of glad to see him locked up myself because the fellow was not quite playing the game according to Hoyle.

We have discovered down in Washington these late years, you see, that the best way in the world in which to get elected to public office is to give away the other fellow's money and to make promises to purchase things for the people of Elizabeth, N. J., with money which is to be collected exclusively from the people of Syracuse, N. Y. [laughter]; and when you are in Syracuse, you just reverse the process, and it seems to work mighty fine. But this fellow was sort of violating the code.

He was giving away his own money and we did not want that thing to become contagious down in Washington, so it was a good thing that they locked him up. [Laughter.]

I am serious when I say that while I have been down in Washington for 12 years, I still have enough of South Dakota in me to believe that the important people of America are, or should be, the farmers, the laborers, the business and professional people of the country, and not those who temporarily hold positions of authority and power down on what I refer to as the wrong side of the Potomac River. I think in large part because we have developed that atmosphere of importance down in Washington, however, which is shared by all who live there and enjoyed by all who make Washington their home that some difficulties are accumulating for the people of America which are growing increasingly large and increasingly imminent, week after week and day after day.

That is what I want to discuss with you tonight under the heading of what, in my opinion, primarily challenges the freedoms of America, because I think they are being challenged. We know they are being challenged from abroad. I believe they are also being dangerously challenged here at home.

They are being challenged by the marching armies and the intriguing conspiracies of the Communists in every foreign capital and on a great many foreign fronts.

Certainly our freedoms are being challenged when we live in an era of history when a gigantic totalitarian power is building and stockpiling atomic bombs, each of which in theory, if not in fact, is being fabricated for the purpose of eventually dropping them upon our country and our people. That tends to circumscribe our freedom, our liberty, and our happiness; and the more we ponder on it and the more we realize the atomic bomb is the first weapon in history which better serves the cause of tyranny than freedom, the more we recognize that the areas of our freedom are growing increasingly small.

You see, up until they built the bomb it did not make much difference what country first discovered liquid fire or a tank or some other kind of war weapon because the great industrial genius and productive capacity of America could redesign it, refine it, and break it up into a number of parts, and set up a production line and create a weapon which could last longer and shoot harder and straighter than that produced by any other country in the world. We can still do it.

We built the first bomb. We built the biggest bomb. We have built the most bombs, but we developed a weapon which is so destructive in its character that it depends in large part upon the element of dropping it by surprise for its efficacy because it might well be that the country shooting second in an atomic war shoots a thousand years too late—and democracies never shoot first.

While we debate our wars, as we should, and while we discuss the difficulties and differences of opinion which confront us before we go to war, as we must if we are going to stay free, surely any country which has fabricated bombs is going to start dropping them on us before we conclude the debate. So if you agree with me, as I think your common horse sense must compel you to do, you recognize that any country smart enough to make a bomb at all is wise enough not to drop any bombs until it drops enough bombs simultaneously to obliterate the targets; also, you recognize that living in an atomic age when we have nothing effective to curtail or curb the aggressions of communism or to protect ourselves against an atomic and hydrogen bomb does tend to limit the areas of freedom for us all because it shortens the life expectancy of each of us.

That, however, is not what I want to talk to you about tonight. Serious as I think that situation is—and I know it is much more serious than most of us dare even admit when we are confronted with the evidence—I somehow feel that the decisive battle for freedom in our generation is going to be won or lost on American soil, won or lost by men and women like you and by what men and women like you either do or fail to do within the next 5 years. I do not anticipate an atomic attack from any source in so short a time. I think it can be demonstrated that the areas of

human freedom all around the world have been growing steadily smaller for at least two decades and that America is no exception to the rule. What happens in the next 5 years may well fix the pattern for the next 500.

I think it can be demonstrated further that the reason why the areas of human freedom have been growing increasingly small all over the world is because out of Germany 100 years ago there came a new ism and a new creed which most of us do not understand and which most of those who parade in picket lines to support do not analyze and define, but because communism was launched 100 years ago and because it has been able to develop a great many collateral creeds and friendly fronts and confused and bewildered followers, I think we can prove demonstrably and geographically and factually that your freedoms and mine are in jeopardy and are growing less secure by the hour.

Now let me undertake to discuss with you those two rather hyperbolic statements; the first, that the areas of human freedom all over the world are growing smaller and the second, that the main reason for that decrease in the flourishing of human liberty is communism and the factors which it controls and the individuals whom it contaminates.

Twenty years ago everybody was not free. Twenty years ago these human freedoms which we cherish, most of us beyond life itself, were not available to everyone. Twenty years ago in Germany under Hitler and in Italy under Mussolini and in Russia under Stalin and in Japan under the Shinto priests and in certain other areas in various gradations and degrees, people were not completely free. But, by and large, except for the individuals in those four countries and in semicivilized areas, mankind had developed over a period of many centuries increasing control over his own future, his own destiny and his own behavior.

There was a marked degree of political and economic freedom all over the world flourishing under quite a variety of different types of governments. What is the picture today, 20 years later?

Twenty years later we find that Russia is still controlled by the Communists. We find Germany and Japan unable to exercise their own autonomy because they are the losers in a war which they precipitated, and we are responsible through our armies of occupation for what occurs in those countries. Italy, while it operates under a fine, young Christian leader by the name of De Gasperi, finds itself constantly threatened and imperiled by the communistic forces of Togliatti, the Communist leader, who controls some 40 percent of the individuals of Italy and who is able constantly to keep the De Gasperi government on the anxious seat so as to prevent De Gasperi from producing the economic and political reforms so essential in Italy if they are going to have stability and a sound and equitable system of economics and of government.

OUR AREA OF FREEDOM GROWS SMALLER

However, communism no longer is limited to Russia. We find now that instead of looking at Russia and saying, "There is the land in which the Communists control 195,000,000 human beings in Russia," that during these past 20 years communism has moved forward so fast that it now controls a great many other hundreds of millions of people. The first to go were Lithuania, Latvia, and Estonia, the three countries of the Baltic Republics. When I went down to Washington in 1938, I knew the Ministers of those Baltic Republics, I still know some of them who still reside in Washington. They are Ministers without portfolio because Lithuania, Latvia, and Estonia were conquered by the might of the Russians.

The Russian Army moved in by force and took over those countries against their will, and very few areas of the civilized and democratic world even filed a protest at the rape of freedom and the disruption of liberty in those three little Christian, patriotic, democratic, and private-ownership republics.

Now, let us look to the south, where we have Albania. Twenty years ago Albania had a certain amount of rugged individual freedom which adheres normally for people living in mountainous areas. The royal house of the Albania family had sort of a limited kind of monarchy. They had a parliamentary procedure.

They had certain rights of freedom of movement, freedom of speech, freedom of religion, and freedom of ownership. By American standards they certainly were not free. By the standards of the Balkans, by the standards of the Middle East, however, they were substantially free. Now they are all under the control of a fellow by the name of Enver Hoxha, a dictator selected by the politburo of Moscow in the closing days of the war who controls the decisions and the lives of everybody in Albania, and there is not any freedom left anywhere in that country.

So the areas of freedom at least are smaller than they were 20 years ago by the loss of Lithuania, Latvia, and Estonia, and by the fact that Albania has been pulled into the clutch of the Communists—but that is not all.

The Balkan countries—Rumania, Hungary, and Bulgaria—with their beautifully romantic cities of Bucharest, Budapest, and Sofia, that area of the world which has contributed so much to culture and to the medical profession and to the romance of the world, all of them today have been completely sucked into the Communist orbit against their will.

Different individuals tried to resist the trend, or should I say groups of individuals? Cardinal Mindszenty tried to keep the church doors open in Budapest and he found himself arrested and tried by a "kangaroo court" and incarcerated in prison where he is dying as a piece of human clay today simply because he wanted to keep the doors of his faith, the Catholic religion, open in Hungary. After that, 12 Methodist bishops of the creed to which I belong, tried to keep the Methodist Church doors open in Bulgaria. They were treated precisely in the same manner as Cardinal Mindszenty was treated in Hungary, thereby giving the eternal lie to those who would tell you that communism is simply against the Catholic Church or simply against the Jewish synagogue or the Protestant church.

Communism is against any church anywhere. It tries to make you believe that there is no God.

Now a little bit later I am going to show you why. Another fellow who tried to maintain freedom tried it in Hungary, a fellow by the name of Vogeler.

He was a businessman, a man of your profession. He wanted to maintain the right of private ownership and he did not escape in time, this American citizen, and so by being tortured by hot blades put in between his fingers and his fingernails, by all the kinds of torture that the fanatical Asiatic mind of the Communist leader can conceive, they compelled him to admit crimes which he had never perpetrated and he also has been incarcerated and locked up to die.

There is no freedom left in the Balkans, and they were remarkably free 20 years ago. Next to the Balkans comes Yugoslavia, where a lot of people who were of the old Austrian-Hungarian Empire tried to set up a government under King Peter and Prince Paul. They had a considerable degree of freedom in that enlightened era following World War I and now Tito runs it as a Communist dictator.

There you have Tito, the leader of the Communists in Yugoslavia, a creature of Stalin. At one time he was a member of the Secretariat of Moscow.

At one time he was Stalin's representative on the Communist side of the Spanish war; temporarily in disagreement with Stalin, to be sure, but there is no hope for those of us who oppose collectivism, no hope for those of us who oppose communism or socialism, in the fact there is an argument going on between Stalin and Tito because they are not arguing about the right things to satisfy us.

You can read carefully the reports of that debate. There is no difference of opinion between Stalin and Tito as to whether or not the churches should be open in Belgrade. They both agree that God is something which must be defamed and denounced to have communism.

They never argue about whether a peasant should own his own farm or a worker be permitted to select his own job or a shopkeeper or a manufacturer to run his own enterprise. They both agree that under communism only the state can make the decisions and the people must be chained to the job.

The argument is only about whether Stalin or Tito is to be the chieftain of the Red ship of state once it has conquered all the seas around it, and there is no freedom left in Yugoslavia.

Next comes Czechoslovakia, in some respects one of the most pathetic cases, and in some respects one of the most important, especially for Americans.

I have visited Czechoslovakia three times since the war. I watched the slow, sordid process by which Czechoslovakia lost its freedom and, mind you, there was a country that had almost the same degree of freedom that we have in America. After World War I, a great American idealist, the President of this country in World War I, Woodrow Wilson, wrote in his own handwriting much of the Constitution of Czechoslovakia. He helped set up a democratic government and that government produced freemen like Benes and Masaryk who became famous around the world for their dedication to the ways of freemen.

Czechoslovakia was, indeed, one of the bright spots and the big dividends of the first world conflict. I recall visiting it in 1947 as a member of a joint committee of the Senate and the House of which, incidentally, our present Vice President, ALBEN BARKLEY, was a member.

He was then the senior Senator from Kentucky, the greatest advertising agent that Paducah, Ky., ever had. ALBEN, in those days, to be sure, was more interested in affairs of state than he was in affairs amour, but he puts his heart into any project which he undertakes. He was a very valuable member of our committee. [Laughter.]

He and I and our colleagues sat around in state dinners in Prague and we had long talks with the present dictator, long talks with Clementis and Gottwald, the Communist leaders in the government, all of them giving ostentatious expressions of loyalty to Czechoslovakia—but what happened?

COMMUNISTS HAVE INFILTRATED WASHINGTON TOO

By the process of infiltrating the Government, by the process of putting Communists in certain key positions in the Government in Prague, by employing the formula of destruction item by item, measure by measure, plan by plan, in exact conformity with the proposals now being attempted by the Communists in France, in England, and in Washington, D. C., Czechoslovakia lost its freedom without the firing of a shot by a coup d'état, by weakening and sabotaging the forces of freedom, by perverting the foreign policy of Czechoslovakia, by diluting the decisions which might have enabled the Czechs to stay free.

It is no exaggeration, I assure you, to tell you that the situation in Prague which ALBEN BARKLEY and I saw demonstrated

clearly that they were following there the formula now being employed in Washington, D. C.

ALGER HISS

For a Gottwald, I give you, if you please, in Washington, D. C., Alger Hiss. Gottwald at his worst could not conceivably have done more to determine the course of history of his country than Alger Hiss did at Yalta as assistant to the Assistant Secretary of State and one of the main architects of the Yalta appeasement conference; Alger Hiss who, across the river from you, was convicted in a Federal court by 12 men of a Federal jury not for any charge of treason because of the statute of limitations, but convicted for lying about the fact that he was engaging in treason while serving as assistant to the Assistant Secretary of State.

HENRY JULIAN WADLEIGH

For Clementis, I give you Henry Julian Wadleigh who was a colleague of Alger Hiss in the State Department and who, like Alger, had graduated from our great universities with a Phi Beta Kappa key and summa cum laude, and who, even beyond Alger Hiss, had gone off to Oxford to study; a man who, unfortunately, in many ways has not attained the same degree of national attention as Alger Hiss because he did not happen to have a $20,000 a year job in a great American foundation, financed by American business incidentally, at the time they caught him.

When they caught Hiss he was working for the Carnegie Foundation. When they caught Henry Julian Wadleigh, he had a very unimportant job. So each case was not equally well publicized.

To protect his $20,000-a-year job with the Carnegie Peace Foundation, of which he was a leading light, Alger Hiss lied to the judge and the jury. With no job to protect and the House Committee on Un-American Activities closing in on him, Henry Julian Wadleigh confessed to his crime and said, "Of course, for hundreds of times I delivered security secrets from the State Department to Russian Communists in New York and in Washington."

He finally turned State's evidence and testified against Alger Hiss, his colleague, in the particular court case in which Alger Hiss was convicted.

CARL ALDO MARZANI

For Fierlinger I give you Carl Aldo Marzani now in the Federal penitentiary because he was caught by the FBI working as a Communist in our State Department in one of the key spots where he was trying to confuse and befuddle a country, to misinterpret the codes and to distort the messages being sent perhaps from our foreign dispatch offices in China and in Asia, thereby making it more probable that we would develop a program and an attitude and a policy toward China which would serve the Communists and sabotage the free. So it is no exaggeration to say the formula is the same here as the one used in Prague.

Czechoslovakia was closer to Russia than Washington. It was smaller. They did not have as long a history and background and experience in democracy as we did. So Czechoslovakia fell to the Communist conspirators.

I am not suggesting we are about to fall by a coup d'état to the Communists but I am suggesting that the Communists in our Government have had influence in the past so tremendous as to make us realize how easy it must have been for them to destroy freedom entirely and to sell countries out to their foreign masters when they served the government.

Poland is next to Czechoslovakia. I do not have to tell the people of Elizabeth, N. J., who live here in this great cosmopolitan area how the Poles throughout history have been devoted to freedom, dedicated to an indefatigable zest for freedom, and every time aggressors ground the Polish people down, they rose up like the courageous soldiers that they are to recapture for themselves the control of their own destiny. But this time something happened to the Poles because at Yalta where Mr. Hiss served so energetically, Mr. Stalin said to our leaders at Yalta that in the postwar world he thought it was only fair that the Communist government in Russia should have control of that portion of Poland after the war that the Russians had conquered fighting as an ally of Adolph Hitler in the first months of World War II.

Oh, how people such as those who financed the picket lines in front of this hotel tonight hate to be reminded of the sordid facts of history. They want us to forget that when the Nazis and Hitler so unjustifiedly attacked the Poles from the front and drove through Danzig and into Poland and when the Poles were defending so valorously Warsaw with the Hun at their gate, the Red Armies of Russia attacking Poland by surprise from the rear gave her the coup de grâce that destroyed the fighting capacity of the Poles and that the Russians attacked the Poles in conformity with the agreement between Hitler, Von Ribbentrop, Molotov, and Stalin which was the pact that gave birth to World War II.

HOW POLAND WAS ENSLAVED

The Communists do not like to be reminded of that but it is written in the red blood of history. And so Stalin said to our leaders at Yalta, "Since we fought for some time as an ally of Hitler's, since Communists and Nazis joined in an attack against the Poles, since in that conflict we conquered everything east of the Curzon line, that we expect to keep after the war is over."

We protested very feebly and very ineffectively and acquiesced to the eternal shame of our country and helped perhaps toward the building of the third world war. In all events, the Russians went in. They did not stop at the Curzon line. They drove right on and took all of Poland and went further than that, if you please, and took the eastern provinces of Germany. They have them to this date and this late hour and there is less freedom there than there was 20 years ago.

Now I come to China. There are some 450,000,000 human beings today under the yoke in China. Tonight's newspapers bring the report that they have captured the first big island as a stepping stone to Formosa and the timetable indicates that May or June will likely be the time when they will attempt to capture Formosa.

WHAT HAPPENED IN CHINA

Remember China. That is the only country in the world that ever fought a war for the United States. We have fought a lot of wars for other countries. We fought to liberate the people from the tyranny of Spain.

We fought wars for different causes and different creeds and for different areas of the world and have joined our force and prowess and idealism with like-minded people against common enemies time and anon, but let the oldest historian here, if he can, pass up a note asking your speaker to explain some exception that he thinks he has found to the generalization that no other country in history ever fought a war for us except China under the nationalistic government of Chiang Kai-shek.

At Pearl Harbor the bombs came dropping from the Japanese by surprise, butchering, and murdering hundreds and hundreds of American youth on a pretty Sunday morning. After we declared war on the Japs and the Germans and the Italians declared war on us and we declared war on them, we were in it in a two-front war.

Our military men very wisely, in my opinion, decided that the thing to do first of all was to defeat Hitler and Mussolini. They were the tough guys. So we sent an emissary to Chiang Kai-shek and said, "Look, fellow, we are all in this war together now. It is true the Japs have attacked us and we are fighting the Japs and while you are not fighting the Italians and you are not fighting the Germans, if you would just be willing to keep on fighting the Japs all alone for a while, sacrifice a few hundred thousand more dead Chinese soldiers and a few more provinces of China to buy time enough for us to defeat Hitler and Mussolini, we solemnly promise you that after that we will come back and help drive the Japs out of your country and help restore to your government the autonomy of China."

Chiang Kai-shek said, "Well, I will try, but we have been fighting a long time. Can't you give me a little more help than that?" And so in a moment of almost unprecedented magnanimity we said, "This is what we will do. Since we are now in the war against Japan ourselves from now on we will not sell the Japanese any more scrap iron and oil for the duration of the war," because we had been selling it up to 2 days before Pearl Harbor to help the Japs attack Chiang Kai-shek. Anyhow, the Chinese kept their promise.

They lost most of their provinces and they lost over a million men instead of the several hundred thousand we asked them to exchange for time. We kept part of our promise.

We defeated Hitler and Mussolini and we were planning to go over to help China but the Yalta Conference came along and at Yalta it is recorded in the agreement that Stalin said, "I want to have from China the heart of the country, the Ruhr of Asia, Manchuria."

He insisted and, for the first time in American history, we sold out an ally who had fought for us in a war and we turned to the country who had fought a war for us and said, "On second thought, you Nationalists are not as liberal as we thought you were. You are kind of reactionary and we do not believe you have a representative enough government," and so we sold out Manchuria to the Communists and they have been rolling through China ever since.

Those are facts from the book of records. To me it is particularly bad not only because of the infamy it has brought to us in the eyes of people all over the world who cannot understand that kind of ingratitude, but because it has plunged us into such a situation that as of last night, anyhow, our Department of State still has no policy toward Asia.

The last announcement by the Secretary of State was to "let the dust settle in our eyes."

I heard him in the Statler Hotel last Saturday night address the American Society of Newspaper Editors. The advance blurbs indicated he was going to talk about Asiatic policy, and that is why I went. But he told us nothing. There is not anybody in this room I know and there is not anybody in the United States Senate I know who could define for you what the American foreign policy is as of today toward half the people of the world, those who live in Asia. But tonight we want to talk about freedom, so I point out simply that there is no freedom of choice left for the Chinese, no freedom of choice for any Chinaman because the Russian Communists control the situation.

AMERICA CONFRONTS ITS GREATEST PERIL

Adding their 450,000,000 to the 195,000,000 of Russia and the population of the other areas I have mentioned and you now have for the first time in history over 800,000,000 human beings controlled and directed by a force which tells us and tells the world it intends to destroy Christianity and freedom in America.

We have never faced a peril like it before and that is why a great American, former Gen. George Marshall, told an audience the other evening that communism is the greatest peril that America has ever faced.

That is why there is some justification in the fact we are spending over $20,000,000,000 of your money this year to try to defend ourselves against communism abroad and to try to weed it out of positions of importance here at home. That is why I think it is tremendously important that every adult American citizen understands exactly what communism is, how it operates, how it establishes its friendly fronts, how it controls and contaminates people and gets some folks with good intentions to carry out its nefarious goals and purposes.

That is why I think unless we can conquer the Communist conspiracy at home and stop movements which tend to make it stronger, we cannot expect to remain free in America against that kind of peril, a peril so great that in just 100 years it has come to control the lives of almost exactly the same number of human beings as are today influenced by the great doctrines of Christianity in the 20 centuries that we have had the Christian religion.

In one-twentieth the time communism has come to influence as many people as the Christian Church, including all the Protestant denominations, the Catholic Church, and the Jewish faith combined, and it is gaining on us by the hour mostly, as I see it, because somehow or other we failed to be able to put into harness the great capacity for constructive good represented by individuals like you in meetings like this.

DO YOU KNOW WHAT COMMUNISM REALLY IS?

Now, what is communism? It is not the thing that Karl Marx and Dr. Engels wrote about 100 years ago when they issued Das Kapital and issued also the Communist Manifesto.

It is not an economic creed. It is not built on that original concept that they talked about that Communists should take from people according to their ability and give to people according to their need. There is nothing particularly inimicable about that. There is nothing in a creed like that even though they continued to practice it which would require appropriating $20,000,000,000 to defeat it or to stop it.

There is nothing in a creed like that which could conquer Poland and China and try to organize the world against us; just an economic creed which, in my opinion, could not work but, otherwise, nothing particularly wrong with it.

They departed from that concept long ago. When I visited the Russian equivalent of the Westinghouse plant in Leningrad in 1945, when I visited the production places of the big Stalin Motor Works in Moscow and the tank factory in Stalingrad, I found individuals working on the production line being paid by piecework under conditions of the speed-up which no American labor leader would dare to suggest for his people in this country. They have gotten entirely away from the economic factor. It is not an economic creed, neither is it a political party. That is the thing that somehow or other I have been trying to explain along with some other speakers in America for 20 years.

That is the one thing we are trying to get the Members of Congress and the country to understand so that we can have some such legislation as these pickets are protesting against out here because some bewildered individual, some great original member of the bewilderment bund has told them that it is a law which operates against a political party. We have got to understand if you are going to remain free that the Communist conspiracy is exactly that, that it is not a political party, that it has never operated like a political party, that it does not pretend in the confines of its own meetings even remotely to resemble a political party, but that it is something which you can now explain and define and observe in 14 different countries in the laboratory of life as an international conspiracy. So we know what it is.

A political party has candidates for office, has campaigns. It has campaign chairmen and propaganda and headquarters and conducts campaigns up and down the highways and the byways, but, above everything else, a political party is an institution which seeks to achieve its objective at the polling place, and if any institution in our midst is not endeavoring to reach its decisions at the polling places by the ballot, whatever else in the world it is, it is not a political party.

All right, the Communists have 14 countries. I have told you who they are, how they got that way. In not a single country of the world have the Communists ever gotten into power by ballot, nor have they ever conducted themselves like a political party, nor have they ever succeeded in electing their leaders to authority, and in not a single country of the world where they have gotten into power have they ever stayed in power by holding an honest election. So obviously they are not a political party.

What are they then? I think it is easy to define. I think it is vitally important to you men and women out there in the ranks grappling to retain some last vestige of freedom for yourself and your children to know exactly what it is that organizes the forces of collectivism throughout the world and would destroy you and the dignity of your position and the integrity of your enterprise.

AN ACCURATE WORKING DEFINITION OF COMMUNISM

Here is a definition that nobody can deny because you can find it proving itself in the crucible of life in every country which the Communists now occupy. Communism is a godless way of life that holds that all of the means of production, all the means of distribution, and the flow of capital shall be controlled in the capital city of the land by a selected group of individuals who permit no opposition and who join themselves with other Communists throughout the world in promoting a world-wide dictatorship under the control of the Kremlin. Let me say it again because if every American knew that, my fellow Americans, we would win this fight against communism.

If every American knew that, we would win the cold war quickly and completely:

If every American knew that, we could help explain it to the world and soon cause communism to dry and wither on the vine. Communism is a godless way of life. Why godless? Are they afraid of preachers particularly? No.

They are godless because they will not permit a Communist to serve two masters. They will not permit a Communist to believe there is anything higher than Joe Stalin and the head of the Politburo. Communism is a godless way of life in which a selected group of men in the capital city of the land permit no opposition. If you oppose them, you get locked up like Vogeler did or like the Methodist bishops did or like Mindszenty did. It is a godless way of life in which a selected group of individuals in the capital city of the land control—it does not say own—all of the means of production, the farms, the factories, the mills; all the means of distribution, the railroads, the ship lines, the telephone companies; the flow of capital, the banks, the insurance companies, the building and loan agencies, the entire economic fabric. They control it and they join themselves with like-minded men around the world to bring about a Communist dictatorship headed by Moscow.

IF WAR COMES, ALL COMMUNISTS WILL SUPPORT RUSSIA

How easily and quickly we Americans forget. About 18 months ago Stalin and the Politburo decided to make a demonstration around the globe that all Communists would work and fight for a common dictatorship. They sent out the order to Togliatti in Italy, to Jacques Duclos and Maurice Thorez in France, to Foster across the river from Elizabeth, N. J., and they said to each of them, "Within 72 hours tell the public in the countries in which you live what will happen in the event of a war between the Communists and your country." And Togliatti said, "I hope it never comes, but if it comes, the Italian Communists will fight on the side of their Russian brothers."

The French Communist leaders, Thorez and Duclos, said, "We hope that war never comes, but if it comes, French communism and Russian communism will be joined together on the same side of that great class struggle," and Dennis and Foster said, "In America if war comes, you can be sure the American Communists will not be found fighting on the side of the capitalistic American Government."

They told it to our face. They thumbed their nose at us, and still a lot of us are reluctant to do anything which might in any way inconvenience the Communists or the bleeding-heart sentimentalists, the pseudo progressives and the pseudo liberals, and the members of the bewilderment bund who help them achieve their nefarious purposes, who help them achieve their purposes right in the heart of the freemen of the greatest enterprise system in the world.

That is what communism is, and it is moving in our direction. Look at England, a great land of private enterprise, probably the most canny businessmen and tradesmen in the world, who built from a group of small islands a mighty empire because of their business acumen, and in the hour of victory after they had fought back the Hun and withstood the blitzkrieg and knocked back the buzz bombs, when those tight, little islands had rallied behind the dynamic and vital leadership of Churchill and brought England to its greatest purple hour of triumph, they discarded the formula of freedom that made them great and adopted in the hour of victory the formula of failure that brought Hitler to his knees.

Ask some German-speaking member of the Elizabeth community, and if he knows his German economic history, he will tell you that the word "Nazi" simply means a series of alliterations which represent the contraction of the words in German meaning the National Socialistic Party of Germany. That is what the word "Nazi" means, and that is what the British have adopted, and it is bringing Great Britain to her knees and destroying another great area of human freedom in the world.

A great New Jerseyite by the name of Albert Hawkes has been traveling around America a good bit, with a British scholar whom I knew in Britain and whom I have met over here, by the name of Dr. Palmer. I presume you have heard him. I hope you have. If not, I hope you do.

I remember so well what he told us one day at luncheon in the Senate Restaurant when I said to him, "Dr. Palmer, how is the British experiment with socialism working out?" and he said, "The British people are drinking the poisons of communism out of a cup called socialism."

HOW COMMUNISM IS LINKED TO SOCIALISM

We must remember that there is a silver thread of consistency binding together all these isms of centralized control. The differences and distinctions between nazism, fascism, communism, state socialism, nationalism, a welfare state, and a planned economy are much fewer and significant than the similarities which bind them together.

I want to get right down to brass tacks now and demonstrate the similarity between the first step, whether you call it a security state or a welfare state or a planned economy, and the last step which is nazism or communism or fascism. They are bound together inevitably by one simple, understandable philosophy, and that is the philosophy that businessmen such as you cannot be trusted to spend your own money wisely in

UNIVERSITY OF MICHIGAN LIBRARIES

your own behalf so that you should consequently give increasing amounts of your money to politicians like me to spend for you because we will spend it more wisely than you can spend it.

It is the philosophy that tells you to your face and makes you like it that businessmen like you are too dishonest or too dumb or too crooked to be trusted to manage private enterprises in the public welfare so you should turn the management over to the politicians in jobs like mine from the Olympian heights of our established purity and we will do the job better for the general public. That is the basic tie that binds all of these various forms of collectivism together.

Washington and London today both are teeming with politicians who believe in their hearts that only men in political jobs are honest enough, ethical enough, and wise enough to spend the Nation's substance and to manage the Nation's enterprises.

I disagree with that philosophy but I think you will find that it is part of every one of those isms based on centralized controls in a central city.

Now I think I know how they get that way. I have spent a good portion of my life, longer than I have been in Congress, teaching economic and political history around the world. I know something about it. I received a master's degree at one time over at Columbia University. I never used to admit that, however, until General Eisenhower got to be president. [Laughter.]

ALTERNATIVE NO. 1

Let me make another generalization that somebody might want to question in our questions period. In all of human history, some 3,500 years of it, in which mankind in different areas of the world has been experimenting with some kind of national socialism, over and over again it has been tried, and every time it has always ended with one of two results, never anything else; sometimes at the end of the experiment you have found a people completely disillusioned, you have found them confused, you have found them approaching bankruptcy, you have found them escaping from the trap of national socialism 15 minutes before it is too late as the Australians and the New Zealanders did in the elections last fall.

The British brought socialism to a dead heat in their recent election as we Americans spewed it out after having tried it, please remember, as the first economic formula ever tried by white men on the North American Continent because after we signed the Mayflower Pact, those colonial forebears of ours established up on the cold New England coast a philosophy of socialism. They built the stockade to protect them. They sent our colonial forefathers out to gather things according to their ability to be distributed by the politicians of that stockade in accordance with the needs of the community. Some were assigned the job of catching fish, some the job of shooting wild turkey, some the job of trapping bear, and some the job of cutting wood.

Do you know what happened? History records a stupendous percentage of our early colonial forefathers starved to death that first rugged winter on the New England shores.

What was the reason? Then as now there were a lot of early American chiselers among the early American colonials and they did not want to go to work. [Laughter.] They were human beings like we are, that is all.

Some of them who were assigned the job of cutting down trees preferred to fish. Some of them that were assigned the job of going fishing preferred to bathe in the sea. Some of them that were assigned to shoot wild turkey did not like the blunderbuss as it went off against one's shoulder; and history further records we could not commemorate the first bountiful Thanksgiving Day, that great American holiday, on American soil until we discarded the philosophy of national socialism and adopted the philosophy of private enterprise instead, and we have been working at it ever since.

Strangely enough, in spite of all the carping criticisms of all the members of all the liberal philosophies of the world, by following the principle of private enterprise, this country in a century and a half has become envied by everybody. It is the only country in the world that has to establish immigration bars to keep the people out. The rest of them all put up the bars to keep the people in. They want to come over here and practice freedom and liberty and private enterprise.

ALTERNATIVE NO. 2

Without exception, I say national socialism has always ended that way or else it has ended this way: People have found that in order to get efficiency and in order to compel the chiselers to work and get things done, they had to increasingly give more and more power to fewer and fewer people at the top until a Hitler brought efficiency about in Germany by depriving the people of the freedom of choice, until a Mussolini made the trains run on time in Italy all right but nobody in Italy any longer had control of his own destiny, or until a Stalin demonstrates that he can produce with a great capacity all right, but he does it by the man-hours of people working in the political concentration camps of the Siberian slopes where they now have some 12,000,000 or 15,000,000 human beings working as prisoners of the state because they disagreed politically with the party in power.

There has never been any exception to the rule. Do you know why? I think it was brought out in a debate that I had with one of the executive officials down in Washington some time ago, a very able fellow, an entirely patriotic fellow, one of these people who have been bewildered and confused by the preachments of the Communists but who considers himself a good American and who knowingly would not, for 1 minute, help the Communists. It is by confusing and controlling the thinking of good-minded individuals and pure patriots that the Communists achieve most of their objectives.

HOW A PLANNED ECONOMY LEADS TO TYRANNY

We were arguing about a planned economy for America. He said we ought to have one and I said we should not have one, and he was somewhat at an advantage over me because it was difficult for me to focus my eyes on him when he talked because I was being blinded by the light glistening from the Phi Beta Kappa key off his chain when he talked.

He was pushing people like you around, believing in his heart that there is not a man in this room who can be trusted to spend your own money or to run your own business as well as he could do it from the vantage point of that Phi Beta Kappa key.

So he said to me, "I can't understand how a Senator from a State like South Dakota would be against a planned economy. Certainly you must believe in planning, Senator, for yourself and your family, for old age, for a vacation, for the education of your children. Certainly, Senator, you must believe in planning ahead for the next election."

He was right on that one, you bet I do. [Laughter.] It is tough enough for a Republican to get elected nowadays and if we did not plan ahead, we would not have a chance.

He then said, "Without a planned economy, Senator, how can you be sure that all the people who make automobiles can sell all the automobiles that they make, that somebody will not make cars that he cannot sell? How can you be sure without a planned economy that steel will be equitably distributed among the people who need steel? How can you be sure that the little fellow who needs some steel to make razor blades and baby carriages and roller skates can get the steel he needs; that some big corporation making railroad rolling stock will not take all the steel and freeze out the little fellow?

"How can you be sure of that unless you have a planned economy?"

Then he sat down and it was my turn to talk. I was not in any hurry. He practically had me persuaded by that time. [Laughter.]

Believe me, when you bounce these seductive phrases up against the propagandized mind of the average American these days, you can sell him almost anything, especially if you do it from the wrong end of a train going west on a nonpolitical tour at public expense. It is an easy job, I assure you. [Laughter.] But the point I am trying to bring out is that he stopped there for me to answer his arguments and so I had to say something.

I was thinking and trying to figure out how to make the best approach because this was a debate a lot of people were attending and I was badly handicapped anyhow, he having been educated at Harvard University and having one of those Harvard accents. They always kind of frighten me, to begin with. I shudder sometimes to think how much a Harvard accent has cost the American taxpayer in the last 20 years. [Laughter.]

I was just a fresh-water Senator, so I said to him, "Let me ask you a couple of questions, Professor; you have been asking me a lot of them."

"Of course," he said.

I said, "I would like to know, in the first place, Professor, whether you would agree with me that a planned economy cannot achieve anything for anybody just as long as it remains a plan. A plan in a political platform wrapped up in some bureaucrat's desk drawer is not any good until you put the plan into use. Would you agree to that?"

"Yes, I agree to that," he said.

"I wonder, Professor," I said, "If you would agree with one other thing I would like to ask about it. Would you agree with me that a planned economy cannot possibly do any good for your family or solve the predicament with regard to the distribution of steel so long as the people who make the plan simply send it through the mail under the franking privilege or announce it over the radio, so long as people in America are still permitted to accept the plan or reject it as they choose, would you agree, Professor, that a planned economy cannot work until and unless you give the politicians who make the plan the police power to compel the rest of the people to go along with the plan or go to jail?

"Would you agree, Professor, that for a planned economy to work you have got to have that kind of pushy government, that kind of political control, that kind of coerced cooperation?"

And because he was an honest, respectable man, he said, "Of course, I agree to that but you have to remember to consider the greater good and not the individual good, and that in order to achieve the benefits of a planned economy, you must compel the stubborn individual who is a recalcitrant to go along or go to jail."

And if you think they are not talking about a planned economy now in what we still think is a free enterprise system, let me point out to you that on the floor of the Senate 2 weeks ago on two consecutive days, two United States Senators made two speeches wherein one of them said, "The time has come in America when we should establish some kind of law, some kind of regulatory board which would deny the steel industry the present authority it has to make unjustifiable profits. It is making profits which are so large it is jeopardizing the economy of America." We have to have politicians regulating it.

The next day one of his colleagues from the same side of the aisle got up and gave a speech and said, "The time has come in America when we have to have regulatory power, when we have got to let the politicians exercise authority on the coal industry because the coal industry is not making enough profit so that it can function as it should in our economy." So they get you coming and going. If you are making money they have got to control you because you are making too much and if you are not making money, they have to control you because they need more people to pay taxes.

WHAT YOU MUST DO TO STAY FREE

If you accept the philosophy that only a politician in a job like mine has any answers that will work, has any judgments that are sound, knows how to spend the money that you earn, then you accept the philosophy of the welfare state, of the security state, of the planned economy, of national socialism, of communism, of fascism, and nazism. They are linked together by that fundamental conviction which I consider a fundamental fallacy.

I have now been down in Washington for 12 years. In that time I have known all the Presidents we have had down there by their first names. I might say we have not had very many in that time. [Laughter.]

I have known all the Members of the House of Representatives and of the Senate. I have served in both branches and I am a sort of gregarious fellow. I know them, I like them, and I get along very well with them. I know the members of the President's Cabinet and I want to tell you, frankly, that in all the time I have been down there I have yet to meet the first politician, Republican or Democrat, in the White House or out of it, in Congress or in the civil service, any place any where, that I think is so wise and so good that I would like to turn over to him all of my money and all of my freedom and say, "You take the ball and run with it."

That is the thing they are talking about. That is the thing that it is up to you to stop. That is the thing that can be stopped only when men and women like you begin to resent articulately and in organized action any politician from any party who insults you to the point of saying, "I am going to take your money and your judgment and exercise them and spend them for you in your own behalf."

If we are going to have freedom in America, those who are presently the recipients of the benefits of freedom must speak out in its defense and its support and must unite themselves, it seems to me, in some kind of concerted effort to defend it. Let me now in 4 or 5 minutes suggest some practical things for the men and women of Elizabeth, N. J., to do in this connection and then I will be ready for your questions.

In the first place, it seems to me, that we have to recognize that if we are going to maintain freedom in America, it is essential that Americans generally understand exactly what it is all about and what communism is and how it works, that we have to conduct an educational campaign in our communities day by day and year by year, making sure everybody knows what those precious points are in the American success formula that we must save.

WE MUST PROTECT OUR AMERICAN SUCCESS FORMULA

These factors are private enterprise, individual initiative, political independence, simple little things like that. We have to protect them from attacks, from the malicious Communist conspirator no less and no more than we protect them from attacks by those who do not understand the purport of the things they do.

So I suggest that perhaps from the organizations of which you are members, if you belong to the American Legion or the Methodist Church, if you belong to the Veterans of Foreign Wars or the Kiwanis Club, if you belong to the Elks Lodge or the United States Chamber of Commerce or the Women's Federated Clubs, you might want to be sure that on May 13 and 14 that there is a representative of your organization at the La Salle Hotel in Chicago where under the able and courageous leadership of a great American, National Commander George Craig of the American Legion, the third and the most important meeting of the all-important American Conference to Promote Freedom and Defeat Communism is going to be held. The first conference was held in the Astor Hotel in New York City in January and the second conference in the executive committee rooms of the American Legion Building in Indianapolis in March.

BETTER JOIN THE ALL-AMERICAN CONFERENCE

This is the third conference. This is it. This meeting on May 13 and 14 is to determine whether there are in America enough individuals and organizations willing to join together in a common front against communism and for freedom to defeat these forces of collectivism moving in on us from every corner of the world. Either we succeed in Chicago in May or America continues to lack a united front and a cohesive weapon with which to combat communism.

We propose to set in motion this simple program: that the local members of such national organizations as Kiwanis, the A. P. of L., the United States Chamber of Commerce, the churches, the individual patriotic organizations of men and women, etc., shall form community-action committees in a city like Elizabeth, N. J., and see to it that at least these four things are done as part of the program of the All-American Conference:

The first is to have taught in every school in America a few rudimentary facts about freedom and what it means and how we got it and how we can keep it; of what private enterprise and political independence mean in America now and how to support them; a little quick capsule course to be added to what they are being taught so that every American who graduates from a public school will know in his heart why he is proud to be an American and what he has to do to keep America American and to avoid the pitfalls of all forms of collectivism.

No. 2, to have in every community of the land of 1,000 people or more a "Know Your America Week" in which a program by the whole community is developed for the purpose of making every citizen in that community understand better and appreciate more the principles upon which America depends and upon which our freedom now rests.

San Jose, Calif., is kicking off from July 2 to July 8 with 300,000 people in a "Know Your America Week" launched by the Kiwanis Club of that community. Memphis, Tenn., did the job a little while ago and I had the happy pleasure on Good Friday night of talking to 5,000 people in the city of Memphis about what it is we have got to do to stay free and how it is you can tell when something is moving us toward communism, because it always moves by the formula of taking money and power from individual citizens and giving that power and that money to the palace politicians. It never misses. This does not mean, and let me make that clear, that everybody who favors centralized controls, it does not mean that everybody who favors deficit spending, it does not mean that everybody who believes in building a great regulatory planned economy is a Communist. But it does mean exactly that every Communist in America without exception always favors all three of those encroachments upon your individual liberties. They never miss. They know political controls are the stepping stones toward communism.

A "Know Your America Week" would help in fighting these steps and trends, for example, through the newspapers and through the schools and on the radio. It could do some of the things which were done so splendidly by the Standard Steel Spring Co. with its series of advertisements which have been reprinted in this booklet entitled "Something To Think About" which you as executives can get free of charge by writing a postcard to the General Motors Corp., Detroit, Mich. They have made this available to do their part to help keep freedom so you can reprint in your newspapers without giving any credit to the Standard Steel Spring Co. or the General Motors Corp. or to the Hayes-McFarland Advertising Co. in Chicago which set it up, this dramatic lesson, sponsored by your local employers telling the story, "Socialism! Brother You Don't Know the Half of It."

Then this advertisement goes ahead and starts with this language: "Let's put away all the $10 words and call a spade a spade. Socialism in plain English is nothing more nor less than political management of the lives, the total lives, of all the people," and then down here in every paragraph, "Facts no American should ever forget."

A "KNOW YOUR AMERICA WEEK" IN EVERY COMMUNITY

In this "Know Your America Week" we are going to try to make every American always remember facts like these; that in Russia under communism a man who works a week earns 17 pounds of sugar, if he works a week in Great Britain he gets 282 pounds of sugar and if he works a week under the private-enterprise system of America at the same job, he gets 500 pounds of sugar. That is what the workingmen are interested in.

There would not be enough money in the Electrical Union in Elizabeth to hire pickets to be in front of this hotel tonight if the people in those picket lines really understood the kind of lives they would have to lead if communism were to prevail in America. But we have not taught the people the facts. We have not brought out these truths, "Facts No American Should Ever Forget."

The average number of hours of working time required to purchase a man's pair of shoes is as follows: In the United States, you can earn the shoes in 6 hours, in Great Britain, 25 hours; and in Russia in 145 hours. We would like to have all Americans know those facts, but it cannot be done unless or until men and women like you somehow or other get into the fight.

A politician cannot say it because people would think it is Republican propaganda. You can explain it. The schools can tell us. The churches can tell it.

So the second thing in this new program is to encourage and sponsor "Know Your America Weeks" throughout the country.

The third is to project the dividends from our freedoms more generally throughout our communities. Your preacher knows and I know, because at one time I taught school and he is a preacher and knows, that the dividends of freedom are not divided as fairly as they might be in Elizabeth, N. J., or in South Dakota. You have probably got some place here you do not take Aunt Mary to when she comes in from the country, and you show her the sights. There are some places in town that you are ashamed of; we have them in every community.

Let us see to it that by community action and not by bureaucratic control, not by a new set of taxes by which we collect a dollar from you and give back 25 cents to clear out the slums of Elizabeth, N. J., but by community action let us improve our towns and communities one at a time, making them better one at a time, like we started them in the first place, one at a time. Let us see to it that the children that need their tonsils

UNIVERSITY OF MICHIGAN LIBRARIES

taken care of in Elizabeth, N. J., get it done by the collective generosity of the medical people of Elizabeth, N. J., and by community clinics and not by political doctors coming down from Washington. Let us cooperate in projecting the dividends of freedom increasingly for more and more people. That also helps to defeat communism.

Finally, and fourth in this proposed program, behind which we hope to put the united effort of organizations representing 60,000,000 Americans, come the middle of next month, is to alert ourselves to protect our freedoms.

FREEDOM IS WELL WORTH DEFENDING

It would not be fair, and I am not going to do it, to ask anybody here just what have you done, John Smith, to protect your freedoms since the war. What have you actually done to stay free? If all of us do nothing, of course, we are not going to stay free.

Freedom is everybody's job but unless everybody works at the job, nobody stays free, and so we hope to get people in every community alert to discovering who the people are in their localities who are the Communists and to identify them, and expose them. Do not arrest them, do not put them in jail, just focus the spotlight of public opinion on them and they will wither and die like any other disease germ in any other body, but let people know who they are.

Do not let them get into your school faculties, do not let them get into your unions, do not let them get into your women's clubs, or your business organizations or your churches. Protect America.

A simple thing could be to start with to find out from the Attorney General those organizations now numbering over 100 that the Communists control today and make sure that those organizations are known by name to all the people of Elizabeth, N. J., so nobody here is unknowingly helping those organizations to destroy freedom. In a capsule, that is the program. It is the only one available.

In conclusion, let me say that I am convinced that we are not going to win the battle for freedom simply by relying on fellows in the political profession in jobs like mine. If we save freedom now at this late date, it is going to be because individual citizens in towns like yours do something different somehow in the next 5 years from what has been happening in America in the last decade.

Thank you. I am now ready for your questions.

(Audience arises and applauds.)

Mr. STRINGFELLOW. We have a large number of questions, and, to save time, I do not think I shall read them. I will ask the Senator to read them, but I should like to say at the outset that I am having this speech and these questions recorded and I shall distribute them to you at an early date with my compliments. [Applause.]

I am mindful of the fact, as is the Senator, that there are a great many people in this audience who are saying to themselves, and probably to others at the table, "That was a great speech but he delivered it to the wrong audience." Well, let me say this to you, he delivered it to the only kind of an audience that can save America.

Another thing is that if you and others like you have as much love for America as our founding fathers had, then the kind of a speech that was given here tonight will make each one of us become Paul Reveres, and if there was ever a time in the history of this great Republic of ours when we need Paul Reveres that time is now.

As I listened to this marvelous address, I was reminded of a benediction which was given by a former chaplain of the United States Senate which I should like to read. It is composed of only five lines. The chaplain's name was Peter Marshall.

"Oh, God, our Father, let us not be content to wait and see what will happen, but give us the determination to make the right things happen. Give us the courage to stand for something lest we fall for anything."

I think that summarizes what the Senator was driving at tonight. Now I would like to ask the Senator if he will read these questions himself. That will save a little time.

Will you answer them, sir?

QUESTION-ANSWER SESSION

Senator MUNDT. All right, I will do the best I can. Here is the first question:

"Senator MUNDT, you have brought together a number of important historical items pointing up the dangers of communism. Can you suggest why this material is so often ignored by our most respected newspapers?"

It is difficult to know that. I am greatly disturbed about the way in which some newspapers have reported some of these Communist things. I did not realize it nearly as much until it fell to my unhappy responsibility to serve as chairman of the Un-American Activities Committee during the time we were having the Hiss investigation with Whittaker Chambers and the famous pumpkin papers, and we got a pretty bad kicking around on that committee, as you probably remember, up until the very hour that Hiss was convicted for the second time or convicted finally probably, I should say, after a hung jury resulted in the first trial at New York.

Since then there have been a lot of red-faced newspapers. The newspapers of America, insofar as they are published in communities of 100,000 or less, I think have done a pretty good job of explaining communism. When you get up into a great metropolitan paper, of course, you have a multi-million-dollar corporation which very frequently has its editorials written by $100-a-week individuals who do not have a complete understanding of the processes of private enterprise.

When you take away in the newspaper business the ownership relationship between the editorial writer and the paper you lose something which I think is highly valuable in American journalism. I do feel that newspapers generally, though, are coming to understand better what communism is. I have talked about this many times with J. Edgar Hoover, and I would be surprised if we have in America over 5,000 people—and I think that is a generous guess—who actually understand what communism is and how it operates and its whole historic background.

I think that men like Mr. Budenz and Mr. Gitlow, who have left the Communist Party and are explaining and opposing it, are doing a great deal to help make that thing generally understood, but it is not something on which most of us have had any occasion to devote any study and, consequently, there is a paucity of information about it.

QUESTION NO. 2

"Are our educational institutions, in any appreciable measure, weak points in our fight against communism?"

I would say "No," as far as educational institutions are concerned. There are educators in many of our institutions, of course, who have been bewildered and confused, and some of them definitely captivated by the Communist doctrine. You and I know of a case out in the University of Washington with regard to that.

I spoke out in Washington last fall, and, as a matter of fact, I spoke in every State west of the Mississippi River on this creed last fall. Out in Seattle, Wash., I learned from Dr. Allen about the three Washington University professors who finally were removed from their jobs because it was discovered they were Communists. The pathetic thing about it was that in the final day of testimony before these professors were finally kicked off the public payroll it was brought out that they had been teaching there for 20 years as Communists—each of them.

It is impossible to estimate the number of young boys and girls whose souls were sent plumb to hell by the perverted mentalities of those Communist professors.

In this program that I mentioned with respect to the fourth point, protect our freedoms, we believe it is part of the community's responsibility to make sure that in the schools and in the universities and in the institutions that your children attend, in the institutions which your money helps support, that there should be no Communist professors. We do not want to get a gestapo in this country, but we want an alert citizenry which will do its individual part to eliminate these insidious influences.

QUESTION NO. 3

"Do you think laissez faire economics would give us maximum freedom? Do you think we have a chance of getting back to a laissez faire economy?"

I do not think it would give us a maximum freedom. I hope we never return to it. I think the important genius of America is that, more than any other area of the world, we have kept a happy working equilibrium between a complete opportunity state and the complete security state.

We do not pretend to give individuals as much security as they get, for example, out in Alcatraz, where they have complete protection against the vicissitudes of life, free medical care, permanent retirement [laughter], protection from any kind of invasion, and good food. They have security, if that is what they want.

Nor do we pretend to give Americans the complete opportunity state which would be the laissez faire state. We do not give an opportunity to an American that he could get if he wanted to go out, for example, to the Caribbean, to the semicivilized islands and areas of the world; if he wants to live under the regime of laissez faire where the law of the tooth and the fang and the claw prevail—that is not in America.

We have laws that we must obey and we have codes of ethics. We have business practices. We have state and national regulations, but we have kept an equilibrium here. There is opportunity enough for any good man to succeed, security enough for any honest man to be protected against the greater evils and vicissitudes and dangers of life; better than any other country, we have maintained the equilibrium.

Sometimes we go too far in the direction, I think, of too much opportunity as against security. Sometimes we go in the direction of providing too much security at the cost of opportunity; but so long as we keep them in balance, I think, we will have free enterprise and freedom in America.

QUESTION NO. 4

"Who was the Assistant Secretary of State for whom Hiss worked?"

Francis B. Sayre.

QUESTION NO. 5

"How did the Communists get our atomic-bomb secrets?"

Through infiltration; through espionage; through Dr. Fuchs; through the contact with Dr. May and the other Canadian espionage agents in the Canadian spy trials; through Alex Androvich, one of the Communist espionage agents in this country; through other Communist espionage agents in this country, some of whom, incidentally, escaped and returned to Russia without getting caught; through men like the university professor in Minnesota University who was caught relaying secrets from the Berkeley, Calif., atomic ring to the Russians.

There were many leaks, and to that must be added that they worked out some of them

through their own genius because they captured a great many of the Nazi atomic scientists in the closing days of the war who are now working just as feverishly for communism as they worked for nazism and probably do not know the difference between the isms because it is measured only by the length of the mustaches of the two respective dictators [laughter].

They are just as happy one place as they were the other.

QUESTION NO. 6

"Would you care to give your opinion on the Senator McCARTHY episode?"

I will put that down for the moment and see if the other questions permit shorter answers.

QUESTION NO. 7

"You told us how communism through infiltration took over the government of many free and democratic countries. Why do our representatives in Washington condone the actions of individuals representing communism in this country?

"We spend millions of dollars and waste time through the slow legal approach to convict them. Why not fight fire with fire?"

That is a good question and it is related to the other. I will answer them both as the last question.

QUESTION NO. 8

"Is there, in your opinion, adequate legislation now available to deal with Communists in the Governments, Federal, State, and local? If not, what is lacking?"

That is related to the preceding two and it will be covered when I answer them.

QUESTION NO. 9

"What is the secret of successful resistance to the loss of freedom of such a relatively weak and vulnerable nation as Finland, particularly without open help from the United States in the way of ECA funds which seem to be so imperative to other stronger nations?"

I visited Finland on the same tour that I took with Vice President BARKLEY. We met President Paasikivi of Finland and spent considerable time with him. I remember one little humorous incident when ALBEN BARKLEY, in his big, fatherly way, said to him, "You are having a considerable amount of trouble in Finland and the heart of America beats for you. You paid your debts to us and we are always fond of you. We are sorry for the predicament in which Finland finds itself."

President Paasikivi is an old fellow and he has false teeth and he stutters a little bit.

"Yes," he said, "it is certainly true that things are pretty tough over here. We have been in two wars and lost both wars. War is a mighty bad thing, especially if you lose it."

I have thought about that many times. Wars are bad enough when you win, but when you lose them, they are pretty rugged, indeed. The secret of Finland, I think, is simply the fact that the Russians, of course, will take Finland when they want it, when they find it judicious to do so.

The Finns know that even better than we, but from the standpoint of infiltrating, from the standpoint of taking it over, they live so close to the Russians that they see the evils of communism so close to their own threshhold that they never voluntarily are going to grasp communism to their bosom. If and when the Russians decide to roll through Finland, there is not any amount of Marshall plan money, of course, or arms from this country that could conceivably stop that kind of an attack.

QUESTION NO. 10

"Is the Government supplying literature for distribution in plants such as ours for combating communism? If so, how can these be obtained?"

The Government is not, and in my opinion, the Government should not. If the Government distributes literature to the schools and the factories and to other people, it is almost certain to be contaminated and slanted by the particular political philosophy in power. I think those now in charge of the Government would do it and I think we Republicans would be guilty of falling for the same temptation if we should, by any chance, again ever control the Government. [Laughter.]

I would not myself have much hope for a free country like ours saving itself if it had to rely on politicians to the extent even of getting the Government to supply the information to relay to the workers in the factories. If we have not any more fortitude, if we have not any more spirit, if we have not any more gumption and plain old-fashioned South Dakota guts than to ask politicians to save us, to the extent that we cannot publish our own booklets and get our own facts as General Motors is doing and dig them out or write our Congressmen or Senators or have the Library of Congress supply us the evidence that we can reduce to print, I do not think we would deserve freedom and we would not postpone disaster very long with that kind of supine support.

QUESTION NO. 11

"What do you think of the World Federalists as a force toward world peace?"

The World Federalists along with the Ely Culbertson group and others have all proposed a number of interesting suggestions for meeting the problem of the atomic age.

In my opinion, the World Federalists fall down primarily in their failure to meet the biggest single problem that confronts us, and that is what to do about the atomic bomb.

Of all the groups that are struggling and grappling with some kind of program for collective security, I think the proposal recommended in part by the American Legion executive committee, recommended in part by Ely Culbertson's group, recommended in part by a group of 16 United States Senators—8 Democrats and 8 Republicans—is the best, This program proposes to call an international conclave of the world to which all the nations are invited, both those in and out of the United Nations, and in which the proposition is made to accept and adopt the Baruch proposal for atomic control, complete international inspection, complete demilitarization of the bomb, complete outlawry of it, complete protection by inspection and control against production of the bomb, and then after having agreed on that, ask all those countries of the world willing to join in such a collective organization for peace to step across the line and watch and wonder does Russia come across, does Tito come across, does Poland come across or not. If they do, by having the same kind of inspection that you have in your banks in New Jersey whereby the State banking inspector or the Federal bank examiner comes to the back door and says, "I am coming in and I am looking at the books," and whereby the president of the bank cannot say, "You can't come in Monday; come back Friday, I have got a little fixing to do on the books," it should work. [Laughter.] If we have the same kind of inspection the bank examiners make, we can, of course, protect ourselves against an atomic catastrophe. So, if Russia comes in, that problem is solved. If Russia does not come in, the problem is just exactly where it is now, except everybody knows what just a few people in the State Department and the Pentagon Building are now worrying about, and we then decide what to do with the free portion and the decent portion of the world toward organizing some kind of collective effort which is determined and proclaims so all can understand that Russia is not to be permitted to stockpile bombs enough to blow civilization off the face of the earth.

If we select that program, it is better than that proposed by the World Federalists, and it approaches the specific problem more directly, and that is a method showing how we can grapple with the problem of the bomb, and in my humble opinion, if we fail to grapple with that effectively some time within the next 5 years, we shall not have the opportunity to grapple with it once the Russians have outstripped us in the building of the bomb.

QUESTIONS NOS. 6, 7, AND 8

Now we have the three earlier questions which I will repeat and answer collectively and then at long last to your great relief, you will be permitted to go home.

8. "Is there, in your opinion, adequate legislation now available to deal with Communists in the governments—Federal, State, and local? If not, what is lacking?"

7. "You told us how communism through infiltration took over the government of many free and democratic countries. Why do our representatives in Washington condone the actions of individuals representing communism in this country? We spend millions of dollars and waste time through the slow, legal approach to convict them. Why not fight fire with fire?"

6. "Would you care to give your opinion on the Senator McCARTHY episode?"

I will take the Senator McCARTHY episode first. I am not a member of the Senate Foreign Relations Committee which is hearing the evidence presented by Senator McCARTHY. All I know is what I can pick up in the cloakrooms and hear in the committee meetings as a kibitzer and read in the newspapers, measured against my own experience as chairman of a committee for 2 years which dealt with the same specific problem when we were unearthing and convicting or getting confessions from Wadleigh and from Hiss.

I think that Senator McCARTHY in all probability at the end of his charges is going to render a public service in at least two ways. I believe the first is going to be a tightening of the loyalty screening by which the personnel of the State Department are selected.

It has been very embarrassing to the State Department to have to announce in response to McCARTHY's charges that it has removed 205 security risks from the rolls of the State Department and to have to justify its removal of these people by saying, "Don't worry too much, they were not all Communist sympathizers, 91 of them were only homosexuals and sexual degenerates." [Laughter.]

Had it not been for Senator McCARTHY's charges, probably nobody in this room would know about that except the Speaker who knew about it some time in advance in connection with another investigation. I think it is good that you should know those sordid facts.

I think it is good that Americans generally should know that since Yalta not only Hiss has been discovered and convicted and Wadleigh been smoked out, but that since Yalta 205 people have been removed; and if you are willing to accept the criterion employed by the State Department that the 91 moral degenerates were not necessarily security risks, it still leaves a considerable number.

All I can say after having talked with the fellows in the Kremlin a few times in 1945 is that I believe if you would let me put even 100 good American GI's who believe in our way of life in Joe Stalin's foreign office and keep them there for 90 days, I could have old Joe walking around Red Square singing Yankee Doodle Dandy at the end of that time. [Laughter.]

Therefore, in my opinion, even 100 disloyal State Department people are too many. McCARTHY smoked out these State Department figures. As to what he is going to find from now on, your guess is as good as mine. I think he rendered one other important service.

He focused attention on the policy of America toward Asia as it has never been

UNIVERSITY OF MICHIGAN LIBRARIES

focused by any other spokesmen or series of events before. We know now that the Lattimore line was the State Department line in Asia.

We do not know, at least I do not know, whether Owen Lattimore was or is a Communist, but we have had presented before our viewpoint the whole series of Lattimore recommendations which one after another recommended that we pull out of China and turn it over to the Communist forces.

In my book, I am not so much concerned to find out whether Owen Lattimore is a Communist or an Eagle Scout as I am to know that his is the line followed by the State Department which has brought us close to disaster in Asia. That is history.

I think we have got to build a policy toward Asia. I think it should be an American policy supported without partisanship by both political parties; but I think it was good that we washed out the dirty linen and found out as a Nation, for once and for all, how we got where we are. We were licked by the Lattimore line.

It should make us more cautious. It should make us more constructive and it should make us more realistic about getting ahead in the future. One other thing I may say in passing is that I think McCARTHY suffers from one of the characteristics of most members of the Irish fraternity. I think frequently his testimony exceeds his evidence and he engages in extravagant statements.

I think by the same token the Tydings committee up until a few days ago was a pretty bad spectacle as to what the United States Senate should measure up to because it was too much of a partisan effort not to investigate the individuals named by McCARTHY, but to investigate McCARTHY and to try to discredit him. The country has finally made itself felt and its actions in Washington so that both McCARTHY and the committee realize it does not like to see a great political game played with something as serious as loyalty.

McCARTHY is consequently tempering his charges, making them more specific, and 2 days ago, at long last, the Senate investigating committee established a staff to look into the charges to make a report. Let me tell you now what I hope the outcome is.

WHAT THE SENATE INVESTIGATION SHOULD PRODUCE

I hope that the investigation is so thorough and so complete and so objective and so nonpartisan that at the end when the committee brings in a report, which I hope can be unanimous, you and I as ordinary American citizens can then have as much confidence in the loyalty of the members of the State Department still employed as we now have in the loyalty of the agents of the FBI. I do not think that is asking too much.

A NEW CRITERION OF LOYALTY FOR THE STATE DEPARTMENT

The FBI agent apprehends the kidnapper and catches the fellow who runs across a State line with a stolen automobile, but State Department officials these days make decisions affecting the lives of every individual in America and perhaps the lives of continents and civilizations. Therefore I do not think it is asking too much to give the same benefit of the doubt to the Government with regard to loyalty for the State Department officials that we have always given to the Government in analyzing the loyalty of agents of the FBI—and we have never had a disloyal agent in the FBI. So if you want to keep Reds out of the Government, you see, it can be done.

The other two questions lead me to a discussion of the picket line outside. It gives me a chance which I should not overlook. Perhaps some of you are going someplace, but I cannot go back to Washington until midnight anyhow, so I at least have got plenty of time. [Laughter.]

It gives me a chance which I should not overlook to offer at least some rebuttal to the arguments of the picket line outside of the hotel because these questions deal with whether I think there is adequate protection on the Federal statute books now to deal with the Communist conspiracy. My answer is emphatically no. I can prove it by the testimony of the Attorney General who testified that there are loopholes now which should be plugged up. One question asks whether I think we should fight fire with fire? I would not want to subscribe to believing that we should fight fire with fire, if whoever wrote the question sought to imply that we should treat the Communists in this country the way the Communists treat freemen in theirs. I would not want to do that. If by fighting fire with fire you mean do I think we should do something to protect ourselves, I certainly say yes or we do not deserve to be men and to be free.

I think the time has come, frankly, my good friends, when the individual citizens of America have got to begin measuring up to the dimensions of freemen and that means realizing that we are dealing with a conspiracy which is highly organized, well trained, knowing what it wants and having demonstrated in 14 different foreign capitals it has the capacity to get what it goes after.

THE MUNDT-FERGUSON-JOHNSTON-NIXON BILL

Now we propose, consequently, S. 2311, the bill publicized in the picket line as the Mundt bill—I do not honestly deserve all that amount of special attention because it should be called the Mundt-Ferguson-Johnston-Nixon bill, because FERGUSON, the junior Senator from Michigan; JOHNSTON, the senior Senator from South Carolina; and Congressman NIXON, of California, all joined with me in introducing the bill.

It passed the House of Representatives in the Eightieth Congress and you can find out who your Congressman is and see how he voted by looking at the record in the roll call vote which was 319 to 58. Before the Senate had any time to act it adjourned, so it was reintroduced in the Eighty-first Congress.

It has now been passed by the Senate Judiciary Committee with a vote of 12 to 1, only Senator LANGER, of North Dakota, having voted against it. Here is what the so-called Mundt-Nixon bill or the Mundt-Ferguson-Johnston-Nixon bill provides.

WHAT THIS PROPOSED NEW LEGISLATION WOULD DO

No. 1. That all Communists in America should be compelled to register their names and addresses with the Attorney General.

No. 2. That the Communist groups should be compelled to make a financial report each year as to where they get their money and how they spend it.

No. 3. That the Communists should be compelled to label their literature before it is shipped through the mail and to identify all broadcasts sent out over the radio.

No. 4. That Communists should be required to identify the front organizations which they subsidize and support.

Where do we get the idea for doing that? Does that sound like thought control? Is that an antilabor bill?

My good friends, that is applying as closely as you can to the Communists the same regulations now on the statute books applicable to the Republican Party and the Democratic Party. In most of the States of the Union, you have to register as a Republican or a Democrat to vote in the primaries.

In all of the States of the Union, you have to identify yourself as a Republican or a Democrat before you can go to a political convention and serve as a delegate selecting the candidates at a convention. There is nothing novel about that.

We require the Communists to move in the open like legitimate and loyal people do in political parties and activities. Under the Hatch Act and under the clean politics bill, Republicans and Democrats are required to file a financial report in Washington. Under the Hatch bill and the Clean Politics Act, Republicans and Democrats are compelled to identify their literature and their propaganda.

If we organize a Republican farmers' organization under the laws of the Union, we have to identify our connection with our front organizations. My bill provides the same rule for the Communists, no more, no less. I think the time has come when serious-minded citizens begin to recognize you cannot let these Communist weeds grow up in our garden of freedom forever without losing the rest of the functions of freemen. What else does the bill do?

The bill declares by law that no Communist shall be permitted to hold an appointive Federal job. Note the word "appointive."

We do not deny them the right to elect officials. I am one person who does not favor outlawing the Communist Party. I am one who believes that if the Communists can control 51 percent of the voters of America and they vote for Communists, they have a right to communize America. But I want them to do it in the open. I do not want them to smuggle their people into positions of power through appointive people. So we deny them the right to hold an appointive job and put a good fine on the fellow who surreptitiously gets a job and it is discovered he is a Communist, and there is also a fine on the bureaucrat who appoints him, knowing he is a Communist.

I see no more justification for compelling you and me to pay taxes to pay the salary of a public appointive official who is a Communist who has a job and who takes the job for the purpose of sabotaging our freedoms than I could see for the city council of the city of Elizabeth to pass a law compelling you to hire a kidnaper as a baby sitter in your own home. One is as absurd as the other.

The only other prohibition we make against the Communists is this: We deny the Communists the privilege to get a Federal passport to travel abroad because the FBI has discovered so many of them leaving this country with a passport and going to Moscow, participating in Communist conspiracies there, picking up new ideas to bring over here to help destroy our freedoms, carrying military secrets and political secrets from this country to Russia, running a conveyor belt for the purpose of destroying freedom in America. We do not tell our Communists as the Communists tell the people of Russia that they cannot leave. We simply say they cannot get a passport to travel abroad and they do not need a passport to leave America.

The only thing the passport is good for is to be able to get back in again and if they want to go there and stay there, that is O. K. with us, but they cannot get a passport to come back. [Laughter.]

That is the bill. The bill provides one other thing which we call the Hiss amendment. It was not in the bill that passed the Eightieth Congress, but it is in the new bill as the direct result of the Hiss case.

It makes it a crime, for the first time, in open-hearted America for a Government official in peacetime to take a security document marked "classified" and without authorization to turn it over to a Communist agent or to a foreign spy. We make that criminal in America and make it an offense and we expand the statute of limitations which is now 3 years on most of the crimes against the Government for 10 years for that particular kind of crime. We make peacetime espionage and peacetime treason punishable as clearly defined and described in section IV.

Now it is that bill that our friends on the picket line oppose. That is the bill—about which if you buy an issue of the Daily Worker published in New York City when you go to work tomorrow—you will find my name blasted all over the front of the paper.

It is that bill that you will find on the inside pages of the Daily Worker that the Communists of America are endeavoring to raise a million dollar slush fund to defeat. Why? Does anybody here believe that they are sincere when they say they are doing that to protect freedom in America, that they are doing that so private enterprise can flourish in America, that they are doing that so that there can be freedom all over the world or peace? Or justice? Or liberty?

They are doing that because they know our bill is going to destroy their racket in America. Unhappily, they have got a lot of preachers and school teachers and addle-minded lawyers and some editors confused and they say, "My, you must not pass a bill like that against a political party. It is thought control."

We specifically provide that Communists can have the same access to the minds of men and women over the air and through the radio and in the battles of politics in this country as any Democrat or Republican today can have.

DON'T LET THE COMMUNISTS CONFUSE YOU

It is not the Communist that concerns me most in America but it is the people who are confused by the Communists, who do not think things out for themselves.

As J. Edgar Hoover told us one day, it is the people in the front movements that worry him more than the people in the Communist Party. Now if you believe with me that we ought to do something to stop Communists, you can help right now and every day until this bill is voted on by getting in touch with your Senators, both of them, and your Congressman and tell them you would like to have them support this bill, S. 2311. It is not a perfect bill. I think it can be made better through experience. But it is a start. And we are already very late in starting to do something about Communists.

I know that we have worked on it for 3 years and the American Bar Association has twice endorsed it at national meetings. I know we sent it to the firm of John W. Davis across the river from you and his firm of lawyers went through it and analyzed it and suggested some amendments which we made, and they then endorsed it.

We felt we did not want to have just a conservative law firm inspect it and so we went to Donald Richberg, one of the few honest liberals in America, the former head of the NRA, and he approved it suggesting a few amendments which we adopted; but if we can get some law like that on the statute books, we are prepared to start defending ourselves to help offset this wave of propaganda that the opposition is bringing up.

Now if you have not heard enough about that, if you want to tune your radios in at 10:45 tomorrow night on the Mutual Broadcasting System or at 10:45 Friday night on the National Broadcasting Co. network, at both of those hours on both of those networks, I have agreed to discuss the Mundt-Ferguson bill in detail because they have had somebody on the other side talk about it and they want to keep the time equally divided. In essence, however, you have heard the issue, and I am not at all sanguine that we are going to get the bill through because the Communists are working so much harder than those on the side of the angels. They always do work harder than the free people of America so perhaps their tactics of delay and confusion will win for them again and until you get a bill compelling the Communists to operate in the open, you are never going to know where they are with their conspiratorial practices destroying freedom in America.

That concludes the questions; thanks a lot for your interest and your patience.

[Applause.]

Mr. PIDA. I know I speak on behalf of all the people here in the audience and up here at the Speaker's table when I say thank you very much for a very swell job.

Senator MUNDT. Thank you.

(Whereupon, at 10:30 o'clock p. m. the meeting adjourned.)

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article by W. H. Lawrence which appeared in the New York Times of yesterday, one paragraph of which reads:

But while Democrats were talking about increased numbers at the polls, their own plans for making the Chicago parley the biggest political turnout of 1950 were being shattered by the railroad strike. Headquarters had reserved 2,500 rooms in advance, but one hotel that had set aside 800 rooms reported that cancellations had reduced the total to less than 150 expected to arrive. There were no official figures available, as yet, on registered attendance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS CENTER FALL VICTORY HOPE IN HEAVY UNITED STATES VOTE—CANDIDATES TOLD AT BIG RALLY IN CHICAGO THEY MUST "RUN SCARED" TO WIN ELECTIONS—ILLINOIS A BATTLEGROUND—MAIN SITE OF WAR ON ISOLATION—PARTY WARNED BALLOT SLUMP MEANS LOSS OF CONNECTICUT

(By W. H. Lawrence)

CHICAGO, May 13.—Democrats pinned their hopes of increasing their House and Senate majorities today on the prospect of increasing the national vote to 50,000,000 in the 1950 congressional elections—a figure well above the normal midterm vote, when a light turnout probably would help the Republicans.

Democratic candidates for office were told that they must "run scared," avoiding the slightest chance of overconfidence, and that they must fight back vigorously against a revival of isolationism sponsored by Republican candidates across the Middle West.

A session of the Democratic National Committee to chart campaign strategy opened the 3-day Jefferson Jubilee here, which will be brought to a climax Monday night in a speech by President Truman, who is nearing the end of his "nonpolitical" swing across the country.

"If 50,000,000 people could go to the polls in 1950, I would have no fears as to what would happen to the Democratic majorities in Congress," said Senator CLINTON P. ANDERSON, of New Mexico, chairman of the Democratic Senatorial Campaign Committee. "Like the jackpot in a radio show, they would grow and grow and grow."

ANDERSON ASSIGNS QUOTAS

Senator ANDERSON gave some of the States specific quotas for increasing their vote in 1950 over the Presidential year of 1948 if they were to keep Democrats in office in some cases and turn out Republicans in others. He said Pennsylvania and Ohio each should cast about 1,000,000 votes more this year, while Indiana should show a gain of 460,000 and Connecticut balloting should be up by 116,000.

But while Democrats were talking about increased numbers at the polls, their own plans for making the Chicago parley the biggest political turnout of 1950 were being shattered by the railroad strike. Headquarters had reserved 2,500 rooms in advance, but one hotel that had set aside 800 rooms reported that cancellations had reduced the total to less than 150 expected to arrive. There were no official figures available, as yet, on registered attendance.

Opening day ceremonies were devoid of controversy. The States' rights Democrats, who deserted the national ticket in 1948, were not invited, and did not show up. There had been some talk of efforts here to restore Democratic unity in New Jersey, but these have not developed.

HAGUE DELAYED BY STRIKE

Mayor John V. Kenny, of Jersey City, was on hand, but former Mayor Frank Hague, the national committeeman and foe of Kenny, said he would not be able to arrive before Sunday because of the railway strike.

The only major business accomplished was the election of Mrs. India Edwards, former Chicago newspaperwoman, as vice chairman of the national committee, succeeding Mrs. Charles W. Tillett, of North Carolina, who resigned so she could campaign in a primary fight to aid renomination of Senator FRANK P. GRAHAM.

Mrs. Edwards, who has been director of the women's division, recalled that her own entry into active political work had been the result of a speech by former Representative Clare Booth Luce, of Connecticut, attacking President Roosevelt at the 1944 Republican Convention here.

"My only son, a boy of 19, had been killed a few months before, and when I heard a member of the Republican Party say that GI Jim would want Roosevelt defeated, I determined to help erect a living memorial to my boy by working to keep in the White House the man who was being attacked so viciously," she said.

The main news came from the campaign reviews offered by Senator ANDERSON and his opposite number, Representative MICHAEL J. KIRWAN, of Ohio, chairman of the Democratic Congressional Campaign Committee.

What they said publicly was supplemented in a private session with the party's executive committee and individual State delegations who were trying to determine where the maximum effort should be made with the best prospects of success.

Senator ANDERSON's speech clearly indicated Democratic preoccupation with reelecting Gov. Chester Bowles and two Democratic Senators Brien McMahon and William Benton, in Connecticut; with helping Senator Francis J. Myers win against divided Republican opposition in Pennsylvania, and with insuring reelection of Senator Scott W. Lucas, of Illinois, the Democratic majority leader.

Mr. ANDERSON said that the Lucas campaign would provide the principal battleground for the isolationist issue in the 1950 elections. Appealing always for a heavier vote, Senator ANDERSON conceded Connecticut would be lost if there was the usual midterm slump in voting turn-out.

He stressed with glee with which Democrats were watching the vicious battle between Gov. James H. Duff and the Joseph R. Grundy factions of the Pennsylvania Republican Party, and expressed his belief that "we can cook their goose" regardless of the ticket nominated next Tuesday. But a big vote, he said, might win one or two more House seats for the Democrats in Pennsylvania.

UNIVERSITY OF MICHIGAN LIBRARIES

But Senator ANDERSON also saw a large vote giving the Democrats a chance to pick up senatorial seats in Colorado, where Representative John A. Carroll will oppose Senator Eugene D. Millikin; in Ohio, where State Auditor Joseph T. Ferguson is running against Senator Robert A. Taft; in Indiana, where the Democratic nomineee to oppose Senator Homer E. Capehart has not been chosen; and in Missouri, where Senator Forrest C. Donnell is up for reelection, but where the Democratic nominee has not been selected.

The New Mexico Senator added that there was an upsurge of Democratic sentiment in North and South Dakota to such a degree that "our Republican friends will be chagrined and surprised when next November rolls around."

Tonight William M. Boyle, Jr., chairman of the Democratic National Committee, was host at a buffet dinner and reception for visiting Democrats, including 11 governors and scores of other party dignitaries.

The President is due to arrive here at about 10:30 p. m., eastern daylight time, tomorrow, and will remain here for 24 hours before making his Chicago Stadium speech, after which he will entrain for Washington.

Mother's Day Address by Hon. Henry C. Dworshak, of Idaho

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by me at the twenty-sixth annual Mothers' Day ceremonies sponsored by the American War Mothers on Sunday, May 14, 1950, at the Amphitheater in Arlington National Cemetery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PATH TO PEACE

It is an inspiration to participate in this ceremony sponsored by the American War Mothers in this sacred retreat of the Nation's sleeping heroes. The American War Mothers held their biennial meeting in Sun Valley, Idaho, last October, and I was privileged to attend some of these sessions and to meet many of the national leaders. The people in our State are fully acquainted with the splendid work being accomplished by this organization.

We are humbly met today in this hallowed shrine for a sacred purpose. We honor those who paid with their lives in mortal combat that we might live in grateful peace.

Two thoughts come to mind as we meet here near the Tomb of the Unknown Soldier.

The first thought is how easy it is to be discouraged today with the prospects for enduring peace as we contemplate the tragic blunders of diplomacy and politics of recent years.

The second thought which occurs to me is that we must not lose confidence in the prospects for peace. We dare not despair in this chapel dedicated to the sacrifices of those who have died that you and I may retain our treasured way of life, and that this legacy will be assured to future Americans.

The patriotism, the courage, the faith, and the devotion to duty which have made America great are forever enshrined in this memorial. Here sleeps the Unknown Soldier of World War I. And soon, another unknown hero symbolizing the sacrifices of World War II, will rest in this national Valhalla.

A SHRINE OF CONFIDENCE

To me it is a significant thing that we can acquire at this shrine more confidence in the future of this Nation than we find in all the clamor of politics and diplomacy in the Nation's capital city. The spirit of this occasion dare not fail us, despite the shortcomings of leaders who have not measured up to the challenges of peacetime problems.

It is 5 years now since the guns were silenced on the world-wide battlefields of our latest war. The fruition of 5 years of peace is a cold hostility of such implications that men of all the earth await fearfully the outbreak of yet another conflict.

The joys of victory which we and our allies knew 5 years ago seem wholly dissipated. The security we felt as victors over a brutal and totalitarian foe has withered.

The leadership of this Nation as a champion for the basic rights of free men, now is challenged by the despotic tyranny of a Nation that acknowledges neither God nor the rights of man. In 5 years we have seen entire nations of men enslaved; we have seen governments, once our allies in war, subjected to the despotism of a Communistic state.

The Soviet Union, which ruled 170,000,000 people a few years ago, now holds in slavery some 800,000,000 people.

The treaties to guarantee the rights of this Nation and other free nations of the world have been ignored by secret commitments made at Tehran, Potsdam, and Yalta to surrender the sacred ideals for which our armies fought and died.

COMMUNISM THREATENS FREEDOM

In high places of government and in every segment of our national life, some men have given primary allegiance to the theories of communism which now threaten the existence of free institutions in our land.

The appalling tragedy of postwar developments has been that American citizens, reared in the same circumstances and traditions as those whom we honor here, have transferred their loyalty to the dictatorial powers that would destroy us.

These are the disturbing problems which beset our Nation today. But as we meet here we renew our faith in the devotion which American men and women have given, and will continue to give, that this Nation might be free and strong. We find here the courage to offset the discouragement we feel elsewhere when reviewing our postwar blunders and losses.

We renew here our determination that we shall do our utmost to preserve this heritage with which our Nation has been so richly endowed.

Our great Republic, with all its immeasurable strength and its proud history, must guard itself well against danger from within and danger from without. Eternal vigilance continues to be the price of liberty, and liberty shall forever remain the first mile of the pathway to peace. The pages of history, the wisdom of all philosophies, and the irrevocable laws of God hold this unalterable truth forever before mankind.

HONOR TO AMERICA'S WOUNDED

Not only do we honor today those who gave their all that America might be born and live; we also honor those who bear the wounds of battle. Those veterans of war destined to linger for life on beds of pain and those who work with maimed and distorted bodies have earned—and must always receive—the generous aid of a grateful nation. The widow and the orphan, too, have suffered and must receive the considerate care due them from an indebted Republic. For the widow and orphan have borne an irreparable loss for which protection and compensation is a necessity and an obligation.

Throughout America are chapters of American War Mothers represented here today whose members are inspired by patriotism to country and by service to mankind. In cities and communities throughout our land members of this great organization render devoted service for the preservation of American ideals and traditions in both peace and war.

The American War Mothers organization may not seek the spotlight of national leadership, but it does command the sincere respect of all who know its service and devotion. War mothers cherish peace. Always they show their gratitude to those who have worn the uniform of their country. War mothers do not forget, and in hundreds of communities they keep the faith, and exemplify that faith by unselfish service.

The American War Mothers are gathered here today to do honor to the heroic men and women who have offered their lives and their services in war so that this Republic might live. For the safe return of those who survived, all are deeply thankful. Our gratitude goes out to those for whose return their loved ones waited in vain. And, so our Nation dare not forget, in all the days before us, that supreme cause for which our honored dead gave the last full measure of devotion.

IDEALS SURVIVE WAR

In war, material possessions and mortal life itself are consumed in the triumph of a great cause; yet war does not, and cannot, consume our love, our faith, our hopes, and our memories. These priceless possessions and the certainty that life is eternal are left untouched by war. And thus we know that those who did not come back are waiting to welcome us in their homes beyond the sunset.

In a century and seventy-four years of national independence, the torch of our freedom has been fed from the fires of faith, courage, suffering, and sacrifice that have burned in the hearts of American mothers. It would be a blessing of untold value to them to have the certainty of an enduring peace in the years to come. So let us turn from the frowning face of war to the benign countenance of peace—that permanent peace we have so long been promised. Let us, therefore, seek the path to peace.

BEYOND THE HORIZON—PEACE

The creation and continuation of an enduring peace is a hope and purpose of supreme importance in the affairs of men, for in every home, in every land, people await peace, although with fear and foreboding. They await, as mankind has for ages awaited, the coming of peace. And peace—like a frail phantom without substance or shadow—continues to remain just beyond the horizon.

If nations are to live together in harmony—if there is to be peace, prosperity, and security for their peoples—we must find and follow the path to peace.

If we would follow this path, we must adhere to truth, and rid ourselves of those false beliefs and shallow schemes which have caused the failure of all efforts to achieve peace among the political powers of this world. There are forgotten facts and formulas which form the principles of peace, and to them we must return. Let us, therefore, strip from the edifice of peace all the falsities and deceptions which have been thrown about it. Only then may we behold peace in its proper setting of integrity and truth.

We can learn from the disappointments of our recent foreign policy and set aside the appeasement type of agreements which should be scrapped because of their war-making provisions. We must seek to work through the United Nations. Weak though it has been made by concessions to Russia, it still offers the mechanism for peace.

Man's immemorial strivings for power have reflected from age to age the innate and evil tendencies of his mind and the passing poverty of his soul. If his basic motives had changed even in a modest measure, we would have missed a hundred wars and all their horrors.

But education and spiritual enlightenment have slowly reached a point where they may enable many men to think upon a logical and lofty plane and to hold within reasonable bounds their lusts for power. If we are to contemplate realities, however, it is apparent that man has not yet lifted his thinking to a plane sufficient to outlaw brute force, and thereby assure permanent peace. The commission of crimes and the existence of prisons plainly point to the fact that far too many men still measure this life in terms of undisciplined force.

There is one, and only one, path to everlasting peace.

SYMBOL OF THE CROSS

At noon one day, 1,917 years ago, a young man was crucified at a place called Calvary. He was executed because He healed the sick, cleansed the lepers, raised the dead, and taught His followers that "they should know the truth, and the truth would make them free."

The cross on which that man died became the symbol of His words and works. It became, and has since remained, the emblem of all freedoms for which men can hope, and to which they can aspire.

Our four freedoms are nothing new; they are but a part of the other and greater freedoms whose symbol is the cross.

If we would have peace, we need not look far afield.

He who died on the cross well knew that men must lift themselves to better and brighter lives by the power of their own faith and their own thinking. So He taught His followers and believers the strength and power of mercy, justice, truth, faith, and love. And with these conceptions or implements of thought, He showed them the way to overcome fear, doubt, ignorance, hatred, superstition, and evil of every sort and form.

If the people of our land intend to give peace to all men, their course of action is planned and charted for them. Those in the rest of the world who are not free must engender the thoughts and faith which inspire freedom, for only upon the foundation of freedom can permanent peace be erected.

FAITH, NOT POLITICAL POWER

If we intend to make peace a living reality in the world of men, there must continue a crusade that has no end. Such a task is stupendous in its proportions, limitless in its time, and eternal in its reward. Mankind must know that there is no permanent peace in man's manipulations of political power; we must have faith in the face of all obstacles and all defeats; and we must be prepared to pick up Christ's cross and march forward—unafraid. No short and painless path to peace is before us. Peace must be earned. It must be deserved. It must be won.

And finally, my fellow Americans, as the political crucible of our Republic continues to forge our national destiny, let us fondly hope that we shall be guided upon the path of freedom and truth.

Let not the heat of political contention reconvert the jewel of eternal peace into the elements from which it was formed. For the path to peace lies not in the direction of socialistic doctrine or communistic paganism. The history of mankind reflects that experience. May our citizens turn a deaf ear to those who would weaken our Republic.

May we sternly resolve that our honored dead and the great cause for which our Nation's war mothers now firmly stand, may forever inspire us to achieve peace. May nothing swerve us from that path of freedom and truth and justice. For peace is of God and man cannot violate those eternal and divine principles without penalty and remorse. May our beloved America stand firm and forever strive toward an honest and just peace in harmony with the lasting principles of human freedom and eternal truth.

Today, as we gather at this national shrine, we must recognize our individual responsibility to keep alive that spirit of patriotism without which this Republic cannot endure. Each generation faces that same challenge which inspired Americans in 1776 to pledge their lives, their fortunes, and their sacred honor to make this the land of free men and free women; dedicated to life, liberty, and the pursuit of happiness. Let us resolve to preserve that heritage unblemished for future generations.

Address by Hon. Alexander Wiley, of Wisconsin, on First Flight's Day of Rock County Airport

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, yesterday, on May 14, it was my pleasure to be on hand for the dedication ceremonies of a vital new aviation link in the Badger State. May 14 was, therefore, a historic day in the history of southern Wisconsin, because it brought transcontinental air service to Janesville, Beloit, and surrounding area.

It was a real pleasure for me to speak at this ceremony and to be on hand for the addresses of the great air ace, Col. J. J. Foss; the distinguished president of Wisconsin Central Airlines, Mr. Francis Higgins; the able president of Northwest Airlines, Mr. Croil Hunter; the esteemed editor of Beloit, Wis., Mr. Walter A. Strong, the honored city manager of Janesville, Mr. Henry Traxler; Mr. Jess Phillips, the industrious chairman of the county volunteer air traffic committee; his hard-working associate, Mr. Alan H. Ryan, also of Beloit, chairman of the county board airport committee; and my able colleague, Congressman LAWRENCE SMITH, of Racine.

It is through vital advances such as the new Rock County Airport that Wisconsin intends to keep pace with aviation progress throughout the Nation, and to help contribute its share to winged progress in the world.

WISCONSIN CENTRAL AIRLINE FRANCHISE

I particularly invite attention to the fact that daily flights by Wisconsin Central Airlines will carry passengers, air express, and airmail to any place in the world through trunk-line connections at Madison, Chicago, and Minneapolis. Since this great feeder airline, Wisconsin Central, began in February 1948, it has flown nearly 3,000,000 passenger miles with a perfect record of safety. That is why, as I have commented on the Senate floor previously, we of Wisconsin feel it is so essential that the Civil Aeronautics Board grant renewal of the franchise to Wisconsin Central. We are similarly proud of the service rendered to us by Northwest Airlines which began operations all the way back in October 1926 and which has had spectacular growth since then.

We were particularly happy yesterday also to have had on hand our worthy Governor, the Honorable Oscar Rennebohm.

Mr. President, I ask unanimous consent that the text of my address delivered at Rock County Airport yesterday afternoon be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ROCK COUNTY—NEXT DOOR TO THE WORLD

It is a real thrill for me to be on hand with this distinguished array of civic leaders for this inspiring dedication ceremony.

The great achievement which you are celebrating today represents a triumph of cooperation, and I personally am happy to have been able to contribute some small part to its success.

This is an historic day in the history of your county. The ribbon is being cut, opening up a whole new aviation frontier. First Flights Day marks your county's taking wings, so to speak, and rising above its previous accomplishments to a still finer future.

YOU ARE ONLY 60 HOURS AWAY FROM DISTANT SPOTS

It has been truly stated that there is no point on earth more than 60 hours away by air from any other spot on earth. This is particularly true insofar as high speed military aviation is concerned, and it is a matter of fact that with the advance of jet propulsion, the 60 hours flying time is being cut down to still shorter flying periods between any two spots.

Naturally, we here in America are interested in shortening the distance between points on the globe, but not in order that we can deliver bombs more quickly to outside areas, but in order that we can deliver fountain pens, tractors, cotton goods, pumps, woolen goods, shades, awnings, stokers, shoes, powdered milk, refrigerating units, dairy products, and a miscellaneous variety of manufactured goods such as pour forth from the splendid factories and the farms of the Janesville-Beloit-Edgerton area.

Yes, we want to be next door to the world for purposes of commerce, and we want to be next door to the world for purpose of exchanging ideas. You and I know when flint meets flint, when idea clashes with idea, that out of that clash comes a creative spark, a spark that leads to understanding and to an appreciation of the other fellow's problems.

WE WANT TO UNDERSTAND WORLD PROBLEMS

Yes, my friends, we need to be globally minded in this world. We need to lift our eyes and to see distant horizons. We need to understand the problems of foreign people; and at the same time, my friends, as important as it is to look over the back yard to our neighbor's—in Europe, in Asia, and in Africa and Latin America, still it is equally important, if not far more important, I'm sure you will agree, to tend to our own back yard also.

TENDING OUR OWN KNITTING

We must never become so exclusively infatuated with foreign green pastures that we forget that the American market is the greatest in the world. We must never forget

that America has the highest standard of living in the world, and we must keep it up as such. We must never forget that basically our obligations are to our own American people, first and foremost. We must never forget that, and although communism threatens us in Europe, threatens us in Asia, it threatens us even more in Latin America (right next to our own Panama Canal) and here in our own country. There is a Red menace on the home front.

This, my friends, is no exaggeration, no overstatement. A greater proportion of Reds now conspire in America than were in Russia at the time of the Red revolution.

CONSIDER RED MENACE IN OUR OWN HEMISPHERE

In recent weeks, I have pointed out in the Senate that there is a grave Communist threat in Guatemala—next door to Mexico—where the Government is feeling increasing pressure from Communist-controlled labor unions and where there is a constant barrage of red-inspired criticism of "Yankee capitalism" and of alleged American imperialism. There, too, the Government has arbitrarily in effect kicked out our United States Ambassador—an extremely able, conscientious diplomat, the Honorable Richard C. Patterson, Jr.—on the basis of phony, trumped-up charges which the State Department has categorically rejected. That is the sort of menacing situation we face in our own American back yard. Yet, we've shipped dairy cows and other items to Guatemala; we want to trade with her, to prosper with her, to enjoy the finest possible relations with her, but the Red conspiracy has shown its ugly head against our peaceful intentions and against the personal representative of the President of the United States.

Moreover, you need not look far, for there is a Communist Party in Wisconsin and a host of fellow-travelers here in our State as well as in other States.

WISCONSIN CENTRAL FRANCHISE MUST BE RENEWED

Yes, my friends, we are next door to the world, but let's never forget the problems in our own apartment and our own backyard.

Fortunately, by means of this model 780 acre airport, you are going to assure more excellent "made in Wisconsin" shipments turning up in more corners of America and the world. And let me say right now, my friends, that we're going to leave no stone unturned—and I'm sure this goes for Larry Smith, too—to make absolutely certain of the renewal of the franchise of Wisconsin Central Airlines which is doing such a great job in serving our State.

To me these ceremonies symbolize many things, and I should like to mention them now:

TODAY EVIDENCES RESULTS OF COOPERATION

1. Basically, this dedication ceremony symbolizes that cooperation really clicks, that team-work really triumphs.

When I look back in my office files and see the tremendous volume of correspondence, of telegrams, of references to phone calls, and visits which we have had over the years, I note again that Rock County would never have achieved transcontinental air service had it not been for the untiring and unselfish labors of your chamber of commerce, your newspapers, and your broadcasting stations, the hard-working efforts of your own Congressman LAWRENCE SMITH, the cooperation of your veterans posts, the assistance of your individual business leaders, the helpfulness of Wisconsin Central Airlines, and, yes, the aid and cooperation of the United States Civil Aeronautics Board. In other words, my friends, the lesson of cooperation for fulfilling a nonpartisan community need is the sort that all of us can profit from indeed.

Teamwork is an old American tradition dating all the way back to community barn raisings in colonial days. Let's never allow agitators or provocators to destroy our spirit of cooperation among all groups.

WE ARE LIVING IN AIR AGE

2. But I see, and I'm sure you see, a second basic meaning of this ceremony today. Wisconsin Central Airlines' service to Rock County Airport evidences that we are living in an air age today, and the communities which fail to expand their facilities to meet the challenges of that air age will wither on the vine.

You and I know that the area served by the Rock County Airport is tremendously rich in industrial, agricultural, and recreational resources; so rich that there is a tremendous potential traffic in freight, in express, and in passenger service. But if your leaders did not have the initiative, the vision, the energy to secure this air service, then you can be sure that Rock County would not have kept step with the march of Wisconsin progress, and the result would have been that your businesses, your farming, your recreational attractions would have suffered.

Whether we like it or not, this is the age of high speed, of fast transportation, fast communication. Businessmen, farmers, laboring people, depend for their prosperity on up-to-the-minute contact with the other areas of our State and Nation, and indeed of the world. These are the facts; this is the air age, and we must be adequate to it.

WISCONSIN HAS ALWAYS BEEN AVIATION-MINDED

3. I think that all of the aviation-minded folks of Wisconsin will rejoice in this ceremony today, because your airport here in Rock County has been stated to be the most modern airfield in Wisconsin. We have always been an aviation-minded State. As we all know, the Badger State furnished more pilots for the Air Force in World War II than did any other State of the Union, except the far more populous State of Texas.

No American forgets that the greatest of aviation pioneers in American history was our own great Billy Mitchell, the prophet, the seer, who was so far ahead of his time that the mossbacks, the swivel-chair generals, and the rocking-boat admirals (as I have called them on the Senate floor) cashiered and crucified him.

WE MUST BE VIGILANT AGAINST ALL MENACES

Now we have learned the truth of Billy Mitchell's lessons. We have learned as he and as every American patriot warned us—that eternal vigilance is the price of liberty—vigilance to the menaces from within and from without. From over the Alaskan frontier, from over the polar cap (the Arctic Circle), can come winged bombers, or guided missiles, carrying destruction to American cities and homes. It is essential, therefore, that we have a defense second to none, an invincible, impregnable defense to the greatest extent that human brains can devise. We plan no aggression, we even despise the very thought of war, but we are determined to preserve our freedom.

Rock County Airport, with its expanded services, will constitute a vital new link in American aviation defense as well as in industrial, agricultural, and recreational strength. May the wings over this airport always be the winged doves of peace. May all of Rock County's contacts with the next-door neighbors throughout the world be peaceful contacts.

Let me therefore convey again my good wishes and sincerest congratulations to all the scores of folks, known and unknown, who have contributed to the milestone and to the historic occasion which you and I gladly celebrate today.

Thank you.

Health Problems

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on Saturday, May 13, I had the privilege of addressing the Greater New York Hospital Association on the knotty problem of medical care and the role of the hospitals in medical care. I ask unanimous consent that my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HEALTH PROBLEMS

It is a source of deep satisfaction for me to be here tonight at this great gathering—I might even say at this triumphal gathering of the Greater New York Hospital Association. I use the words, "triumphal gathering" because this association at this annual dinner can look back at a year and at many years of notable contributions to the solution of one of the major problems of our time—the problem of bringing adequate medical care to the people.

The Greater New York Hospital Association, fine as it is, has not yet wholly solved this problem. But the Greater New York Hospital Association has blazed one of the paths which can lead to a solution. And when I refer to the Greater New York Hospital Association, I am referring, of course, to the 97 voluntary nonprofit hospitals and the 22 municipal hospitals which are members of this association, and which in their individual, as well as in their collective capacities have contributed so much to the progress which has been made.

As a United States Senator from New York, I take special pride in the fact that this association numbers among its members hospitals of every creed, and of no creed, and also in the fact that these hospitals serve their patients without discrimination as to race, color, or religion. Especially in the light of the debate that is now going on in the United States Senate, I am proud and happy to be in this atmosphere of nondiscrimination and of equal access of facilities to all our citizens. This atmosphere should be, but unhappily is not, the hallmark of all our institutions in every part of the country.

Tonight this association has honored two oustanding citizens of New York who have played major parts in the recent achievements in the field of hospital care in New York. As a New Yorker, I, too, am proud of the work of Dr. Marcus D. Kogel, commissioner of hospitals. I should like to add my tribute to those which he has received here tonight.

And to Louis H. Pink, long my friend and trusted associate in the State service, who is president of the Associated Hospital Service—New York's Blue Cross plan—I add my congratulations on the fine citation which he, in the name of his colleagues, has just received. His work and that of the Blue Cross planners in New York have pointed the way for the voluntary hospital prepayment plans all over the country.

The spectacular expansion of the Associated Hospital Service is an achievement of wonder and distinction. In 1935, the Associated Hospital Service paid approximately $50,000 to the hospitals of New York City and

the surrounding area. In 1949, just 14 years later, the Associated Hospital Service paid $42,000,000 to the hospitals of New York. In that space of time the enrollment has grown from 40,000 to 4,200,000. That hundredfold expansion furnishes its own commentary. It attests to both the merit of the service and the public need which that service seeks so ably to fill.

There is another and even more personal reason for my feeling of satisfaction at being here tonight. I am at home in this gathering of hospital officials, because for more than 80 years some member of my family has continuously served on the board of trustees of Mt. Sinai Hospital. I am proud also to have been active in the Federation of Jewish Philanthropies, which has given support through the years to several member hospitals of the Greater New York Hospital Association. And I am happy to say that throughout my public career, I have always taken the opportunity given me to encourage the development of the voluntary agencies of the three great religious faiths.

I wish to say at this point that I consider these voluntary agencies to exist not by the sufferance of Government but by right and by necessity. I consider that the participation of these agencies in health and other welfare activities is a right which should never be denied or curtailed by Government in any present or future program.

I see no reason why we should even think of the voluntary agencies and of the Government as being opposing forces in any way. They should be considered as cooperative forces, engaged in a sort of partnership. That partnership has never been more finely illustrated than in the Greater New York Hospital Association. The relationship between the municipal hospitals of New York City and the voluntary hospitals has always been close and cordial. Symbolic of that partnership is Dr. Kogel's presence here tonight as guest of honor.

Of course, the achievements of the Greater New York Hospital Association and of the Associated Hospital Service should not really be measured by their administrative achievements, by the size of their membership, or by their financial standing. Rather these achievements should be measured by the service which they have rendered and are rendering to the people.

I am not a medical statistician and need not cite figures on health and disease with which all of you are much more familiar than I. Yet there is one figure which so impresses me that I would like to mention it. The life expectancy of the average citizen of New York today is nearly 25 years longer than it was a half century ago. This is, in part, a tribute to the hospitals of New York City. It is also, of course, a tribute to the entire medical profession, as well as to the contributions of the public health and sanitation services supplied by government. But while left expectancy has been increased and the availability as well as the quality of medical and hospital care have been greatly extended—certainly in the New York area—the problem of adequate medical care for all our people is still far from being solved. I know you recognize this fact. I need not labor it. All of us are agreed that "something must be done."

The problem with which you and I are faced and to which we must honestly and courageously try to find a solution is the problem of the increased cost of medical care and the growing demand of the American people for more and better medical care. You and I know that this problem cannot be solved by any single magic formula or catch word. The solution lies rather in a number of simultaneous and consecutive approaches involving the medical profession, the auxiliary services of that profession, research science, the universities, the voluntary organizations, the hospitals, ar l finally, the Government at all its levels.

As a Member of the Senate I have been assigned—indeed I sought the assignment—to the Committee on Labor and Public Welfare. I was delighted because this committee has jurisdiction over all general legislation affecting health. This is the committee which originally reported out the Hill-Burton Hospital Construction Act and the amendments to that act which were passed last year. This committee now has pending before it all the major health bills introduced into the Senate which have not yet been approved or passed upon. That, it is a matter not only of interest, but of duty for me to know and to appreciate your problems and the points of view which may affect you and every person in this country.

The big question facing us today is the manner and extent to which the affirmative interest of Government in the health of the Nation should be expressed. There is no doubt in my mind that an interest by Government must be expressed, and must be expressed by a broad and comprehensive program of activities in close association and cooperation with the health professions and the voluntary agencies, in a manner to assure to the people the medical care which they need and which the national interest requires that they have.

The health of the people can no longer be considered an individual matter. Laws and ordinances in the field of contagious diseases and in public health and sanitation have long been accepted as necessary, although these laws and ordinances do, in fact, constitute a kind of control over the individual in the interest of the whole community.

Today it is beginning to be generally recognized that the health of the people is as much concern of Government as their education or their working conditions. People in poor health not only cease to be a national asset, but they become a national liability. They are consumers of the national effort rather than contributors to it. The hospitals and the health professions constitute, in this sense, forces of conservation against the erosion of the nation's manpower.

But in this day of world crisis, when the survival of our country and of our civilization depends upon the combined efforts of every man and woman, the diminution of the national effort through illness is a threat to our very existence. It is a national concern and properly the concern of the Federal Government in the fields in which neither the voluntary agencies nor local governments desire to or can practicably operate.

Of course, these are generalities on which most of us will agree. Only the die-hards and extremists who insist that any government participation in the field of health constitutes regimentation will disagree with what I have said. I want to say at this point that I am not addressing myself to the extremists. They are fighting the battles that were lost a half century ago but they still do not realize it. These protagonists of unreason are trying to plug the dike against tides that will not be stayed. They are unaware of the fact that the dikes which they seek to save have long ago been inundated and submerged. These men do not even acknowledge the remarkable success your own association has achieved through the close partnership of government and voluntary hospitals.

No, I am addressing myself tonight to men of fair and inquiring mind who are searching, as I am sure all of you are, for real solutions to real problems. I, myself, have no ready-made solution. I am aware of the practical difficulties which confront us. But I insist that the problem of bringing adequate medical care to the people must be solved. If we continue to say merely that this problem cannot be solved—if we say that the present levels of medical care, because they are higher than those in other parts of the world, are high enough, then we will be paving the way for measures which may be neither right nor reasonable, but which will be impressed upon the medical profession by the force of an outraged public opinion.

I am searching for a solution, my friends, which will represent the best thoughts of courageous and unbiased minds, including the minds of forward-looking members of your profession and of the health professions generally.

I am sure that in this undertaking I and others of us who are searching for a solution will have the unstinted cooperation of all those connected with hospitals and hospital administration. I am aware that hospital groups have been leaders among the health professions in supporting constructive health legislation.

The great voluntary hospitals of this country gave the necessary impetus to the Blue Cross plans at a time when those who are now opposed to any form of Government assistance were saying that the Blue Cross plans were socialistic and were actuarially unsound and impractical.

I could cite other instances of progressive health plans and measures which have been and are being supported by the hospital authorities of the Nation. The hospital authorities are as conscious as any group in our population of the need for Government participation in a proper and sensible way in the solution of our national health problems. The hospitals are keenly aware of the fact that medical costs are rising in a steady spiral. How to meet these costs and how to add constantly and progressively to the quality of medical care while making medical care increasingly available to all the people is your constant concern, and it is the core of the problem that faces us all.

Let me say at this point, before I go any further—and I hope I can make myself perfectly clear on this—that I do not now, and never have, and never will, favor any solution which involves socialization of our hospitals. I am opposed, and always have been opposed, to any move that would involve Government control of our great and free system of voluntary hospitals. I am opposed, and always have been opposed, to any proposal that would place doctors, nurses, or hospital employees under the control of the Federal Government or make them employees of the Federal Government. I am opposed, and always have been opposed, to the regimentation of medical personnel. I hope that this statement is flat enough and simple enough for even the extremists to understand.

But I do favor and do advocate proposals for Government assistance to medical and nursing education as well as for scientific research.

I do favor Government assistance for the construction and establishment of health centers and clinical facilities.

I do favor Government aid for the reconstruction and replacement of obsolete hospital buildings in urban areas. I also favor as an immediate measure Government contributions through grants-in-aid to States for out-patient services.

I do favor more Government participation in these hospitalization fields in which the voluntary hospitals have generally indicated their acceptance of Government participation, such as mental disease and hygiene, tuberculosis, and similar ailments.

I do favor Government leadership and grants-in-aid for rehabilitation of the mentally and physically handicapped.

I do favor a comprehensive program of Federal aid to States and localities in the field of public health and sanitation.

UNIVERSITY OF MICHIGAN LIBRARIES

I do favor and advocate the expansion of the maternal and child health and crippled children's programs started under the Social Security Act programs which I and others are fighting to broaden in the social-security amendments now being considered by the Senate.

In a few weeks or less the Senate will take up a series of amendments to the Social Security Act. These amendments deal, among other things, with social security for hospital employees, and with the child and maternal-care programs. These are programs in which you have a deep interest.

I had the privilege of adding my voice very recently in protest against a provision tentatively adopted by the Senate Finance Committee which would have effectively barred employees of hospitals controlled by religious denominations from being covered by social security. That decision has been happily rescinded, and although the provision as it now stands in the Senate bill is not entirely satisfactory to me, it is a suitable basis for compromise in the House-Senate Conference which will follow the Senate passage of the pending amendments.

This is a matter which you should watch and in which you should express your interest. You should also follow the other provisions of the social-security amendments which I have mentioned. These provisions are vital to the health professions and to the health of the Nation.

But these are all tangential approaches to the central problem—the problem of every-day medical care for the great bulk of our population—for that great mass of people who are neither wealthy nor indigent. These latter two classes are the only ones to whom all necessary medical care is now available.

True, there are available to the general public in most areas of the country not only hospital insurance plans, but medical prepayment plans. But all these plans—and I hope you will understand that I am not being critical but merely factual—are inadequate in an absolute sense. They are not the final answer. Most hospital insurance plans provide only limited service. Most medical insurance plans are likewise limited and cover only a small portion of the population. Finally, there are considerable areas in the Nation where medical prepayment plans are impractical and where even hospital insurance systems do not reach.

For these reasons and others, I am convinced that the public interest demands further Government participation in the national health effort. I think that such a development is inevitable. I hope that it will take place in an intelligent manner, in a constructive manner, and in a cooperative manner, with wisdom and with understanding. That is as much up to you as it is up to government.

Recently I read some very fine and thoughtful words on this subject by the renowned Dr. C. E. A. Winslow, professor emeritus, Yale School of Medicine, as published in the American Journal of Public Health of January 1950. Professor Winslow asked:

"Is it not possible that politics and polemics and paid propaganda may be laid aside and that the statesmanship of competent experts may establish a sound policy of directed gradualism leading to ultimate solution of this most urgent problem of midcentury public health?"

This is a question full of truth and wisdom. I trust and hope that the health profession will take it to heart. Certainly the mechanics of this problem can be worked out if we have the will and the ingenuity. Those mechanics need not and must not involve socialization of the hospitals and of the medical profession.

It will not be easy to determine these mechanics and even less easy to reach agreement upon them. It will require the closest understanding and cooperation between representatives of the public and the representatives of the various health professions. I call upon you assembled here tonight to give your most urgent attention to a real effort to solve this problem and to reach the broad agreement that is necessary both among yourselves and with the lawmakers in government.

I might tell you that I have been meeting with various leaders of thought and the medical profession on this subject. I have a deep interest in arriving at some solution which will meet the criteria I have outlined. There is still time for such a solution.

I am happy to know that there are very many among you who are working and devoting all your energies and thoughts to a solution. I offer my own help and cooperation in this direction. I urge with all the force at my command that you proceed in this task with an unflinching determination to persist in it until success crowns your efforts. Neither you nor I dare fail in this undertaking.

The Railway Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, it is my intention at this time to request unanimous consent for insertion in the Appendix of the RECORD of numerous articles, and so forth, which have to do generally with the railway strike and the need for additional legislation.

First, I ask unanimous consent to have inserted in the Appendix of the RECORD the ticker tape of this morning, of 9:45 a. m., and also the ticker tape of 10:30 a. m. of this morning, on the general subject of the railway strike.

There being no objection, the dispatches were ordered to be printed in the RECORD, as follows:

CHICAGO.—Mediators said today that stripped-down negotiating teams were making definite progress toward settling the strike of locomotive firemen.

Three railroad negotiators and three representing the brotherhood of locomotive firemen and enginemen worked for 5 hours yesterday on a package proposal, and a railroad spokesman said he presumed the talks would be resumed today.

Francis A. O'Neill, Jr., chairman of the National Railway Mediation Board, reported that definitely some progress was made.

But the firemen extended their walk-out to five more divisions of the Southern Railroad, one of the five roads hit by the 6-day-old strike.

At Detroit, police posted a 24-hour anti-sabotage watch on three bridges over the Michigan Central tracks between the railroad's terminal and the Detroit river tunnel. The watch was established after rocks were hurled at Michigan Central trains arriving from Canada, police said.

The talks were curtained in secrecy, and both mediators and negotiators were reticent to talk about the nature of the progress being made.

But it was learned that the disputants have agreed in principle to submit the union's chief demand, employment of an additional fireman on multiple-unit Diesel locomotives, to arbitration.

Still at issue, apparently, was a union demand for a fireman on small Diesels used in yard switching. Currently the small engines operate only with an engineer.

HARRISBURG, PA.—The strike-crippled Pennsylvania Railroad, acting while pickets marched at railroad yards here, stepped up the movement of its freight trains to the west today.

The strikers, members of the Brotherhood of Locomotive Firemen and Enginemen, set up picket lines to protest the operation of trains to the west and north from this rail crossroads and to try to halt the railroad's operations to the east and south.

But the road continued to move out freights to the west and kept its eastern freight and passenger lines operating on schedule.

It declined to say who was operating the trains.

A Pennsylvania Railroad spokesman said he could not estimate how many trains the railroad will send west today, but he said the number will be greater than the 42 freights moved yesterday. Normally, the road sends out 1,500 freights a day on its strike-affected lines north and west of Harrisburg.

He emphasized that the road is not accepting any new shipments, but is moving perishables and other goods stranded when the strike became effective last Wednesday morning.

The Pennsylvania Railroad freights were running in the area bounded on the west by Chicago and St. Louis, on the north by Buffalo, and by Harrisburg on the east.

Railway Act No Longer Model for Labor Laws

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Railway Act No Longer Model for Labor Laws—Recurring Failures To End Disputes Brings Demands for Revision," by Louis Stark, appearing in the New York Times for May 14, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAILWAY ACT NO LONGER MODEL FOR LABOR LAWS—RECURRING FAILURES TO END DISPUTES BRING DEMANDS FOR REVISION

(By Louis Stark)

WASHINGTON, May 13.—The strike of railroad firemen and enginemen this week focused attention on the weaknesses of the Railway Labor Act and coincided with congressional hearings designed to amend this law so as to make it strikeproof.

The law dealing with disputes in the railway industry does not compel arbitration but comes so close to it that it is considered a quasi compulsory arbitration statute. Yet a dispute such as the current one affecting a demand for an additional fireman in multiple Diesel units may run through the lengthy processes of the law and result finally in a strike.

All that the law does is to set up a series of steps to create an atmosphere for settlement. If the parties cannot agree in direct bargaining the National (Railway) Mediation Board seeks a settlement. If mediation fails the Board proposes that the parties agree to arbitrate and accept the decision as binding.

UP TO THE PRESIDENT

Either side may refuse. In that event the next step is usually up to the union. If it threatens a strike and this threat is considered serious, the President may name an emergency or fact-finding board. But the emergency board has no power to arbitrate. It must merely recommend. However, public pressure is relied upon in crucial cases to compel acceptance of recommendations made by presidential boards.

During the war gaps in the handling of railroad labor cases were opened up when President Roosevelt intervened to modify fact-finding board recommendations. At the same time the recommendations of several such boards were set aside or modified by Wage Stabilization Directors James F. Byrnes and Fred M. Vinson, who succeeded him.

Presidential intervention was resorted to in order to get around the wage-stabilization policy. Messrs. Byrnes and Vinson, however, over-ruled fact-finding boards in order to make their findings, as they interpreted them, conform to the national wage-stabilization policy.

The unions, naturally, applauded Mr. Roosevelt's action since it was in their favor but frowned on those of his economic stabilizers because their acts meant wage awards lower than those proposed by the fact-finding boards.

In June 1943, Mr. Vinson vetoed a wage increase of 8 cents an hour for 1,100,000 nonoperating rail men under the "hold the line" order of April 1943. He argued that it was against the national wage policy. The unions insisted that it was for the President to make that decision because the wage stabilizer could not set aside a ruling made under the Railway Labor Act.

CARRIERS' VIEWPOINT

The National Mediation Board was ordered by Mr. Vinson to reconvene the emergency board which had made the 8 cents award. The mediation board said that only the President could do so. For some undisclosed reason the President did not reconvene the fact-finding board. Instead, he created a second such board. This one carried out Mr. Vinson's directive and recommended a wage increase of 4 to 10 cents an hour. This Mr. Vinson approved.

At the time of these incidents it was predicted in some quarters that the Administration's handling of the railway labor problem might result in the act's becoming a war casualty.

In the early days of the last war few cases went to Presidential boards. But since 1941 the unions have been restive and have pressed wage demands militantly. The result has been that some disputes have gone to strikes because unions have refused to abide by recommendations of the emergency boards.

The tally of such refusals kept by the carriers is that since 1941 the unions have rejected the findings of seven fact-finding boards in whole and one in part. The union argument is that the law does not compel acceptance so they withhold complete approval but use the proposals as a basis for negotiation and settlement.

Unquestionably, in many cases in recent years the fact-finding procedure has been used in comparatively trivial cases. In other cases these boards have been set up to adjust matters which should never have gone to them because other machinery exists for handling such disputes.

For example, once contracts are made between unions and carriers, disputes arising under these agreements go to what is known as an adjustment board. There are four such boards, each specializing in cases affecting certain crafts.

FOR DISPUTES AFTER CONTRACT

The law contemplates that decisions in disputes over the interpretation of agreements referred to the adjustments boards shall be binding. And that means there shall be no strikes. The theory is simple. If a contract is really worth the paper it is written on and if machinery exists to interpret grievances that arise while the contract is in force then, too, it stands to reason that neither of the parties shall resort to strike or lock-out over disputes of this nature.

And yet in the last few years the unions have increasingly resorted to strikes or threats of strikes to support the type of grievance which is normally referrable to adjustment boards. Why does this happen? The train and engine service unions complain that Division No. 1, which adjusts their disputes under existing contracts, is too slow, that the board has a large backlog of cases.

Therefore, the unions whose cases go to the first division now bypass this machinery. The law says that the parties may submit these relatively minor disputes to the adjustment board.

The unions interpret it to mean that they need not do so. They then set a strike date in order to create an emergency. Despite the relatively minor nature of many of these disputes the President names an emergency board to consider them when these top-level boards have always been intended only for the most pressing disputes.

The railroads, on the other hand, insist that if a union refuses to submit grievances that arise out of the contract to the Board set up to adjust these disputes, then it cannot, in all good conscience, resort to a strike.

Both railway management and employees' brotherhoods have in the past shied away from making the findings of emergency boards binding. However, management has now come face to face with an important decision as a result of the current firemen's strike. This week outstanding railroad operating chieftains told a Senate Labor and Public Welfare Committee that they were in favor of amending the law to make reports of fact-finding boards final and binding. They supported a bill to this effect offered by Senator FORREST C. DONNELL, Republican, of Missouri.

PRICE FOR NO-STRIKE BAN

But Senator DONNELL's bill goes even further. He would have every dispute which the National Mediation Board is unable to settle turned over to a Presidential emergency board. That would mean creating thousands of such boards. The door would be opened to the diversion of many minor disputes to these boards.

This is the price the Missouri Senator is willing to pay for his no-strike objectives on the railroads.

His proposal may well turn over to the Federal Government many interunion disputes. At present the National Mediation Board takes the view that jurisdiction squabbles among unions are a matter of internal housekeeping among these organizations.

Some opinion in Congress favors removing the exemption of railway workers from the emergency provisions of the Taft-Hartley law. This would permit an 80-day injunction when a strike is threatened.

Labor in other fields is eyeing the move to ban strikes on the railroads with interest. It is concerned lest such a drastic step might spread to other essential industries.

On the other hand, the principle of adjusting disputes that grow out of contract appears to be spreading so rapidly that this phase of the Donnell proposal is unlikely to have any effect on unions and industries elsewhere.

Rail Walkout Hits Union Pacific Line

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rail Walkout Hits Union Pacific Line; United States Parleys Begun," from the New York Times of May 14, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAIL WALKOUT HITS UNION PACIFIC LINE; UNITED STATES PARLEYS BEGUN—FIVE BIG ROADS ARE INVOLVED IN FOURTH DAY OF WALKOUT—RISE IN JOBLESS EXPECTED—SERIES OF TALKS SLATED—ISSUES WERE DISCUSSED FULLY, FEDERAL MEDIATOR DECLARES AFTER 4-HOUR MEETING

(By George Eckel)

CHICAGO, May 13.—The National Railway Mediation Board held the first of a series of conferences today in an effort to settle the 4-day-old railroad strike that now affects five big roads and has thrown 200,000 men out of work.

Francis A. O'Neill, Jr., Board Chairman, announced at 4 p. m. that the Board had held "an informal joint conference of the parties" but "the case is not settled." He said the conference had lasted 4 hours.

"A full and frank discussion of all the issues took place," he want on. "The parties have now returned to their headquarters and are discussing the issues with their folks. This announcement is made to let the public know we are working on the case."

Both parties conferred with the Mediation Board again tonight. There was some reason to believe President Truman's impending visit might be speeding the machinery.

Mr. O'Neill said that additional conferences would be held in Chicago, either joint or separate, but that no dates had been fixed.

Asked if the strike was any nearer settlement because of today's conference, he first said, "No comment," then added:

"We said yesterday it was deadlocked. All we can say now is the case is not settled."

"Were any new proposals put forward today?" he was asked.

"No comment," he replied.

"How has the situation changed?"

"No comment."

Mr. O'Neill declined to identify those at the conference except to say they included representatives of both parties.

THE UNION PACIFIC INVOLVED

The day's strike developments included two moves by the striking Brotherhood of Locomotive Firemen and Enginemen to bolster its position. One was at Harrisburg, Pa., and the other in California, where the Union Pacific, hitherto not involved, was affected. The union embargoed a 100-mile section of the Union Pacific trackage.

The other struck roads are the New York Central, the Pennsylvania, the Santa Fe, and the Southern.

Meanwhile, unemployment resulting from the walkout hovered around the 200,000 mark, with nonstriking railroad employees accounting for perhaps three-quarters of the total. No large increase in layoffs was reported today, but the total appeared due for substantial increases shortly if the strike was prolonged.

The Pennsylvania and the Southern roads, however, announced substantial increases of service in the strike area.

In Knoxville, Tenn., three switchmen of the Southern Railway were charged with having fired on freight trains Thursday night, slightly wounding one trainman acting as fireman. Arrested last night, they were reported to have signed statements admitting the shooting.

District Attorney General Hal H. Clements, Jr., filed shooting charges against Charles Anderson Watson, R. M. Norman, and Paul Brackett. They were arrested last night in an automobile in which two Japanese rifles and a .22 caliber rifle, and ammunition were found. Their statements reportedly said that one of them did the shooting, in which two Southern Railway Diesels pulling freight were ambushed.

The strike was called at 6 o'clock Wednesday morning against the New York Central west of Buffalo, the Pennsylvania west and north of Harrisburg, and the lines of the Atcheson, Topeka, and Santa Fe and the Southern Railway. Called out were 18,000 firemen.

At issue is the firemen's demand for a second fireman aboard multiple-unit Diesel locomotives. Two presidential fact-finding boards have declared the demand to be without merit.

The Union Pacific was involved in the strike by the union's announcement here today that firemen would not take U. P. trains over 100 miles of track between Daggett and San Bernardino, Calif. This trackage, it said, belongs to the Santa Fe. This provision was to go into effect at 6 o'clock, Pacific standard time, tonight. This track is on the U. P. route between Ogden, Utah, and Los Angeles.

FREIGHTS TO BE REROUTED

UP officials here and in Omaha, Nebr., said that freight trains would be rerouted over the Southern Pacific tracks but that some passenger service would be canceled. The Los Angeles Limited and City of Los Angeles left here today, with supervisory employees scheduled to take over as firemen on the struck trackage. But Los Angeles cars of the transcontinental Gold Coast will be dropped, it was announced.

At Harrisburg, Pa., picketing was begun against Pennsylvania Railroad traffic east and south of the city, an area previously unaffected. The road said service had not been affected thereby.

D. S. Herrick, a local official of the brotherhood, said that the Pennsylvania had violated a promise not to operate trains west or north of Harrisburg.

The picketing arrangement is designed solely to prevent crews taking trains at Harrisburg for runs east or south, according to a union spokesman here. A crew assigned to a train at Philadelphia could bring it into Harrisburg and take it back again without crossing picket lines, provided the crew did not leave the train while in Harrisburg.

Replying to the union, the Pennsylvania said that the union might have regarded as a "neutrality agreement" a public statement by Walter S. Franklin, president of the line, at the beginning of the strike. This statement, according to the railroad, was that if the strike were prolonged, it would probably be necessary to lay off a lot of people and stop all trains.

At Spartansburg, S. C., the Southern Railway said it was recalling Monday 460 of 750 employees in construction and maintenance shops. It was also announced that freight service in the area was "nearly normal" and that six of twenty passenger trains normally serving Spartansburg, on the main Washington-Atlanta line, were back in service.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. FERGUSON. Mr. President, in accordance with the consent granted to me during the course of my remarks today, I present herewith for printing in the Appendix the speech delivered over the radio by the Senator from Alabama [Mr. HILL] on April 12, 1950, and the speech delivered over the radio by the Senator from Alabama [Mr. SPARKMAN] on April 17, 1950.

There being no objection the speeches were ordered to be printed in the RECORD, as follows:

SPEECH BY HON. LISTER HILL, OF ALABAMA, MONTGOMERY, ALA., APRIL 12, 1950

ALABAMA'S FUTURE LIES IN THE DEMOCRATIC PARTY

My friends, the people of Alabama face a most important decision. Will Alabama stay in the Democratic Party or will Alabama waste her strength and influence by walking into a Dixiecrat splinter party?

This is a decision of such importance to all of us that I cannot, as your Senator, sit silent in Washington while the question is being determined.

It is my duty to you, the people I serve, to speak out and tell you that I am convinced the interests of Alabama and the future of her people lie in the Democratic Party.

"I am a States' rights Democrat. I have fought the battle of States' rights. I have kept the faith. I tell you it is the power and influence of your Senators and Congressmen that has made possible the defeat of FEPC and the other so-called civil-rights bills, they hold this power and influence as members of the Democratic Party.

The anti-poll-tax bill is bottled up today in a subcommittee of the Senate Rules Committee. Senator JOHN C. STENNIS, of Mississippi, is chairman of this subcommittee because of his membership in the Democratic Party. If he were a member of a Dixiecrat splinter party he could not be chairman of this committee or any other committee. He could have little influence in the fight against the civil-rights bills.

The general civil-rights bill is bottled up today in a subcommittee of the Senate Judiciary Committee. Senator JIM EASTLAND of Mississippi is chairman of this subcommittee because of his membership in the Democratic Party. If we were not a Democrat he could not be chairman of this committee or any other committee.

As a Democrat, I hold a place on the Senate Committee on Labor and Public Welfare. I led the fight in the committee against the FEPC bill, and the committee adopted the bill like a foundling on the Senate's doorstep—without a word in its favor.

If our group of southern Senators is to continue to defeat these civil-rights bills, we must keep the power and influence we hold as members of the Democratic Party.

We know the Republican history of the civil-rights bills. When the people of the Second Alabama District first sent me to Congress some 25 years ago, the House of Representatives was engaged in a fight over the antilynching bill. It was a Republican bill, just as the antilynching bill on the calendar of the Senate today is a Republican bill, introduced by the Republican Senator from Michigan, Mr. FERGUSON.

The Republican Party brought the civil-rights bills into being and today the Republican leader in the House and the Republican leader in the Senate proclaim the Republican Party's solemn commitment to these bills.

You and I remember the days of the Republicans—the bitter days of the Hoover administration—when cotton was selling for 5 cents a pound; banks were failing one after another and the life savings of our people were wiped out; businesses went bankrupt and farms and homes were lost; thousands of men and women walked the streets looking for jobs and entire families knew hunger and misery.

We saw the Democratic Party change all this and save our free-enterprise system.

You and I know what the performance of the Democratic Party has meant to us in Alabama—

More jobs than ever before in Alabama's history. Payrolls and profits for Alabama's people last year at the high water mark of two and a half billion dollars. Business, small and large, has prospered as never before. The savings of every Alabama depositor are protected by Federal deposit insurance. Alabama's businessmen know a new freedom for their enterprise under my amendment to the Transportation Act removing freight rate discriminations.

Our farmers have prospered through support prices, farm credit, crop insurance, soil conservation, rural electricity, rural telephones, farm housing, and reduced tenancy. The income of our farmers is six times their income under the Hoover administration and they and their families know a new way of life.

Our industrial workers have won jobs, collective bargaining, decent hours, and minimum wages.

The county poorhouse of the Hoover days is gone and our people have social security. Our old people are protected against hardship and the workers are protected against unemployment. Dependent children and needy mothers are cared for, and crippled children and the blind are given care and training.

There is TVA with its benefits for all Alabama, created by the act I introduced in the House of Representatives. TVA power serves farm and factory and city. And with TVA the income of the people of the valley has increased more than the income of any other section of the country.

There are the thousands of new homes and apartments for Alabama's families.

There is the GI bill of rights which gives education and job training, and farm and home and business opportunity to our veterans.

Under the Hill-Burton Act, Alabama is building hospitals and health centers. By next January more than 60 Alabama cities and communities will have their own hospitals and health centers completed or under construction.

We see new school houses, hundreds of miles of hard-surfaced roads in every Alabama county, airports, city halls, and vast public works. Our children benefit from school lunches and vocational education. In the Senate we have twice passed the Federal-aid-to-education bill. As an author of the bill I look forward to the time when the House of Representatives will follow the Senate's good example and the bill becomes law.

The development of Alabama waterways for which we have worked so long—the Tennessee, the Tombigbee-Warrior, the Chattahoochee, the Coosa-Alabama—points the way to the conservation and development of all Alabama's resources.

The Democratic measures have brought new strength and new prosperity to Alabama—to our farmers, our workers, our businessmen, to all our people.

As your Senator, I have worked and labored and fought for these measures with all my heart and soul. As I talk to you at this

moment I fight to preserve them, that their benefits and blessings may continue to flow to you, to Alabama, and to all our people.

The Dixiecrat leaders would destroy these measures. They join hands with the Republicans and denounce the measures as socialism. The Dixiecrats and the Republicans seek to tear down that which the Democratic Party has built for us. Dixiecrats and Republicans are birds of a feather.

Alabama's Dixiecrat leader, the chairman of the State committee, advocates an open alliance of Dixiecrats and Republicans. Addressing the State committee in Montgomery on January 21 he proposed that Dixiecrats and Republicans nominate the same candidate for President in 1952. He suggested that Dixiecrats could "share" with Republicans "in the glory of electing a President."

The New York Times of March 9 carried the following story:

"Guy George Gabrielson, Republican national chairman, has met in recent weeks with some top leaders of the States' rights Dixiecrat movement to discuss a plan whereby Dixiecrat votes might be thrown to the GOP nominees in 1952.

"The plan would be based on a 'trial marriage at the top.'

"Under the scheme the States' rights Dixiecrats would nominate for President and Vice President the same men picked by the Republican National Convention."

And so, my friends, we have the strange doings of Dixiecrat chairman and Republican chairman to deliver you and your vote to the Republicans.

I do not believe that you, my Democratic friends, wish to be handed over to the Republicans.

You have not forgotten that the Republicans, when they controlled the Eightieth Congress, tried to sabotage the farm programs by slashing the funds for soil conservation, production and marketing, REA, school lunches, and farm ownership. They tried to sabotage TVA by denying the funds for the New Johnsonville steam plant which the Democratic Party has now given us. They blocked extension of social security, made a mockery of the housing program, and crippled our trade agreements.

Only a few days ago we had before the Senate our bill to adjust cotton- and peanut-acreage allotments and prevent discriminations and hardships to Alabama farm families. We won the fight for our farmers. But we won through the votes of Democrats—northern and southern—against almost solid opposition from the Republicans.

The Senators of the South know that we could not have won as members of a Dixiecrat splinter party. Senator RUSSELL, of Georgia, Senator CONNALLY, of Texas, Senators GEORGE and BYRD and HOEY, and the rest stand squarely in the Democratic Party. Former Senator Jimmy Byrnes has said that he will fight his battles in the Democratic Party.

In 1948 the people of Virginia, North Carolina, Georgia, Florida, Tennessee, Arkansas, and Texas were as much opposed to the so-called civil-rights bills as we were in Alabama. But they refused to walk out of the Democratic Party.

The refusal of these sister States to walk out of the Democratic Party was the death knell of the Dixiecrat Party. And it grows weaker as the days pass.

It was different when the people of Alabama went to the polls on November 2, 1948. The people of Alabama were not permitted to vote and make free choice as were their fellow southerners. Two years ago the Dixiecrat leaders on the State committee maneuvered Alabama out of the Democratic Party and led Alabama into a splinter party—the Dixiecrat Party.

This must not happen in Alabama again.

We must elect Democrats to the State executive committee. The members of the State committee are the trustees of the Democratic Party in Alabama. They cannot serve both the Democratic Party and the Dixiecrat Party.

We in Alabama cannot be both Democrats and Dixiecrats any more than we can be both Democrats and Republicans. We cannot be Democrats in Washington and Dixiecrats in Alabama. Either we are in the National Democratic Farty or we are out of the National Democratic Party and in the Dixiecrat splinter party.

The Dixiecrat leaders tell you that this decision can be postponed until 1952. They want to put off facing the issue.

We cannot put off this decision. We live in the Democratic Party every day in the year. We meet our problems day by day—as Democrats. We won the fight for our cotton and peanut farmers—as Democrats. We hold the line against the civil rights bills—as Democrats.

In this touch-and-go hour in world affairs, as Democrats, we will not divide and split into factions and parties as did the nations that have fallen to the Communists. As Democrats we stand united for America's strength for keeping the peace.

We go to the polls on May 2, vote for Democrats for the State committee, and we remain in the Democratic Party.

We remain in the house of our fathers—the Democratic Party, the party of Thomas Jefferson and Andrew Jackson, the party of Grover Cleveland and Woodrow Wilson, the party of Franklin Roosevelt.

SPEECH BY HON. JOHN SPARKMAN, OF ALABAMA

My fellow Alabamians, I am speaking to you from Mobile. For these few minutes I want to talk just as frankly and just as sincerely as I can about a matter of great importance to all of us in Alabama, that is whether we in Alabama shall go our way politically alone or shall be a part of the two-party system under which this country has become so great, so powerful, and so prosperous.

The Democratic Party is 150 years old. For 100 years there have been two great parties, Democrats and Republicans. From time to time third parties have been tried. But in every instance such splinter party has become a complete failure and of short life. The two most recent efforts have been the Henry Wallace Party and the Dixiecrat Party in the 1948 election. The Henry Wallace Party is dead. The present effort in Alabama is to keep alive the Dixiecrat Party. I believe that it will fail. I know that for the good of Alabama it ought to fail.

There are some things about the Democratic Party that I do not like; some parts of the platform that I will not accept; some of the legislative program that I will not support. We do not have to sacrifice any of our convictions. I am against the civil-rights proposals—always have been and always will be. One of the first votes I cast upon going to Congress 14 years ago was against one of these bills. Almost every year since then I have voted against such proposals.

To listen to some of those who would lead us into a splinter party, one would think that the civil-rights proposals were first made in 1948. They have been coming up with consistent regularity since shortly after the Civil War. During the time I have been in Congress I have voted against them more than a dozen times. In the 1890's, Alabama's great Democratic Senator John T. Morgan, led a successful filibuster against such legislation proposed by Republicans to punish the South.

The platforms of both great parties for many, many years have carried similar proposals for so-called civil-rights legislation. Every platform upon which Franklin D. Roosevelt ran contained such proposals—and Alabama gladly supported Roosevelt without question.

By the way, we southern Democrats had the chance to have the same language on civil rights, almost word for word, in the 1948 platform as was in the Roosevelt platform in 1944. I can say that the decision was Alabama's to make. I was in the hotel meeting of the Alabama delegation that hot Sunday afternoon when the proposal was made. But, unfortunately, half of our delegates had gone to that convention determined to walk out, and they were determined that nothing should happen to keep them from walking out. So they refused to accept the 1944 version and thereby brought about the fight in the convention that resulted in the more objectionable language in the platform. They took the position that they would not play unless they could write every single rule. That is the attitude that the Dixiecrats are taking today. You and I know that games are not played that way.

Even though the Democratic platform, as well as the Republican, carried a pledge for civil-rights legislation, no such law has been enacted. And I predict that if you do not take away from us who represent you in Congress the power that is ours as long as we can operate as Democrats—on the inside—there will not be any such legislation.

After all, civil-rights legislation is not defeated by Dixiecrat maneuvers in Alabama nor by threats of the formation of a splinter party. In the past it has always been defeated on the floor of the Senate. There, and there alone, must we look for its defeat in the future.

We southern Democratic Senators—21 of us—are banded together and pledged to use every parliamentary device possible to defeat civil-rights legislation. And listen to this: Every single one of those 21 southern Democratic Senators believes that we should stay in the Democratic Party. We know what our most important weapon is. It is the ability to work as Democrats.

Some seem to think that the Republicans are our friends in defeating civil-rights proposals. Such is simply not the case. I have before me an AP news item of April 12, the headline of which tells the story. I quote: "Republicans demand act on FEPC."

In recent months a civil-rights amendment has been offered to three different measures, all important to the South. In each instance, the amendment was offered by a Republican Senator, and in each instance the Republicans voted strongly for the amendment and the Democrats—northern and southern alike—voted against.

On a Republican proposal to tie the civil rights to Federal aid for education, not a single Democrat voted for it. On the Republican proposal to tie civil rights to housing, the Republicans voted almost solidly for it while only three Democrats voted that way. A similar Republican attempt to tie civil rights to the oleo tax repeal bill was strongly supported by Republicans, but opposed unanimously by Democrats.

Let us never for one moment be fooled into thinking that we can depend on Republican help to defeat these measures.

I repeat: We must depend upon our group of 21 southern Senators operating as Democrats inside the Democratic Party.

Alabama has much to lose in getting out of the Democratic Party.

And regardless of what may be said, the Dixiecrat program calls for our leaving the Democratic Party. We cannot be Dixiecrats in Alabama and Democrats in Congress. We simply cannot move in and out of the Democratic convention and Democratic Party at will. We must take our place—either in or out.

Following the 1948 defection it was thought for some time that we from the Dixiecrat States would not be regarded as Democrats. Certainly another such defection will not be ignored.

We are Democrats today by sufferance only.

Let us consider very briefly what this would mean to Alabama.

Just last week I was named chairman of the new Senate Committee on Small Business. This came to me without solicitation and indeed without notice. I am a member of the Banking and Currency Committee, one of the most important and powerful committees in Congress. I am chairman of the Housing Subcommittee. I am a high ranking member on the Public Works Committee having jurisdiction over Federal-aid roads, rivers and harbors, flood control, and public works generally.

Senator HILL holds high rank in the Senate and on some of the most important committees as a Democrat.

The same is true of our House Members.

If we were splinter party members—as the Dixiecrats would have us be—we could not have these assignments.

Let me make clear that I am not talking about the honor that may be ours individually to have these assignments. Committee assignments mean work and the higher the rank the more work. It would be much easier for us from an individual standpoint to have minor assignments or like the left-winger MARCANTONIO—the only splinter party in Congress today—to have no legislative committee assignment at all.

But I know you do not want Alabama represented that way. Alabama is entitled to the best representation possible. She is entitled to be heard in Congress. She cannot hope to get the representation to which she is entitled through a splinter party such as the Dixiecrats would have us adopt.

Patronage is not helpful to the individual Senator or Congressman from Alabama. I think every one of them would tell you so. But it is a matter of responsibility. It is a matter of considerable concern to the people of Alabama to have somebody in Alabama and answerable to the people of Alabama to approve of appointments to many responsible positions.

For instance, your postmaster in every community and your rural mail carrier. Do you want them named by your Congressman or by someone in Washington? Your collector of internal revenue, your Federal judges, your United States marshal, district attorney, and all of those who administer the Federal courts and enforce Federal laws in Alabama—do you want them selected by someone in Washington or by your United States Senators?

Senator HILL and I, as Democrats, have the responsibility of naming these. If we should make a bad choice, we are answerable to you, the people of Alabama.

Let us consider our Federal judges and other officers of the Federal courts. When an appointment is to be made now Senator HILL and I as Democrats make the selection. Make us Dixiecrats and the selection will be made in Washington by the Attorney General, who at the present time is Mr. Howard McGrath. Senator HILL and I are answerable to you. Mr. McGrath is in no way subject to your control or influence.

Neither we nor you care for the patronage. We are concerned with the responsibility of making such appointments. I do not believe you want to throw away this local control—this local accountability.

A majority of the House Members have spoken out strongly urging us to stay in the Democratic Party. Not a single one has spoken out in favor of the Dixiecrat proposal for a splinter party.

The Democratic Party was the party of our fathers. Under it the South has done well. It is a national party covering all parts of the Nation. It is made up of many different groups with widely differing views. It is big enough for us all to fight out our differences on the inside. There is where we should work exerting effort to clean up the parts we do not like. We can get nowhere by threatening.

Some dream of a tremendous balance of power. It is merely a dream and not at all realistic. Look at the other splinter parties we have known. Never did one of them wield the balance of power either in Congress or in the electoral college.

I opposed President Truman's nomination in 1948. But I always said that our fight should be in the convention and inside the party. I still believe in this principle.

May I say that I have no personal grudge in this fight. Many of my good friends differ with my views. They remain my friends. I cling to the hope that they will see the error of their ways, that before it is too late they will recognize for what it is the blind alley into which they would take the people of Alabama and that they may see the disservice they threaten to do to Alabama.

Let us preserve the two-party system. Let us not follow the will-o'-the-wisp—that is all the Dixiecrat splinter party can be. Let us be Democrats or let us be Republicans. As for me I choose to be a Democrat.

This plea to stay in the Democratic Party comes to you, my fellow Alabamians, from one who was born and reared among you, one who believes deeply in preserving States' rights, one who is steeped in the traditions of the South handed down to me by my Confederate forebears, one who is dedicated to the cause of fighting for the traditions, the customs, the way of life of the South. It comes from one who is on the firing line and has been for 14 years. I know where this fight is to be won and by whom it is to be won. Do not take away from us the tools with which to do the job.

Jobless Rise Seen in the Rail Strike

EXTENSION OF REMARKS

OF

HON. FORREST C. DONNELL

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Jobless Rise Seen in the Rail Strike," published in the New York Times for May 14, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOBLESS RISE SEEN IN THE RAIL STRIKE—NEW YORK CENTRAL TO LAY OFF 10,000 MORE BY TOMORROW—UNION ACCUSES PENNSYLVANIA RAILROAD

A sharp spurt in unemployment by tomorrow as a result of the national railroad strike was anticipated yesterday as the walk-out passed its fourth day.

Already some 200,000 persons have been made idle by the strike of 18,000 members of the Brotherhood of Locomotive Firemen and Enginemen. With industry normally closed down for the week end, there were few reports of new lay-offs yesterday but many predictions that the situation would grow worse tomorrow.

The New York Central Railroad said 40,000 employees were not working yesterday and that this number would increase to 50,000 tomorrow if the strike continued. This would mean that almost one-half of the line's total of 103,000 employees would be out of jobs, most of them in the strike-affected area west of Buffalo.

In a move to curtail renewed movement of freight traffic by the Pennsylvania Railroad west of Harrisburg, Pa., the union organized picket lines at the road's key division point in that city. The action might halt passenger trains as well.

HARRISBURG TRAFFIC CUT

Under the original strike call, traffic east of Harrisburg to Philadelphia and New York and south to Baltimore and Washington was not affected but was cut after the walk-out began. On Friday, however, the Pennsylvania sent 10 freight trains westward and was operating 21 yesterday as well as performing switching service at a number of points.

Yesterday brotherhood pickets appeared at the line's main yards in Harrisburg used for dispatching train crews and at the big freight classification yards at nearby Enola. In explanation of the picketing, D. S. Herrick, a brotherhood representative, said:

"The Pennsylvania Railroad management has violated the provisions of that statement (not to operate trains west or north of Harrisburg) leaving us no alternative but to establish picket lines in the Enola, Pa., and Harrisburg district."

A railroad spokesman in Philadelphia reported the pickets had caused no changes yesterday in operations east and south of Harrisburg. Since the strike's outset five daily trains have been moving over the main line to and from Philadelphia and three to and from Baltimore.

INCREASED FREIGHT SEEN

In New York, a railroad spokesman said it was anticipated that freight service could be further increased today "with every effort being made to provide some service to industry and business along the Pennsylvania line to the extent possible under the circumstances." Normally the road operates 1,500 freights north and west of Harrisburg.

The New York Central announced new service cuts in New York State, discontinuing four trains beginning tomorrow.

These curtailments, for the strike duration, are in addition to earlier cuts made in schedules. A line spokesman said the previous service cuts had reduced traffic on the newly affected trains, thus making suspensions necessary.

Reports from up-State New York said 3,500 workers were idle yesterday as a result of the strike. Most of these were non-striking railroad workers.

The Boston & Albany Railroad, part of the struck New York Central system, laid off 850 employees in all departments. Harry D. Johnson, general manager, would not say how long the furloughs would last, but he attributed them to a sharp drop in passenger and freight traffic.

The General Motors assembly plant at Framingham, Mass., which laid off 1,400 workers on Friday, said it planned to resume production tomorrow. The Boston & Albany services the plant with raw materials from the Middle West.

At Washington's Union Station the rail strike has actually raised employment. The Washington Terminal Co., which runs the depot, said it had furloughed 100 maintenance men, but had hired 200 extra dispatchers to reroute additional mail coming in.

Three hundred members of the striking brotherhood on the St. Louis division of the Southern Railway joined the walkout at 6 a. m. yesterday. The 475-mile division extends from East St. Louis, Ill., to Louisville, Ky., thence southeastward to the terminus at Danville, Ky. This walk-out affects six freight trains daily in and out of East St. Louis. The single daily passenger train was canceled when the general strike began.

Indian Bureau Budget Proposals

EXTENSION OF REMARKS
OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative letter relative to the Indian Bureau and its budget proposals for the Indians of California. The letter is addressed to me under date of May 8, 1950, by Purl Willis, counselor, Mission Indian Federation, San Diego, Calif.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDIAN BUREAU BUDGET FOR CALIFORNIA
WASHINGTON, D. C., *May 8, 1950.*

Hon. HUGH BUTLER,
United States Senate.

DEAR SENATOR BUTLER: This statement is presented in the belief that it will help to clarify and justify the testimony of a number of Indian delegates from southern California who appeared before the Subcommittee on Appropriations considering items affecting California Indians, on February 27, 1950, and urged the complete elimination of the proposed Bureau budget for the California Indian Agency for the next fiscal year starting July 1, 1950.

THE GREATEST HANDICAP TO INDIANS IS ENFORCED WARDSHIP

It is this writer's belief gained over a score of years intimate acquaintance with Indians and their problems, that the paramount issue confronting California Indians is this nightmare of wardship. We all admit that no people can advance and grow strong while under the handicap of perpetual wardship. California Indians became citizens under the terms of the treaty made with Mexico in 1848, and, although they were designated as "nations" in the treaties ordered to be made by the United States Senate in 1850 (but which were never ratified), the Indian Bureau arbitrarily took charge of all California Indians along with their ancestral lands on the basis that they were wards, meaning an incompetent people. We can find little attempt by the Bureau to aid and train California Indians in assuming the responsibilities of citizens during the past 100 years. The pitiful condition of most California Indians today is wholly the fault of the Federal Indian Bureau, and not because of lack of natural ability on the part of our Indians.

More than three-fourths of the enrolled California Indians are not under the direct influence of the Indian Bureau; yes, more than 15,000 California Indians live outside of the so-called Indian reservations. These Indians have long ago taken on the responsibilities of individual citizens. They have met the tests of citizenship responsibility and fully justify the testimony given by the Indian delegates who urged the complete elimination of the whole of the Indian Bureau budget for the State agency for the coming year. The verdict of every investigating committee of Congress has been the same—the universally poor condition found among Indians (ward Indians) has been charged to the manner in which the Indian Bureau has been handling this problem. Drastic changes have been ordered by Congress, but somehow the fundamental policies of the old Indian Bureau have not changed. Congress has been most tolerant and generous with the Bureau. If an accurate record be made showing the number of Indians in the Nation who should be classed as in need of Government supervision today, it would show, in our belief, that there are less than 200,000 who should be dealt with as wards. From all sides of this controversy, one hears the charge that the Indian Bureau is concerned first with its own plan to perpetuate itself. It has been the same under all administrations.

All America has an interest in this Indian problem. See the Nation-wide interest displayed within the last few years concerning the great Navajo Indians. For instance in southern California, right among the some 30 small bands of Mission Indians, where the witnesses who testified before committees recently live, a score or more trucks gathered donations of food, clothing and medicine, and funds and rushed them to the Navajo Indians, while the majority of the Mission Indians who are known as being in very great need gets little attention.

THE JOHNSON-O'MALLEY ACT OF 1934

As a result of the Nation-wide investigation by Congress about 1930, organized groups of friends of Indians demanded a new program toward Indians. Prominent leaders among women's clubs, welfare groups composed of leading educators in cooperation with welfare officials from several of the States, held many conferences and finally a plan was announced which its proponents acclaimed as the solution to the Indian problem.

The basic idea of this new plan was to have the States take over the principal services or aids needed by Indians. These services were education, welfare and medical attention. It was agreed that these fundamental needs were common to all Indians in all the States where Indians live. It was quickly appreciated by Government officials, and by State and county welfare officials that the Indian problem could now be reduced to a common-sense basis. Like in all vexing questions which go on and on without a solution, when approached on a sound basis, an answer is found. The policy and theory of the Indian Bureau across the years was to keep its control of Indian life, and it was obvious that in these three fields—Indian education, welfare, and hospitalization—the whole Indian life could be molded. Therefore, it was reasoned by these new friends, if these services could be taken over by the States, there would be few handicaps left; all Indians would soon be absorbed into the general population. Here follows the Johnson-O'Malley Act:

"(Public, No. 167, 73d Cong., S. 2571)

"An act authorizing the Secretary of the Interior to arrange with States or Territories for the education, medical attention, relief of distress, and social welfare of Indians, and for other purposes.

"*Be it enacted, etc.*, That the Secretary of the Interior is hereby authorized, in his discretion, to enter into a contract or contracts with any State or Territory having legal authority so to do, for the education, medical attention, agricultural assistance, and social welfare, including relief of distress, of Indians in such State or Territory, through the qualified agencies of such State or Territory, and to expend under such contract or contracts moneys appropriated by Congress for the education, medical attention, agricultural assistance, and social welfare, including relief of distress, of Indians in such State.

"SEC. 2. That the Secretary of the Interior, in making any contract herein authorized with any State or Territory, may permit such State or Territory to utilize, for the purpose of this act, existing school buildings, hospitals, and other facilities, and all equipment therein or appertaining thereto, including livestock and other personal property owned by the Government, under such terms and conditions as may be agreed upon for their use and maintenance.

"SEC. 3. That the Secretary of the Interior is hereby authorized to perform any and all acts and to make such rules and regulations, including minimum standards of service, as may be necessary and proper for the purpose of carrying the provisions of this act into effect: *Provided*, That such minimum standards of service are not less than the highest maintained by the States or Territories with which said contract or contracts, as herein provided, are executed.

"SEC. 4. That the Secretary of the Interior shall report annually to the Congress any contract or contracts made under the provisions of this act, and the moneys expended thereunder.

"SEC. 5. That the provisions of this act shall not apply to the State of Oklahoma.

"Approved, April 16, 1934 (48 Stat. 596)."

THE INDIAN BUREAU THEORY OF THE INDIAN PROBLEM IS WRONG

It has now been more than 100 years since Congress turned over to this Federal agency the responsibility of educating and training Indians to fit them for citizenship. Today the Indian Bureau demands that it be given another 5, 10, or 25 years or even longer, before it is ready to release its autocratic control over Indians and their property. The Bureau calls upon Congress for larger budgets as it announces new regional district offices staffed with old employees who have been promoted—but the same old philosophy of never allowing the Indian a chance to help himself is an integral part of its every program.

Most all students of Indian life today, just as they did back in 1934 when the Johnson-O'Malley Act was approved by Congress, agree that the obligation of the Nation toward its Indian citizens is to extend them equal opportunity with the predominating white race. In our opinion, one of the most constructive steps Congress has ever taken toward solving the Indian problem was its enactment of the Johnson-O'Malley law. All agreed at the time that henceforth the states would assume the full responsibility of extending equality to Indians in the basic fields of education, welfare, and medical attention. Indian Commissioner John Collier, who was one of the leading proponents of this new plan, completely failed to give the law a fair chance. In California, like his program in certain other States, Collier refused to carry out the full intent of the act; he only made a contract there for the State to take over Indian education.

The Johnson-O'Malley Act was agreed upon by its sponsors with California in mind, as the three main services or agencies in the fields of education, welfare, and medical service in the State were extolled as of the highest in the Nation. This writer, along with numerous Indian leaders, urged Mr. Collier to make a contract with California for all three of the main services provided in the act. Collier's answer to us was that he also felt this would be best, but that he "did not run the Bureau, although he was the commissioner." We felt that then as now, the staff of intellectuals of the Bureau, actually set the policy of the Bureau. We can clearly see today that if the Secretary of the Interior would have complied with the real intent of the Johnson-O'Malley Act and turned over to the State of California the services intended, there would be little left to the California Indian problem. Although the Bureau had a contract made with California for Indian education only, in 1935, the Bureau today is to all intents and purposes in actual control of Indian education. It has changed the original plan, and has set up its regional and state staff, and directing how the fund of some $324,560 should be spent. We cannot see any reason why the Indian Bureau should be allowed to have anything to do with the education of Indian children in California. California public schools are free—there can be no

extra charges required of one group of citizens which are not demanded from others.

For instance, an item of some $800,000 was included in the Bureau budget by the Sacramento Indian Agency intended to be used by the Bureau in constructing a public school for the Hoopa Indian community. There are some 800 enrolled Indians in the Hoopa band; they have valuable lands, with a good stand of timber and other assets. White children attend the public schools at Hoopa, though the Indians are in the majority. The school buildings are old and in great need of repair or replacement. They were formerly an old Army barracks. It is the first duty of the local district and the State school authorities to furnish proper school facilities. I am very sure that the Hoopa Indians do not want the Indian Bureau to have anything to do with building a new school plant, or in any manner controlling their affairs. These Indian citizens are among the most able Indians of the State and for years have been looked upon as being fully capable of assuming all the duties of other citizens. In 1947, Acting Commissioner Zimmerman, testifying under oath, named the Hoopa Indians as one of the groups which should then be released from all forms of wardship.

If Congress desires to assist the Hoopa Indians in this school-building program, we submit that it would seem to be proper to make the fund available to the State, as the Johnson-O'Malley Act provides, and not give it to the Bureau.

THE WHEELER-HOWARD ACT SET INDIANS BACK 50 YEARS

We felt that in 1934, when the Indian Bureau upper staff decided to not give its full support to the Johnson-O'Malley Act in California and certain other States, it would bring out its own plan. The Johnson-O'Malley Act if enforced, would naturally and surely break up the old Indian Bureau policy. Early in March 1934, the Collier-Woehlke members of the old American Indian Defense Association, now in control, brought forth their own version of directing Indian life. It laid before the Congress its 50-page Wheeler-Howard bill, which after several weeks of intensive hearings was reduced to its present form of some 10 pages. Under it Indians were to set up laws and regulations apart from the other citizenry. It was an experiment which many officials charge follows the communistic theory. Of course, many of the leading groups of Indians voted the bill down: Notably the Navajos, the Hoopas, and the Mission Indians.

As stated above, practically every congressional committee over the years has condemned the Indian Bureau manner of handling the Indian problems. The tangled and confused mess in all Indian problems—welfare, school, health, and inheritance—is the result of the Bureau policy—its whole theory has been to perpetuate itself. It is a sad reflection upon the Congress, for Congress should be the policy-making authority. The more than a score of Indian communities or reservations mostly in the remote areas of southern California, present a case of abandonment. The Bureau has been in complete charge of these people. With scores of Federal housing projects being thrown on the surplus market, it would have been a comparatively easy matter to have made a few hundred of these houses available to needy Indians. Likewise surplus trucks, machinery, tools, etc. would have been transferred to these people if the Bureau would have heeded the appeal of Indians.

SUMMARY OF THE CALIFORNIA INDIAN PROBLEM

California Indians should have long ago been released from all Federal wardship, further delay will only complicate and confuse the program. All investigating committees have recommended that California Indians be taken from the enforced wardship status. California Indians are taxpayers, citizens, and voters. Only about 5,000 of the 20,000 California Indians live on restricted lands—the other 15,000 have always lived as individual responsible citizens, owning their own homes and paying all the taxes imposed on other persons. The Indian Bureau and not the California Indians would suffer if Congress stands by the decision of the House subcommittee to not approve any funds for the Bureau for the coming year. Under State welfare laws all needs for aid, hospitalization, etc. are made available to Indians on the same basis as to other citizens. California Indians have sustained irreparable losses to the Federal Government and to the State; once they were potentially among the wealthiest in the Nation, and today under the status of Bureau wards, most of them face the direst of poverty.

The greatest blessing any people can have is the right to live on equality with his neighbor, and, this writer is of the firm opinion, that all California Indians deserve to be released from the shackles of wardship. They will quickly take their places as responsible citizens. All other obstacles will soon be eliminated if they could now gain their freedom from this enforced un-American status of wards.

Respectfully submitted.

PUEL WILLIS,
Counselor, Mission Indian Federation.

Strike Over Diesels

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Strike Over Diesels," published in the New York Times of May 14, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRIKE OVER DIESELS

The first Diesel (oil-burning) locomotives on an American railroad went into service on the Chicago, Burlington & Quincy in 1934. Since then the economical Diesel has been rapidly replacing the steam (coal-burning) locomotive. Diesels already account for about 28 percent of all locomotives in service. Of the 4,700 locomotives built since the war, 4,300 are Diesel.

The advent of the Diesels has long caused friction between railroad management and labor—particularly the Brotherhood of Locomotive Firemen and Enginemen, most of whose 110,000 members are firemen. The principal point of contention has been the manning of large engines powered by two or more Diesel units. The brotherhood contends that these engines need two firemen—one to service the Diesel units, the other to stay in the cab with the engineer in case he should faint or be otherwise incapacitated.

The brotherhood's fear of technological unemployment plays a large part in the dispute; one large Diesel often is used on hauls which previously required two or more steam engines—and two or more firemen. Moreover, the brotherhood complained that the roads were giving to other employees the servicing work that could be given to firemen.

COMPANY POSITION

Management argued that even one fireman had little to do but help the engineer watch dials and track signals, since Diesels need attention only after thousands of miles. Two firemen, the railroads said, would be pure "featherbedding"—payment for work not done.

The brotherhood pressed its demand in 1943 and again in 1947. The dispute went through the procedures of the law governing railroad labor relations—the Railway Labor Act of 1926. The procedures are, first, mediation by a National Mediation Board, then recommendations for a settlement by a Presidential fact-finding board, with no requirements for either side to accept the recommendations. Last September, a Presidential board rejected the demand for an extra fireman. It said the demand was "devoid of merit." The brotherhood repudiated this finding. In Chicago efforts to mediate the dispute went on without results.

FIFTH ROAD STRUCK

Last week the Chicago talks broke down. At 6 a. m. Wednesday 18,000 firemen struck. For tactical reasons the strike was directed against only four major roads—the Southern, the Santa Fe (Chicago to the west coast), and the New York Central and Pennsylvania lines west of the Appalachians. These lines handle two-fifths of the Nation's passenger traffic and one-fourth of the freight. The strike quickly cut their traffic to a trickle and disrupted connecting lines. Freight shipments were stalled, particularly in the heavily industrialized Midwest. Predictions were that as a result hundreds of thousands of industrial workers would soon be laid off. Air, truck, and bus lines did a booming business. Yesterday the strike hit a fifth road—the Union Pacific—because it uses some Santa Fe trackage.

The firemen's strike tactics seemed designed to meet a special legal situation confronting railroad labor. The situation is this: The Taft-Hartley Act, with its provision for 80-day injunctions against national emergency strikes, does not apply to railroad labor. The Railway Labor Act has no injunction provisions. But 2 years ago in a dispute involving the firemen and two other rail brotherhoods, a Federal court ruled that the Government could enjoin a Nation-wide rail strike under its general powers, regardless of any statute. No strike, the court said, could be permitted to disintegrate society itself. The Supreme Court later rejected an appeal by the brotherhoods. In effect, this meant that unions that operate trains could not stage a Nation-wide strike. As a result the firemen's strategy apparently is to strike piecemeal, hitting various segments of the industry in turn.

Address by Bernard M. Baruch at the Thirtieth Anniversary of School of Business and Civic Administration, College of the City of New York

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, on last Thursday, May 11, 1950, America's park-bench philosopher, the Honorable Bernard M. Baruch, spoke words of wisdom to the students of his old alma mater, the college of the city of New York. His treatment of the dangers of present-day economic trends in the United States should be brought

to the attention of all Members of Congress; therefore, on my own account and on behalf of the Senator from South Carolina [Mr. JOHNSTON], I ask unanimous consent to insert his very wise speech in the Appendix of the RECORD.

Mr. THOMAS of Utah. Mr. President, anything which Bernard Baruch writes or says is as good reading for the American people as are Adam Smith and Samuel Smiles, because Bernard Baruch understands the meaning of America and the worth of American institutions in the development of a vigorous, free citizenry. But since I am one generation later out of college and since my experience with universities is one generation earlier than the present group of students to whom Mr. Baruch is speaking I cannot refrain from saying the following:

The wealth of nations, self-help, and thrift have meaning only when money is stable and good, bank deposits are certain and sure. What is the use of teaching thrift if the place where one puts his profits is unsafe? What is the use of relying on self-help when one cannot do anything for himself because he either has to inherit wealth or belong to the group that controls it. The men and women who graduate from the universities today have some hope of future success, and they can save their earnings without fear of their being lost. That was not the case when I left my university position. The boys and girls I helped to graduate moved into a sphere of uncertain economy, an atmosphere of no faith in banks, and an almost jobless future. Government still has much to do for its citizens.

Mr. Baruch might have gone further and said what every graduate of any university knows that anyone who would like to see the downfall of the American Government is not only a traitor to his neighbors but he is a traitor to all civilization and to mankind because the world's hope today rests upon faith that American stability, American wealth, and the American dollar will see them through.

So, Mr. President, because of the universal interest which the address Mr. Baruch delivered at the thirtieth anniversary of the founding of the School of Business and Civic Administration, College of the City of New York, May 11, 1950, will have, I join in the request of the Senator from Colorado [Mr. JOHNSON], that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to be here today. It recalls happy memories. Sixty-five years ago I was a student in the old City College building located here.

Every morning we filed into assembly. President Webb read from the Bible. A sophomore climbed the rostrum to deliver a declamation; then a junior and a senior an oration. When my turn came, how my knees trembled and my heart pounded, as they do now.

Of all my teachers, the one who influenced me most was Professor Newcomb. He was never strict about requiring attention to his lectures. Students who preferred to play chess could sit in the back rows and pass the chess boards across their desks. Professor Newcomb wouldn't bother them. The students interested in what he had to say sat up front. That was where I always sat.

It may strike you as quaint, even old-fashioned, that Professor Newcomb taught political economy, logic, ethics, philosophy, and psychology—all in one course. Today these subjects would be fragmented among several professors. Such specialization is not necessarily a mark of progress. Too many educators seem to have forgotten that you cannot teach good economics, good politics, good ethics, or good logic unless taught together as parts of one whole.

With overspecialization has come a tendency to mistake information for education, to turn out quiz experts, who are crammed full of useful detail but who have not been trained how to think.

Nor is this defect confined to our educational institutions. Washington today is a dismaying example of Dryden's observation about those "who think too little and talk too much." For 5 years we have been engaged in a mighty struggle for peace and survival—the cold war. Yet nowhere are all the tangled strands of that struggle brought together in one place to be woven into a unified global fabric. We continue to stagger from crisis to crisis, with the initiative left to the enemy. We remain too obsessed with today's details to think through the bold strategy so vital for tomorrow.

What is lacking is not so-called information. There has never been so much news, so many statistics, so many alleged real inside stories. Yet the public has never been more confused.

To print all the facts collected by our great communications agencies would exhaust our paper supply. Of what avail is a forest of facts if we have lost the art of sitting on a log and thinking the facts through? We appear to have lost our ability to distinguish between the true and the false, the good and the evil.

The object of all fact gathering is to furnish material for thought and reasoning to arrive at sound judgments which can lead to clear and constructive decision and action.

That ours is a well-intended confusion is significant. It indicates that the failure of our educational system is a double one, of bad moral habits as well as bad thinking habits. I refer to morals in the broadest ethical sense. Too many people seem to regard good morals and good intentions as the same thing.

Morality rests upon values; what we regard as good and evil, what we live for, what we would die for. Without such values, everything would be reduced to a cynical zero. Values, in turn, rest upon discipline, on regulating one's behavior by the light of one's values and the rights of others. Morality, in other words, requires both good intentions and the strong backbone of self-discipline. Yet how many of our schools and teachers attempt to teach values without discipline.

This dual educational failure, the failure to instill in students the know-how of thinking and a disciplined grounding in ethics, is all the more tragic because never were these two qualities in greater need.

I have already remarked on the folly of dealing with national and international problems on a piecemeal basis, without a thought-thorough strategy. Let me now turn to the moral dilemma which grips us all and which will grow ever sharper as the role of government grows.

Some of you who look to Government action as the cure-all for our numerous ills may be startled by this statement, that our moral problems will grow more acute the more the Government undertakes to do. With the revolt against the old laissez faire, do-nothing government philosophy has come a sense of community responsibility for the individual welfare, and rightly so. Civilized society cannot survive the jungle law of fang and claw, with its ruthless survival of the fittest.

But do-nothing government is dead. Virtually every phase of economic life is subject to some Government intervention or regulation. The issue we now face is whether, as some say, community responsibility should be everything—and individual responsibility nothing. This doctrine ignores the human law that there are limits to the burden a community can carry. There is a point of no return beyond which Government intervention and the lack of responsibility among nonproducers slow down all production and defeat their own purposes.

To lift the levels of human dignity and living is a proper function of government. I joined with both Woodrow Wilson and Franklin Roosevelt in their programs of humanitarian reform, in the Adamson 8-hour day, collective bargaining, economic equality for farmers, and other new freedoms. I opposed the conscription of labor in the recent war, even when President Roosevelt's liberal advisers favored it. I have favored pensions and care for the aged, infirm, and handicapped, and have urged that America take the lead in lifting wages and working standards all over the world.

Enormous advances have been made under our present system, the best in the world. These advances can be pressed further in years to come—as long as we preserve our form of government. But the way to protect human rights is not to socialize them. The chief threat to human rights is no longer one of too little Government, as it may have been 30 years ago when this school of business and civil administration was founded. Freedom's greatest threat today is too much government, that all limits to government action may be swept away.

Is there to be no line beyond which government shall not go, as it is in Soviet Russia, and becoming so in socialistic England? Is government action to be prompted by the sheer expediency of whichever greeds or pressure groups appear strongest at the moment? Or is it to be subject to higher ethical restraints, and if so, what are they to be?

That is the dilemma which will confront you through the rest of your lives. You will have to ask yourself not should the Government take action, but how can the Government's action be made just and fair to all?

Do-nothing government, we were told, was a cloak for powerful interests who wanted to be let alone to despoil the country's resources and the public. How unselfish are they who today invoke the power of government to further their own interests, or to get votes?

The plunder of our natural resources has been largely checked, though not entirely. Are we now to have a new system of plunder of the National Treasury?

Is the old let-me-alone philosophy to be replaced by nothing better than a gimme-mine philosophy?

Under the old philosophy of do-nothing government, it was not necessary to define or regulate social relations in detail. It was assumed that if each individual looked after his own interests, the end result, through a Darwinian process of natural selection, would be for the general good. That age had never met Hitler.

With Government regulation, we now must consciously define man's relations to his neighbors, of the various segments of society to one another. To consciously regulate ourselves poses enormously greater problems than when taking things for granted, trusting to the automatic workings of competition.

Look at the inflation that has wracked the country in recent years, with such injury to those with fixed incomes and wages—firemen, teachers, policemen, nurses, civil servants, pensioners, the aged, and others. This inflation has not been the result of do-nothing economics. It has come from

Government-managed economics, from Government favoritism to certain pressure groups, in disregard of the national interest.

To prevent this inflation, as you know, I urged that in war, priority controls be accompanied by an over-all ceiling over the entire economy, over all prices, all rents, all wages, all costs, with taxes high enough to eliminate profiteering. This plan would have treated everyone alike. It would have frozen all prices arbitrarily as of some fixed date. Adjustments could be made where essential to stimulate production and to relieve inequities.

Instead, under political pressure and only after much costly delay, a piecemeal price control plan was passed. This law legalized inflation. It allowed farm prices to rise to 110 percent of parity; it left wages free. When this broke down, the administration attempted to hold the line with an over-all ceiling, as had originally been recommended. By then the damage had been done.

With the war's end, we scuttled and ran. The process of inflation by pressure groups was given whirl after whirl with the end not yet in sight.

Millions have been penalized through a cruel reduction of their purchasing power. Was that just, or fair?

What moral would you draw from this inflation?

Only recently increased old-age pensions were voted. This justly recognized that since 1939 living costs have risen around 60 percent. What good will increasing pensions do unless the spiral of inflationary policies and deficit spending are halted and pressure groups fought off?

Every form of saving has been depreciated—life insurance, Government bonds, thrift accounts, annuities, and pension funds. Week after week, bit by bit, these sums were put aside by millions of persons for their old age, for buying a home, for sending a child to college. To the extent that these savings are cheapened, the ability of these millions to care for themselves and their families is weakened. They have been made more dependent upon the Government. They have been made more insecure.

Yet, all this has been done in the name of security.

This false gospel of security through deficit financing is evidence of bad-thinking habits. If men and women are to provide for their futures, they must be able to put aside part of the earnings of their most productive years and be assured those earnings will not be wiped out. Saving is the first bulwark of security. Inflation is the worst enemy of savings.

In Soviet Russia, the people saved up their rubles, the accumulated sweat and hopes of a generation of work and deprivation. Then, ruthlessly, the Soviet Government slashed the value of the ruble to one-tenth. For all Russians over 40, nothing was left but to work at a bare subsistence level until they died. They could never hope to regain the savings their government had wiped out.

In eastern Europe the Communists have demonstrated another form of tyranny—near-feudal slavery through inflation. Farmers, for example, are paid liberally for their crops. After the crops are collected the money is ruthlessly depreciated. To get working credit for a new crop, the farmer is compelled to join a Communist-dominated organization which controls his planting and returns.

Wherever they have come to power, the money. They have robbed savings of their Communists have wrecked the value of value and keep the people enslaved through a system of perpetual inflation.

Nothing quite so bad has happened here—yet. If American fiscal policy becomes a perpetual inflation machine—as deficit financing would make it—the result must be to enslave us to the Government.

One of man's oldest delusions has been that he could avoid the necessity of working and saving by some money trick—lowering its value, printing more of it, changing lead to gold, burying gold in caves or concrete dungeons. In every instance these efforts have brought ruin.

Moreover, deficit financing has convicted itself as a system of practical economics. It has been tried. It has failed. England, where Keynes and his school were born, cannot finance her own recovery by deficit spending. In this country when the recent war ended, the apostles of bigger and better deficits predicted a calamitous depression. Ten million were to be unemployed. Waging a campaign of fear against the American people, these deficit spenders pressured for and got tax reductions. Inflationary increases in prices and wages necessarily followed.

I opposed reducing excess-profits taxes after the war, an action which, to date, has cost the Treasury thirty to forty billion dollars. Even before the war ended, I stated that for at least 5 and possibly 7 years after the war, there would be more work than there were minds and hands to do—no matter what the Government did or did not do. After that it depended upon the peace. If those taxes had not been reduced, there would be no budget deficit today.

Now, what I have said here is not intended to suggest that a return to do-nothing government is either desirable or possible. Nor that we should cease to strive for a more equitable sharing of the fruits of our production. I do want to impress upon you that the mere shift from do-nothing government to Government intervention does not, in itself, solve our problems. Unless this ever-expanding Government activity is brought under the restraints of the highest moral laws, it will wreck our society.

Woodrow Wilson wrote, "It will be a bad day for society when sentimentalists are encouraged to suggest all the measures that should be taken for the betterment of the race."

Everywhere in the world today there is change. Nowhere is there peace. When I was a student here at City College, it was taken for granted that change was good, that change meant progress. None of us can believe that any longer. All of us have seen that change can be bad and oppressive.

Yours is a far more confused and difficult outlook than that which confronted my generation. You must stand amidst all the many changes pressing upon us and decide which are good and which are bad. You can take nothing for granted.

The world is always in need of leadership. Today the need is for self-disciplined leadership. With the training you have received here and the self-discipline which can only come from your own souls, you will find open to you positions of ever greater trust and responsibility—positions in which you, holding firm to the values and freedoms we cherish, can join in leading this country toward peace and a fuller life.

Mr. Truman Builds a (Figurative) Dam

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mr. Truman Builds a (Figurative) Dam," written by Edward H. Collins, and published in the New York Times of May 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN BUILDS A (FIGURATIVE) DAM

(By Edward H. Collins)

In an address here on May 2 Harold E. Stassen commented half humorously on President Truman's prospective swing through the West. Said the former Governor of Minnesota and contender in 1948 for the Republican Presidential nomination:

"He will go out to Grand Coulee Dam—the plans for which were proposed under President Hoover, the construction of which was carried on by President Roosevelt and the payment for which was voted by both Republicans and Democrats alike—and, standing on the edge of the dam, he will * * * act as if he had built it with his own hands."

Mr. Truman did make a speech at Grand Coulee Dam on Thursday of last week, and he didn't suggest that that project was his own personal handiwork. But when Mr. Stassen referred to Grand Coulee Dam he was, of course, speaking figuratively. Substitute Lincoln, Nebr., for Spokane, Wash., and the administration's farm program for Grand Coulee Dam and the accuracy of his picture becomes almost too painfully obvious.

Mr. Truman's thesis at Lincoln may be summed up roughly as follows:

1. "We" attacked the depression "at its roots" in 1933 and introduced a farm program that has been spectacularly successful.

2. When World War II came along this program "proved its worth all over again." The stored-up surpluses of cotton, wheat, and other crops, which had been bitterly criticized before the war, turned out to be extremely valuable."

3. However, the existing mechanism has revealed certain defects which call for correction. The best way to do this is by enacting into law the so-called Brannan plan.

4. It will be necessary "in some cases" to limit crop production * * * but this must not be confused with the idea of "regimentation." After all "under our system, quotas are not imposed unless two-thirds of the farmers affected vote for them."

Now this was quite a "dam" that Mr. Truman built before the eyes of his listeners in Lincoln, Nebr. But if Grand Coulee rested on no firmer foundation and if it had been built of equally flimsy materials it most certainly would have collapsed of its own weight long before it was finished. To see why this would have been so, let us examine briefly the four main points made by Mr. Truman.

1. Of the three agricultural programs introduced in recent years—the first AAA, the Soil Conservation Act and the second AAA—the most recent had become law 7 years before Mr. Truman came to office and the earliest 12 years before.

The fact is that, just as the plans for Grand Coulee were prepared under Mr. Roosevelt, so the foundations for the original Agricultural Adjustment Act had been laid more than a decade before even the advent of the New Deal administration of Mr. Roosevelt. The concept of parity, which is the backbone of the present farm policy, for example, was first introduced at a conference on agricultural policy called by a Republican Secretary of Agriculture, Henry C. Wallace (father of Mr. Roosevelt's secretary, Henry A. Wallace). Its authorship is generally ascribed to George N. Peek, another Republican. In March 1922, the Department of Agriculture began publishing a purchasing power index series in its publication, Weather, Crops

and Markets. The first specific proposal for securing equality for agriculture was the original McNary-Haugen bill of 1924, formulated by Mr. Peek and Gen. Hugh S. Johnson.

2. When he says that the farm program proved its worth in World War II Mr. Truman is undertaking to transform a major blunder into a far-sighted constructive achievement. Actually, as most persons, fortunately, know Government-held surpluses had reached unmanageable proportions when World War II came along and saved the administration from the consequences of its folly. Under Mr. Truman history is now repeating itself with respect to crop surpluses, but on a greatly magnified scale. Are we to assume that what Mr. Truman is suggesting is that we continue in the direction in which we are now going on the assumption that a Third World War will come along to bail us out once again?

3. Mr. Truman's assurance that the Brannan plan will remedy the defects in the present program has absolutely no basis in logic. The Brannan plan calls for support prices even higher than those provided under the present program; at the same time, it would effectively chloroform political opposition to these high-level price supports by subsidizing consumption of perishable farm produce, which represents 75 percent of the total.

4. There is nothing basically wrong with the concept underlying the present farm program. Its imminently threatened breakdown under the Truman administration has been purely the result of political vacillation. While the administration has been an eager advocate of plans for supporting farm prices at high levels it has persistently flinched from demanding their necessary corollary, production control. No change in the mechanics of the farm program can cure that kind of defect.

Mr. Truman denounced as preposterous allegations that there could be any regimentation in a plan under which marketing quotas may be applied only when two-thirds of the farmers agree to accept them. What the President did not add, was that failure on the part of farmers to vote for marketing quotas when they are called for means very heavy penalties, ranging from the withdrawal of benefits to the actual taxation of commodities produced on excess acreage. In the opinion of this writer, that is a thoroughly desirable arrangement. What is not desirable is for the administration to seek to sell the Brannan plan, or any other plan, on the ground that at one and the same time it will, and will not, provide for what some call marketing controls and other regimentation.

Markets Move Narrowly as Rail Strike Assumes Serious Proportions

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Markets Move Narrowly as Rail Strike Assumes Serious Proportions—Output Holds High," by John G. Forrest, financial editor of the New York Times, appearing under the heading "The financial week," in the New York Times for May 14, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FINANCIAL WEEK

MARKETS MOVE NARROWLY AS RAIL STRIKE ASSUMES SERIOUS PROPORTIONS — OUTPUT HOLDS HIGH

(By John G. Forrest, financial editor)

Activity in financial markets was circumscribed last week by developments of a conflicting nature. The open season for political speeches coupled with another strike—this one more serious in its implications to the national economy than the recently-settled Chrysler dispute—sharply offset numerous favorable reports on business conditions. It was not surprising, then, that stocks moved narrowly and indecisively in less active tradings.

The strike against four of the major railroads, on the question of an additional fireman for Diesel locomotives, caused an immediate curtailment of train schedules. It also affected activities in many industries far removed from railroading. The full impact will be felt more by the automobile, steel, and coal industries than by other groups, but eventually every segment of the Nation will suffer if the strike continues for any length of time.

The high level of industrial production also was threatened by the possibility of a strike against General Motors if current talks between the company and the United Automobile Workers break down. The feeling persists nevertheless, that a settlement will be reached because of the experience in the costly Chrysler strike. It may be significant that, although May 29 is the deadline for changing the contract, the union has not yet announced its termination; this means that legally there cannot be a tie-up on that date, since 30 days must elapse after the filing of the termination notice before a strike can start. Some hint of progress may be revealed at the annual meeting of the company, which will be held on Friday.

However, if labor conditions were disquieting, developments in the political arena here and abroad were more reassuring. The omnibus appropriations bill, for the fiscal year beginning on July 1, was passed by the House after the total was slashed $1,000,000,000. The cut actually amounted to $600,000,000, but a compulsory reduction in personnel that has been ordered will reduce the Government's outlay by another $400,000,000. The big news from abroad was the proposal made by France that the coal and steel industries of that country and Germany are to be integrated. Considered one of the most dramatic developments since the announcements of the Marshall plan and the North Atlantic Pact, it is believed that this proposal, if consummated, would go far toward stabilizing Europe's economy.

Although the stock market, as measured by the New York Times averages, reached a new high for the movement since July of 1946, prices seesawed through most of the sessions in the smallest week's trading in a month. The volume remained below the 2,000,0000-share mark each day, indicating caution on the part of traders despite otherwise favorable conditions in the industrial picture. Special groups and issues were featured in the trading, while several former favorites were relegated to the background.

Steel production again was scheduled above 100 percent of capacity for the fourth consecutive week. Output in April was 8,196,050 net tons of ingots and steel for castings, the largest production for April in the history of the industry and the third time that output has topped the 8,000,000-ton level. Mills are running in excess of capacity in an effort to satisfy the tremendous demand, some of which is the result of inventory losses during the steel and coal strikes. With the conversion market booming and gray market activity increasing, the pressure is threatening to blow the top off scrap prices, but the question in the minds of operators is how long can the huge operating rate continue.

Trade statistics continue mostly favorable. Industrial output in April was higher for the fifth consecutive month. The Federal Reserve Board announced that the preliminary estimate put it at 88 percent above the 1935–39 monthly average. Demand for tin, lead, copper, and zinc also was heavy and price increases occurred in several metals. Production of all goods, in the first quarter, was at an annual rate of $262,000,000,000, compared with $258,000,000,000 in the corresponding period of 1949.

In some sections of the economy there were grounds for a more cautious appraisal of conditions. The Department of Commerce reported that business inventories reached $55,000,000,000, on March 31, an increase of $500,000,000 over February. The gain was principally in goods held by retailers and wholesalers. Net income of class I railroads for the first 3 months of this year aggregated $53,000,000, against $62,000,000 in the 1949 period.

Employment of Negroes in Boston Stores

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Christian Science Monitor on Wednesday, May 10, 1950, which I believe is pertinent to the debate on the FEPC bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BETTER JOBS FOR NEGROES WIDENING IN BOSTON STORES

(By Laura Haddock)

Widespread employment of Negroes in superior jobs in Boston's department and specialty stores is now an established fact, due to the work of the Urban League of Greater Boston toward this end since 1944.

The whole story is told in a booklet published by the league this week under the title "The Boston Drama."

Where once a Negro could expect to be employed in a department store only as an elevator operator, cleaning man or woman porter, maid, presser, janitor, matron, kitchen woman, bus girl, or stock clerk, today the field is opening wide.

The Urban League reports, "Now there are store buyers, supervisory trainees, salesgirls, salesmen, advertising personnel, clerical workers, clerical and sales trainees, and personnel workers."

The stores to which the Urban League gives special thanks for cooperation in this work are: Conrad & Co., C. F. Hovey, Gilchrist Co., Jordan Marsh Co., Leopold Morse Co., Lerner Shops, Raymonds' Inc., Touraine Stores, and William Filene's Sons Co.

All the fears expressed when the program was first tried have gone out the window, says the Urban League. It adds: "All stores as listed above now report unlimited opportunities for Negroes. Unions joined with management in making possible this progress.

"Management reports unified satisfaction, and in many cases the desire to do more in this field.

"From many quarters come reports of complete satisfaction with what has gone on in Boston. Customers write to management people. Fellow employees praise Negro workers. Personnel people discuss it together. In Boston there is a growing sense of pride that the community is finding the answer to a problem.

"Young colored Americans living in Boston can now feel that, with proper training, the doors are no longer closed in the retail sales field, and they are therefore preparing to become efficient workers in dignified jobs of their choosing."

There was of course, concern at first over the possible resistance of customers to dealing with colored sales clerks. On this point the Urban League says: "All stores have reported a sizable amount of favorable comment, both written and oral, when customers first saw colored salespeople and clerical workers in the stores.

"Management was, on the whole, overwhelmingly complimented on this policy. Some customers, feeling strongly, wrote employers not hiring Negroes in the better classifications, and transferred their accounts to more democratic stores.

"There were complaints from a handful of people who criticized the new policies."

The Glory of American History

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Glory of American History," written by Harry H. Schlacht, and published in the New York Journal-American of May 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GLORY OF AMERICAN HISTORY

(By Harry H. Schlacht)

America sits with the dew of youth on her starry brow.

Americans should know their American history. Americans should thank God they are Americans.

There is no study more delightful, there is no study more profitable, than the study of American history.

Our youth should know the stirring saga of the birth and the pageantry of our blessed country.

Our history is comparatively brief but brilliant. Our history is without parallel.

Our youth should know we have won the right to live as free men and women.

Our youth should know how our sainted fathers laid the foundation of the temple of freedom before whose altar, in a little more than a century and a half, 150,000,000 Americans should bow.

America is like a gallant ship under full sail upon the stormy sea of time.

She bears a cargo costlier than the most precious rubies for millions yet unborn.

Her voyage is just beginning. Her sails are filled with heavenly breezes.

This glorious ship of liberty is destined to bear its benedictions for all humanity.

The Hearst newspapers have consistently and persistently advocated through the years the teaching of American history in all our schools and colleges.

A recent survey reveals the gratifying information that twice as many colleges require the study of American history today as compared with 8 years ago.

This is a magnificent tribute to the great editorial campaign initiated by the Hearst newspapers.

The study of American history should be mandatory in all American schools and colleges.

There is no excuse for any American to be ignorant of the land that gave him birth, of the land that gave him shelter and a home.

If we love America and its civilization, if we love its dream of humanity; we will instill in our youth a love of country.

Love of country is one of the loftiest of virtues. Love of country is one of the essentials of good citizenship.

He is not a good citizen if he does not love his country.

There are those in our midst who would pass an erasing finger over the memories of our glorious past; who would entice us away from our trophies, our songs, and our dreams.

They would drown out the music of the drums and the silver voice of the heroic bugle. They would leave us not a single melody or note to recall the visions of our saintly sires whse deeds should be glorious to Americans of today and to Americans yet unborn.

By educating our youth in American history we can defeat their nefarious purpose.

He is not worthy to bear the name American who does not make a glad and proud study of his history.

Let us see to it that the ideals of our fathers are not defamed. Let us see to it that the democracy does not fail. Let us see to it that the American beacon light shall shine o'er the earth.

Firemen's Warning

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Firemen's Warning," appearing in the St. Louis Post-Dispatch of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIREMEN'S WARNING

Railroad firemen have been given a warning of what may be in store for them and other laboring men if the strike against four major railroads is prolonged. Senator DONNELL has asserted that the strike emphasizes the need for his bill banning strikes on railroads or airlines.

That is not all. Railroad officials are urging Congress to pass the Donnell bill. If the strike continues, pressure for an antistrike law, which might be extended to other industries, undoubtedly will increase.

The firemen do not have much of a case to present to the public in this instance. Their principal demand—placing an additional fireman on multiple-unit Diesel locomotives—already has been considered twice and rejected twice by public boards of inquiry. In the absence of authoritative and disinterested evidence to the contrary, it looks as though feather-bedding rather than safety is the union's goal.

In their own as well as the public's welfare, the firemen should go back to work. They are running serious risk of having their right to strike taken away from them altogether. If that were to happen, then the merits of the case would not matter.

Campaign of Truth

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Campaign of Truth," appearing in this morning's Washington Post. This editorial reinforces the urgent need for action in line with the objectives of Senate Resolution 243, calling for a "Marshall plan of ideas."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAMPAIGN OF TRUTH

The communiqué issued at London by the Foreign Ministers of the three big western powers underlines the need for joint efforts in what President Truman has called "a great campaign of truth." "Faith in freedom should not be taken for granted, but should be built into a dynamic force," the Foreign Ministers say, "and steps should be taken to increase public understanding of the exact nature, methods and dangers of the threat to its existence." From the State Department come reports that a new working agreement on counterpropaganda is in the making between the United States and Great Britain and perhaps with other North Atlantic Treaty countries. Such steps are long overdue. Since the object of the free world in the cold war is to protect itself against the encroachments of communism without resort to arms, harmony of effort in the informational field is of inestimable importance.

One of the immediate aims of the British-American negotiations, which Assistant Secretary of State Barrett hopes to bring to a head on a visit to London this week, is to increase from 73 to 100 the transmitters through which western information can be beamed upon the iron-curtain countries. Additional power as well as new transmitters is needed to prevent the Soviet Union from jamming the Voice of America and the British programs. Plans also call for British-American committees to exchange information and prevent conflicts in foreign policy broadcasts. These are important steps toward integration, but they seem to us inadequate. Nations that are in the process of unifying their military defenses must necessarily bring their informational services into harmony if their joint efforts are to attain maximum effectiveness.

Lack of harmony in the free-world propaganda broadcast to the countries behind the iron curtain suggests lack of agreement as to what the basic policies of the free world are. It is not to be supposed, of course, that any one unified agency could speak exclusively for all the diverse peoples in the free world. But so far as the foreign policy

of the Atlantic community of powers is concerned, the need for concerted efforts to enlighten people now in darkness is obvious. No nation, as we recently noted on this page, can effectively carry on such a campaign single-handed.

As for libraries and documentary films, the American people have scarcely begun to realize the possibilities of preaching the doctrine of freedom by these means. Perhaps there is less necessity for international cooperation in establishing libraries abroad and making available informational films, but the spectacle of free countries working together to promote the type of education that makes for peace is always impressive. Joint efforts to promote education about the free world ought to be vigorously promoted in the spirit of the Foreign Ministers' conference.

Legal—But Tragic

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Legal—But Tragic," appearing in the Washington Daily News, a Scripps-Howard newspaper, for May 13, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEGAL—BUT TRAGIC

There is nothing illegal about the locomotive firemen's strike against four of the Nation's key railroad systems.

However gravely their strike may injure the country, the firemen are within their rights under the Railway Labor Act.

This law, enacted by Congress in 1926 at the joint request of railway unions and managements, does not prohibit strikes.

It provides a system of Government conciliation, mediation, and voluntary arbitration which for many years maintained an almost unbroken record of industrial peace on the railroads.

It puts no compulsion on either side in a controversy to accept the decisions of fact-finding boards appointed by the President of the United States. It relies solely on the force of public opinion to produce compliance with such decisions.

Settlements brought about by this law were not always satisfactory to one or both sides. But they were far less costly to labor, to management, and to the American people than strikes would have been.

The current firemen's strike, though legal, is nevertheless a tragic mistake.

For it is a strike in defiance of public opinion.

Two Railway Labor Act fact-finding boards, one named by President Roosevelt, the other by President Truman, have held that the firemen's demand—for employment of two members of their union on every Diesel locomotive—is without merit and should be denied.

The almost certain result of this strike, if it continues long, will be to destroy the Railway Labor Act and substitute for it a law to make railroad strikes illegal and require compulsory arbitration of labor-management controversies in the railway industry.

A bill for just that purpose is already before Congress—the Donnell bill, introduced by a Republican Senator from Missouri.

With each day that the firemen's strike continues, public pressure on Congress for enactment of the Donnell bill, or something like it, is sure to grow. A long strike could make that pressure irresistible.

The American people just won't stand for being badly hurt by a strike for featherbed jobs. The firemen's union, in this foolish, tragic strike, is inviting loss of infinitely more than it can possibly win.

Tariff Reductions on Rubber Footwear

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution passed by the Massachusetts Legislature in opposition to the further tariff reductions on imports of waterproof and canvas-rubber footwear.

The resolution follows:

Resolution memorializing the President of the United States and the Congress and certain departments of the Federal Government in opposition to further tariff reductions on imports of waterproof and canvas-rubber footwear

Whereas members of the rubber-footwear industry are greatly concerned and disturbed, based upon information which is considered authoritative, over the possibility that the Federal Government may put into effect further tariff reductions on imports of waterproof and canvas-rubber footwear; and

Whereas any further reductions in the tariffs on these items would produce an effect upon the American rubber footwear industry little short of disastrous, and it would be impossible for said industry to produce articles which could compete in price with the products of the nationalized industry of Czechoslovakia or with those of Japan with its debased oriental standard of living; and

Whereas the rubber footwear industry is an American enterprise about 100 years old and at one time it supplied most of the world, but since the early 1930's the American industry has been confined to the domestic market because of its inability to meet foreign low-wage competition; and

Whereas at present, such imports from these countries are priced at from 20 to 40 percent under the usual American prices, and the presence of even a small amount of low-priced goods in an industry as seasonal as rubber footwear can be a most upsetting influence on the market; and

Whereas in the decade of the 1930's, the threat to the American industry by the influx of rubber-footwear imports was so great that both President Hoover and President Roosevelt issued proclamations making duties on these products applicable on the American selling price basis, and the rates of duty which were 25 percent on waterproof and 35 percent on canvas remained unchanged, but they applied to the domestic selling price of American-made footwear similar to the imported articles rather than to the selling price of the foreign product; and

Whereas in 1937, when the Czechoslovakian trade treaty was under consideration, this policy was sustained by President Roosevelt, and in 1947, at the Reciprocal Trade Conference in Geneva, the American delegation granted concessions to Czechoslovakia on waterproof rubber footwear which, in effect, cut the American duty in half, which means that the duty on Czechoslovakian footwear was reduced to 12½ percent; and

Whereas this industry is one in which the labor cost, in proportion to the total cost of the product, is very high, namely, 47 percent, and an attack upon the price structure becomes therefore an attack upon the wage structure of the American worker in this field and is also a direct threat to his job; and

Whereas this industry at present is doing a business of about $100,000,000 annually, and employs more than 20,000 men and women, and this is of vital importance to New England and especially to Massachusetts, inasmuch as over 75 percent of this industry is located in southern New England, a small area already hard-pressed economically and struggling to maintain its position in the American scene, and a very substantial portion of this 75 percent, much more than half, is located in Massachusetts, which becomes, therefore, a matter of vital significance for this area, and some particular communities in it would suffer extreme hardship were this industry to become blighted; and

Whereas in view of the aforesaid facts, a vital New England industry, with a long history, is faced with a situation which would make sheer survival difficult and certainly make any prosperity impossible: Therefore be it

Resolved, That the General Court of Massachusetts hereby expresses its opposition to any further tariff reductions on imports of waterproof and canvas rubber footwear; and be it therefore further

Resolved, That a copy of this resolution be sent forthwith by the secretary of the Commonwealth to the President of the United States, Members of Congress from Massachusetts and the Secretary of State, the Secretary of Labor and the Secretary of the Treasury of the United States.

In house of representatives, adopted April 6, 1950.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted in concurrence April 11, 1950.

IRVING N. HAYDEN,
Clerk.

Feather-Bed Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Feather-Bed Strike," published in the St. Louis Globe-Democrat of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEATHER-BED STRIKE

The strike against four railroads, begun yesterday by the Brotherhood of Railroad Firemen and Engineers, will get little or no sympathy from the public. Nor should it. The issue is clear and of long standing. The union wants to force employment of a second

fireman on multiple unit Diesel engines. Company officials call this a feather-bedding program, and in this instance certainly they seem quite right.

The dispute has been hanging fire for years. When Diesels were first put into service, they were run by one man, an engineer. Under threat of strike, roads added a fireman. Then in 1939 the Brotherhood insisted another fireman be assigned to each Diesel. This insistence has been renewed from time to time.

Yet two presidential fact-finding boards, one in 1943 and another in 1949, held the demand for either an extra fireman or an extra engineer to be unneeded and devoid of merit. The argument of the union that more men in the cabs would promote safety was discredited.

Despite the findings of two boards, appointed by Presidents certainly most friendly to organized labor, the Brotherhood has struck, tying up schedules of the Pennsylvania, the New York Central, the Southern and Santa Fe roads. The Nation's transportation system is crippled and some 500,000 workers will probably be reduced to idleness. St. Louis, being a terminus of several roads, is especially hurt. Twenty-five passenger trains have been canceled, and freight service is blocked on three of the lines.

If the union should win its fight to add another fireman to Diesel units, the next step obviously would be to force use of an extra engineer. Experts have found these changes completely unnecessary. The Brotherhood only injures its reputation by this strike, which seeks made-work in the face of mechanical advances.

The strike calls attention to a bill sponsored by Senator DONNELL which would outlaw such walkouts, and force compulsory arbitration of railroad and airline disputes. Yesterday's development may force an early hearing and congressional action.

It would be interesting to see what the President would do had the strike been called on the road he is now using to "whistle stop" the country on how handsomely the country is faring.

Independence of Farmers

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, appearing in the Washington Post yesterday was an article by Paul C. Johnson entitled "It's High Time the Farmer Threw Away Crutches." I have known this young man from boyhood up, and have known his parents, and I know that Paul Johnson has his feet on the ground so far as agricultural questions are concerned. For that reason I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S HIGH TIME THE FARMER THREW AWAY CRUTCHES

(By Paul C. Johnson)

(The following is a digest of an address delivered by Mr. Johnson, editor of the Prairie Farmer, at the University of Minnesota editors short course, on May 5.)

Less than 100 years ago we were an agricultural Nation, with five families on the land needed to supply the food for one family carrying on industrial or city work. We have completely reversed that, so now it takes less than a fifth of our population to grow the food we need, with something to spare.

As a matter of fact, in our most efficient and most modernized farming sections, the ratio is more nearly 10 to 1. This means that 9 families out of 10, or 4 out of 5 for the country as a whole, have been freed to do other things besides grubbing a living out of the soil. They can build homes, manufacture automobiles and refrigerators, operate schools and hospitals. And these are the things by which we measure our standard of living.

Good farming has made it possible for the average American to take food for granted and go on to improve his living standard by the many other things he can earn.

Mr. Average American needs to spend about 25 percent of his income for food. In England, the cost is around 45 percent, including government subsidy. In Italy, it is around 70 percent. In countries like India and China, about 90 percent of the average man's income must go for the food to hold body and soul together.

While only about one-seventh of our national income is in agriculture, around 55 percent of all people in this country are farming or in work that is directly dependent on farming. It's interesting to know that of 9,000,000 individual businesses in the United States, 6,000,000 are farm businesses.

BAD STATE OF MIND

But there is danger in pounding our chests and expounding the indispensability of agriculture. I feel uncomfortable when a farmer declares that agriculture is the key to all prosperity and that the Government must take care of the farmer first. There is a good deal of truth in what the man says, but the state of mind is bad for everybody and especially bad for the farmer himself.

I have heard top-flight industrialists and economists say that the prosperity of agriculture is so important to this country that we can well afford to give agriculture preferred treatment. I cannot agree. I'm quite sure that hothouse treatment may actually destroy the productiveness which has made our agriculture great, and may result in progressive poverty rather than guaranteed prosperity.

There is a warning for us in the public reaction against farmers which has grown at an alarming rate during the past year or two. While much of this feeling it based on misinformation to which both the press and the radio have contributed, it is an ill omen of what may come if agriculture permits itself to be pushed out on a limb by politicians looking for votes and industrial people looking for an indirect guaranty of good business.

We are already too far out on that limb. We must revise our national farm program into something we can live with, something the public will support and, above all, something that will insure an increasingly productive and efficient agriculture.

FARMING FOR UNCLE

Why are we having so much trouble with our present commodity support programs? It's because they tell the producer a lie.

Whenever the support price is higher than what the market will support, then the producer is being misinformed. The minute the farmer starts raising products for Uncle Sam, we're in real trouble. Uncle can't pay Senators and Supreme Court judges in bushels of corn or sacks of potatoes.

Our leading farm organizations have not asked for the present farm-support levels. It is to the everlasting credit of farm leaders that most of them have tried to get rid of the subsidies. But the political ins want to stay in, and the political outs want to get in. Both seem to think that votes are to be had in exchange for Government checks and special privilege.

Our commodity support approach to the farm problem has been warped away from its original purposes. Too many people want to think of it in terms of an income guaranty from the Government to the farmer. Because the marketing problem has somehow become confused with a political philosophy, the various crops and commodities have been out of step with each other, and there has been too much disregard for a basic fact of a free economy: Increased efficiency must be shared.

THE BRANNAN PLAN

In this respect, our support programs have been pretty much in the same class with the much publicized Brannan plan.

Mr. Brannan proposed that we keep all our present supports on basic crops at levels even higher than those which have already gotten us into trouble. But he went beyond this and suggested that since perishables such as milk, eggs, and potatoes could not be successfully handled in storage, we should substitute the direct income payment to the farmer.

His plan had one very attractive feature. These products were to be turned over to the consumer at whatever they would bring. But remember that the farmer would be paid according to his production and Uncle Sam would foot the bill for the difference between what the farmer got in the market and what he should have had according to the standard set up by Mr. Brannan.

What's wrong with this plan? Well, many people, including myself, do not like the idea of the farmer being dependent on Uncle Sam for his income check. Any way you look at it, the income guaranty idea heads down the socialistic path toward stunted production and dependence on government.

Right now we are wrestling with acreage allotments. Hanging over this controversy is a fear that acreage allotments will not reduce production, and that the marketing quotas which are to follow can be enforced only by police state methods.

The Brannan plan would be no different, probably worse. The only way Uncle Sam could get off the hot seat and wean consumers away from their free food ride would be to slap severe quotas on farm production and reduce that production to the point where food prices would rise again.

POINT OF DEPENDENCY

At what point would it be politically expedient to stabilize these Government prices? If I read my political history right, they would try to stabilize them at the point where the farmer could not live without his Government check, but where he would be restrained from embarrassing his bureaucratic supervisors with too much efficiency or too great production. As production controls progressed from big crops to little crops and from feed crops to food products, there would be a thriving production of red tape, and much political pap to be distributed.

Do you know that down in the tobacco country your allotment, that is, the permission of the Government to grow tobacco, may be worth as much as $2,000 an acre on $200-an-acre land? I am told that the farmer committees which are administering the tobacco program are doing a nice job, but I cannot shake the fear that here is an opportunity for political graft which will catch up with us some day.

We are hearing more and more these days about the two-price plan, which you will recognize as the old McNary-Haugen bill

over again. This plan, too, has its attractive features, but its flaws are clearer today than in the McNary-Haugen days.

The two-price plan calls for dumping of some kind. We know now it isn't so easy to dump abroad. But it isn't easy to dump in our own country, either.

We could make a certain amount of corn and wheat into alcohol and pass a law that all gasoline would have to include a certain percentage of this fuel. But that would be robbing the fertility of our soil for an inferior and expensive purpose.

DISASTER UNLIKELY

All right, what should be done?

I believe that now is the time to move in the direction of a free competitive market and greater self-reliance on the part of agriculture. Of course, the patient trembles at the thought of throwing away the crutches. But if we don't do it now, we never will.

Our debt is in good shape. Our efficiency is high. Our customers have money in their pockets, and the city people are outnumbering the food producers by more and more every day.

We'll have some falls when we start taking away this makeshift scaffolding, but I doubt if there will be any widespread disaster. We can still take out certain insurance policies in the name of security and social conscience.

I would like to propose three ingredients of a sound, long-time farm program that could go nicely with a farm economy based on efficiency and the competitive market.

In the first place, I believe that the soil conservation principle is the only justification for Government payments to farm people. City people have a stake in the conservation of the land. The farmer is always under pressure to market the fertility of his soil as quickly as possible. The mortgage needs to be paid, and the children need college education. A carefully worked out system of conservation payments intended to rest and rebuild land would also relieve the farmer's pressure to cash in. The public would get its money's worth in the assurance of a future food supply.

In the second place, I believe the present support machinery should become a standby program for use only in emergency. I believe a price floor should be a floor and not an income guaranty. We had better set up the program in such a way that the politicians cannot change its original purpose.

MARGINAL FARMERS

In the third place, I believe that we should make a real study of the reasons for poverty among farm people. The problem of the marginal farmer is not one of price or of Government subsidy. It doesn't make so much difference whether you get $3 or $5 a hundred for milk if you are trying to support a family on three scrub cows.

No, the problem of the underprivileged farmer is one of education, or credit, of building his farm into a going concern. I believe the Government can do a great deal along this line without tying up the processes of agriculture in a rigid bureaucratic system. I believe we can extend our present activities through the Extension Service and the Farmers Home Administration so that we can meet this problem more adequately. We may want to go a step further and think in terms of building industries in rural areas to take care of people who cannot possibly earn a decent living from the land.

We have been drifting in our national thinking toward the notion that the means are justified by the ends. When you get down to cases, that's the philosophy of the Communist. We want prosperity on our farms, but the means by which we achieve it are important, too—very, very important.

The Medieval Joust

EXTENSION OF REMARKS

OF

HON. FORREST C. DONNELL

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under the headline "The medieval joust," the author of which is Mr. E. C. Craig, who formerly was general counsel for the Illinois Central Railroad. The letter appeared in the Chicago Tribune of April 9, 1950.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE MEDIEVAL JOUST

CHICAGO, March 10.—The settlement of disputes by "wager of battel"—"trial by combat"—which originated in the military spirit of early days, was introduced into England by William the Conqueror (1066). Blackstone describes the "trials" in great detail (3 Bl. Comm. 337). They took place in a field especially prepared for them in the presence of the judges of the court in their scarlet robes with learned serjeants of the bar in attendance. The parties fought with staves either in person or by champion. the "trial" began at "sunrising" and lasted "till the stars appear in the evening," or until one party earlier cried, "Craven," or was defeated. Judgment was entered by the court for the victor.

The right to the "wager of battel"—the "trial by combat"—was recognized by the English courts until abolished by an act of parliament. As late as 1817, the Court of King's Bench held the right to trial by combat still existed. In the next session of parliament the act was passed abolishing it (59 George IIIc, 46).

This form of trial could not be recognized in the United States due to the constitutional provision for trial by jury at common law (*Childress* v. *Emory*, 8 Wheat., 21 U. S. 642).

We have, however, "wager of battel"—"trial by combat"—not between individual litigants as of old where no one was hurt but the litigants or their hired champions, but in strikes, where everyone is hurt, especially the public—strikes national in scope, seriously affecting every man, woman, and child—which are increasingly being allowed to choke industry, create unemployment, and cause great economic and social distress.

There is more reason why "wager of battel"—"trial by combat"—should not be allowed where public rights are interfered with and sometimes destroyed, than where it is but a trial between private individuals. As our affairs become more complex, as our activities grow more interdependent, the reasons against this method of settling controversies increase.

We pride ourselves on our Constitution, our wonderful form of government; that this is the land where law governs and not individuals; that all men are created equal; that here exist equal rights to all and special privileges to none; that we settle all controversies between citizens and between Government and citizens in our courts, etc. Yet we allow these anachronous, obsolete, antiquated "trials by combat"—"wagers of battel"—originated by the vandals or some other barbaric tribe, to be used in settling questions which involve our very existence—questions which, as all others are, can be settled by orderly procedure based on facts and not on force.

If the "trial by combat"— "wager of battel"—was barbaric when applied to private litigants, how much more so are these appeals to force—these "wagers of battel," these "trials by combat," of our modern day. The English parliament abolished the one. Congress can constitutionally and entirely abolish the other, and would do so if the people of the country would demand it.

Why the public supinely tolerates these "wagers of battel"—these "trials by combat," with their destructive effect on our daily life, when they can be constitutionally and entirely abolished, is beyond comprehension. That they are permitted is solely due to the apathy of the people. Something should be done about it.

E. C. CRAIG.

Washington in 1800

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mrs. SMITH of Maine. Mr. President, on this May 15, 1950, I think that many of the Members of Congress would be interested in reading about the Washington of 150 years ago, on May 15, 1800. It is not only interesting to read of the contrasts of the Washington a century and a half ago, but also of the striking similarities of that 1800 Washington with the 1950 Washington of today. Even then Members of Congress had a housing shortage problem to contend with.

I ask unanimous consent to have inserted in the RECORD an article by Alexander R. George, Associated Press staff writer, appearing in the Washington Post issue of May 8, 1950. It is interesting and enjoyable reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HALF-STARVED CATTLE ROAMING WASHINGTON STREETS IN 1800 GAVE EMBRYO CAPITAL A DISTINCTLY BUSH-LEAGUE ATMOSPHERE

(By Alexander R. George)

The Federal Government took to the woods 150 years ago this spring, moving from fashionable Philadelphia to the wilderness city that was Washington.

On May 15, 1800, President John Adams ordered the executive departments (some 150 officials and clerks and 12 boxes of Government archives) to move to the new Federal city in the Territory of Columbia. Congress had voted in 1790 to make the Territory, later the District of Columbia, the permanent seat of the National Government.

Government officials and clerks made the trip by stage coach, carriage, or horseback. The 140-mile overland journey between the two towns then took the better part of 3 days.

Government records packed in seven large boxes and five small boxes were shipped on a packet sloop down the Atlantic coast, up Chesapeake Bay and the Potomac River. Documents of the State Department included the original Declaration of Independence, the

Constitution, and the Articles of Confederation.

POPULATION THEN 3,000

The new Capital's population was 3,000, a small fraction of the number of sesquicentennial celebration visitors who now daily invade this Capital City of 1,400,000.

Washington was having a housing shortage in 1800. A survey showed there were 253 frame and 109 brick dwellings in the town. Secretary of the Treasury Wolcott, upon arrival here, reported:

"I do not see how Members of Congress can possibly secure lodgings unless they will consent to live 18 or 20 in one house. There are few houses in any one place and most of them are small and miserable huts."

The Congress House (Capitol), President's Palace (White House), and original Treasury building were near enough to completion to provide accommodations for part of the offices. Houses were leased for the State, War, Navy, and Post Office Departments.

Pennsylvania Avenue, connecting the President's Palace and the Congress House, was a dirt road which a writer of the time said was bordered by the forest primeval and swamps. The Avenue's dust, suffocating in dry weather, became a great bog after a rain.

"HOW COULD I DESERVE IT"

A European diplomat took one look at the new Capital City and said: "What have I done to be condemned to such a place?"

A visitor from England wrote that "half-starved cattle browsing among the bushes of the city present a melancholy spectacle * * * so very thinly is the city peopled, quail and other birds are shot within 100 yards of the Capitol."

Members of Congress lived two and three to a room in boarding houses. They swatted with kerchiefs at flies which came from nearby livery stables to bite the long-stockinged legs of the legislators.

New York's Senator Gouverneur Morris wrote in sardonic vein:

"It's the best city in the world—for a future residence. We want nothing here but houses, cellars, kitchens, well-informed men, amiable women, and other little trifles of this kind to make our city perfect."

Thomas Moore, the Irish poet, visited Washington in 1804 and wrote this verse:

"This embryo Capital where fancy sees
Squares in morasses, obelisks in trees
Which second-sighted seers even now adorn
With shrines unbuilt and heroes yet unborn."

Bewigged Government executives tried to keep an elegant appearance in their primitive surroundings. Hair-dressing shops on Pennsylvania Avenue featured large cupboards, with glass doors, containing freshly dressed wigs for the daily visits of their owners.

Most of the labor in the District of Columbia was done by Negro slaves who were leased by slave dealers for $60 a year. It cost persons who hired a slave an additional $35 a year to furnish his clothes and food, the latter consisting mostly of salt pork and Indian meal.

When President Adams and his wife Abigail celebrated their first Christmas in the White House it was an uncompleted palace hard by the Potomac swamps. Mrs. Adams had the family wash hung in the great audience room (East Room) on the first floor.

President Adams, however, had a nifty Christmas garb consisting of a black velvet suit, silk stockings, silver knee and shoe buckles, and white waistcoat. His hair was powdered.

The Government's expenditures in the year 1800 totaled $10,786,000 less than one-tenth of the Government's daily expenditures now. The Treasury that year had a surplus of $62,000.

Most of the Federal revenue was obtained from import duties. However, the Government levied internal taxes on land, dwellings, and slaves, on stills, distilled spirits, refined sugar, and pleasurable carriages.

Washington then was almost at the center of the narrow union of 16 States. George Washington has envisioned the Chesapeake and Ohio Canal and the Potomac River connecting West and East as the most practicable route to the Atlantic Ocean.

As people poured westward there was almost constant clamor to move the Capital west of the Alleghenies. However, the coming of the telegraph and the railroads did much to lessen the demands for a new site for the Capital.

Slaves Versus United States Labor

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. MACK of Washington. Mr. Speaker, Mr. Victor Riesel, the newspaper columnist whose column, Inside Labor, appears in 254 American daily newspapers, has been doing an excellent job of calling the American people's attention to the dangers to our economy in the importation of canned crab, furs, and other goods from Russia.

Last year our imports from Russia, not counting those from any of her satellites, totaled $42,425,000, according to the Department of Commerce figures, while our exports to Russia were only valued at $6,646,000.

As a result of this balance of trade favorable to Russia, the Soviets had a surplus of more than $35,000,000 in American dollars and credits which the record shows she spent in France, Belgium, and Britain to purchase steel, iron, copper, zinc, lead, and other commodities which added to her economic strength and war potential. I ask, are we not, by carrying on this trade with Russia, repeating in effect, exactly what we did prior to Pearl Harbor, when we permitted the sale of scrap iron to the Japs?

Imports of canned crab from Russia during the 12 months of 1949 totaled 30,252 cases. In the first 4 months of this year we have imported almost 70,000 cases of this crab meat from Russia. In short, in the first 4 months of this year we have imported twice as much canned crab from Russia as we did in all 12 months of last year. Nor is the end in sight. I am reliably informed another 36,000-case shipment of this Russian canned crab meat is or soon will be enroute to the United States.

Our Atlantic and Pacific coast crabbing industry cannot compete with the labor in Russia's 17 slave labor fishing camps. We should not expect that they should. Unless Government executive agencies act to stop these imports of Russian crab, our American crab fishing industry will be destroyed, its thousands of cannery workers will become unemployed and its fishermen, many of whom have invested their life savings in fishing boats, will be financially ruined.

The New York Mirror, one of the large newspapers in America's largest city, recently carried an excellent editorial on April 21, 1950, on slaves versus United States labor. Under leave to extend my remarks and include extraneous material, I include this editorial in the RECORD:

SLAVE VERSUS UNITED STATES LABOR

Thanks to our ace labor writer, Victor Riesel, Americans are finding out some queer and curious things about their foreign trade:

1. In recent months, $3,000,000 worth of crab meat, or 59,000 cases, canned in Soviet slave-labor camps, has come into this country via Seattle and Boston.

2. The Russians are offering United States importers $20,000,000 worth more at prices no United States canner can meet.

3. More than $55,000,000 worth of Soviet furs are coming into this country annually—and these, also, have been processed in the Siberian labor camps for political prisoners.

4. Walnuts produced in Sovietized Manchuria pour into the American market in large quantities at 42 cents a pound, to compete with the American product which cannot be put on sale at less than 62 cents.

5. Communist Czechoslovakia, having nationalized (which means stolen) its shoe industry, is sending unmarked and unidentified footwear here.

We know, too, that imports from Communist Czechoslovakia are threatening the United States hat industry. That hits close to home. Thousands of jobs in Danbury, Conn., are menaced.

Smoked hams from Communist Poland are brought in to sell against the produce of the United States farmer.

What sort of two-handed diplomacy are we running?

On the one hand, we bitterly protest the downing of a United States plane and the probable murder of its 10 airmen; on the other, we offer Soviet Russia a market for her slave-made goods.

The vicious, inspired insults against us by Red Czechoslovakia make American blood boil; but we afford the commissars who rule that once-democratic country a juicy supply of United States dollars.

Does Acheson know what Snyder is doing? And does either reckon with Hoffman, of the ECA?

Let's go back to the 59,000 cases of Soviet crab meat. Direct from Siberia, 15,000 cases came into Seattle. But 44,000 cases came to Boston—from England.

England trades extensively with Russia. England needed salmon. Russia provided the salmon, but forced a tie-in of 80,000 cases of crab meat. England couldn't use all that, so she dumped 44,000 cases on the American market, and undercut our producers $2 a case.

This double play against United States industry and United States jobs was revealed when businessmen and Congressmen complained to Hoffman.

Maybe the State Department and the Treasury Department and the agency that overshadows both, the ECA, can explain these transactions.

Maybe they will say that the United States industries affected are only small fry.

That won't sound very good to workers in the cannery in Bellingham, Wash., which has announced it will close because of Soviet competition, or to the 197 fur breeders who have gone out of business for the same reason, or the Danbury hatters, or the New England fishermen.

Wipe out a few jobs here. A few jobs there. Create unemployment, and the fear of un-

employment. That's exactly what the Kremlin wants. Our policies, unwittingly or not, are sacrificing American labor to the support of slave-labor states.

NEWSPAPER CARTOON

Recently there appeared in hundreds of American newspapers a cartoon by Reg Manning depicting Uncle Sam carrying away a case of canned crab meat that was labeled "Produced at unbeatable low prices by Russ slave labor" and in the background stood Joe Stalin counting up a big pile of American dollars which Uncle Sam had just handed him for the crab. Standing nearby watching the transaction was a sad-faced man, in commercial fishermen's clothes, who was labeled "American fishing industry."

Uncle Sam, as he toted away his Russian canned crab was saying to Mr. American Fishing Industry, "Why can't you let me have bargains like this?"

The American fishermen can give Uncle Sam bargains like that in canned crab such as Stalin offers only if the American fishermen and cannery worker will accept "slave labor" working conditions. No sensible American wants or expects that he should.

A BREAK, MAYBE

Says the Aberdeen World, of Aberdeen, Wash., in a recent editorial:

In his almost singlehanded fight to save Northwest industry from foreign encroachment, Congressman RUSSELL V. MACK has finally won a promise from Treasury Secretary Snyder to investigate importation of Russian canned crab meat. Congressman MACK has asked Secretary Snyder to bar the Russian meat because the cheaply-produced product is undermining the domestic market for American packers.

Secretary Snyder promised to investigate whether or not the Russian product is produced by involuntary labor. There is an American law prohibiting importation of foreign products produced by such "slave" labor. We could make a good case based on the "involuntary" characteristic of the Soviet labor mass, but whether Snyder will do it or not is another matter. We know that Russian labor is not free, as we interpret the term. How much involuntariness we will tolerate is up to Snyder's interpretation. With the current trend to lower trade barriers and with an administration tendency not to rile Russia any more than possible, our hunch would be that Snyder finds Russian canned crab meat admissible. The condition of certain American industries doesn't seem to be of much concern to administration bigwigs in Washington.

LONGVIEW, WASH., NEWS

The Longview Daily News, one of the largest dailies of southwest Washington, editorially referring to Russian crab imports said:

A bulletin from the Nation's Capital says that during the past 6 weeks 59,000 cases of Russian canned crab, valued at $3,000,000, was imported into this country. The report says that the Soviets have 400,000 to 500,000 cases of this canned crab on hand and that there is danger of a great portion of this being dumped on the American market.

It would be interesting to know why we need to be catering to the Russians in this way or what they are buying from us in return. Let's hope it isn't weapons and ammunition.

We were a little surprised to see while browsing around a grocery store only Saturday, a brand of corned beef coming from Uruguay which bore an appealing label. When we asked the dealer about it he said it was a most popular brand, and that he had difficulty in keeping it in stock. We have to say in all candor that we know little about Uruguay, but we do hope that in canning meats sold in this country, it maintains the American standard of sanitation.

SEATTLE TIMES

The Seattle Times, one of the largest Washington State dailies, in a lead editorial in March had this to say about Russian crab imports:

COAST INDUSTRY HURT BY RUSSIAN PRODUCTS

Congressman MACK of Hoquiam, is rightly concerned over the volume of canned crab meat that is being imported into this country from Russia. MACK says these imports amounted to 15,000 cases by way of Seattle and 44,000 cases by way of Boston last month. At a value of $54 a case, the lot was worth about $3,000,000. If they are permitted or encouraged to sell their crab meat in the United States, MACK fears, the Russians will rapidly build up as big a market for their product as the Japanese enjoyed before the war.

In those days, Japan was providing 85 percent of all the canned crab meat marketed in this country. The low wages and living standards of the Japanese fishermen made it impossible for Americans to compete with them. During the war, however, the crab-fishing industry began to flourish along the Pacific coast. Some idea of its growth may be gained from the record on Grays Harbor alone. In 1940, fishermen at Westport landed 16,143 dozen crab. Last year 277,844 dozen were landed there.

The Japanese crab-fishing and canning industry had reached large proportions before Pearl Harbor. From 1927 to 1939, they had an average annual pack of 445,102 cases, reaching 600,000 cases in the best years. They sold about 250,000 cases, or about 55 percent of their pack, in the United States. Much of the fishing area the Japanese formerly controlled now has been turned over to Russia, and it is estimated Soviet canneries are producing as much as 500,000 cases of crab meat a year.

Congressman MACK is looking after the interests of an industry that is beginning to prosper in his own State when he insists that this new foreign competition be discouraged. Here is another of those situations where it becomes necessary to choose between encouraging foreign trade and supporting a domestic industry. As the Salem, Oreg., Statesman has put it: "If we have any foreign trade at all, some group is apt to suffer; but we are hardly ready to quit trading with foreign countries."

In this instance, however, a little more than that is involved. Protection of the growing Pacific coast crab canning and fishing industry would contribute to the American economy. The importation of the Russian adds a little something to American foreign trade, even to the volume of Seattle's foreign trade. It also contributes to the Russian economy by providing a market here for the Russian product. If we had to make the choice, we would string along with Congressman MACK, being considerably more interested in what helps Americans than in anything at all that may help Soviet Russia.

ILWACO TRIBUNE

The Ilwaco Tribune of Ilwaco, Wash., commenting on Russian crab imports, said recently, editorially:

The Japanese formerly sold 85 percent of their entire pack, about 250,000 cases a year, in the United States. The Russians will, I am sure, if we permit them to, sell an equal amount here. If they do, our prosperous Pacific coast crabbing industry, in which millions of dollars have been invested will be destroyed.

Our American fishermen and cannery workers cannot compete with the slave labor of Russia.

If our crabbing business is destroyed by Russian competition, what will our fishermen, who have invested their life savings in fishing boats and gear, do? A bureaucrat in Washington, D. C., several years ago suggested that workers displaced by foreign imports should get into other work, "making typewriters, for example." That isn't easy.

SOUTH BEACH NEWS

The South Beach News, of Westport, Wash., in a lengthy editorial deploring the increasing imports recently, said, editorially, in part:

We of the South Beach News have been perturbed for some time about the Russian crab imports and have done what we can to call attention to the situation.

It is a consolation to know that the threat is realized, but it would be more of one were we assured that something would be done about it.

There is every reason to believe that the Russian imports will not only continue but they will increase. Russia gained the Kuriles and other island bases close to profitable fishing bases of Japanese fishermen before the war. There is little doubt that as long as there is a market in the United States for Russian crab meat that they (the Russians) will exploit those fishing grounds to the utmost.

This is no news to the economists, the State Department, and the heads of ECA in Washington. Such being the case, it would seem that they would be perturbed to the point where some action would be taken toward imposing a tariff, but tariffs, it seems, are taboo in this enlightened age.

Rather than a protective tariff, the administration, or at least the State Department and the ECA, are in favor of what they call "relief" for those who are hurt by the tax-free imports.

We suppose this means that the Government will make up to the domestic processors the difference between the price which will be set by the imports, and that at which they would have to sell to make a fair profit.

Personally, it would seem much more sound to us if the Government would save its money, put a tariff on crabmeat that would protect local packers, and let Russia solve its own economic problems.

But, of course, we are not schooled in enlightened thinking.

RAYMOND HERALD

The Raymond Herald of Raymond, Wash., denouncing the growing importation of Russian canned crab, recently said editorially:

Our Third District Congressman RUSSELL V. MACK recently called attention to the fact that 15,000 cases of canned crabmeat from Russia had been unloaded at a Seattle dock. The Congressman's revelation was significant and distressing.

We recall that before the war most of our canned crabmeat came from Japan. Then, when that industry was put out of business at the outbreak of hostilities, American fishermen began building a fleet of boats to fashion our own crabbing industry, and fish canning plants installed facilities for processing the crabs brought in by our own fishermen.

Now that the war is over and something like normalcy restored, the Russians are planning to capture this industry. They will be able to do it, too, under the present free-trade

set-up and spineless foreign policy of our national administration, because of their low standards of living and slave-labor conditions. Unless some way is found to halt it, American labor, much of it right here in Pacific County, will be the victims.

CORVALLIS (OREG.) GAZETTE-TIMES

Concerning the increasing imports of canned crab from Russia the Corvallis Daily Times, published in the inland town of Corvallis, Oreg., said:

Congressman RUSSELL MACK, of the State of Washington, calls attention to the fact that recently 15,000 cases of Russian canned crabmeat were unloaded in Seattle. Before the war most of our canned crabmeat came from Japan. Then, when this industry was put out of business, Americans immediately began building a fleet of boats to fashion our own crabbing industry. Now that the war is over and something like normalcy restored, the Russians are planning to capture this industry. They will be able to do this under present free-trade policies because of their low standards of living and slave-labor conditions.

There doesn't seem to be much that can be done about it now. We are spending millions in western Europe to stop the forward march of communism and neglecting the back door nearer home, both economically and in our policy toward the Far East. Some day our international economic folly is going to catch up with us.

SPOKESMAN REVIEW

The Spokesman Review, published in Spokane, Wash., which is 400 miles inland from the Washington seacoast, likewise expresses alarm over the growth in imports from Russia. Editorially, it said recently:

Russian imports into the United States are increasing at such a rate that they may soon prove a serious threat to certain aspects of the American economy.

At present, congressional leaders are becoming increasingly alarmed over the appearance, in large quantities, of shoes, hats, crabs and furs from Russia and her satellites.

Mass produced by slave labor and benefiting from the Soviet state-trading program, such items can be sold in the American market at a low price which domestic producers cannot equal.

These goods threaten to drive domestic industries out of business if their import remains uncontrolled by tariff and regulatory measures. As is to be expected, this unfair competition is causing increased unemployment in the United States.

Ironically, while spending billions of dollars abroad to oppose communism, the United States is now helping to support certain industries in iron-curtain countries.

Of particular interest to the Northwest is the reported Russian penetration of the United States fur market. In recent years, Russian fur imports are said to have increased 800 percent. By contributing 30 percent to the United States fur-import total, it is claimed by domestic fur interests that Russia now dominates and controls the Nation's fur market.

The situation is arousing public indignation. However, all protests to the State Department appear to have gone unanswered. It has even been officially suggested that the Department is contemplating further tariff cuts, which would intensify Russian economic penetration.

Federal officials owe the Nation an explanation of their policy in the matter, consistent with the best interests of American industry, jobs and her anti-Communist foreign aid programs.

Rail Talks Resume; Industry Warns of Shut-Down in Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rail Talks Resume; Industry Warns of Shut-Down in Strike," appearing in the New York Herald Tribune of May 13, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAIL TALKS RESUME; INDUSTRY WARNS OF SHUT-DOWN IN STRIKE—MEDIATORS MEETING TWO SIDES SEPARATELY—G. E. APPEALS TO TRUMAN; SOME TRAINS RESTORED; NEW DISORDERS REPORTED

(By Robert A. Bedolis)

Mediation efforts to end the 3-day-old strike against four major railroads were resumed yesterday, with the National Mediation Board conferring separately with representatives of the railroads and the striking Brotherhood of Locomotive Firemen and Enginemen, unaffiliated.

It was understood that Francis A. O'Neill, Jr., chairman of the board, and its other members submitted settlement proposals. While early reports of developments toward a settlement were discounted last night, the renewed activity of the board stimulated some hope that an agreement may be found soon.

LAY-OFFS INCREASE

On the negative side, the day's developments included new reports of violence; a slowly increasing pinch on business, especially in parts of the 27-State strike area which depend on the struck roads for all or most of their rail transport; and increasing lay-offs and the prospect of more if the strike continues. It was hinted by some union officials that the strike against the New York Central system, which has been limited to divisions west of Buffalo, may spread eastward if a settlement is not reached soon.

A development on the positive side was the announcement that some additional trains are being restored by struck roads in the affected area.

The dispute involves the union's insistence on the employment of two instead of one fireman on many multiple-unit Diesel locomotives.

SABOTAGE CHARGED

In Cleveland, the front wheels of a New York Central two-unit Diesel locomotive pulling a 59-car freight train were derailed under circumstances which the railroad described as "a deliberate act of sabotoge." The train was moving slowly in the railroad's Collinwood yards and no one was hurt.

D. W. Taylor, New York Central police chief, said he summoned the Federal Bureau of Investigation to investigate. He said the derailment occurred because a piece of wood had been jammed into an automatic switch, keeping it from closing all the way. He said only the slow speed of the train at the time prevented injury to the 5-man crew and damage to the other cars. None of the freight cars left the rails. The union denied any knowledge of the incident, or that it was caused by strikers.

The New York Central also reported that a bullet was fired into the cab of a Diesel freight locomotive as it pulled out of Elkhart, Ind., and "barely missed" the engineer. The Southern Railway, one of the four affected, said that it stopped operations in its Knoxville, Tenn., division yesterday because of shots fired at trains in that city Thursday. A clerical worker serving as a fireman suffered a flesh wound then.

New York Central reported that another 15,000 of its employees stand to be furloughed over the week end if the strike does not end, which would bring this railroad's total to 40,000 laid off.

The Pennsylvania Railroad, which is struck west of Harrisburg, said the 85,000 employees it has furloughed may also increase by thousands. The Southern has reported 18,000 workers laid off because of the strike.

The fourth railroad involved, the Atchison, Topeka & Santa Fe, in the Middle and far West, has laid off many workers, but gave no total. It was estimated that more than 175,000 workers have been made jobless, including miners in western Pennsylvania and Indiana, where lack of coal cars has closed scores of mines.

The Pennsylvania Railroad, which had not attempted to run any trains in its struck divisions at first, announced that it operated 10 freight trains west of Harrisburg yesterday on its main east-west lines. The railroad said it expects to increase this number today. Few Pennsylvania freight and no passenger trains are operating in the strike area. The railroad said it restored the trains yesterday "in an effort to provide some service to industry and business * * * and to relieve to some extent public inconvenience and possible hardship."

CENTRAL PUTS TRAINS BACK

The New York Central announced that it added 2 passenger trains yesterday to the 10 passenger trains it has operated since the strike began. Another, the James Whitcomb Riley, which serves Indianapolis and Cincinnati, will be added today, the railroad said.

The union first demanded that all multiple-unit Diesel locomotives carry two firemen, but just before the strike conceded that it would accept an agreement calling for arbitration to decide whether a second fireman should be employed only on multiple-unit Diesels used on crack passenger runs. Arbitration would call for an impartial third party to make a binding ruling.

The railroads describe the demand as "featherbedding"—employment of unnecessary workers—and emphasize that two impartial Presidential fact-finding boards have ruled against the union. Under the Railway Labor Act, which provides for fact-finding boards, such recommendations are not binding.

The strike created a business boom for airlines, trucking companies, and nonstruck railroads which serve areas in which the four affected railroads operate. Airlines at LaGuardia Field said they added 42 extra flights yesterday because of the strike.

The General Motors Corp. reported that 4,900 of its employees, mostly in Fisher body plants, have been laid off because of the rail strike. General Motors, Ford, and Chrysler said a serious effect on their production was anticipated if the strike lasts into next week.

Harrisburg steel mills and those in other areas warned of possible lay-offs of thousands of workers if the rail strike continues. Buffalo reported 500 mill employees idle, in addition to rail workers. In western Pennsylvania 25 percent of coal production was reported tied up by the strike.

In Toledo, Willys-Overland Motors put 4,500 of its 7,000 production workers on a 4-day week "to conserve inventories."

A. M. Hartung, vice president in charge of personnel and public relations for the Railway Express Agency, said that an express embargo on shipments to towns served only by the struck roads has been imposed. But he said that shipments to cities which are also served by other railroads are being satisfactorily served by the express company, although there have been a few "slight delays." He described the situation as "not very harmful."

Rent Control

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MADDEN. Mr. Speaker, I am receiving dozens of letters and telegrams from the great industrial Calumet region of Indiana pleading for the extension of rent control.

The following article by William Green, president of the A. F. of L., sets out numerous facts explaining the necessity for rent-control extension:

RENT CONTROL MUST BE EXTENDED
(By William Green)

Within a matter of a very few weeks your Congressman and Senators will be voting on a subject of utmost importance—continuation of rent control for another year. Whether or not Congress decides to extend the rent-control law not only will affect the 8,000,000 members of the American Federation of Labor as well as all the tenants and landlords of this country, but also, because of its broad implications, will have an important bearing on the well-being of every man, woman, and child in America.

The sixty-eighth convention of the A. F. of L., which met last October, unanimously recommended that "until the supply of low-priced housing units can be equalized with the demand, effective rent control must be maintained so that families will not be faced with exorbitant increases in rents."

Following this convention action, the executive council, at its most recent meeting, unanimously adopted a statement emphasizing that until there is a large increase in the supply of homes for low- and middle-income families, an effective rent-control program must be continued. The executive council concluded its statement with the following sentence:

"We can safely remove rent controls in only one way—by building an adequate supply of homes that fit the pocketbooks of the millions of families who are without decent housing today."

Opponents of rent control have attempted to show that there is no longer any shortage of housing. The fact is that despite a recent spurt in residential construction, there still remains a severe housing shortage, particularly of homes and apartments renting at levels that low- and middle-income families can afford.

The Rent Control Act passed in 1949 contained a provision permitting local governing bodies of cities and towns to decontrol their own communities. This is the so-called local option provision.

If opponents of rent control were correct and there were no longer a housing shortage, the American people would have acted to take advantage of this very liberal local option decontrol provision. The fact is that very few cities have elected under this provision to remove rent controls.

Despite intense pressure from the real estate interests, the city councils of only 249 cities—only 6 percent of communities under rent control today—had elected to remove rent control by April 1 of this year. This total includes only 10 cities with more than 100,000 population and 13 others with over 50,000.

In order to determine just how the removal of rent controls would affect A. F. of L. members, the A. F. of L. Housing Committee has just completed a special survey of all communities throughout the country in which there are A. F. of L. central labor unions.

The survey shows that of the 691 communities which have ever been under rent control, 459, or two-thirds are still under rent control. Only 87, or less than 13 percent, were decontrolled by the local option method.

These over-all figures are supported by a State-by-State analysis indicating even more conclusively the catastrophic impact that sudden decontrol would have on A. F. of L. members. Thus there are 10 States and 1 territory where not a single community with a central labor union has been decontrolled. In some of the larger States only a few of the very smallest cities have been decontrolled.

This survey clearly indicates that the great majority of A. F. of L. members, including those in a great many relatively small communities, are still protected by rent control. The sudden removal of rent controls would inevitably be reflected in a sudden increase in family expenditures for millions of union families throughout the country.

The wisdom of maintaining rent controls becomes crystal clear when we discover what has happened to rents in some of the communities where rents have been decontrolled. In November 1949, the Department of Labor made a survey of residential rents in seven decontrolled communities. The survey showed that in those communities tenants whose rents had been raised were forced to bear an average increase of from 16 percent in Salt Lake City to 40 percent in Houston. Moreover, the rent increases affected from one-third to three-fifths of all the tenants in those communities.

The Labor Department's findings have been confirmed by a recent survey made by a very strange source, the National Association of Real Estate Boards, which is the backbone of the notorious real-estate lobby in Washington. Of 100 decontrolled cities in 30 States, the survey showed that rents increased for half of the tenants in decontrolled areas of over 50,000 and for 55 percent in cities of over 100,000, thus pointing out the tremendous number of families whose rents would be raised if all remaining rent controls were removed.

According to the survey, the average tenant whose rent was raised had to pay 22 percent more for rent after decontrol. Moreover, tenants in the smaller cities whose rents were raised sustained larger rent increases than tenants in the larger cities.

This indicates very clearly that rent control is by no means exclusively a big-city problem.

While these figures are significant in themselves, they are averages which tend to conceal the fact that decontrol hits low-income families the hardest. Low-income families spend a larger proportion of their income on rent than families in the higher income groups. The Federal Reserve Board reports that in 1948 families with annual incomes under $2,000 spent 23 percent on rent, compared with 12 percent for all families and only 9 percent for families with incomes of $5,000 and over. Thus it is clear that a rent increase for a low-income family looms larger in the total family budget than a comparable increase for a higher income family.

Yet, the Labor Department survey of decontrolled communities to which I have referred indicates that a greater porportion of the low-income families reported rent increases than those in the higher income groups. In the cities where income data was obtained, the proportion of families with incomes under $2,000 whose rents were raised ranged from 48 to 71 percent as compared with a range of only 22 to 37 percent for families with incomes of $4,000 or more.

Let us examine specifically what these increases in rent would mean to the average worker and his family. Let us use for our example a factory worker whose earnings are $50 a week, approximately the present Nation-wide average. Let us assume that this worker is spending approximately 20 percent of his income for rent, about $10 a week.

If rents in his community are decontrolled, the Department of Labor survey indicates that his rent would rise by at least 25 percent or $2.50 a week. This increase in rent is equivalent to a wage cut of 5 percent, or over 6 cents an hour, assuming a 40-hour week. Under these circumstances the implications for collective bargaining are bound to be quite far-reaching. From my long experience in the labor movement, I know that a widespread wave of sizable rent increases will inevitably be reflected in the demands of organized workers for higher wages.

Congress must face squarely this issue of rent control. It may well decide that Federal rent controls should not be extended beyond June 30. If it does make this decision, it must realize the full consequences of its action.

But this is not enough. I urge each and every A. F. of L. member to write immediately to his Congressman and Senators.

Let them know what the end of rent control would mean to you and your family and to other workers' families in your community.

Let them know that if Congress allows Federal rent control to lapse, it will mean substantial and widespread increases in rents, with the greatest burden falling upon those least able to withstand it.

Let them know that the workers in your community want Congress to extend Federal rent control for the next 12 months.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Council of the City of Medford, Mass., as offered in the council by Mayor Frederick T. McDermott:

Be it resolved, That this council does hereby record itself as being incensed by the action of the Congress of the United States in the passage of any law or appropriation which results in the reduction of operational costs of the United States Post Office Department to the extent that the Department has been forced to resort to the dismissal of many veterans of World War II from employment; and

Whereas this curtailment of employment has resulted in the discharge of five amputee veterans from this district already known to the sponsor of this resolution, it is undoubtedly repeated in many other sections of the country, and constitutes a sad commentary of justice to those who made great sacrifice to their country in the Armed Forces: Therefore be it

Resolved, That this council does hereby seriously appeal to the Congress of the United States to take immediate steps to correct this unspeakable condition by an emergency appropriation of funds to provide for the reemployment of these men who have been forced into unemployment at the earliest possible time; be it further

Resolved, That a copy of this resolution be transmitted upon its passage to the Members in Congress for their serious consideration and action thereon.

Bureau of Reclamation Promotes Two

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MURDOCK. Mr. Speaker, I was pleased to learn the other day of the promotion of two worthy employees of the Bureau of Reclamation, Department of the Interior. As chairman of the Subcommittee on Irrigation and Reclamation, and as one who has worked closely with that Bureau since coming to Congress in 1937, I have had occasion to know and appreciate the good people who work there. The two employees I refer to are Mr. Goodrich W. Lineweaver, who has been promoted from Director of the Branch of Operation and Maintenance to Assistant Commissioner of Reclamation and Mr. E. D. Eaton, who has been promoted from Assistant Director of Operation and Maintenance to Acting Director of that branch.

I quote from a release from the Department of the Interior, issued on April 28, 1950:

LINEWEAVER NAMED ASSISTANT RECLAMATION COMMISSIONER

Promotion of Goodrich W. Lineweaver to Assistant Commissioner of the Bureau of Reclamation was announced today by Secretary of the Interior Oscar L. Chapman. Mr. Lineweaver has been Director of the Bureau's branch of Operation and Maintenance for the last 5 years. At the same time, E. D. Eaton, who has been assistant director of Operation and Maintenance, was named acting director.

The appointments were the recommendation of Commissioner of Reclamation Michael W. Straus. Mr. Straus said an additional Assistant Commissioner is urgently needed to handle the expanding administrative burden of a water resources development program.

The new Assistant Commissioner, Mr. Straus said, will have immediate supervision of program and finance operations of the Bureau of Reclamation, including appropriation presentations before the Bureau of the Budget and the Congress in addition to special assignments.

Mr. Lineweaver has been with the Bureau of Reclamation since 1937 in various capacities and has been Director of the Branch of Operation and Maintenance since 1945. In this position he has supervised the opening to homestead entry, by war veterans, of more than 50,000 acres of public lands comprising about 500 irrigated farms on Western Reclamation projects.

Mr. Lineweaver first served the Federal Government as Secretary of the Federal Power Commission from 1934 to 1936, and has been associated with western resources development constantly since that time. He is a native of Harrisonburg, Va., and served as an officer in the United States Army during the First World War. With Mrs. Lineweaver, he resides at 3511 Davenport Street NW., Washington, D. C.

Other Assistant Commissioners are Kenneth Markwell and Wesley R. Nelson. Both continue their present positions within the Bureau with specific responsibilities little changed, Commissioner Straus said.

Mr. Eaton, the new acting head of the Operation and Maintenance Branch, has been with the Bureau of Reclamation since 1943. Prior to the war, he was with the Soil Conservation Service in Albuquerque, N. Mex., and elsewhere in the West.

He is a native of New York, a graduate of Cornell University, and resides with his family at 5505 Kirkside Drive, Chevy Chase, Md.

Industry Hard Hit by Rail Stoppages

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain news dispatches from Detroit, San Francisco, Philadelphia, Schenectady, Pittsburgh, Los Angeles, and Charlotte, N. C., as they appeared in the New York Times of May 13 under the heading "Industry hard hit by rail stoppages."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

INDUSTRY HARD HIT BY RAIL STOPPAGES—HEAVY LAY-OFFS SEEN AS VITAL SUPPLIES PILE UP—ROADS START SKELETON RUNS

DETROIT, May 12.—As the railroad strike continued to hit the automobile industry today, General Motors Corp. announced drastic cut-backs in overtime work, and furloughs for 500 employees in its Fisher Body Plant in Flint. The company had already laid off 400 yesterday at its body plant in Grand Rapids.

The Michigan Central Railroad, a subsidiary of the New York Central, completed the laying off of 13,500 of its 15,000 employees in Michigan, 10,000 of them in the Detroit area.

Truckers reported boom business. Howard Minnich, executive chairman of the Michigan Trucking Association, said that its members had not been nearly able to meet demands.

Competition for truckers' services was expected to mount so sharply as to limit deliveries only to highest priority items, he added.

FORD CRIPPLED IN WEST

SAN FRANCISCO, May 12.—Freight handling costs at the Ford Motor Co.'s assembly plant at Richmond, on the East Bay, have been quadrupled by the railroad strike, company spokesmen said today.

Ford receives 80 percent of its parts over the Santa Fe, and is now transshipping some materials by barge from the Western Pacific's tracks in San Francisco. Other materials are being trucked from railheads of the Southern Pacific.

Spokesmen for the Santa Fe had no official count of its workers involved in the strike, but estimates are that as many as 1,000 rail men in this area may be idle next week when the company's local shops and yards are shut down.

THE PENNSYLVANIA MOVES FREIGHT

PHILADELPHIA, May 12.—The Pennsylvania Railroad anounced it had started operation of 10 freight trains today on its east-west main lines, west of Harrisburg, Pa., and expected to increase the service tomorrow.

Movement of freight on the Pennsylvania Railroad west of Harrisburg has been at a standstill since the firemen and enginemen went on strike 3 days ago.

A spokesman said supervisory personnel were on the locomotives.

GENERAL ELECTRIC IS HIT

SCHENECTADY, N. Y., May 12—The General Electric Co. announced today that the company's plants very shortly will be paralyzed unless the railroad firemen's strike is settled.

The statement was made in a telegram to President Truman and sent by Harry L. Erlicher, vice president in charge of purchasing and traffic. Paralysis of the plants, he said, would cause immediate heavy lay-offs.

In a statement to the press, Mr. Erlicher added that, "we are so dependent upon hundreds of suppliers for materials which can be transported only by railroads that operations will stop in a number of places very shortly unless the strike is settled immediately."

He asserted that irreparable damage already had been done by a halt in shipments and supplies.

The Schenectady works, he said, employing about 32,000, would not be affected as much as other G. E. plants.

TWENTY-THREE MAJOR COAL SHUT-DOWNS

PITTSBURGH, May 12—Lack of empty railroad cars raised the total of major coal mines shut-downs to twenty-three today in the strike of railroad firemen. The number of small pits that have closed is not known. Coal miners made idle by the railroad walkout rose to at least 7,500. The daily production loss is estimated at almost 49,000 tons of soft coal.

LAY-OFFS LOOM IN LOS ANGELES

LOS ANGELES, May 12.—Lay-offs are expected to start next week in local industries that have begun to feel the crippling indirect effects of the strike of locomotive firemen and enginemen against the Santa Fe system.

Nash Motors, at Inglewood, notified its employees that it has supplies large enough only to carry the plant through Monday, and the employees were alerted to possible lay-offs.

A meat packer on Santa Fe lines said that all livestock is now being trucked to the plant.

A machinery company reported that operations might cease next week because carloads of supplies via the Santa Fe have been immobilized.

Many other plants reported that losses were mounting because they have to hire trucks to haul materials formerly unloaded from Santa Fe cars in their plants.

Santa Fe maintenance shop shut-downs in seven western cities have made thousands of rail workers idle.

CHARLOTTE, N. C., May 12.—The Southern Railway announced here today it was scheduling 32 additional passenger trains. Four-

teen of these trains serve the Carolinas. The announcement came from the system's Eastern Lines headquarters here.

Locomotives are being manned by regular engineers and carried firemen who disregarded the strike call or who normally were engineers or supervisory employees, the road reported.

Passenger service scheduled for restoration through the Carolinas included the Crescent, operating between New York and New Orleans.

The Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I request unanimous consent for insertion in the Appendix of the RECORD excerpts from newspaper reports and comments, and certain quotations from certain Members of Congress concerning the Kerr gas bill.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

AMERICA AT CROSSROADS

We may as well make our choice now, whether we stop our drift into regulation, or we must just give up and regulate everything else. (Boston Herald.)

UNHOLY ALLIANCE

It is true that the industrial interests of the North and East formed a temporary alliance with the socialistic politicians to defeat the bill, feeling that it would raise the price of natural gas for their own use, but that does not alter the fact that the Federal Power Commission and its coworkers in the administration's program of nationalization have a long-range goal of a powerful socialized control. (Oklahoma City Times.)

MAIN SPEECH

KERR's ringing defense of the independent gas producers and the pending legislation represented his most important speaking appearance since he made the Democratic keynote speech at Chicago in 1944. This carefully prepared address on the Senate floor—weighted with documentary evidence and brightened with wit and anecdote—brought new zest to the dullness of legislative tedium and established the junior Senator from Oklahoma as one of the Senate's best performers. * * * By the sheer force of his own persuasion, Senator KERR pulled himself out of a defensive position. Turning the tables on the critics who have been trying to pit him against the American consumer, Senator KERR urged the passage of his bill "as the best insurance" for a continued growing supply of the best and cheapest fuel. Senator KERR's popular-styled speech, clarifying both the legal and practical basis for his case, drew an unusual response from a body conditioned to the best in oratory and legislative strategy.

UPHILL VICTORY

After an uphill battle against heavy odds, the Oklahoma author of the gas measure has scored a decisive personal victory and opened the way for expansion of the gas industry in the Southwest. Senator KERR, as a wealthy oil and gas operator and principal authority on the industry, has been made a chief target by the opposition who thus sought to discredit the legislation as an exploitation of the consumer. Hence, the Wednesday vote amounted to a vote of confidence in Senator KERR personally. (Tulsa Tribune.)

OPA WRONG WAY

We believe Mr. Truman has chosen the wrong way to insure people gas. If the OPA principle didn't work on meat and clothing, there is no reason to suppose that it will on fuel. (Chicago Daily News.)

FEDERAL ENCROACHMENT

It is clear that Speaker RAYBURN spoke the truth when he told the House, "This Kerr bill will not raise the price of natural gas to any consumer in the United States one red cent."

There remains, of course, the question of Federal encroachment upon the rights of States and individual citizens. Defeat of the Kerr bill would have meant that an already powerful Federal agency would have still more power. For that reason, also, it is good that the effort to defeat the Kerr bill has failed thus far and with President Truman's signature will fail completely. (Dallas Times-Herald.)

SUBJECT PROVINCES

So far as the people of the Southwest were concerned, the bill was "in the public interest." But we're outnumbered—there are more votes in the overcrowded cities.

And we're condemned to stand by and see our irreplaceable gas drained out from under us at a price set by a Government in control of those hostile to our best interests, drained to warm the inhabitants of eastern cities adjacent to the coal fields.

It sometimes seems that the people of the North and East regard the South and Southwest as subject provinces. (Texhoma (Okla.) Times.)

FALSE CLAIMS

The utter fallacy of claims of opponents of the Kerr bill that its passage would increase gas prices to consumers is so easily proven I can't understand why radio commentators and others fell for such misrepresentation of facts.

We feel false information was supplied radio commentators and others about the Kerr bill and that most of us who knew the facts, including this columnist, were extremely derelict. (Andrew Rowley, oil editor, Tulsa Tribune.)

PROPAGANDA CAMPAIGN

Seldom has the Nation seen such a cleverly organized propaganda campaign against a bill in Congress.

PERSONAL FIGHT

Fainter hearted figures would have quailed before the barrage of vilification and abuse heaped upon BOB KERR as he made his fight for the gas bill. All of Washington is talking now, though, about the brilliant fight he conducted for the bill during almost a week of debate, much of it marked by haranguing from the comma-counting crew led by Missouri's Republican Senator DONNELL. (McAlester (Okla.) News-Capital.)

BATTLE CONTINUES

Knowing BOB KERR as we do, and with a consciousness of his varied abilities, it is safe to say that the battle in behalf of the independent producers of natural gas is not yet over. And, up to now, it is an issue on which the powerful northern and eastern interests have outmaneuvered the people who own and produce natural gas for a great part of the Nation. The matter deserves more thoughtful attention than the people of Oklahoma have given it. And, when it again becomes an issue before Congress, it will be a matter that should be given forceful backing in behalf of a measure that is important to this State and its citizens. (Frederick (Okla.) Leader.)

SMEAR CAMPAIGN

Never within his memory, said Representative LYLE, of Texas, during House debate on the Kerr natural gas bill, has a measure been so falsely, maliciously, and deliberately misrepresented. This widespread campaign of distortion and misstatement continues while the bill is before President Truman for his approval or veto, matched only by the vicious personal attacks directed at sponsors of the legislation, and especially its author, Senator KERR, of Oklahoma. (Fort Worth Star-Telegram.)

REAL PURPOSE

The "billion dollar steal" cry had no more basis than the imagination of Congressman YOUNG and his associates. They had nothing to base it on except their own mistrust of the traditional free-enterprise system. They just prefer Government regulation to free competitive operation.

Speaker RAYBURN put his finger on their real objective when he said in reference to the position of another Clevelander:

"If I felt, as my distinguished friend from Ohio [Mr. CROSSER] has indicated he feels, that the Federal Government should own and control all the natural resources of this country, then my position on this and much other legislation certainly would be changed." (Cleveland News.)

FIELD GAS CHEAP

These housewives might be glad to know that 4 cents would be a generous estimate of the field price of the gas they use in a month's cooking. They might also be glad of the reassurance of Speaker RAYBURN, who is at least as well informed on the subject as Senator DOUGLAS, that the Kerr bill would not increase the price of gas by one red cent.

The Daily News is for low gas prices. We are convinced that the way to have them is to encourage producers to find more gas and to sell it to the pipelines. Transmission costs drop as volume increases, and the more high-priced manufactured gas that is displaced by natural gas, the greater the saving. (Chicago Daily News.)

[Congressional comment]

UNCLE SAM INVADES

Why must the forces of Uncle Sam march past the statehouse, past the county courthouse, on down to each farm and pasture and commissioner's precinct to apply a new cost formula when a proper Federal control already exists?

The consumer is protected from unreasonable prices. The fear of unreasonable prices is not a justification for defeat of this legislation.

OFF KEY

Remember, the producer sells his gas for an average of 5 cents per thousand cubic feet in the Southwestern States; the householder pays $1.25 for that gas. Some Senators say the consumer needs more protection. If the consumer needs more protection, I say the consumer needs more than 5 cents' worth. (Senator LYNDON JOHNSON, Democrat, Texas.)

NEW PRICE FIX

If we permit an OPA price to be placed upon the commodity of an independent gas

producer, through default of our congressional duties, that will be the only instance on our economy where a nonutility price is fixed. No present or foreseeable peril to the consumer exists which would justify such isolated price fixing. (Senator EDWIN C. JOHNSON, Democrat, Colorado.)

GENERAL INTEREST

Between 60 and 70 percent of the total area of continental United States is proven as potential gas-producing territory. This area is owned by tens of millions of Americans any one of whom has the right and privilege to prospect for and produce, if found, natural gas. And so, Mr. President, any American citizen becomes a potential producer of oil or gas, either on his own acreage or upon leases secured from others. Many Americans now have, or at one time did have, an interest in what is commonly referred to as a wildcat well. (Senator ROBERT S. KERR, Democrat, Oklahoma.)

SMALL OWNERS HURT

Gas fields are owned in the main by many small landowners, each holding a royalty interest in the production from the field or from his block. If Federal price controls should be imposed, production curtailed, and operators hamstrung by Federal edict, thousands of small farmers and landowners would be deprived of what has come to be part of their livelihood. The royalty income that farm owners now receive from natural-gas production, which in effect represents the price at which they sell their minerals—their own private property—would no longer be fixed by the law of supply and demand, but, instead, by an all-powerful Federal bureau. Should this bill be defeated, the door would be opened for Government regulation of sales of privately owned real-property rights, mineral leases, royalties, mineral rights, and even the minerals themselves. In one section of Louisiana, there are more than 1,500 people who own mineral rights in a single gas-producing unit (Senator ALLEN J. ELLENDER, Democrat, Louisiana.)

BUM STEER

If such a theory were a good one, a proper one, we might have the following situation: A man in Iowa might have some nice beef cattle which he was feeding Iowa corn. A man in Chicago might say, "I should like to have that beef steer." "But, it does not belong to you," someone might say. "It belongs to a man in Iowa." The Chicago man might say, "Yes, but he is going to ship that beef steer to Chicago. It is going to enter interstate commerce, and, therefore, the Government has the right not only to regulate its actual transportation but to regulate its price right down to Iowa, and Mr. Iowa Cattle Dealer, you must sell your cows, you must sell your steers, not at your price, not at the price the packer is willing to give you, but you must sell your cattle at a price fixed by a bureau in Washington, whose mind changes as it sees fit to change it." (Senator TOM CONNALLY, Democrat, Texas.)

NATIONAL DEFENSE

We used to say that an army traveled on its stomach; but today, Mr. President, an army also travels on gasoline and oil, produced by the same drill, in the same well, at the same time natural gas is produced. So, let me repeat that in view of all the problems confronting us today, we should be considering measures to increase, rather than reduce, the incentive for the development of natural gas. (Senator LESTER HUNT, Democrat, Wyoming.)

NO GOUGE

These facts do not support any theory that gas is a monopolistic operation or that it is engaged in a conspiracy to gouge the public through exorbitant prices. Quite the contrary. (Senator BOURKE B. HICKENLOOPER, Republican, Iowa.)

SOCIALISTIC SWEEP

Mr. President, this is a two-way road. If we regulate independent producers and gatherers at a time when they are doing a good job, and before it is proved necessary to regulate them, they will join other forces and say to the people, in the coal-producing States, and in the States producing other commodities, "We ought to regulate those industries."

The next step after complete regulation of industry is nationalization of industry. Let those who say there is too much regulation go back to their States and explain to their constituents why they voted to regulate an industry which has brought down the price of gas to the consumer 12 percent in 12 years. (Senator ERNEST W. MCFARLAND, Democrat, Arizona.)

DANGER SIGNAL

There are some who feel that everything should be regulated at the Federal level. Right now natural gas is their target. If they are successful in this attempt, who can predict what commodity will be next to be removed from private enterprise and placed under bureaucratic restrictions? (Senator EDWARD MARTIN, Republican, Pennsylvania.)

INDUSTRY PRAISED

The question before you is to determine whether you think it wise or unwise to impose Federal control on an American industry which, up until this time, has been a credit to its members, its producers, its engineers, and its staff workers, and whose product has brought no cause for justifiable complaint to any consumer anywhere. (Senator HARRY CAIN, Republican, Washington.)

GOOD COMPANY

In being for this bill, as I was when it originally passed the House, and as I am now in favoring concurring in the Senate amendment, I have some pretty good company. The Federal Military Establishment was asked about this bill, and this is the guts of what they said, after all elements of the Department of Defense has studied it: "Enactment of the bill will remove uncertainties now existing as to the extent of the application of the Natural Gas Act and will clarify its terms. Its effect should be to encourage the development of oil and gas resources and thus would be of benefit to the national security."

That is what our whole Military Establishment says about this legislation.

ONE RED PENNY

In my opinion—and I state this to you deliberately, I would not deceive you, you know that—this will not raise the price of natural gas to any consumer in the United States one red penny. I think this thing should be gotten out of the way. We should concur in this Senate amendment, and then have this study and see where we go from there. (Speaker SAM RAYBURN, Democrat, Texas.)

BEST DEAL

Who then, Mr. Speaker, could question the soundness of a law that has brought cheap fuel to millions of consumers?

I say to you with all the sincerity that I have, with a lifetime of study of this problem, that the passage of this measure will permit the industry to continue to supply millions of more people at rates considerably below that which they are today.

It not only will not increase the cost to the consumer but it will reduce the cost to the consumer. (Representative JOHN E. LYLE, JR., Democrat, Texas.)

VETO IN ERROR

Because many consumers of natural gas are of the opinion that the President's veto has warded off the threat of higher rates for this popular fuel, I believe that it is well that you should know that there is far more danger of higher gas rates now than there would have been had the President signed the gas bill. In spite of all the fog that was thrown up during consideration of the Kerr bill, it was purely a measure simply to retain to the various States the control over their natural gas resources they hitherto have enjoyed; also control of distribution of gas within their borders.

So, I submit to you, that a vote for the Kerr bill was a vote for lowering gas prices to the consumer, and for ever-growing supplies of gas. The Kerr bill was well designed to prevent further socialization of the natural gas industry and to maintain States' rights. It was a bill to protect gas consumers and not to exploit them. (Representative PAUL SHAFER, Republican, Michigan.)

Bill To Bar Rail Strikes Gets O. K.

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Bill To Bar Rail Strikes Gets O. K.," by Robert P. Vanderpool, financial editor, published in the Chicago Herald-American of May 10, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILL TO BAR RAIL STRIKES GETS O. K.

(By Robert P. Vanderpool, financial editor)

Senator DONNELL (Republican, Missouri) has introduced a bill which would outlaw strikes and lock-outs in the railroad industry. If disputes between labor and management could not be settled by negotiation, according to this bill, the two parties would be required to arbitrate and accept the result of such arbitration.

While leaders of both labor and management have constantly opposed previous efforts to outlaw strikes and lock-outs, the presidents of three of the country's leading railroads, Fred G. Gurley of the Santa Fe; Walter S. Franklin, of the Pennsylvania; and Gustav Metzman, of the New York Central, have just testified before a Senate labor subcommittee in favor of this proposed bill.

If the railway firemen persist in their misguided efforts to force at the point of a strike a second fireman in these Diesel locomotives, they may insure passage of this bill. In such case, the country will owe them

a vote of thanks despite their unjustifiable motives.

One can well wonder why such a bill should be confined to the railroads. The benefits to all concerned, including the workers, of arbitration as an alternative to strikes for settling labor disputes frequently have been discussed in this column. The faster we move in this direction the better it will be for labor, for capital, and for the Nation as a whole.

The South Looks Ahead—1950-60

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. ELLIOTT. Mr. Speaker, from 1940 to 1950 the South had the greatest economic and industrial development in its history. Undoubtedly, this development will continue for the next 10 years or more.

Our people must continue to bring the great advantages which we possess to the attention of business and industry everywhere.

As a part of my remarks, I include an address by Dr. Paul W. Chapman, associate dean, College of Agriculture, University of Georgia, delivered before the 1950 annual conference of the advertising staff, the Progressive Farmer, Point Clear, Ala.:

THE SOUTH LOOKS AHEAD—1950-60

The business outlook for 1950 is bright, favorable, and encouraging. This is the consensus of virtually all forecasters, Government officials, and business leaders.

In postwar years, all of which have been prosperous beyond belief, a favorable forecast is unique. In no previous year since the close of World War II, has a note of hope, confidence, or optimism been sounded in outlook reports.

* * * * * * *

* * * Grave doubts have been expressed as to the ability of corporations to maintain profits; yet earnings in the last year of the decade were twice as high as in 1945, and dividend payments to stockholders increased every year during the entire decade.

In spite of the fact that gloomy predictions of the recent past have been far from accurate, many forecasters, typically conservative, are still unwilling to extend their optimism, in terms of specific gains, further than 6 months into the future.

On the other hand, there is every reason for looking to the future with implicit confidence.

We should prepare now for a decade of growth and progress.

This conviction is based upon the record of the past decade and the irrefutable fact that economic history tends to repeat itself. The economic pattern following major wars is always the same; the only fundamental difference is timing.

After World War I, there was a short, sharp upswing followed by a sharp and equally short recession of adjustment period. The same pattern was followed after World War II; the only difference between the two was the degree of change and the length of the respective periods.

Then after World War I, it will be recalled that in 1921 there began, for the economy as a whole, an 8-year period of increasing business activity.

We are now entering upon the corresponding long-time prosperity period that may be expected if economic history repeats itself, as it invariably does.

The only difference between the current situation and the prosperity years after World War I is that our present growth or expansion period should be of longer duration, certainly from 1950 to 1960. Of course, we may expect minor fluctuations, but the trend of the decade should be steadily upward, unless a world-wide emergency occurs.

A DECADE OF PROGRESS

That we may look forward to what can be called a decade of progress has been recognized by a number of economists.

Some forecasters have said that prior to 1960, we may reasonably expect to attain a national annual income of $300,000,000,000. The President of the United States made such a prediction in a recent speech.

The figure is conservative. To attain the $300,000,000,000 income level in a period of such potential prosperity will not be an achievement of Government, but rather an obligation—an obligation to bring about such a favorable business atmosphere that the billions upon billions of new capital required to produce a higher income will be supplied by the American people.

Growth has always been the chief characteristic of our Nation's economy; growth will continue to be the outstanding characteristic so long as the population continues to increase and risk-capital is adequately rewarded.

A $300,000,000,000 income prior to 1960 will require a gain for the decade of $44,000,000,000. This is but one-fourth the gain made during the past 10 years. It is but 1.7 percent a year, as compared with the average annual gain of 2 percent that has been made every year since the prosperity peak of $83,000,000,000 was attained in 1929.

THE SOUTH WILL OUTGAIN THE NATION

But regardless of national business conditions that will obtain in 1950 and the years beyond, percentage gains for the South will, in all probability, be greater than those for the Nation as a whole.

The only difference between the last decade and the one we are now entering is that the South's progress in the future will go forward on a geometric ratio. This accelerated rate of gain will be the result of the sound foundation of economic adjustments laid during the past 10 years.

Every section of the South is making economic gains more rapidly than the Nation as a whole. * * *

* * * * * * *

The following summaries of 10 factors support the belief that the South, in 1950 and throughout the current decade, will maintain its relative leadership in greater gains in earnings and business volume.

Factor No. 1: Industrial growth

The South continues to carry forward industrial growth and expansion at a more rapid rate than the Nation.

According to the most recent census of manufacturers, the South added more than 16,000 new establishments between the years 1939 and 1947.

When compared with the national gain of 65,000 new factories, it is found that the South made a gain of 50 percent during the period as compared with 36 percent for all other regions of the Nation.

An average of seven new industrial plants opened their doors for business in the South on every working day during the past 10 years.

In addition, for every $1,000,000 that went into new plants—that is, new corporations and concerns locating in the South for the first time—$15,000,000 went into the expansion of established industries long identified with the South.

* * * * * * *

To cite any example of current growth is merely to detract from others of equal importance. But in Alabama, for instance, where 74 new industries located in 36 towns in 1949, the new $37,000,000 Coosa newsprint plant, operated by Kimberly-Clark Corp., opened its doors this year. This is but one of three new and important industries in the Childersburg area, which are parts of the same development program.

The rate of industrial expansion in 1950 will not be so great as the average for postwar years, but it will be of big-scale proportions. This is revealed by an analysis of the industrial expansion for any State in the South.

* * * * * * *

Factor No. 2: New industrial jobs

Industrial expansion in the South has created, since 1940, approximately 1,250,000 new jobs in manufacturing.

More than 75,000 new jobs in manufacturing have been created in each of the following States: Alabama, Georgia, Louisiana, North Carolina, Tennessee, and Virginia.

* * * * * * *

Increasing industrial employment opportunities * * * are bringing—for the first time in the Nation's history—a well-balanced occupational pattern to the South. They are the keys to the higher regional income that is being realized; they are stimulating business activities along all lines and providing expanding local markets for farm products; they are contributing to a greater degree of economic stability throughout the entire Nation.

Factor No. 3: New business establishments

Industrial expansion is always associated with gains in business and service establishments; hence, it is no surprise to learn that in this factor the South, during recent years, has made more progress than the Nation as a whole.

The Survey of Current Business (December 1949) published by the United States Department of Commerce reports that, for the 5-year period 1944-49, the national gain in new business establishments and related enterprises was 30 percent. For the Southeast during the same period the gain was 43 percent; for the Southwest, 45 percent.

In all phases of business—wholesale, retail, service, financial, real estate, insurance, transportation, and all others—the South outgained the Nation during the postwar years by a margin of 14 percent.

In construction—a vital index to prosperity—the national gain in firms in operation at the end of the decade stood at 116 percent. For the Southeast the construction gain was 185 percent. For the Southwest, which ranked No. 1 among the Nation's seven regions, the gain was 229 percent.

In new business attracted the seven States—Alabama, Florida, Mississippi, Tennessee, and the Carolinas—led the Nation by a margin of 8 percent during the past 5 years.

Factor No. 4: Wages and salaries

It is estimated that spendable earnings from wages and salaries will increase in the Nation 10 percent in 1950.

But regardless of the rate of national gain, the percentage gain in the South will be larger than that for the Nation.

Total income payments to individuals during a recent 8-year period amounted to a gain of 172 percent for the Nation. In the Southeast the gain was 215 percent. And in the Southwest, the top-ranking region for the Nation, the gain was 223 percent.

The favorable outlook for the South is based upon this recent record, upon expanding industrial employment, and the application of the 75-cent-an-hour minimum wage law, which went into effect in January.

Only 1,500,000 workers will be affected directly by the law, according to the Department of Labor. But of this number, 900,000 live in 13 Southern States, the remaining 600,000 live in all other 35 States.

To meet the requirements of this new law, $300,000,000 will be added to pay rolls; $200,000,000 of this increase will be paid in the South. Of course, the total sum involved, in relation to the total national payroll, is small; less than one-half of 1 percent. But in the South the effect will be far reaching. Not only will the program raise workers now earning less than 75 cents an hour, but all wages and salaries in the plants involved must be adjusted upward.

When illiterate operatives at the simplest industrial jobs earn a minimum of $120 a month, there will develop competition for work in jobs covered by Federal law and also dissatisfaction with current rates of pay in some jobs requiring a high level of skill, training, and intelligence. We may look for higher wage scales and salaries in the South.

Most important among the industries that will loom large in the South are lumber, tobacco, fertilizer, furniture, and food.

Factor No. 5: Electric energy output

No index factor is a more reliable guide to growth and economic outlook for a locality or area than the demand for electric energy.

On the basis of this index, the South is the Nation's No. 1 region for 1950 and for the decade 1950–60.

In 1950 and the 2 years to follow, the South will lead the Nation in the percentage increase of kilowatt-hours made available through the completion of additional generating facilities.

* * * * *

Factor No. 6: Electrified farms

Electrification of the Nation's farms has been one of the significant developments of the past decade; 83 percent of all farms in the United States are now wired for electric service, according to the estimate of Electrical Merchandising, January 1, 1950.

Of the 4,863,266 farm consumers listed in the report, 48 percent were located in 14 Southern States.

Two Million Two Hundred and Forty Thousand Electrified Farms in the South—A 10-Year Increase of 1,820,000

Number of farms served in 14 Southern States (as of Jan. 1)

1950	2,240,976
1949	1,813,175
1948	1,510,900
1947	1,225,300
1946	1,010,000
1945	866,600
1944	770,377
1943	749,700
1942	698,417
1941	530,538
1940	420,700

Source: Edison Electric Institute and Electrical Merchandising.

No region made such rapid expansion in new farms wired in 1949 as did the South; yet no region has such a vast potential for future expansion. * * *

Rural electrification is important from a business point of view. For every dollar spent in extending electric lines, four or more dollars are spent for wiring and appliances.

Increasing farm uses of electricity will promote efficiency, reduce man-hours of labor, and increase income. The current policy of REA places increasing emphasis upon greater farm uses of electric energy rather than the extension of lines. In the decade of 1950-60, this will be the major development.

Factor No. 7: Rural telephones

Rural telephone service is being extended in the South faster than in any region of the Nation.

Every rural county served by the Bell System has been mapped. The potential development on a 5- or 10-year basis is known. Millions upon millions of dollars will be expended on new lines and new phones in the current decade.

Rural telephone expansion in the South is important for a variety of reasons, including the fact that telephone service is one item used in compiling the Index for Farm Living, published annually by the Bureau of Agricultural Economics. In this development the South has lagged to such an extent that the item is lowest in the list from which the Index is computed, hence lowers Southern county ratings. With expanded phone service the rating of many counties will jump up five or more points within the next few years.

Factor No. 8: Index of farm living

In the Farm-Operator Family Level-of-Living Index, compiled by the Bureau of Agricultural Economics, United States Department of Agriculture, the South has made greater gains for several years than other sections of the Nation.

* * * * *

Factor No. 9: Cash farm income

During the favorable years for farming that have existed since 1942, the South has made great gains in cash farm income. In 1943 it reached $5,000,000,000 and by 1948 had risen to the all-time high of $8,250,000,000.

Since 1940 the gain in cash farm income for the Nation has been 233 percent; for the South it has been 272 percent.

Recent price trends still find the South in a favorable position.

If the maximum decline in farm income predicted for 1950 should develop, southern farmers will still receive about three times the prewar level and $1,500,000,000 more than 1940 and 1941 combined.

Factor No. 10: Bright spots in the South's farm outlook

A. 1. Higher net income from cotton.
2. Higher income from peaches.
3. Higher income from milk.
4. Higher income from corn.
5. Higher income from beef cattle.
6. Higher income from sheep and wool.
7. Higher income from tung nuts.
8. Higher income from forest products.
9. Higher income from fruits and vegetables.
10. Higher income from poultry.
11. Higher income from livestock.

These are expressions from leading economists of the agricultural colleges of the South recently interviewed.

B. Expanding southern food markets: With the exception of a few on the Pacific coast, large cities are growing faster in the South than those in other parts of the Nation; wages and salaries, percentagewise, are increasing faster than in other regions; nonfarm employment is expanding at a rapid rate.

This favorable combination of conditions is improving local food markets in the South. In the typical southern city in 1950 sales of milk, meat, poultry, eggs, citrus fruits, and frozen foods will be 100 percent above the prewar level.

C. New markets through processing farm products: Of the more than 16,000 new industrial establishments that have opened recently in the South, 3 out of 4 are directly related to farming; that is, they either make farm supplies and equipment or buy and process farm products; approximately 50 percent buy raw materials for processing from local farmers. In this way many new and dependable markets for diversified products have been created.

* * * * *

Wood-using industries are increasing rapidly. In the paper industry, the South will soon hold the same dominant position among the regions of the Nation that it has held for many years in textiles.

* * * * *

286,000 more owner-operators, 951,000 fewer tenants and share croppers—14 Southern States

	1930	1935	1940	1948
Owner-operators	1,378,533	1,536,525	1,507,853	1,664,539
Tenants	1,776,036	1,815,754	1,435,358	1,153,896
Share croppers	774,407	714,320	538,422	444,985
	2,550,443	2,530,074	1,974,780	1,598,881
Average acreage per farm	106.5	110.2	123.5	131.7

D. Gains in farm management and operation: Gains in farm owner-operators have been going forward faster in the South than in other sections of the Nation. There is a marked decline in tenants and share croppers.

Financial status of farmers in the 14 Southern States

	1940	1948
Income	$2,437,487,000	$8,250,407,000
Time deposits	340,000,000	749,813,000
Savings bonds	68,729,000	1,553,096,000
Demand deposits	748,700,000	3,780,782,000
Total	3,594,916,000	14,334,098,000

Percent increase 1948 over 1940, 299 percent.

Working capital is being increased. In terms of greater earnings in the future, this is the most important trend of the century in southern farming.

Crop production is being balanced with animal production. Breeding stock is being increased on southern farms faster than in other sections of the Nation.

Most important of all in relation to soil conservation and livestock profits, feed production is keeping pace with gains in animal population. Many Southern States are organizing 100-bushel corn clubs; Georgia has inducted 200 members in 2 years.

Major emphasis is being placed on the development of improved pasture. The greatest opportunity lies in all-year grazing systems with maximum grazing in the winter months. Using such a system the South can produce cheaper milk and beef than most other sections of the Nation.

Poultry production is being expanded at a rapid rate. The South, in the Delmarva, Georgia, and Arkansas areas, is now supplying the major portion of the Nation's broilers. Dozens of new dressing, packing, and freezing plants were added to marketing facilities last year.

E. Rapidly expanding farm mechanization: Farm mechanization is going forward rapidly in the South.

With 777,016 tractors on farms in the South, July 1, 1949, a gain of 186 percent has been registered since 1940.

Southern farms account for 61 percent of the Nation's increase in farm-owned trucks between 1945 and 1948. This striking fact is disclosed by a survey made by the Bureau of Agricultural Economics.

This progress toward mechanization of southern farming operations merely scratches the surface and lays the ground work for greater sales possibilities.

Today the South is the Nation's greatest farm power and machinery market. More than 2,000,000 additional farms must turn to power machinery and labor-saving equipment to meet demands for greater efficiency and lower production costs. Conversion to machinery is more important in a falling farm market than is one that is moving upward.

Mechanization of southern farms will continue to go forward at a rapid rate. This fact is recognized by the makers of farm machinery, virtually all of whom have located plants, or enlarged service warehouses or both, in the South during recent years.

F. Aggressive farmer-training programs: In all phases of agricultural education, research, and extension service, vigorous aggressive programs are under way in the South.

In no section of the Nation are so many young men registered in farm-training classes, including the vocational agricultural classes in rural high schools and veterans farm-training classes.

Of the 250,000 ex-servicemen enrolled in veterans farm training in the Nation, approximately 66 percent live in 13 Southern States. These young men are farming now under the supervision of college-trained, farm-reared instructors. An excellent job is being done. These veteran farmers are, for the most part, mechanically trained. They are livestock and poultry minded. They believe in diversified, balanced farming. They are buying farms, tractors, livestock. In fact, they are carrying forward livestock development so rapidly that in most Southern States the full time of one man is required to locate and buy breeding stock for veteran trainees. Within 6 years, it is possible that one farm out of every seven in the South will be operated by a graduate of the veterans farm-training program.

The 10 factors, discussed in this paper, high light economic trends in the South. They tell a story of growth, progress, and confidence in the future. They lead to the conclusion that 1950 will be a favorable year for the region and that 1950–60 will be another decade of progress.

Black-Eyed Peas

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. BECKWORTH. Mr. Speaker, certain acceptability tests recently have been made concerning black-eyed peas. I include for the record some facts about the tests:

DEPARTMENT OF THE ARMY,
OFFICE OF THE QUARTERMASTER GENERAL,
Washington, D. C., May 4, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: In accordance with your request, this Office has sponsored a test of the acceptability of black-eyed peas in Army troop messes.

The test revealed that this commodity is sufficiently acceptable to be included in the list of foods used to subsist the Army. Whenever black-eyed peas compare favorably in price with other legumes, they will be considered for inclusion in the Department of the Army master menu. As is shown on the attached listing, current prices preclude such action at this time.

Administration of the Army's rations provides for the revision of the master menu by station menu boards whenever such revision is considered necessary or desirable. Black-eyed peas are among those foods authorized for procurement to meet station requirements.

Sincerely yours,

W. H. MIDDLESWART,
Major General, USA, Acting the Quartermaster General.

Current prices of black-eye peas and certain other legumes available for Army subsistence

BASED ON OVERSEAS PRICING CATALOG (QM 5–1–P) F. O. B. DESTINATION

	Per dozen No. 2 cans
Canned black-eyed peas (grade unknown)	$2.28
Canned green peas (fancy grade)	1.44

BASED ON MARKETING REPORT AS OF APR. 25, 1950, F. O. B. SHIPPING POINT

	Per hundredweight
Dry black-eyed peas	$13.75–14.25
Dry green peas	3.75– 4.25
Dry baby lima beans	7.25– 7.35
Dry small white beans	7.40– 7.50

VETERANS' ADMINISTRATION,
Washington, D. C., January 17, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to our letter of November 9, 1949, informing you that studies on acceptability of canned, fresh, green, shelled, black-eyed peas were to be conducted at three Veterans' Administration hospitals in the South, and that you would be advised of the findings.

The studies have now been completed and the information made available to this office. As you know from previous correspondence, the hospitals selected were Kennedy Veterans' Administration Hospital, Memphis, Tenn., a general medical hospital; Veterans' Administration Hospital, Dallas, Tex., a general medical hospital, and Veterans' Administration Hospital, Tuscaloosa, Ala., a neuropsychiatric hospital.

During the 30-day testing period, canned green black-eyed peas were served from two to four times, which approximates the frequency with which dried black-eyed peas are served. The serving portion in each hospital averaged 4 ounces. In the neuropsychiatric hospital, the canned peas were found to be acceptable by more than 90 percent of the patients served, whereas in the general medical hospitals the range of acceptability was from 80 to 85 percent. The average unit cost of the canned green black-eyed peas was $0.022 as compared with $0.008 for the dried peas.

At one general medical hospital, after contacting the patients served, it was learned that many of them were unable to tell the difference between the canned and the dried product. Approximately 50 percent stated they would like either the canned or dried variety served once a week. At the other general medical hospital, 42 percent of the patients indicated a preference for dried peas; 30 percent had no preference or indicated they did not like black-eyed peas; while 28 percent preferred the canned item. The majority of these patients expressed a desire to have either dried or canned peas served once a week.

In the neuropsychiatric hospital, 845 patients were contacted; the ratio was 2 to 1 preferring the dried peas to the canned. Here again, those patients indicated they would like either variety served once or twice each week.

It is believed that the information resulting from these studies indicates that canned green black-eyed peas are an acceptable menu item in areas where black-eyed peas are generally eaten, but that dried black-eyed peas are preferred by the majority of the patients. Since the unit cost is so much greater for the canned peas than for the dried peas, it is believed inadvisable to purchase this variety centrally at the present time, but rather to leave the matter of local procurement in quantities desired, to the judgment of individual hospital managers.

Very truly yours,

PAUL B. MAGNUSON,
Chief Medical Director.

TUSCALOOSA, ALA., *November 18, 1949.*

Hon. LINDLEY BECKWORTH,
Member of Congress, House of Representatives, Washington, D. C.

MY DEAR MR. BECKWORTH: Under date of November 2, 1949, I replied to your memorandum of October 29, 1949, regarding the use of green, dried, or canned black-eyed peas at this hospital at which time I informed you that we had not previously used canned peas but did use green peas in season, but with the greater part of our consumption being black-eyed peas of the dried variety.

In connection with the above I have your notation on my letter requesting advice as to why we do not use canned or green peas and information as to the price we pay for the dried variety.

The chief, dietetic service, has advised that experience has shown that at this neuropsychiatric hospital the average patient prefers the dried variety, properly seasoned, to the green peas used in season when prepared under the same conditions. Almost immediately following my November 2, 1949, letter to you we received a request from our central office at Washington to give the canned variety a trial and report to the central office at the end of a 30-day trial period the results of our experience with the canned variety as against the dried variety commonly used. Accordingly, request was made by the chief, dietetic service, for a nominal supply of the canned peas and upon investigation I find that the order for the canned variety has just been filled by the contractor and the dietetic service will serve the canned variety in accordance with instructions received from the central office.

For your information I may say that canned peas have not previously been used by reason of the fact that our central office sets the standard for procurement of such items with station procurement being mandatory on such standardized items through the VA supply depot system. The dried variety was the type standardized by the central office for station use and under the system in use field stations were without authority to procure the canned variety in lieu of the dried variety stocked in the various supply depots for withdrawal by the supply service on requisition; however, the request from our central office that the canned variety be given a trial would indicate the possibility that both types will henceforth be stocked in the supply depot for withdrawal in which case it will be optional with the dietetic service as to whether they desire to use one or both types as each type will be available for requisitioning purposes.

The dried variety available through the VA supply depot system is billed to us currently at a cost of $0.109 per pound whereas our recent purchase of the canned peas was at a cost of $0.75 per No. 10 can and according to cost figures prepared by the chief, dietetic service, the use of the canned variety will be approximately three times that occasioned by use of the dried variety; however, we are very glad to cooperate with our central office in

giving the canned variety a thorough trial with the results to be submitted to that office at the end of the 30-day trial period. I am returning attached my letter of November 2, 1949, in accordance with your request.

Very truly yours,

M. B. HOLMES, M. D.,
Manager.

THE SECRETARY OF THE NAVY,
Washington, April 5, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: I wish to acknowledge receipt of your memorandum of March 21, 1950, concerning the black-eyed peas.

Extensive tests have been conducted to determined the acceptability of dried, canned dried, frozen green, and canned green black-eyed peas. Based upon these studies the acceptability of all four test samples of black-eyed peas ranks above the acceptability of kale, rutabagas, brussel sprouts, and turnips; is equal to asparagus, cooked celery, parsnips, and winter squash but is below that of lima beans, string beans, dry beans, beets, cabbage, carrots, cauliflower, corn, eggplant, onions, green peas, Irish potatoes, sweetpotatoes, spinach, and tomatoes. Based upon the results obtained in this comprehensive study, peas, string beans, corn, spinach, tomatoes, and potatoes have a higher percentage eaten of the amounts served than do black-eyed peas.

In contrasting the tests conducted at Charleston, Corpus Christi, Boston, and Bayonne, we find that the results were quite uniform and substantiated the findings stated above. In addition, it has been clearly shown that black-eyed peas, irrespective of method of preparation or whether canned, frozen, or dried, have their highest degree of acceptability among those men whose origin was from the south and southwestern portions of the United States.

Your memorandum of March 21, 1950, is returned.

Sincerely yours,

JOHN T. KOEHLER,
Assistant Secretary of the Navy.

DEPARTMENT OF THE NAVY,
BUREAU OF SUPPLIES AND ACCOUNTS,
Washington, D. C.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: I wish to acknowledge receipt of your memorandum of March 21, 1950, concerning black-eyed peas.

Extensive tests have been conducted to determine the acceptability of dried, canned dried, frozen green, and canned green black-eyed peas. Based upon these studies the acceptability of all four test samples of black-eyed peas ranks above the acceptability of kale, rutabagas, brussel sprouts, and turnips; is equal to the asparagus, cooked celery, parsnips, and winter squash but is below that of lima beans, string beans, dry beans, beets, cabbage, carrots, cauliflower, corn, eggplant, onions, green peas, Irish potatoes, sweetpotatoes, spinach, and tomatoes. Based upon the results obtained in this comprehensive study, peas, string beans, corn, spinach, tomatoes, and potatoes have a higher percentage eaten of the amounts served than do black-eyed peas.

In contrasting the tests conducted at Charleston, Corpus Christi, Boston, and Bayonne, we find that the results were quite uniform and substantiated the findings stated above. In addition, it has been clearly shown that black-eyed peas, irrespective of method of preparation or whether canned, frozen, or dried, have their highest degree of acceptability among those men whose origin was from the south and southwestern portions of the United States.

As requested, your memorandum of March 21, 1950, is returned.

Sincerely yours,

C. W. FOX,
Rear Admiral (SC), USN, Chief of Bureau.

UNITED STATES NAVAL
SUPPLY RESEARCH AND
DEVELOPMENT FACILITY,
NAVAL SUPPLY DEPOT,
Bayonne, N. J., March 24, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: The following information is submitted in response to your letter of March 21, 1950, relative to the acceptability of black-eyed peas.

This activity has engaged in a comprehensive study of the acceptability of various vegetables. This study has also included the testing of black-eyed peas including dried, frozen green, canned green, and canned dried types.

Based upon these studies, the acceptability of all four test samples of black-eyed peas ranks above the acceptability of kale, rutabagas, brussels sprouts, and turnips, is equal to asparagus, cooked celery, parsnips, and winter squash but is below that of lima beans, string beans, dry beans, beets, cabbage, carrots, cauliflower, corn, eggplant, onions, peas, Irish potatoes, sweetpotatoes, spinach, and tomatoes.

This activity has no comprehensive data wherein the acceptability of black-eyed peas can be compared with any new Navy foods.

Sincerely yours,

C. L. AUSTIN,
Rear Admiral, Supply Corps, United States Navy, Officer in Charge.

UNITED STATES NAVAL
RECEIVING STATION,
Charleston, S. C., March 31, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: It was my pleasure and privilege to conduct an acceptability test of black-eyed peas in the general mess of the United States Naval Receiving Station, United States Naval Base, Charleston, S. C.

The acceptance by the personnel involved was slightly less than half, in general, either southern-born or southern-raised men accepted. It is firmly believed that the peas could readily be used as a rotating item to provide the general mess menu with additional variety.

Personally I like black-eyed peas very much and have them frequently in my home. Wishing you every success in your program for their adoption, I remain

Very respectfully,

G. L. HANSEN,
Captain, United States Navy, Commanding Officer.

UNITED STATES NAVAL RECEIVING STATION,
Boston, Mass., March 23, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: The following information is furnished in reply to your memorandum of March 23.

The tests on black-eyed peas were conducted at this station in accordance with the instructions received from the Bureau of Supplies and Accounts. Recommended receipts were used. The results of the tests indicated a favorable comparison with such other infrequently used foods as fresh turnips, canned beets, and canned spinach. As it happened the quantity of black-eyed peas ordered exceeded the amount required to conduct the tests. The excess peas have since been prepared and placed in the serving line with no indication of increased acceptance.

Various fresh frozen foods have been introduced at this station over the past few years. Those foods, which are acceptable as canned items, have generally proved to be even more acceptable as fresh frozen items. On the other hand, spinach, for which there is a negligible demand as a canned item, has come to be readily acceptable as a fresh frozen item.

In the interests of economy and morale every effort is made to prepare menus which will be to the liking of the greatest possible number. To this end personnel are questioned at random to determine their appraisal of the meal. A suggestion box is prominently located in the mess hall. Suggestions are reviewed and where practicable the recommendations are effected. It is regrettable to report that there have been on requests for additional servings of black-eyed peas.

Sincerely yours,

A. F. JUNKER,
Captain, USN.

DEPARTMENT OF THE NAVY,
BUREAU OF SUPPLIES AND ACCOUNTS,
Washington, D. C., April 10, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: I wish to acknowledge receipt of your letter of March 27, 1950, concerning the acceptability tests on English peas similar to those previously conducted on black-eyed peas.

As pointed out in the Secretary of the Navy's letter of December 5, 1949, and my letter of December 21, 1949, an item must have an acceptability of at least 75 percent in order to be served regularly in the general mess.

English or green peas, whether canned, fresh, or frozen, approach Irish potatoes in their degree of acceptability, which exceeds 90 percent for all personnel irrespective of origin or childhood dietary habits of the individuals being served.

Your letter of March 27, 1950, is returned herewith.

Sincerely yours,

C. W. FOX,
Rear Admiral (SC), United States Navy, Chief of Bureau.

UNITED STATES NAVAL AIR STATION,
Corpus Christi, Tex., March 25, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: In reply to your letter of March 21, 1950, with regard to the general results of tests of black-eyed peas.

Based on the results obtained from tests recently conducted, black-eyed peas compared favorably with kale and Brussels sprouts and unfavorably with cauliflower and eggplant. It does not compare favorably with various vegetables which have been in use over a long period of time.

Sincerely yours,

J. B. DUNN,
Captain, United States Navy, Commanding Officer.

[Enclosure 1]

UNITED STATES NAVAL RECEIVING STATION, NAVAL BASE, CHARLESTON, S. C.—SUMMARY OF DATA OBTAINED DURING PERIOD JANUARY 6, 1950, TO FEBRUARY 2, 1950

1. Authorization: Letter from Chief, Bureau of Supplies and Accounts, dated November 8, 1949, JJ56-2/L5 (SB-4).

2. Objective: To determine the acceptability of black-eyed peas by naval personnel subsisting in the general mess.

8. Introduction: Two samples of black-eyed peas were produced:

Type	Brand name	Price per pound	Packer
Frozen green.	Honor Brand.	$0.275	Stokely-Van Camp, Inc., Oakland, Calif.
Canned green.	Pocahontas.	.12	H. A. Taylor, Jr., Richmond, Va.

4. Procedure: The study used enlisted personnel subsisting on the general mess of the receiving station. Cafeteria method was used for serving and men were allowed to accept or reject. Men entering the mess hall handed in to the MAA a slip of paper indicating their geographic location.

Each of the two types of peas were run twice during the tests with at least a week elapsing between servings. All tests were conducted during the noon meal to encircle the greatest number of men. Standard meals were served.

Preparation of the peas was according to recipes as furnished by the Bureau except in the case of frozen peas. Test No. 1 indicated that 30 minutes cooking time was more than ample; accordingly on test No. 2 for frozen peas the cooking time was reduced to 25 minutes instead of the 2 hours as indicated by the Bureau.

Geographic origination of test personnel participating in the black-eyed pea study at the United States naval receiving station, naval base, South Carolina

	Percent
Group I	21.9
Group II	22.1
Group III	43.1
Group IV	12.9

(a) Group I: Eastern United States consisting of First, Third, and Fourth Naval Districts.

(b) Group II: Midwestern United States consisting of Ninth Naval District.

(c) Group III: South and Southwestern United States consisting of Fifth, Sixth, Seventh, and Eighth Naval Districts.

(d) Group IV: Western United States consisting of Eleventh, Twelfth, and Thirteenth Naval Districts.

Recapitulation of test data

Type of peas	Test No.	Number of men present	Number of men accepting	Percent accepting	Pounds net prepared	Pounds net not served	Pounds net served	Pounds net served but not eaten	Percent served but not eaten
Fresh frozen black-eye peas	1	620	370	59.7	98	22	76	14	5.6
	2	695	432	62.2	106	9	97	12	1.4
Total		1,315	802	61.0					
Canned black-eye peas	1	757	375	49.5	78	0	0	13	1.7
	2	420	244	58.1	74	15	59	8	1.4

TEST NO. 1

FOR FROZEN PEAS (FROZEN OR CANNED)

1. Date of test January 6, 1950.
2. One hundred pounds net weight prepared (record number of pounds of peas used).
3. Ninety-eight pounds prepared drained weight (strain liquid from peas and weigh the drained peas after cooking).
4. Thirty-nine pounds liquid (weigh the liquid).
5. Not applicable.
6. Not applicable.
7. Not applicable.
8. Six hundred and twenty, total number of men present for meal (count the men as they pass through the line).
9. Three hundred and seventy, number of men who accepted a serving of black-eyed peas.
10. Thirty-three pounds of peas not served (weigh the peas left on the serving line and/or left in the kettle).
11. Twenty-two pounds prepared drained weight not served (strain liquid from peas and weigh the drained peas).
12. Eleven pounds liquid not served (weigh the liquid).
13. Fourteen pounds of peas served but not eaten (strain liquid from peas and weigh the drained peas).
14. One and one-half pounds of liquid from peas served but not eaten (weigh the liquid).
15. Menu for meal: Hot soup and crackers, French fried shrimp, tartar sauce, sliced lemon, French fried potatoes, black-eyed peas, French fried, cole slaw, M. D., peach pie alamode, hot rolls, butter, bread, cocoa.

FOR FROZEN, GREEN, BLACK-EYED PEAS

Recipe outline:

1. For each recipe consisting of 20 pounds of frozen peas, use 2 pounds of cured bacon or salt pork.
2. Dice the bacon and cook until slightly crisp.
3. Add the cooked bacon and the fat drippings to the peas. Place in kettle.
4. Add sufficient cold water to cover peas.
5. Season partly with salt and pepper.
6. Bring the mixture to a slight boil.
7. Reduce heat and simmer for approximately 30 minutes or until tender.
8. Taste and add more salt and pepper before serving if needed.

FOR CANNED PEAS (FROZEN OR CANNED)

1. Date of test January 18, 1950.
2. One hundred and fifty pounds net weight prepared (record number of pounds of peas used).
3. Seventy-eight pounds prepared drained weight (strain liquid from peas and weigh the drained peas after cooking).
4. Seventy-two pounds liquid (weigh the liquid).
5. Not applicable.
6. Not applicable.
7. Not applicable.
8. Total number of men present for meal, 757, (count the men as they pass through the line).
9. Number of men who accepted a serving of black-eye peas, 375.
10. Pounds of peas not served, none (weigh the peas left on the serving line and/or left in the kettle).
11. Pounds prepared drained weight not served, none (strain liquid from peas and weigh the drained peas).
12. Pounds liquid not served, 65. (Weigh the liquid.)
13. Pounds of peas served but not eaten, 13. (Strain liquid from peas and weigh the drained peas.)
14. Pounds of liquid from peas served but not eaten, 1. (Weigh the liquid.)
15. Menu for Meal: Hot soup and crackers, grilled breaded veal cutlets, brown gravy, mashed potatoes, black-eyed peas and sliced bacon, cole slaw, M. D., cherry pie ala-mode, hot rolls, butter, hot cocoa.

NOTE.—Canned peas 48 percent water.

FOR CANNED GREEN, BLACK-EYE PEAS

Recipe outline:

1. For each recipe consisting of 4 No. 10 cans, or equivalent in smaller cans, use 2 pounds of cured bacon or salt pork.
2. Dice the bacon and cook until slightly crisp.
3. Add the cooked bacon and the fat drippings to the peas.
4. Season partly with salt and pepper.
5. Bring the mixture to a slight boil.
6. After the mixture has just started to boil, reduce the heat and simmer for not more than 30 minutes.
7. Taste and add more salt and pepper before serving if needed.

TEST NO. 2

FOR FROZEN PEAS (FROZEN OR CANNED)

1. Date of test, January 25, 1950.
2. One hundred and twenty pounds net weight prepared (record number of pounds of peas used).
3. One hundred and six pounds prepared drained weight (strain liquid from peas and weigh the drained peas after cooking).
4. Forty-seven pounds liquid (weigh the liquid).
5. Not applicable.
6. Not applicable.
7. Not applicable.
8. Six hundred and ninety-five, total number of men present for meal (count men as they pass through the line).
9. Four hundred and thirty-two, number of men who accepted a serving of black-eyed peas.
10. Thirty pounds of peas not served (weigh the peas left on the serving line and/or left in the kettle).
11. Nine pounds prepared drained weight not served (strain liquid from peas and weigh the drained peas).
12. Thirty-five pounds liquid not served (weigh the liquid).
13. Twelve pounds of peas served but not eaten (strain liquid from peas and weigh the drained peas).
14. One pound of liquid from peas served but not eaten (weigh the liquid).
15. Menu for meal: Hot soup and crackers, pot roast of beef, vegetable gravy, French fried potatoes, French fried black-eyed peas and bacon, Waldorf salad, M. D., pound cake, ice cream, hot rolls, bread, butter, coffee.

FOR FROZEN, GREEN, BLACK-EYED PEAS

Recipe outline:

1. For each recipe consisting of 20 pounds of frozen peas, use 2 pounds of cured bacon or salt pork.
2. Dice the bacon and add to the frozen peas. Place in kettle.
3. Add sufficient cold water to cover peas.
4. Season partly with salt and pepper.
5. Bring mixture to a slight boil and then reduce heat.
6. Simmer for 2 hours before serving.
7. Taste and add more salt and pepper before serving if needed.

FOR CANNED PEAS (FROZEN OR CANNED)

1. Date of test, February 1, 1950.
2. One hundred and five pounds net weight prepared (record numbers of pounds of peas used).
3. Seventy-four pounds prepared drained weight (strain liquid from peas and weigh the drained peas after cooking).
4. Thirty-one pounds liquid (weigh the liquid).
5. Not applicable.
6. Not applicable.
7. Not applicable.
8. Four hundred and twenty, total number of men present for meal (count the men as they pass through the line).
9. Two hundred and forty-four, number of men who accepted a serving of black-eye peas.
10. Twenty-one pounds of peas not served (weigh the peas left on the serving line and/or left in the kettle).
11. Fifteen pounds prepared drained weight not served (strain liquid from peas and weigh the drained peas).

12. Seventy-eight pounds liquid not served (weigh the liquid).

13. Eight pounds of peas served but not eaten (strain liquid from peas and weigh the drained peas).

14. One and one-half pounds of liquid from peas served but not eaten (weigh the liquid).

15. Menu for meal: Hot soup and crackers, boiled fresh corned beef, boiled cabbage, boiled peeled potatoes, black-eyed peas with bacon, prepared mustard, sliced pickles, vegetable salad, F. D., cherry pie alamode, hot rolls, bread, butter, coffee.

FOR CANNED, GREEN, BLACK-EYE PEAS

Recipe outline:

1. For each recipe consisting of four No. 10 cans, or equivalent in smaller cans, use 2 pounds of cured bacon or salt pork.

2. Dice the bacon and add to the canned peas.

3. Season partly with salt and pepper.

4. Bring mixture to a slight boil and then reduce heat.

5. Simmer for 2 hours before serving.

6. Taste and add more salt and pepper before serving if needed.

NATIONAL CANNERS ASSOCIATION,
Washington D. C., April 25, 1950.

To canners of black-eye peas:

1949 BLACK-EYE PEA PACK

This report is compiled from reports to the Division of Statistics of canners packing fresh, green, black-eye peas in 1949.

Credit is given to the Southwest Canners Association, Tyler, Tex., and the Texas Canners Association, Weslaco, Tex., for the compilation of that State. The pack in Texas includes some purple hull peas as well as their black-eye pack.

1949 black-eye pea pack by can size

	24/2	48/1P	24/300	24/303	6/10	Total
Arkansas and Oklahoma	134,704	----------	19,667	3,275	23,429	180,875
Texas	420,612	12,115	480,368	----------	63,172	[1]976,267
Other States [2]	61,252	6,817	----------	----------	8,967	77,036
United States total	616,268	18,932	500,035	3,275	95,568	1,234,178

[1] Includes Purple Hull, estimated to be about 20 percent.
[2] Includes Georgia, Louisiana, Maryland, and Virginia.

Yours very truly,

DIVISION OF STATISTICS.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
AGRICULTURAL RESEARCH ADMINISTRATION,
Beltsville, Md., April 12, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: Your informal note of April 6 upon our letter of April 4 concerning Crowder, Purple Hull, and English peas is received.

Because of the relatively small importance of the Crowder and Purple Hull varieties they have not been analyzed and studied extensively enough to afford a sound basis for saying they are either superior or inferior to English peas as a part of the human diet. Since they are similar to the black-eye variety in many respects, they may be reasonably expected to resemble the black-eye in composition. It will be noted that although the composition of English peas and black-eyes are somewhat similar, there are differences in the percentages of the principal constituents that contribute to their respective food values. Furthermore, each kind of pea shows great differences in composition and energy value from one stage of maturity to another.

The available analyses suggest that at comparable stages of development, black-eyes and English peas are so similar that it would be difficult indeed to prove, in actual dietary studies, any superiority of one over the other. While young English peas may contain more of vitamin A and black-eye more of some other vitamin, there is no basis for saying which one is more valuable altogether. That would depend in part upon the nature of the many other foods entering into the diet.

Thus, on the basis of limited data available the Crowder and Purple Hull peas appear roughly equivalent to English peas, in food value, at comparable stages of maturity.

Your file of correspondence on this matter is returned.

Sincerely yours,

F. P. CULLINAN,
Acting Chief, Bureau of Plant Industry, Soils, and Agricultural Engineering.

DEPARTMENT OF COMMERCE,
OFFICE OF DOMESTIC COMMERCE,
Washington, D. C., May 1, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: This is in reply to your letter of April 22, 1950, inquiring for information on the consumption of black-eye peas.

As Mr. Hiday of the Stokely-Van Camp Co. correctly stated in his letter, neither the Department of Commerce nor the Department of Agriculture publishes consumption figures on black-eye peas. The reason for this is that the necessary statistical facts are simply not available.

Consumption figures on agricultural commodities and the products processed therefrom are what we call "derived data." They are developed by taking the known or estimated supplies at the beginning of the year (or other time period), adding the annual production, or pack, and subtracting the known or estimated supplies at the end of the year.

In the case of black-eye peas the beginning and ending inventory situations are not known and no reliable basis for estimating them is evident. Moreover, production is not reported by the various packers to any Governmental agency or to the National Canners Association.

We hope that the foregoing explanation satisfactorily accounts for the absence of information on this subject. If we can be of assistance at any time, please call on us.

Sincerely yours,

H. B. MCCOY,
Director.

DEPARTMENT OF THE NAVY,
Washington, D. C., March 27, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: Receipt of your letter dated March 21, 1950, is acknowledged.

Research and conferences with qualified personnel have disclosed that Crowder and Purple Hull type of field peas fall within the same category as black-eyed peas, even to the similarity of taste. In view of the above, it has been determined that the same acceptability standards would apply to Crowder and Purple Hull peas as apply to black-eye peas. In connection with the letter, the results of tests and acceptability standards were transmitted to your office by our letter dated November 18, 1949, and enclosure hereto.

In accordance with your request the enclosure is returned herewith.

Sincerely yours,

OLIVER P. SMITH,
Major General, United States Marine Corps, Assistant Commandant of the Marine Corps.

VETERANS' ADMINISTRATION,
Washington, D. C., April 14, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Your letters of March 25, 1950, March 10, 1950, and March 7, 1950, which letter consisted merely of a note on the bottom of a letter dated March 2, 1950, from Food Processors, Brownsville, Tex., to Gen. Carl R. Gray, all concerned generally with the procurement of peas by the Veterans' Administration, have been referred to this office for appropriate action.

With regard to the possibility of a test being conducted on the use of frozen blackeye peas, it is believed not such a test would serve any useful purpose since it has been determined that dried black-eye peas are preferred by the majority of patients, in addition to being considerably more economical as you were advised in letter of January 17, 1950, from the Chief Medical Director, Veterans' Administration.

This office has neither comments nor information to offer concerning Crowder and Purple Hull peas.

As requested, there is listed below the annual requirements of the Veterans' Administration for various packs of green peas procured centrally:

	Pounds
Dry split peas	200,000
Canned green peas (250,000 No. 10 cans)	1,735,000
Canned pea puree (150,000 No. 2 cans)	210,000
Total	2,145,000

The prices requested for the above listed items, other than canned puree, were furnished in my letter to you of December 7, 1949. The latest average cost of canned peas puree delivered to the Veterans' supply depots was $0.21213 per No. 2 can or $0.16976 per pound.

Very truly yours,

R. C. KIDD,
Director, Supply Service.

DEPARTMENT OF THE ARMY,
OFFICE OF THE QUARTERMASTER GENERAL,
Washington, D. C., April 10, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: Reference is made to your letter dated March 25, 1950, addressed to the Secretary of the Army, and memorandum dated March 31, 1950, relative to the annual consumption and price of canned and dried green peas.

The annual consumption of canned green peas for the Departments of the Army and

Air Force is approximately 12,000,000 pounds. The average price per pound for canned green peas, based on 1949 pack procurement, is approximately $0.106 delivered to depots.

The annual consumption of dried green peas for the Departments of the Army and Air Force is much lower than the consumption of canned green peas, and is approximately 700,000 pounds. The average price per pound for dried green peas is approximately $0.087 delivered to depots.

The correspondence forwarded with your memorandum is returned as requested.

Sincerely yours,

R. B. THORNTON,
Colonel, QMC, Executive Officer.

NATIONAL CANNERS ASSOCIATION,
Washington, D. C., May 3, 1950.

Hon. LINDLEY BECKWORTH,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: As you requested on the 28th of April, we are pleased to enclose a copy of the pack report on green peas for the year 1949 with a comparison with 1948. As you will note this gives a breakdown by grade, can size, variety and geographical area. The total pack for 1949 is stated in the last paragraph of the first page of the report.

It is a pleasure to serve you and if there is any additional information about the industry that you need, please call on us.

Yours very truly,

R. B. HEINEY.

[1] In "Other States."

This is a report of the 1949 pack of peas compiled by sieve sizes, alaskas, and sweets, and is based on actual reports of canners packing peas, together with estimates for six firms whose report were not received.

The total 1949 pack of green peas amounted to 24,944,874 cases of all sizes compared with the 1948 pack of 24,446,054 cases. On the basis of standard cases of 24/2's, the 1949 pack was 23,468,000 compared with 23,356,000 cases packed in 1948.

Very truly yours,

DIVISION OF STATISTICS.

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the eighteenth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

When will Stalin kindly go on and die? Who will succeed him? The old man has talked about that recently. He has said that he knows exactly what will happen, for he has arranged everything.

It may be, for Stalin has ruled now longer than any ot' er important man alive. He is a tough old rooster who has a good personal working knowledge of the worst that human nature can do.

And he may have discovered the secret of perpetual motion for government to his taste.

Most people do not know it, but Stalin is not a Russian, any more than Hitler was a German. Furthermore, he has never in his life put foot outside the empire that he rules.

He has excellent spies and enjoys plenty of reading matter concerning the world outside, so he does not let his lack of travel distract him.

The makers of the revolution in Russia that was to start all the world to communism as a way of life, overnight, were of a different breed.

They were travelers abroad, and their main leader, Lenin, even said one time that he thought it likely the Communists in Germany would soon set the Russians aside and take charge of the world movement toward scientific Marxism.

Note that point well, for it has since been steeped in the blood of millions.

The makers of the revolution thought, back in 1917, that they need only kill a few blind men here and there who could not see the wisdom of the Marxist idea, and then everybody else would be on their side. They did not care whether the Communist movement really took all its cues from Moscow, just so communism should rule the world.

Stalin had a different view.

This extraordinary man was born at Gori, in Asiatic Georgia, on December 21, 1879. He was the son of an illiterate shoemaker, and it was a great thing in the family that his mother started him for a priest.

Georgia is not Russia. The village of Gori is farther from Moscow than is Berlin.

Georgia lies in the narrow neck of land that separates the Black Sea from the Caspian. Next door are Turkey and Armenia. Iran, Iraq, and Syria are just a jump away.

Up in the sky is Mount Ararat, where Noah landed his ark, and under the ground lies oil, so that into this region of primitive tribal life there has moved in the past 30 years a sudden overlay of the machine age.

Unlike Texas, which was rescued from skin-and-bones farming by the oil prospectors, the lands back of Mount Ararat are still dry with poverty. Moscow issues no royalty checks in return for the oil it takes.

Stalin, a natural oriental born in a countryside that takes feuds and hates to its heart, soon abandoned the idea of being a priest for that of killing and robbing. The excuse, of course, was to overthrow the czar so far away.

In Georgia, as in every other corner of the overblown Russian empire of conflicting races, religions and economics, there was a seedling local revolution brewing all the time.

It just happened that in Stalin's youth the revolutionary instinct was grafted onto the Marxist theory of a Socialist society run on Communist lines.

Stalin, who was christened Iosif Vissarionovich Dzugashvili, went as a sword for a throat to the violence Marx called for as the necessary groundwork for socialism.

He robbed trains. He robbed banks. He killed and plundered. The profits went to the gang, and Stalin went to prison. He came out tougher than ever. In fact, though he has since done all he could to obliterate every record of it, evidence still remains of his once actually being expelled from the Communist organization itself for "expropriating" as it was called, with unauthorized enthusiasm.

By 1917 Lenin, Trotsky, Kamenev, Lunacharsky, and all the other leading lights of the revolution were busily writing and gabbling with Communists from all over.

As they set up the first Soviet state in Russia they were careful, also, to build a

Comintern, the Communist International that was to blow up the governments abroad.

Stalin, in that time, concentrated on the local problem of Russia's diverse and conflicting races. He got the job of commissar of nationalities.

And so while the others were politicking the world at large, the serpent who looked ahead was politicking with the delegates from the grass roots.

From commissar of nationalities, Stalin moved to general secretary of the central committee of the Communist Party of the United Soviet Socialist Republics of Russia.

On the surface it looked like a meaningless bureaucratic post, something about like being secretary of the Democratic National Committee.

But in fact Stalin thereby set a model Communists since have aped all over the world, in everything from labor union locals to world government societies.

They shoot for the low visibility jobs, when they can.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the nineteenth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

How does a career of murder and violence end? Sometimes in justice at the end of a soaped rope.

Sometimes unpunished, in a comfortable bed at home.

Sometimes with a pickax through the brain, in a foreign land, by order of a more cunning gangster.

If you have had the patience to follow this review of the biggest news story of the twentieth century you will no doubt be glad to learn that now I begin to tie some running threads of narrative together and knot them into place.

Up to now characters have been introduced. Here are just a few: Karl Marx; Woodrow Wilson; Vladimir Ulyanov, who called himself Lenin; William C. Bullitt; Franklin D. Roosevelt; Lev Davidovitch Bernstein, alias Leon Trotsky; Alexander Kerensky; Vyacheslav Skryabin, so well known in the 1940's by his alias, Molotov.

And Iosif Vissarionovich Dzugashvili, now called Stalin "for steel."

When Lenin died, in 1924, the first Soviet Government in the world was already on the rocks. It had jumped cleverly out of the war of 1914–18, to make popularity at home.

It had beat down circling civil wars by promising land to the country people and bread to the city people.

It had started the Communist international organization against all other governments, had tried and lost a war against Poland that was to signal a world upheaval of people everywhere against their own governments.

But it had not been able to deliver either bread or peace at home, and the farmers taking over the land in tiny parcels, were stubbornly declining to obey Moscow's orders on what to grow or what to do with what would grow.

The ruling class in Russia before the revolution had been a landed aristocracy taking its cue from the inherited monarchy of the Romanov Czars.

After the revolution, a new ruling class came to power that called itself the "Communist vanguard" of world socialism, and like all new managers of power, this class had trouble learning its job.

But worse than that, it had a flaw in its basic notions. Some Communists wanted to be Communists of the world, first, and Communists in Russia second. To these belonged Trotsky. Others said that Russia must first be brought in discipline to the Communist heel at home, and then the rest of the world could be dealt with in due time. This was Stalin's view.

The result: For 4 years after Lenin's death, Russia continued to disintegrate and fall apart, while the palaces of the Kremlin, in Moscow, rang with shots and screams and quarrels.

Stalin finally won enough power to his side that he had Trotsky exiled, in January 1929. But it was a narrow squeak, and Stalin lived in actual terror of the slippery, fox-bearded little wizard of words and plots. He knew Trotsky too well. Trotsky was a born seditionist, breeder of trouble, and a supreme fisher in troubled waters.

First from nearby Europe, then from overseas, Trotsky continued to shoot arrows into Stalin's hide. He even spread the story that Stalin had tried to poison Lenin, once, and for all we know it was true.

This row exposed communism's rawest weakness to the world. Communism cannot endure competition, either of partisans for office in government or of constitutions and drafts of law. All opposition to the man in office is illegal and conspiratorial, for the system forbids legal competition.

So, Stalin sent out his teams of assassins to find Trotsky, wherever in the world he might try to hide.

And finally, in Mexico City, on August 21, 1940, a young man known as Jackson, slipped up from behind as Trotsky was correcting proofs of a biography of Stalin, and knocked out his brains with a short-handled pick. Jackson was sentenced to 20 years by the Mexican Government, friendly to Stalin.

Incidentally, Mexico was for years a favorite hangout for Stalin's murder squad on this side of the water.

One of their most spectacular stunts was that of blowing up a plane load of people at Mexico City, on January 25, 1945, in order to get rid of a fellow for Stalin—the Soviet ambassador to Mexico. Details later in this series.

All in all, Stalin had literally millions of Russians killed in the process of erasing Trotsky from public memory. The list included old Bolsheviks, aristocrats of the revolution who had been out front fighting in the streets while Stalin himself was hiding in a cave. They numbered generals and admirals, and the low as well as the high.

To see it, you must imagine that in the United States of America one man had wormed his way to power who would send out his gang to kill the Chief of Staff of the Army, half of the Presidential Cabinet, ranking Members of the Senate and House of Representatives.

And that the wave of blood would roll out to knock down little governors, mayors, writers, musicians, finally, factory hands, farmers in the field, and street-corner loafers.

That was the actual story of Hitler in Germany, and it was Stalin's in Russia, across the same, identical span of years. Two demons from hell—one of whom President F. D. Roosevelt chose above the other, when he need not have touched either.

Why? For an answer we begin to tie in another thread of this story.

The revolution was just really beginning to eat its children in earnest when this writer first ran across communism in 1930.

That year, as I began to study its peculiar nature in New York City, Stalin decreed that the government would seize the grain of the Ukraine, where the wheat farmers were rudely declining to give up the land they had grabbed at Lenin's suggestion in 1917–18.

And so, as I got acquainted with the Communists over here, some 12,000,000—that is as printed here, 12,000,000—Russian men, women, and children were starved in a single famine by order of Stalin.

Thus was the great revolution to "liberate" mankind making its way in the world.

Now it is time to tell the story of what the revolution was about in the United States of America. We will come back to Russia again, in the days of F. D. R.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the twentieth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

A new line of action for the Communists in the United States of America, was ordered in the May issue of their leading journal of instructions, Political Affairs.

In plain language, it is to drop everything else and find the American spy in their midst.

The fact is well known to communism from the Kremlin to the State Department, that the Federal Bureau of Investigation sits in the innermost councils of their conspiracy.

For the past 20 years, in the cruel and unknown war of spy and counter-spy men and women have been murdered in every important American city.

One was shot dead in a Washington hotel some years ago, in the crudest terms of melodrama that no movie would attempt as anything but farce.

Yet still the FBI keeps its solid seat in the most secret councils of the Communists and continues to build the record that has kept two Presidents of the United States awake at nights, wondering what could be done about "that man, J. Edgar Hoover."

The Federal Bureau of Investigation has to be understood just as much as the Communist organization itself, if you are to follow the unfolding of the twentieth century biggest news story.

This agency, so powerful and competent today, was hardly as well organized as the Communist conspiracy itself when these two enemies locked in combat during the last days of Woodrow Wilson.

And, down through the years since, Stalin has managed to destroy many antagonists all over the world. But one he has failed to get is J. Edgar Hoover, a native of Washington, D. C.

And so, in the telling here of communism's rampage in the United States of America for

the past 40 years you will find a weaving in and out of the life of the FBI and the unique individual who made it, Hoover.

First, some facts about the base line of communism in America. In the early years of this century there was a spattering of socialism in the rapidly expanding industrial cities touched only a little here and there by the mania of Karl Marx's science.

The seething and fermentation of American expansion from our earliest times has bred crackpots in politics as well as men of solid statesmanship. And so, once the Socialist idea got any attention at all, a lurid skyful of rockets began to go up in bid for notice.

Henry George produced the single tax. Gen. Jacob Coxey marched on Washington with his army. The Populists excited the farmers on the Great Plains. William Jennings Bryan and the nuttier Democrats enjoyed several noisy campaigns of defeat. The Industrial Workers of the World are remembered now hardly anywhere except on the west coast.

There were the many-factioned Socialists whose leading figure came to be Eugene V. Debs.

And there was the Syndicalist League, admired by a whole variety of anarchist societies.

But none of them, though two United States Presidents were assassinated and another wounded, actually represented a serious or sizable element of our national life. America itself was interested in other things, all concerned with self-improvement and growing national strength.

On October 1, 1910, the Syndicalist League of North America distinguished itself by extinguishing itself in a single action. The McNamara boys dynamited the Los Angeles Times building, to show how they felt.

The fact that 21 innocent people happened to get killed in the circumstances, did not concern them.

American opinion was outraged, and the McNamara boys were promptly collared and put in Folsom prison.

Then, on July 22, 1916, Tom Mooney and Warren K. Billings and others of the old syndicalist gang set off a bomb in San Francisco, killing 10 people and wounding 40. They went to San Quentin instead of the gallows.

When I came to Washington in 1933, they were still there. But by then the Communists had adopted Tom Mooney as one of their endless chain of money-raising devices.

"Free Tom Mooney" campaigns were common and at every Communist gin-drinking calypso concert, girls switched around shaking tin plates under people's noses and demanding—and getting—hard money.

Finally the old bomb thrower was released from prison by a soft-headed governor. How many dollars the Communists had milked out of Washington and other cities in his name by then, I can only guess, but it was in the thousands. It was all spent, I can guess, with educated judgment. Not for Mooney but for Marx and Stalin.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the twenty-first article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

J. Robert Oppenheimer, the most distinguished physicist in the world, could do the United States a great service if he would. It would be a service far greater than any he has made—and he has made many—to understanding of atoms and their behavior.

Oppenheimer is suffering a painful experience.

He has been identified by a former Communist as having been present in Communist meetings on the campus of the University of California in 1941. The suggestion is that Oppenheimer is or was a Communist.

All the usual hand-wringers and tear-jerkers are now running around the country expressing anguish and indignation at the very idea. But Oppenheimer himself knows and indeed has long ago admitted, that he was once very much under the Marxist spell.

And his brother, Frank, also a physicist of considerable rank, has been proved on the public record to have been not only a Communist but also a liar.

Those who want to see the proof can do so by going to the Library of Congress and looking at the bound files of the Washington Times-Herald of July 12, 1947, June 14, 1949, June 15, 1949, and June 18, 1949.

The Times-Herald published Frank Oppenheimer's Communist card number in 1947. Oppenheimer called the Times-Herald a liar.

But when finally the House Committee on Un-American Activities got around to him in 1949 and asked him about the matter under oath, he caved in and confesed the truth.

Then he crawled out of town and the hand-wringers and tear-jerkers all said he should be allowed to go his way, unquestioned about his boyish indiscretion, as they now do (in re) brother Robert.

It is as if a man had come up to you and said, "I was in a mob of murderers planning to kill you, but I quit. Don't ask me who they were."

Whoever hesitates to turn every possible Communist, ex-Communist and associate of Communists upside down and shake him for the last shred of knowledge he may have, does not understand our times.

This is a struggle for the world. The object of the Communists is to destroy civilization and build another system on their own model. They mean to kill you, personally, if you object.

J. Robert Oppenheimer knows that. His brother, Frank, knows that. The fancy man from Manhattan who committed contempt before the United States Senate a few days ago, Frederick Vanderbilt Field, knows that.

Therefore, J. Robert Oppenheimer's duty, today, is to speak out in public to the people of the United States and tell them not only his present beliefs, which all who know him say are on the side of humanity and civilization, but also, to tell everything he knows about everybody under the Communist spell, past or present. Less than that is to do the civilized world a positive damage.

If you want to grasp the dimensions of this struggle, compare the Communist organization in the United States of America today, with that of 30 years ago.

The Communists in this country were not really a fully developed political and conspiratorial force until 1934. They got their growth under the patronage of F. D. Roosevelt.

In the period 1914–18, they were scattered through a spectrum of meddlers in terror, socialism, and anarchy, but in no way had a central command.

Then, in 1919, as the Soviet Government of Russia set up its Communist International to develop resolutions in every country of the world, there was organized in Chicago the first real Communist gang.

Around this, the embryo revolutionists quickly formed, and just as quickly the headquarters were shifted from Chicago to New York City.

The first general secretary of the Communist organization was Charles Emil Ruthenberg, of Cleveland, Ohio, who held that job until his death in 1927.

Like John Reed, the Harvard Marxist who was the first of many Communist couriers between New York and Moscow, Ruthenberg lies buried, today, in the Kremlin.

Thus, it has always been obvious and visible to anybody with an honest mind and heart, that Communists in the United States of America are all and always, the agents of that same Kremlin and dedicated to the ruin of this Nation. Yet in our schools that has not seemed to matter.

The Problem of Old-Age Security

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, recently the famed Harvard economist, Prof. Sumner Slichter, presented testimony before the Senate Finance Committee in support of an expanded old-age insurance program. Professor Slichter's conclusions are in line with amendments I have introduced for increasing old-age benefits. I ask unanimous consent that pertinent excerpts from Dr. Slichter's testimony be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE PROBLEM OF OLD-AGE SECURITY

(By Sumner H. Slichter, Lamont University professor, Harvard University associate chairman, Advisory Council on Social Security, Senate Committee on Finance)

I

My purpose in appearing before you is to report to you on the work of the advisory council on social security, appointed by the Committee on Finance of the United States Senate, Eightieth Congress, under authority of Senate Resolution 141, and to answer your questions about the recommendations of the council.

* * * * *

The Advisory Council reached three basic conclusions concerning the problem of old-age security:

(1) That the foundation of the country's system of old-age security ought to be a Federal system of contributory social insurance with benefits related to prior earnings and awarded without a means test.

(2) That the present Old-Age and Survivors Insurance Act is failing to perform adequately the job that it was expected to do.

(3) That the present Old-Age and Survivors Insurance Act is sound in principle, and that its failure to do the job expected of it is attributable to three principal defects in the act, all of them easily remedied.

In order to remedy the defects in the old-age and survivors insurance plan, the Advisory Council made 22 recommendations for

changes in the act. On 20 of these recommendations the council was unanimous.

* * * * *

II

* * * * *

The 17 members of the council—employer members, labor members, and public members—were unanimous in believing that contributory social insurance should be the foundation of the country's system of old-age security. Furthermore, the same conclusion was reached by each of the two previous advisory councils—the Council on Economic Security, which helped draft the original law of 1935, and the Advisory Council appointed in 1939. There are four principal reasons why the Advisory Council of 1947–48 reached the conclusion that a contributory system of old-age pensions should be the foundation of the Nation's system for old-age security.

In the first place, the pensions provided by a contributory insurance system are not charity. No means test is used, but pensions are awarded as a matter of right. Furthermore, the cost is met from the worker's own production in the form of a tax on payrolls paid by the employer and a tax on wages paid by the worker. Hence the dignity and the self-respect of the worker are shown consideration. * * *

In the second place, old-age insurance encourages self-reliance and thrift instead of discouraging them. A man by being thrifty does not diminish the amount of the pension that he receives—he simply assures himself of a better standard of living in his old age. This is in contrast to old-age relief based upon a means test. When a means test is used, the man who has been thrifty and who has provided for himself gets nothing; the man who has partly provided for himself gets small benefits; the man who has made no provision for himself gets the largest grant. Such a system is equivalent to a series of rewards for not being thrifty and self-reliant. Old-age insurance by avoiding the use of a means test, avoids discouraging thrift.

In the third place, old-age insurance which relates benefits in some measure to the prior earnings of workers helps protect men from too drastic a drop in their standard of living on retirement. The standard of living of workers obviously tends to vary with their earnings. Since the purpose of old-age security is to protect men against having to make too drastic cuts in their standard of living when they retire, pensions should vary in some measure with past earnings. Flat benefits, which are not related to earnings but are the same for everyone, would assure that there would be only an arbitrary relationship between men's standards of living before retirement and their standards after retirement. * * *

In the fourth place, a Federal system of old-age pensions should be the foundation of the country's system of old-age security because it can be applied to all members of the labor force and can be made as broad, therefore, as the problem with which it is supposed to deal. This method of meeting the problem does not depend upon the willingness of an employer to grant pensions or upon the bargaining power of unions and their ability to compel employers to grant pensions. Furthermore, a system of old-age insurance can be applied to the self-employed as well as to employees. * * *

III

* * * * *

The members of the advisory council were unanimous in believing that the present Old-Age and Survivors Insurance Act is not doing the job expected of it. There were three principal reasons for this conclusion.

One reason was that, even after 13 years, only about 39 percent of the male workers who reach 65 years of age would receive benefits if retired. Hence, it is plain that many people who need to receive protection from the system are not getting it. The principal reason why they are not receiving protection is that the Old-Age and Survivors Insurance Act applies to only about three out of five jobs. Another reason is that eligibility to receive benefits is determined by the proportion of time that a man spends in covered employment, not by the proportion of time that he is at work. A man may be quite steadily employed and still not qualify for a pension if he is one of the many workers who move back and forth between manufacturing, which is covered, and agriculture which is not. At the present time, half again as many people are drawing old-age assistance as are drawing old-age pensions—2,700,000 are receiving old-age assistance and about 1,900,000 old-age pensions.

A second reason for believing that the Old-Age and Survivors Insurance Act is not doing the job expected of it was that the average pension is too small and is considerably less than the average payment for old-age assistance. The average pension for a single person averages about $26 a month and the average pension of a retired person with one dependent less than $40 a month. The average monthly payment under old-age assistance is about $44.50. * * * The principal reason why pensions are small is that the benefit formula is too low even for workers steadily employed in covered industries. * * *

A third reason for believing that the Old-Age and Survivors Insurance Act has not done the job expected of it was that the average monthly pensions under it have not kept pace with the rise in the cost of living or the rise in per capita income. Average monthly pensions have increased 14 percent since 1940 while the cost of living has risen over 68 percent, average weekly wages in manufacturing have risen 117 percent, and the average per capital income of the country has increased 132 percent. During the period that average monthly pensions were increasing 14 percent, average monthly old-age-assistance payments more than doubled. The purchasing power of pensions is 32 percent less today than it was 10 years ago.

Pensions ought to bear a more or less constant ratio to the average earnings of persons. Otherwise they do not give people the required help in maintaining their customary standards of living. Part of the explanation of why the increase in the average pension has been far less than the increase in the average wage is that, as monthly earnings rise from $50 a month to $250 a month, the primary pension increases only $10 for each $100 increase in earnings. * * * Another part of the explanation why the increase in pensions has lagged behind the increase in wages is that only wages up to $3,000 a year count in computing the average earnings on which pensions are figured. As wages have gone up, more and more workers earn more than $3,000 a year. In 1948, about one out of four among all workers earned more than $3,000. Still another part of the explanation why pensions have increased more slowly than wages is that pensions are computed on the average monthly wages of each worker over his lifetime. Although the average worker is earning more than twice as much today as he was earning 10 years ago, his lower earnings of 10 years ago help bring down the monthly average of earnings on which his pension is computed. All in all, the present methods of computing pensions assure that pensions will be slow to rise whenever wages increase.

IV

Why does the advisory council believe that improvement of the act along the lines indicated by its 22 recommendations would enable the Old-Age and Survivors Insurance Act to do the job expected of it and to become the foundation of the country's system of social security?

In the first place, the recommendations of the council would extend the protection of the act to virtually all of the 25,000,000 jobs not now covered. Obviously one cannot expect a program to give protection to people whom it does not cover. Consequently, expansion of coverage of the old-age and survivors insurance scheme is of basic importance. * * *

H. R. 6000 proposes that about 11,000,000 additional jobs be brought under the old-age and survivors insurance plan. This is a step in the right direction, but it would bring under the act substantially less than half of the jobs that are not now covered. Large and important categories, such as farmers, many farm laborers, and a number of professional groups, would still be deprived of protection of the scheme.

The incomplete coverage proposed in H. R. 6000 raises basic questions as to where and how uncovered groups would get security for their years of retirement. Nearly all of the groups left uncovered by H. R. 6000 are groups that cannot be expected to be covered by private pension plans, initiated by employers or negotiated by trade-unions. Apparently the philosophy of H. R. 6000, therefore, is that the uncovered groups should either be able to take care of themselves or should be expected to rely upon charity. * * * Certainly the people cannot expect old-age and survivors insurance to be the foundation of the country's system of old-age security if large parts of the population are excluded from the plan.

* * * * *

In the second place, the recommendations of the council would liberalize the eligibility requirements for pensions so that older workers who are newly covered by extension of the Old-Age and Survivors Insurance Act to new industries will soon become eligible for pensions. * * * It would obviously do little immediate good to extend the act to the 25,000,000 uncovered workers if the eligibility requirements for new workers remain as strict as at present. H. R. 6000 makes a little improvement over the present law, but even H. R. 6000 would require 20 quarters of coverage, or 5 years, for newly covered employees to become eligible for pensions.

The council recommends that the extension of coverage to new industries be accompanied by a new start in eligibility requirements that will require the same qualifying periods for older workers as was required for persons who were the same age when the system began operation in 1937. * * *

In the third place, the recommendations of the advisory council would substantially raise the average monthly benefits. * * * The primary insurance benefit for a worker with 10 years of coverage under the present act and with average monthly wages of $200 is less than one-fifth of his monthly wage, and if he has one dependent, his total benefits are less than 30 percent of his average monthly wage. Obviously such pensions are far too small.

The advisory council has made three types of recommendations designed to raise the average benefit. One recommendation is that the benefit formula be liberalized—that benefits be 50 percent of the first $75 of monthly wages instead of 40 percent of the first $50, and 15 percent of additional wages up to the amount of the tax base instead of 10 percent as at present. Another recommendation is that the benefit base and the tax base be raised from $3,000 a year to $4,200. Still other recommendations pertain to liberalizations in the benefits payable to dependents. The most impoitant of these recommendations is that women may qualify for old-age benefits (either primary or supplementary) at the age of 60 instead of 65. * * *

The total effect of the recommendations of the advisory council would be to increase the average pension paid under the old age and survivors insurance scheme by about 100 percent. This would be an important improvement. Nevertheless, I do not believe that the recommendations of the council go far enough. To begin with, the formula proposed by the council is not sufficiently liberal, particularly for the workers earning above $75 a month. * * * This formula would give a primary pension of $37.50 for workers earning $75, of $48.75 for workers earning $150 a month, and of $63.75 a month for workers earning $250 a month.

H. R. 6000 proposes that the primary pension be $50 for the first $100 of earnings. Several members of the advisory council, Mr. Folsom of the Eastman Kodak Co., Mr. Rieve of the Textile Workers Union, CIO, and Mr. Cruikshank, the social security expert of the A. F. of L. have expressed agreement with this feature of H. R. 6000, and I share their views. The benefit formula of 15 percent of wages between $75 and $350 a month does not provide a large enough spread between the pensions received by persons with low earnings and persons with higher earnings—though the council provides a greater spread than the formula in the present law or that proposed by H. R. 6000. If pensions are to protect the standard of living of workers who retire, they must be fairly closely related to previous earnings. Certainly a rise of only $10 or $15 in pensions as average monthly earnings increase $100 does not provide a very close relationship between earnings and pensions, and is not fair to the skilled workers. * * * Two members of the council, Mr. Rieve and Mr. Cruikshank, have recommended that the rise in pensions above the basic amount be 20 percent of additional earnings. I am in favor of at least a 20 percent increase in pensions for each rise in average monthly earnings above the basic amount, but I believe that a 25 percent rise would be preferable. Such a rise would give a man with average monthly earnings of $200 a month a primary pension of $75 (assuming the formula provides for a pension of 50 percent of the first $100 as in H. R. 6000) and a man with average monthly wages of $300 a month, a primary pension of $100. Certainly such a spread in the pension received by men with a difference of $100 in monthly earnings is not too large.

Finally, I believe that the limit of $4,200 on the benefit base and the tax base recommended by the Council is too low and is unfair to many skilled workers and to foremen and others in the lower ranks of supervision. The upper limit of $4,200 in the benefit base means that no earnings of more than $4,200 a year produce an increase in a worker's pension. * * * In the year 1948, 17 percent of the male workers who earned wages in covered industries in all four quarters earned more than $4,200. Why refuse to count any of these earnings over $4,200 in computing the pension that the man receives?

The primary pension for a worker earning $5,000 a year, if the pension were 50 percent of the first $100 and 15 percent of the additional earnings up to $4,200 a year, would be only $87.50 a month. It is not satisfactory to expect all men who receive more than $4,200 a year to depend on individual savings or on company pension plans. * * * Business enterprises themselves do not expect these men to depend on individual savings because they establish generous pension plans for executives. But almost all of these company pension plans tie a man to one company and penalize the man who moves from one employer to another. When one considers the serious deficiencies of company pension plans, one reaches the conclusion that skilled workmen and foremen should not be dependent to any considerable extent upon them.

I am not in favor of increasing the tax base and the benefit base for the purpose of increasing the income of the pension fund. Nevertheless, if the benefit base is increased, the tax base should be correspondingly increased because the two should be the same. As a matter of fact, the increase in the tax base above $4,200 would not produce much new tax revenue.

V

When the present Federal old-age pension plan was drawn up about 15 years ago, the prevailing opinion was that it should be inadequate—that it should provide only a bare minimum of security and that it should be supplemented in various ways. It is understandable that back in 1935, when the idea of a Federal old-age insurance plan was new, many people wished to avoid placing too much reliance on it. At that time, the serious disadvantages of private pension plans as devices for providing old-age security were not clearly seen. Nor were all of the developments and problems of old-age assistance clearly seen.

The time has come, I believe, for a change in our thinking about these matters. It is high time to adopt the view that the Federal pension plan should be so close to adequate that only moderate supplementation by private pension plans or public assistance will be necessary. Of course, substantial supplementation by individual thrift will always be necessary.

VI

* * * * *

What would a more adequate system of old-age and survivors insurance cost? * * *

The best way to estimate the costs of an old-age insurance program is as a percentage of payrolls and of the income of the self-employed, in case the insurance plan extends to the self-employed. In the next 20 or 30 years there will be a very large rise in payrolls—partly due to the increase in the labor force and partly due to the rise in wages which must be expected to continue in the future as in the past. In another 30 years, for example, the labor force will increase by over 10,000,000, and, if wages rise as rapidly as in the past, hourly earnings will increase between 80 and 90 percent. One must expect that the benefits paid under the old-age insurance plan will bear a more or less constant relationship to average monthly earnings. As wage rates rise, benefits will be liberalized from time to time in order to maintain a more or less constant relationship between earnings and pensions. That is why the most realistic and conservative way of estimating costs is in terms of percentage of payrolls and the income of the self-employed.

The actuarial consultant of the Advisory Council on Social Security prepared a low-cost estimate and a high-cost estimate of the recommendations of the Council. He estimated that by the year 2000 the expanded program recommended by the Advisory Council would cost from 5.87 percent to 9.70 percent of payrolls. The range in his estimates of level premium rose from 4.90 percent to 7.27 percent. The more liberal benefit formula which I had suggested would cost somewhat more.

VII

Fortunately, the cost of old-age pensions can be substantially reduced by encouraging employers not to retire workers who are physically fit to perform their work. It is a cruel fiction that men on attaining the age of 65 suddenly become unfit to continue their jobs. * * *

Many people conceive the problem of old-age security as mainly a result of the aging of the population—that is, the increase in the proportion of the population of 65 years of age or more. As a matter of fact, the problem of old-age security is as much a problem of earlier retirement as a problem of the aging of the population. Back in 1890, 68.2 percent of all white males were members of the labor force. By 1930 this percentage had fallen to 54. By 1940, only 42.2 percent of all white males were in the labor force.

The drop in the proportion of the population of 65 years of age or more in the labor force is not the result of voluntary retirements. It is the result of lay-offs by employers. For example, among rural farm population, 69.3 percent of males 65 to 74 years of age were in the labor force in 1940, and even 31.5 percent of males over 75 were in the labor force. Among urban groups, on the other hand, only 46.9 percent of white males between 65 and 74 years of age were in the labor force, and only 15 percent of those 75 years of age or more. Many large companies have adopted the rule that everyone must retire at the age of 65.

The practice of earlier and earlier retirements is bad for the individual worker in most cases, it is bad for the country, and it greatly increases the problem of an old-age insurance plan. Retirement is bad for the worker partly because it reduces his income, but even more because it cuts him off from the contact of his fellows that his job gave him, and makes him feel that he is a has-been and is now on the shelf. He is unhappy and maladjusted. Often his health suffers. Earlier retirements are bad for the country because they deprive the community of the output that the retired workers might produce. At the present time, for example, there are about 2,800,000 workers of 65 years of age or more at work. They produce about $10,000,000,000 of goods. If the practice of universal retirement at 65 were made general, the country would be deprived of the output of these 2,800,000 men. In other words general retirement at the age of 65 would cost the country about $10,000,000,000 a year. Finally, earlier retirements greatly increase the cost of pensions. Life expectancy at age of 70 is about 3 years less than at the age 65. If most men retired at 70, therefore, the number of years pensions would be paid in the average case would be about three less than if most men retired at 65. Furthermore, contributions would be paid for more years. Consequently, the contribution rate that will buy a given pension beginning at age 65 will purchase much larger pensions beginning at age 70.

The time has come to halt the tendency for employers to retire men at an earlier and earlier age. This tendency is quite out of place in a community where health is improving, longevity is increasing and the remaining years of usefulness of workers at the age of 65 are growing. The Advisory Council on Social Security pointed out that the great majority of retirements are involuntary, and it recommended that the Federal Government establish a commission to study the broad problem of the aged in the community and the adjustment of aged to retirement. I believe that immediate steps should be taken, however, to help workers between the ages of 65 and 70 continue in employment instead of being forced to retire.

* * * * *

An incorporation into the Old-age and Survivors Insurance Act of an incentive for employers to keep workers beyond the age of 65 would be a major improvement in the country's arrangements for old-age security. It would open new hope and opportunity for millions of older workers. It would greatly reduce the cost of pensions and it would make it possible to give much more liberal pensions than are now available with only a moderate increase in the cost of pensions. It would increase the productivity of the economy. This increase in productivity would alone go far to pay the total cost of old-age security.

Truman Unlikely To Win Fight Against Taft Act

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Truman Unlikely To Win Fight Against Taft Act—Rail Strike Stirs Public Ire Against Labor Bosses," by Gould Lincoln, appearing in his column entitled "The Political Mill," published in the Washington Evening Star for May 13, 1950.

In the course of the article, these three sentences appear:

Obviously, with Congress in its present temper, there is no slightest chance of Mr. Truman being able to carry out his pledge to repeal the Taft-Hartley Act. Indeed, the vote in the Senate is merely a reiteration of support for the labor act. Further, if there is any new labor legislation, it will be in line with demands that the laws be amended so as to provide for compulsory arbitration in railroad disputes so as to prevent future tie-ups imperiling the entire country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL—TRUMAN UNLIKELY TO WIN FIGHT AGAINST TAFT ACT—RAIL STRIKE STIRS PUBLIC IRE AGAINST LABOR BOSSES

(By Gould Lincoln)

President Truman is crying aloud again his determination to repeal the Taft-Hartley labor law—notwithstanding the rash of important strikes this year, including coal, automobile, and railroad. The last is not calculated to put either Congress or the country in the frame of mind to turn the country even more completely over to the domination of labor bosses.

It is not surprising, however, that Mr. Truman still demands that the country return to the one-sided Wagner Labor Relations Act. It was one of his promises to labor in the 1948 political campaign—and this year he is fighting for the election of a Democratic Congress (more to his liking, he hopes, than the present one).

The promise of the Brotherhood of Locomotive Firemen and Engineers to keep the President's special train rolling on his western trip—no matter what happens to other trains, freight and passenger, and to other would-be travelers—is a new kind of special privilege. It may be that it is more important for Mr. Truman to travel about making partisan political speeches than it is for trains to move carrying the great, necessary traffic of the country—but it is difficult to understand.

SUSPICION OF REWARD

The promise of the firemen not to interfere with Mr. Truman's movements may be predicated on a desire of the brotherhood to respect the office of President of the United States. But there is a suspicion that it is also intended to reward this particular President—who at one time threatened to draft into the armed forces all railroad men.

Just before the President uttered his pledge of unending battle to repeal the Taft-Hartley Act, the Senate, by a vote of 53 to 30, turned back his attempt to repeal part of the act by Executive order. The vote came on the resolution of Senator TAFT, of Ohio, to kill Mr. Truman's order, under the reorganization act, to do away with the present independent general counsel of the Labor Relations Board, and place all authority in the Chairman of the Labor Board. Robert N. Denham, general counsel, has, since his appointment, striven to bring about the enforcement of the Taft-Hartley Act. The sympathies of the members of the Board, however, have been those of Mr. Truman—against the Taft-Hartley Act.

Obviously, with Congress in its present temper, there is no slightest chance of Mr. Truman being able to carry out his pledge to repeal the Taft-Hartley Act. Indeed the vote in the Senate is merely a reiteration of support for the labor act. Further, if there is any new labor legislation, it will be in line with demands that the laws be amended so as to provide for compulsory arbitration in railroad disputes so as to prevent future tie-ups imperiling the entire country.

STRIKE HAD NO APPEAL

This particular railroad strike, to compel the employment of extra firemen on Diesel locomotives, has had no public appeal whatever. Two fact-finding boards in the past have declared such employment not necessary.

The course of the Truman administration, however, has been to give labor what it demands whenever it can. Cynically, why shouldn't it be that way? The CIO-PAC and A. F. of L.'s League for Political Education are adjuncts of the Fair Deal Democrats. In some States, they have virtually taken over the running of Democratic campaigns. There has grown up, too, a touching belief in Fair Deal circles that labor bosses can deliver the votes of union members.

One of the strangest happenings in recent days, on Capitol Hill, was the action of Representative LESINSKI, Democrat, of Michigan, chairman of the House Labor Committee, which prevented an immediate investigation of charges that John L. Lewis, by secret signals, had kept alive the coal strike last winter, when Mr. Lewis was publicly calling for a resumption of coal mining. Mr. LESINSKI accomplished this by removing subpena power from Chairman JACOBS, Democrat, of Indiana, head of a subcommittee, who was going to put Mr. Lewis on the grill. What will the public think of such tactics?

Card Clothing Machine Operators' Union Seeks Increase in Tariff To Protect Jobs of Its Members

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Fall River, Mass., local of the Card Clothing Machine Operators' Union of America asking an increase in tariff rates on card clothing in order to protect the standard of living of its members:

Whereas we are a skillful technical craft that is absolutely essential to the manufacture of textile fabrics; and

Whereas during the last war our industry was rated A-A1 priority, proving how necessary we were to the war effort; and

Whereas the importation of card clothing has always caused us a loss of income and hardship in times of peace; and

Whereas foreign competition will eventually close our industry due to the differential of wages in foreign labor; and

Whereas to equalize this unfair competition and keep our industry in a position to help hold the economic condition of our country, we feel it necessary to increase the tariff on our product; and

Whereas since our Government accepts the principle of fair trade through subsidies to hold farm prices at home, it seems we should be guaranteed protection through tariff regulations to maintain fair trade for our industry; and

Whereas the present devaluation of the pound sterling and the contemplation of still lowering its value gives the importers of card clothing an unfair advantage over our American-made product: Therefore be it

Resolved, That we, the members of the Fall River branch of the Card Clothing Machine Operators Union of America, wish to go on record as opposing any tariff revision that will jeopardize our present standard of living.

A Text for Truman

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Times-Herald:

A TEXT FOR TRUMAN

President Truman is in Chicago after circuitous travels. His purpose in going there is said to be that of participating in a jubilee honoring the one hundred and fiftieth anniversay next March of Thomas Jefferson's accession to the Presidency. If a certain elasticity of the dollar is permissible among Fair Dealers, we suppose that the same liberties may be taken with time.

We are happy, however, to hear that politics does not enter into this visit, for Jefferson held strong views on the subject of political junkets, as witness his remarks in a letter of June 19, 1807, to James Sullivan, Governor of Massachusetts, after New Englanders had proposed a tour in that quarter.

JEFFERSON'S INTEGRITY

"I confess," said Jefferson, "that I am not reconciled to the idea of a chief magistrate parading himself through the several States, as an object of public gaze, and in quest of an applause which, to be valuable, should be purely voluntary. I had rather acquire silent good will by a faithful discharge of my duties than owe expressions of it to my putting myself in the way of receiving them.

"As I have never yet seen the time when the public business would have permitted me to be so long in a situation in which I could not carry it on, so I have no reason to expect that such a time will come while I remain in office."

For these reasons Jefferson felt obliged to refuse the proffered invitation to display himself at distant post horn stops. He said that "a journey to Boston or Portsmouth, after I shall be a private citizen, would much better harmonize with my feelings, as well as duties."

Whether it is 150 or only 149 years since Jefferson's accession, times have, indeed, changed.

Address of President Truman at Butte, Mont.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the President of the United States at Butte, Mont.:

TEXT OF TRUMAN SPEECH TAKING TO TASK THOSE WHO CRY "SOCIALISM"

It is a great pleasure to return to Butte. I remember very well my last visit here, not quite 2 years ago. The grand reception you gave me then was an inspiration to me during the days that followed.

I came to the Pacific Northwest to dedicate Grand Coulee Dam. That dam is one of the most remarkable engineering feats ever accomplished. More electric power is generated there than in any other plant in the world.

It will bring immense benefits to the people in the region it serves and to our whole Nation. It is an outstanding example of how we can use our Federal Government to perform tasks that are so big they are beyond the power of any other agency through which the people can act.

This trip is giving me an opportunity to report to the people about their Federal Government. Every year, the President reports to the Congress on the state of the Union. That is a good thing. But it seems to me that it is just as important for the President to report directly to the people who elected him.

In our democracy the Government is responsible to the people, and they are entitled to know just what the Government is doing. I find that one of the best ways for me to report to you is to come out here where I can talk to you face to face.

I understand that some people have objections, but I think the real reason is that they are afraid the people might like it too well when the President comes out to see them.

ALL GROUPS ARE DEPENDENT

Today, I want to report to you on some of the Government's activities and programs that are of particular interest to working men and women. But, first, I want to remind you that the welfare of all groups of the population is inseparable. Workers, businessmen, and farmers all depend upon one another—they all prosper together or they all suffer together.

I understand that you have had a clear demonstration of that fact here in Butte within recent months.

This city depends very largely upon the production of copper. When the demand for copper fell off last year, it affected the Anaconda Copper Co. The results didn't stop there. The men who worked for the company also were affected. There were layoffs in the mines and smelters.

Now, things are looking up again. The market for copper has improved. The company's business is better again, and men who had been laid off have been put back to work. In fact, I saw where someone was advertising in a Colorado paper the other day to get more hard-rock miners to come up here to work.

I am mighty glad to hear that there are jobs for people in Butte, and I hope it will always be that way.

However, you cannot be prosperous here unless the rest of the country is prosperous. Your jobs and the company's profits depend on what people are able to buy in New York and Georgia and Texas and all over this great country of ours.

You have a vital and direct interest in the economic welfare of the entire Nation, and therefore you have an equal interest in what the Government does to maintain the economic welfare of the Nation.

The Federal Government has always taken a hand in the country's economic affairs. Indeed, one of the purposes for which our Union was formed was to promote trade and commerce among the several States. Some people seem to forget that sometimes, but it is true.

During the last 17 years, however, the Government has played a larger part in our economic life than ever before. There is a reason for this, and one that is not hard to find. The reason is the great depression of the early 1930's—and the lessons we have learned from that depression and from the events since then.

We have learned that in a dynamic, highly industrialized economy such as ours, the Federal Government must use its strength and resources to prevent violent cycles of boom and bust. We learned during the period from 1929 to 1933 what happens if the Government stands on the sidelines—with men in high places merely smiling cheerfully and saying everything is going to be all right. We have learned since 1933 that a Government which takes positive action can supplement and support the efforts of private business in such a way as to keep our economy steadily expanding.

GOVERNMENT SAVED BUSINESS

These lessons have been hard for some people to take. In fact, they deny them still. All of you, I am sure, have heard many cries about Government interference with business and about "creeping socialism."

I should like to remind the gentlemen who make these complaints that if events had been allowed to continue as they were going prior to March 4, 1933, most of them would have no businesses left for the Government or anyone else to interfere with—and almost surely we would have socialism in this country, real socialism.

The truth is that Government action during the last 17 years has been the salvation of private business in this country and has strengthened the private enterprise system against socialism, communism, and all other isms.

Don't let anyone tell you that the Government should retire to the sidelines while the national economy goes back to the days of "boom and bust." The power of the Government exists for the people to use. It would be folly for the people to be afraid to use their collective strength through the Government.

The strength of the Government is being used now—and, so far as I am concerned, it will continue to be used—to protect your jobs and improve your welfare.

Perhaps our most important single economic goal is to see that there are enough jobs for those who need them. This was the purpose behind the Employment Act of 1946. The act pledged the resources of the Federal Government for the maintenance of maximum employment, production, and purchasing power. We are now committed to keep our country prosperous. No one was more influential in getting that act adopted than your own Senator, JIM MURRAY.

You sometimes hear it said—and I think this comes mostly from the lunatic fringe among the reactionaries—that the Government promises to make it possible for people to live without working. They say our Government programs would make us a Nation of dead beats and loafers. That, of course, is absurd.

STRONG SHOULD HELP WEAK

I think it is the responsibility of Government to help those who because of old age or other disability are unable to work, and those who, through no fault of their own, are unable to find work. I believe that the strong should help the weak, and I make no apologies for that belief.

But for men who are able to work, I want jobs—not idleness. That's what they want, too—an opportunity to earn their own living. I have too much faith in the American workingman to have any doubt about his willingness to give full value received for the wages he is paid. There is one thing I am accused of sometimes to which I will have to plead guilty. I am in favor of good wages.

I think that the people who do the work are entitled to a fair share of the income from the product. I believe that they should share in the benefits of technological improvements and increased productivity. I believe that one of our goals should be a steadily improving standard of living for the American working man and his family.

TAFT-HARTLEY ACT CENSURED

Our main reliance for seeing that the workingman gets a fair share of the benefits of our economy, is upon collective bargaining between employees and their employers. This bargaining process is carried on between private parties, but it vitally affects the public interest. It is of the utmost importance to the whole Nation that negotiations between labor and management be conducted in good faith, with sincerity and patience, by parties who are able to bargain freely and as equals.

Before the passage of the Wagner Act in 1935, the status of collective bargaining in the United States was at a low ebb. Under the Wagner Act, great progress was made in the field of industrial relations. All too often, we fail to realize that the progress achieved under that act had a lot to do with the improvement in economic conditions we have enjoyed. Make no mistake about it, the Wagner Act was one of the bulwarks of American liberty and prosperity.

Then came 1947 and Taft-Hartley. The Taft-Hartley Act emasculated the Wagner Act and subverted its purpose. The avowed intention of its sponsors was to strengthen the hand of management. To do this, they devised a clever law which insidiously undermines the strength of labor unions.

The Taft-Hartley law hangs over the head of labor, threatening to destroy the gains of 15 years. There it will hang until we are able to replace it with a law that is fair to management and labor alike.

That is something we must do—not only for the sake of labor, but for the sake of the whole country. I believe profoundly that the Taft-Hartley law is a substantial infringement of the basic freedom to bargain collectively.

I will not cease to fight for its repeal.

In other fields, we have made considerable progress since I last visited with you here in Butte.

Last year, we increased the minimum wage under Federal law from 40 cents to 75 cents an hour. That probably did not have a direct effect on many people in this city. For, I am glad to say, most people who are employed here, in jobs which that law covers, already made more than 75 cents an hour. However, you will all benefit from the improvement it brings about in other parts of the country.

WIDER SOCIAL SECURITY URGED

In the social-security field, the Congress has been considering a bill to strengthen our system of old-age and survivors insurance.

You will recall that I have pointed out many times how pitifully small these social-security benefits now are, and how a great many people are left out altogether. I am confident that the Congress will complete action at this session on legislation which will do much to remedy both of these shortcomings. However, I must confess that I have been disappointed at the inadequacy of some of the provisions which are in the bill in its present form.

There is one governmental program with which some of you probably have had some first-hand experience lately—that is unemployment compensation. I am sorry if you had to fall back on it, but I am mighty glad that it was there for you to rely on, and I'll bet you are mighty glad of that, too.

This is an insurance system to help tide workers over periods when they are temporarily out of employment through no fault of their own. This system has thoroughly proved its value, both as a means of alleviating hardship among workers and their families, and as a support to our general economy by helping to maintain purchasing power.

However, this system—like the old-age insurance system—also needs modernization and strengthening. Benefit rates should be brought up to date, in line with today's prices. The duration of benefits should be extended. Additional workers should be given the benefits of the law's protection.

GAINS IN HOUSING RECALLED

I have made recommendations of this nature to Congress, and I hope that the necessary improvements in this law will be made.

I expect that you people are also interested in housing. You are interested in houses as homes for your families, and, if Butte is like other places, houses have been rather scarce lately.

Moreover, you people here in Butte have a special interest in seeing a high level of housing construction all over the country, because people who build houses use copper, and that's your main product here.

I have some things both good and bad to report about housing—mostly good.

Today home construction is at an all-time record volume. Now that did not happen all by itself. One of the main reasons for it is that the Government has been helping to make credit available at low interest rates and for long periods.

However, not enough houses are being built for low-income families and middle-income families, who too often cannot pay today's prices for housing.

We have made real progress on one of these points. Last year we passed a law to provide assistance to the cities of the country in building low-rent public housing. It took a long time to get that law passed over the opposition of the real-estate lobby, but we finally got it through in the first session of the Eighty-first Congress.

PROSPERITY, PEACE LINKED

So far we haven't done so well on our proposal to build more housing for middle-income families. But we are going to keep trying—just as we did for the public-housing bill—and I am sure that we will get it eventually.

I have talked mainly today about programs which are of special significance in a great mining and industrial center such as this one. But these programs are important not only in this community. They are part of a broad national effort to achieve higher incomes and better standards of living for all our people.

That is also important to us.

It is also important to world peace.

We are now engaged in a great world-wide struggle to demonstrate that the free way of life is the way to the highest level of well-being for all the peoples of the world. To that end, we must make our own economy ever stronger, and must constantly improve the welfare of our people.

This is a job for all of us, whether we are in private or public life. We will attain these goals by working together in the common cause.

Communist Activities in the Government

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. HILL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am presenting two letters I received urging the continuation of the investigation of the charges of Communist activities in our Government.

There has been a tendency on the part of some individuals and organizations to discredit this investigation. I am sure my colleagues will see by these letters that the public is deeply concerned over the charges and want the facts brought to light.

The future security of the Nation is at stake in the cold war. It is of the gravest importance that a thorough investigation be made of subversives in Government. This mess of alleged espionage, treason, and perversion must be uncovered. The safety and preservation of our American way of life depends on it.

The letters follow:

Hon. WILLIAM S. HILL,
House Office Building,
Washington, D. C.

DEAR BILL: The governing board of the Denver Retail Merchants Association has instructed us to write to all Members of the Colorado delegation in Congress and respectfully urge that they exert their influence to see that the current congressional inquiry into espionage charges involving departments of the Federal Government be pressed with vigor and continued until such time as the truth or untruth of these charges has been clearly established.

In making such a request we are departing from a policy to which this association has adhered rather strictly for many years—that of taking a position on national affairs only in those cases in which the interests of retail business are directly involved. However, this request bears no particular relation to retail business. It might well be made by any group of American citizens who are increasingly concerned over the day-by-day reports out of Washington regarding influences that are claimed to be operating within departments of the Federal Government.

In view of the disturbing international situation, it seems to us that this country can ill afford to permit the continued existence of suspicion and distrust on the part of citizens of any arm of our Government. The only way to remove such suspicion and distrust is by an unrelenting inquiry to uncover the truth, and since the real question involved is one of national security we are confident that we can all agree that political or partisan considerations have no proper place in such an inquiry.

Very truly yours,

GEO. A. FLANNIGAN, *Manager.*

DEAR CONGRESSMAN HILL: It has come to our attention that there is a possibility of the so-called McCarthy committee hearings being discontinued.

If this is so, for the benefit of all concerned, we trust the same will not be done until a thorough investigation has been made.

Yours very truly,

FONTIUS SHOE CO.,
HARRY E. FONTIUS.

World Cooperation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the President at Madison, Wis., on May 14, 1950:

TEXT OF PRESIDENT TRUMAN'S ADDRESS AT MADISON, WIS., ON WORLD COOPERATION

It is a pleasure for me to be here in Wisconsin, one of the great progressive States of the Union. And I am glad to be in Madison, a State capital and a university center in which so much has been done for the progress of our country.

I am happy to participate in dedicating Filene House, the international headquarters of the Credit Union National Association.

Credit unions offer people who have few resources a way of getting funds when they need them. I am told that last year, in the United States alone, credit unions had about 4,000,000 members and made loans totaling close to a billion dollars. This is a splendid record. It is a tribute to the values of thrift and self-help and mutual assistance.

This building will serve credit unions in the United States and Canada, and other areas in the Western Hemisphere. It will be a truly international headquarters and, as such, it symbolizes the international character of cooperative activities. In whatever country they may be found, these activities speak a common language and have a common goal.

Their common language may be found in the principles of self-help, mutual assistance, and democratic control. Their common goal is to solve, by joint action, problems which cannot be solved by acting alone.

The effectiveness of cooperative action has been demonstrated in many ways. In our country, farm cooperatives and cooperative stores have been successful. Use of the cooperative principle has brought electricity to rural areas. Use of the same principle offers new ways to solve the housing problem.

PEACE A TASK FOR MANY

In a broader sense, moreover, cooperative action is the method we are using to solve problems we share with other nations.

Today, the United States is engaged with other free nations in a great cooperative endeavor to preserve freedom and achieve peace in the world.

This is the greatest problem we face.

We cannot solve it unless we work together.

No one nation alone can bring about peace. Together, nations can build a strong defense against aggression, and combine the energy of free men everywhere in building a better future for all of us.

That is the way to achieve peace.

That is why it is in the interest of each of the free nations to help one another.

The United States is a part of a world made up of many nations and many peoples. This world is constantly being drawn close to us by improved communications and improved transportation. It is also being drawn close—dreadfully close—by weapons of destruction which become ever more terrible.

We could not, even if we wanted to, go our own way and let the rest of the world go its own way.

You remember the situation when our own country was formed. There were 13 separate Colonies scattered along the Atlantic coast. Each of them could have tried to get along as an independent nation. But they were wise enough to realize the folly of such a course. They decided to band themselves together in a common cause, and out of that decision has grown the greatest Nation the world has ever seen.

In many respects, the whole world is now in the same position in which those Colonies found themselves in 1776. Remember, you can now go from Madison to Moscow much quicker than a man could go from Philadelphia to New York in those days. We must recognize that the march of events has joined the peoples of the world together, in a common destiny, whether we like it or not.

COMMUNISTS ON THE OFFENSIVE

And yet the nations of the world are not ready, as the Thirteen Colonies were ready, to join together in one single government.

Indeed, one nation today is doing everything it can, short of war, to prevent common international action among nations. For the Communist philosophy feeds upon suspicion and hate and disunity. And the Communists are doing their best to break down the strength of the free nations of the world, in an effort to bring more people under the domination of their Godless creed.

This makes it more than ever necessary for us to work together with the other free nations, to preserve our freedom and to increase our common welfare.

If we are to achieve these ends, the free nations of the world must demonstrate that freedom leads to greater strength and a better life for the people.

One of the most important tasks that we must accomplish together is to create a sound economic system in the world. And to do that, we need to work together for more production in the free countries and more trade among them.

Our own country has grown strong and great by increasing production in all parts of the country and by expanding our internal volume of trade. The same kind of growth can occur in the world. All countries will benefit from a growing volume of international trade.

But that trade has to be on a basis of fair competition and mutual benefit among nations that stand on their own feet. That is what we have been working for ever since the war ended.

MARSHALL AID A VITAL FACTOR

Our first step was to aid the recovery of nations whose economic systems were shattered by the war. We have given substantial assistance in the restoration of devastated areas and in the rehabilitation of industry and agriculture. The greatest example of this type of activity is, of course, the Marshall plan.

That program has been an extraordinary success. Three years ago, many of the Marshall-plan countries were on the verge of collapse and absorption by communism. Today, with our help, every one of them is stronger and better able to resist communism than at any time since the war.

The success of the Marshall plan demonstrates the value of international cooperation. It demonstrates that helping people to help themselves is one of the best ways to maintain and strengthen freedom.

In the rest of the world, just as in Europe, joint action to increase production is the key to trade, progress and security. One reason why there is so much unrest and insecurity in vast areas of the world is their low productivity and their inability to trade profitably with us and with other countries.

The problem in most of the rest of the world is different from that in Europe. The primary problem in Europe is to reestablish and expand a modern industrial and agricultural economy. In the underdeveloped areas of the world, the primary problem is to build such an economy in the first place. And that requires a very different kind of action on our part.

HELP OF BENEFIT TO BOTH SIDES

The greatest needs of the underdeveloped areas are modern scientific and technical knowledge to increase their skills, and the investment of funds to increase their productive capacity.

Today, more than half the people in the world are undernourished. Millions of farmers in Asia and Africa and Latin America still turn the ground with crude wooden plows. They know little about improved seed. Their livestock is underfed and diseased. Many of them have never even heard of soil conservation.

As these people become better educated and healthier, as they get more roads and factories and power plants, as they increase their output of agricultural and industrial products, they will slowly but surely play a larger part in the community of nations.

In that way, they can attain progressively better living conditions and renewed faith in the promise of the democratic way of life. In that way, too, the United States and other free countries can acquire new sources of the things we need and new markets for the things we produce.

I am very glad that both Houses of Congress have authorized the Government to increase our program for aiding the underdeveloped areas to progress toward modern standards of health, education, transportation and production.

I am determined that this work shall go forward energetically. I regard it as one of the most important factors in promoting trade and one of the main hopes for world peace.

These cooperative programs to build a world economy which will bring increasing welfare to all free people are vital to world peace.

So, also, is the work we are doing to strengthen the common defense of free countries against aggression.

FORWARD DESPITE SET-BACKS

And so is the effort we are making to create an effective world political order through the United Nations.

All these steps are essential to freedom and peace. They are all ways of putting into practice, in our relations with other nations, the basic cooperative principles of self-help, mutual assistance and democratic control.

The measures we are taking to bring peace to the world are necessarily imperfect. We are working to solve a problem larger and more difficult than any other we have ever faced. We shall inevitably experience setbacks, as well as successes.

But we must continue to move forward, strongly and steadfastly, in cooperation with other free countries.

We have no other choice.

Isolationism is no alternative. Isolationism is a counsel of despair. Isolationism would bring on another war, and it would be a war in which we might stand alone against the rest of the world.

In our own self-interest, therefore, we must cooperate with other free nations. We must join with them in a common defense against aggression and in providing greater opportunities for human advancement.

But there is another reason why we must work together with the other free nations.

We have a moral duty to protect the exercise of freedom here and in other lands. As a nation we are committed to the principle of freedom because we believe that men are created equal. Freedom is a relationship between equals.

FOR A WORLD OF FREE MEN

We believe that men are equal because we believe that they are all created by God. The religious traditions which have flowed together to make the foundations of this Nation all emphasize that every individual is an expression of the spirit of God, and should be respected on that account.

Because of that relation between God and man, we believe that each man in himself has dignity and individual worth.

Because of that relation, we believe that all men are brothers, who must strive to live together in freedom and peace.

We would be unworthy of our traditions—we would violate our fundamental beliefs—if we failed to acknowledge and to live by the principles of brotherhood which bind men and nations together.

We must continue to exert our energy and our will, in cooperation with those who share our beliefs, that together we may create on this earth a community of free men, living at peace with one another and working together for the common good.

We must not falter or turn back.

We must go forward in the faith that we are following the commandments of God, who is the Father of us all.

Commercial Telegraphers' Strike

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. BLATNIK. Mr. Speaker, few events have demonstrated the evils of the Taft-Hartley Act so dramatically as the current strike of the commercial telegraphers against the United Press.

It is not a strike that has made headlines—I will wager that there are Members of this House who do not know that it is going on, unless they happen to have run into the pickets in front of the National Press Building. Nevertheless, it has thrown into sharp focus the provisions of the Taft-Hartley law which can lead us into one of the greatest orgies of union busting this country has known.

The teletype and maintenance employees of the United Press went on strike on April 30 after weeks of fruitless negotiating. Since that date, practically all the news reports flowing over the wires of that great agency have been handled by scab labor.

SUPERVISORY SCABS

The company has maintained the fiction that its teletype work is being handled by supervisory employees. This is true only in the sense that the United Press has brought into its key centers news reporters from its smaller bureaus—bureaus so small that reporters are expected to handle telegraph wires as well as gather and write the news.

These reports are classified as supervisory only because such a classification

exempts them from the contract the United Press has signed with the American Newspaper Guild, a typical dodge. Aside from that, about the only "supervisory" right they enjoy is the right to fire themselves without going through the usual channels.

After a few days, however, the United Press dropped the idea of handling its news report exclusively through these men. The organization went into the open market and began hiring scabs wherever they could be found. I am reliably informed that these scabs are now working in the New York, Washington and Chicago offices of this organization.

TAFT-HARTLEY LAW INVOKED

It is at this point that the Taft-Hartley Act stepped in to take from labor one of its most cherished rights—the right to give help to brother trade-unionists.

Any Member of this House who has had experience with organized labor knows that nothing is more repulsive to a trade-unionist than to be forced to help a scab. That is precisely what is happening in this strike. In spite of the fact that practically all the news furnished to newspapers by the United Press in the past 2 weeks has been furnished by scab labor, other unions in the industry have been forced to handle these news reports.

Threats of injunction under the misnamed "antisecondary boycott" clause of the Taft-Hartley Act have met the protests of the fellow workers of the telegraphers. Stereotypers, typographical employees, pressmen, guild reporters—all union men—must swallow their natural resentment and prepare United Press reports for use in their newspapers.

Mr. Speaker, to me this has all the earmarks of old-fashioned union busting. On the one hand, we have the powerful newspaper industry which is not restrained from giving help to the management of United Press. On the other hand, we have the organized newspaper employees blocked at every turn from helping the commercial telegraphers union.

Here is a question which might well be examined by the House Committee on Education and Labor. How much help is being given the management of United Press by the powerful dailies and newspaper chains in their war with the telegraphers? How many newspapers have followed the deliberate practice of featuring UP reports during the past 2 weeks, even though those reports are necessarily limited by the mechanical difficulties brought on by the strike? It is obvious that United Press has been forced to curtail its services with inexperienced men operating its equipment.

AFL UNION INVOLVED

Here I wish to say a word about the commercial telegraphers union, which is on strike. It is a well-established American Federation of Labor union which has shown its good faith by 43 years of peaceful relations with employers. Its members are responsible men who perform a difficult and highly skilled job.

In recent years, and especially since passage of the Taft-Hartley law, like all unions it has found bargaining more difficult. During the past 6 years, according to the union leaders, it has been unable to obtain any realistic bargaining with the United Press unless it actually took a strike vote.

This year, negotiations for a new contract were preceded by a number of threatening moves on the part of management. More than a week before the expiration of the old contract, special machinery was moved into key centers which could, in a pinch, be used to replace men. This tactic has become commonplace in the newspaper business when contracts with the typographical union are due to expire. In no cases do these devices do a satisfactory job by ordinary standards, but they serve where an inferior product will be accepted during a strike.

Two days before expiration of the telegraphers' contract with UP, the so-called supervisory employees, ineligible for union membership and thus unable to present any organized protest, were brought into key bureaus. One, I am told, was imported from Puerto Rico. In addition, uniformed Burns detectives appeared on the scene the very minute the contract was up.

UNION-BUSTING TACTICS

All of these preparations, Mr. Speaker, have an ominous ring to those of us who have good reason to remember the union-busting that preceded passage of the Wagner Act. They are signs of the times, and should serve as a warning to all friends of labor that we are walking back down the road to the days of the open shop. Unless the Taft-Hartley Act is repealed, and repealed soon, the labor movement may be divided and crushed. The strike-breaker and the Burns and Pinkertons are coming back into their own.

This strike of the commercial telegraphers is over purely economic issues. The union is bargaining for more weekly pay for its members. For several months management has refused to make any offer at all, though it has boasted publicly that 1949 was its most prosperous year. Its final offer, made just before the strike on a take-it-or-leave-it basis, was a raise of $2.21 a week—just about 3 cents an hour.

The merits of an economic strike are something that can be argued forever. What interests us here is whether management was bargaining in good faith. There is a question raised by this strike which is of urgent concern to the American people. It can be summed up simply as this: Is the United Press using the Taft-Hartley Act as a shield under which it will spearhead a drive to bust unions in the newspaper industry?

Are We Headed for World War III?

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. HILL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following radio address which I made to the constituents of my district over the following radio stations: KBOL, Boulder; KCOL, Fort Collins; KFKA, Greeley; KFTM, Fort Morgan; KGEK, Sterling; and KLMO, Longmont. The speech follows:

Friends of the radio audience, this is your Congressman, WILLIAM S. HILL, speaking to you from Washington, D. C. Today I wish to speak on world peace.

Throughout the Nation today, the people are troubled. They are torn by the mixed emotions raging in their hearts over the threat to the peace we won at such a horrible price in lives, blood, and treasure. They realize that another war so close on the heels of the last one can well mean the end to our civilization. Another war is not necessary to settle the problems of the world. But the fear of the cold war suddenly bursting into flame is causing untold anxiety and concern in the homes of our people.

Dangers of the peace are increasing. The tip of the scale one way or the other, might touch off another war—a war more terrible and destructive than the last. It could be the war to end all wars. It could wipe out our civilization. The very thought is horrifying. Our finite minds are incapable of visualizing the consequences of an A-bomb or an H-bomb dropped on this country.

But the purpose of this warning isn't to scare you out of your wits. It is to awaken you to the idea that now is the time to speak up. Those of us who want peace must be heard. Our voices must ring out with an appealing force to halt the mad dash for superbombs and superduper death-dealing weapons of mass detruction.

Part of the guilt for the armament race is on our consciences. President Truman authorized the dropping of the atomic bomb on Japan. The late President Roosevelt initiated the scientific experiments and provided the finances for construction of the A-bomb during World War II. Now the President has given the green light for the building of the hydrogen bomb. We are out in front in the rearmament race, but it isn't, to my way of thinking, a thing to be proud of. We should be in the forefront of those in the world who want to maintain peace. Our leadership should be for moral and spiritual rearmament rather than military force.

In the world court of opinion, we have left our sincerity and high purposes open to question. The hopes and aspirations of the people, who overwhelmingly desire peace, must be brought out into the light for the world to see. Our diplomatic maneuvers and our military activities have cast a false reflection on the basic motives of this Nation. We are a peace-loving Nation; the majority of our people are most anxious and eager to spread to the four corners of the earth their expression of good will. But somehow this opinion becomes distorted and twisted by the actions of our political and military leaders.

It is time for a constructive call of the great political powers of the world to settle the problems of the cold war. Our leaders have attempted to assuage our conscience by rationalizing the use of the A-bomb and the H-bomb. Perhaps they are entirely right in their assumptions. But, we should, with equal vigor and honesty to ourselves encourage a policy of world disarmament. All of our efforts politically, economically, and otherwise have the single objective of stopping the Red tide of atheistic communism from engulfing the world. Russia is our enemy, now; in the war she was our ally.

What caused Russia to change her attitude toward us? Admiral Leahy, who was President Roosevelt's adviser at the Big Five conferences, until the late President's death, attributed the difficulty last week in an article as arising out of differences between

Stalin and Roosevelt. But it was 5 years later before the people were advised of these conditions through Admiral Leahy's magazine disclosure. Why weren't we informed long ago?

Former Prime Minister Churchill of Great Britain has thrown another light on American entry into World War II as a result of Pearl Harbor, in his current writings in Life magazine and the New York Times. He established the fact that for a year and a half before Pearl Harbor, December 7, 1941, he had pressed President Roosevelt to come into the war on Great Britain's side. At the Atlantic conference in August 1941, he said he informed Roosevelt's party and I quote—"that I would rather have an American declaration of war now and no supplies for 6 months than double the supplies and no declaration."

Churchill said that he related this incident to General Smuts, Prime Minister of South Africa, stating—and I quote again—"We must not underrate his (Roosevelt's) constitutional difficulties. He may take action as Chief Executive, but only Congress can declare war. He went so far as to say to me—this is Roosevelt speaking—'I may never declare war; I may make war. If I were to ask Congress to declare war they might argue about it for 3 months.'"

It will be remembered that the attack on the fleet at Hawaii was presented to the American people, who knew nothing at the time of our American economic sanctions, our unyielding diplomacy with Japan, and our other secret maneuvering, came as a shocking surprise—an act of treachery on—and I quote President Roosevelt—"a date which will live in infamy."

Churchill had this to say with reference to Pearl Harbor. And I quote him again: "I do not intend in these pages to attempt to pronounce judgment upon this tremendous episode in American history. We know that all of the great Americans round the President and in his confidence felt, as acutely as I did, the awful danger that Japan would attack British or Dutch possessions in the Far East and would carefully avoid the United States, and that in consequence Congress would not sanction an American declaration of war."

Quoting Churchill further, he said: "Roosevelt, Hull, Stimson, Knox, General Marshall, Admiral Stark, and, as a link between them all, Harry Hopkins had but one mind. A Japanese attack upon the United States was a vast simplification of their problems and their duty. How can we wonder that they regarded the actual form of the attack, or even its scale, as incomparably less important than the fact that the whole American Nation would be united for its own safety. Moreover, they knew, earlier than we in Britain could know, the full and immediate purpose of their enemy."

The armed power of the world is again divided into two camps. Is there a war party in this Nation, as there is in the Kremlin? Communist dictatorship is not only designed for a surprise attack with all the arms it has, but the Kremlin can violate any agreement it signs to gain advantage and abrogate at will the agreements it makes.

But our free people have greater productive and moral powers. We can unite our strength, unless it is undermined and weakened by secret action of our political leaders.

We must make our stand for peace through the United Nations. We must declare our intentions and desires. We have no assurance from available public reports that Russia would cooperate in an effort at disarmament in the strengthening of the objectives of peace, but that should not stand in our way. We should look into every avenue for a way to lasting peace. If our sincerity is clear, our reasons and examples steadfast, then before the eyes of the world we have made our case.

WE CAN DO NO LESS

Are we going to let someone push us into world war III? Is fear of the A-bomb or H-bomb going to deter us from striving for what we know is right, and what the peoples of the world all believe in—peace? Regardless of the actions of their leaders—and this includes Russia, too—I believe that all peoples of the world want peace. But they must speak up; they must be heard before powerful influences get us so involved in political and economic circumstances that resulting action winds up in war.

At present the United Nations is the only world organization in operation. Through it let us urge the representatives of the United States to work for peace. The adoption of certain measures would augment the efforts of the people in presenting our case to the peoples of the world. In the past Russia has overshadowed the rest of the nations participating in the UN and has effectively used it as a propaganda agency. If necessary, let the United States assume the Christian responsibility for guiding the UN into discussions of big-power politics in controlling the A- and H-bombs; renewing the forces of religious and spiritual leadership toward a new birth of moral indignation into the depravity of a superarmament program. Men must learn to live together. War is not the economic savior of broken and decadent political philosophies. This fact must be impressed on those who seek to fasten its chains upon the people.

Unless there is a quick turn in the course of events, the intensity of the cold war will surely increase. It is time for us to unite and demand that every effort be exhausted to maintain the peace. The hour is late.

The expenditure of huge sums for defense weapons or for the purpose of winning friends abroad is not the answer. The answer will come from the deep-rooted desire of all peoples to live together in friendship. Exploitation by political leaders for momentary advantage will not assure a period of international transquillity. But the earnestness and sincerity of the good peoples of the earth can bring about what selfishness, greed, and political chicanery cannot achieve. Until we have placed this country in the position of exhausting every possibility of peace so that our sincerity and honesty stand crystal clear before the rest of the world, let us not resign ourselves to the cynical attitude that the only solution to our problem is to arm ourselves to the teeth and develop an arms race which in the end can only mean the ultimate destruction of our civilization.

World Federation Opposed by the American Legion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, recently the Foreign Relations Commission of the American Legion issued a statement of policy on the subject of a world federation or a world government at this time. National Commander George Craig has called my attention to the position of his great organization on this subject. It is short and to the point and without equivocation, as follows:

4. The American Legion is opposed to any form of world federation or government at this time.

David Lawrence Praises President's Small-Business Loan Recommendations—Column Hails Him as Deserving Nonpartisan Support—Private Banks Would Do the Lending—Also Favors Private Capital Banks, for Small Business, Within Federal Reserve System

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. PATMAN. Mr. Speaker, the statesmanlike recommendations for small-business loan legislation made by the President in his recent small-business message are meeting with wide approval in many diverse quarters. This commendation is by no means confined to the rank and file of the Democratic Party nor to those who are generally regarded as loyal supporters of the President.

Mr. David Lawrence, whom no one would accuse of any partiality toward the President, or toward administration policies, devotes one of his columns, syndicated throughout the United States, to an endorsement of the President's recommendations. The endorsement appears under the significant subhead, "Credit financing plan should not be involved in partisan politics."

The President proposes that private banks be encouraged to make small-business loans, on a liberalized collateral basis, by authorizing RFC to take an increased participation in such loans—perhaps, I take it, up to 90 percent—and the President also proposes a small-business loan-insurance plan to encourage private bank loans. Secondly, the President proposes the chartering of capital-loan banks, privately owned, although within the Federal Reserve System, with authority to purchase stock in small-business corporations and to supply equity capital to small business generally.

As Mr. Lawrence states:

But Mr. Truman comes forward now with something which he and his advisers have striven to formulate in such a manner as to take the Government itself out of the loan business and to put the burden on private financing with Government coordination and Government insurance as a stopgap.

With the permission of the Members of the House, I append in full the text of David Lawrence's column, as it appeared in the Washington Evening Star on May 9, 1950:

EQUITY CAPITAL LOANS PROPOSED BY TRUMAN CALLED STEP TO RIGHT—CREDIT FINANCING PLAN SHOULD NOT BE INVOLVED IN PARTISAN POLITICS

(By David Lawrence)

President Truman's message to Congress recommending that equity capital and credit loans be made available to business through a new system of loan insurance and investment institutions goes to the heart of a problem which, in one form or another, has been before Congress ever since the depression of 1929–33.

In the melee of crusades and criticism, the so-called bank affiliates—the companies which were affiliated with banks and did much of the financing of American enterprises in the 1920's—were abolished. They have never been followed by any constructive substitutes. There has been a recurrent outcry since that some means should be provided to assure equity capital for the enterprises not big enough to warrant national attention through the floating of stock issues. This deficiency has led radicals to make many a proposal for Government financing or Government ownership.

But Mr. Truman comes forward now with something which he and his advisers have striven to formulate in such a manner as to take the Government itself out of the loan business and to put the burden on private financing with Government coordination and Government insurance as a stopgap.

LOANS OF RECENT ORIGIN

Broadly speaking, banks have hesitated for years to extend credits that are in fact capital loans. They have felt, and rightly so, that demand deposits should not be so used. But at the same time large loans in commercial financing have been syndicated by the banks or taken in their entirety by insurance companies. Likewise, although frowned upon in early years, installment financing of automobiles and many household products is now an orthodox credit device. There was a time when banks did not like installment financing.

Even the real-estate loans made under the so-called insured plan, whereby banks have made housing loans or have participated in the making of mortgage loans along with governmental agencies, are really of recent origin.

When the President, therefore, comes forward with what he calls a pioneer undertaking in the financing of business, it is natural that first reports should say that bankers are cool to the idea. As they examine and study it, perhaps making alternate suggestions, it may turn out to be the very thing that will increase the earnings of the banks without any such risks as would be involved in individual transactions as contrasted with group risks.

The principle of insuring a lot of loans through an over-all agency makes it possible for the income from the premiums and the interest on the successful loans to offset any that may go sour.

The plan has several parts. One relates solely to loans of $25,000 or less which would run for 5 years. No one in the Government would pass on such loans and the banks would take a minority percentage risk while the Government took the major percentage risk.

The second part of the plan is even more important. It proposes that national investment companies be set up in which the banks and private investors could invest. The major purpose of these companies, as the President phases it, "would be to provide equity capital and long-term loans for efficiently-managed business unable to finance themselves on reasonable terms through the organized securities markets."

PUBLIC WOULD INVEST

Actually the public and banks would invest in the national investment companies—buying their bonds—while the companies would, in turn, finance the equity-capital needs of worthy businesses. There is no limit placed here as to size of loans but it is assumed that the plan will primarily take care of the needs of business ranging from $25,000 to $1,000,000. This is the bracket of financing about which there has been considerable discussion in recent years, and the President says this phase of his plan "is designed to fill the most serious remaining gap in the business financial structure."

Coincident with these developments, the President proposes that both the Reconstruction Finance Corporation and the Federal Reserve bank authority to make business loans be cut down, so that the latter may be abolished altogether and the former would be retained only for those rare cases where private investment companies find themselves unable to do the financing and yet where credit extension of large size may be needed.

The whole plan is designed to maintain a private-enterprise system of credit. It is the first important move toward the right in financing technique which the Truman administration has made, and it would be most unfortunate if consideration of such a plan became involved in partisan politics just because the President happens to sponsor it.

Strikes Against the People

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor of the St. Louis Globe-Democrat, by William R. Schneider, a well-known lawyer of the city of St. Louis. The letter appears under the heading "The Mail Bag," in the St. Louis Globe-Democrat of May 7, 1950.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE MAIL BAG

STRIKES AGAINST PEOPLE

To the EDITOR:

The bill introduced by Senator DONNELL to outlaw strikes on railroads is a timely and commendable manifestation of Grover Cleveland-like statesmanship.

Public utilities generally are given monopoly powers by the State. Thus they are able to enjoy a stability of business not generally enjoyed by other businesses. These quasi-public corporations and their employees therefore owe a greater duty to the public in return for the favors and special privileges they so enjoy at the hand of the people.

It ill becomes public utility workers to bite the hand that feeds them through the special privileges they so enjoy. When the employees of such corporations strike they are striking against the public welfare and against their own great benefactors, the people. Such workers, like police officers, should not have that right anywhere or any time. This perfectly obvious and sound position when stated by the Governor of Massachusetts was so popular with the people it made him President. Since then union labor has so abused its powers under the Wagner Act, you will find that position even more popular now.

The scope of the bill should be enlarged to include telephone workers as well as other public utility workers, whose work affects interstate commerce. Of course Senator DONNELL will be accused of sponsoring slave labor legislation and trying to deprive workers of their inalienable and constitutional right to strike. The simple answer to that is there never was such a constitutional right until the Wagner Act, by indirection, undertook to establish it after 6 Federal district court judges, 12 Federal appellate court judges, and 4 Supreme Court judges, 22 in all, held that act unconstitutional over the superior ruling of 5 frightened Supreme Court judges. Prior to that time a worker always had and now has the right to quit his job any time. But when he goes about inducing his coworkers to quit their jobs also to compel his employer by economic or property loss to accede to his or their demands, that always was a criminal conspiracy to deprive another of his property without due process of law and there are many Federal and State court decisions that so hold.

The bill should contain the penalty of forfeiture of seniority rights, and pension rights should date from the time of reemployment, if any, after a strike. If they take it upon themselves to arbitrarily indulge in the license to injure the public, then they must not be heard to complain that they are entitled to enjoy immunity from injury solely because they carry union cards. No other citizen enjoys such immunity from the injury and damage he intentionally causes to others.

WILLIAM R. SCHNEIDER.

The President's Speech at Dedication of Grand Coulee Dam

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by President Truman at dedication of Grand Coulee Dam:

TEXT OF PRESIDENT'S ADDRESS AT DEDICATION OF GRAND COULEE DAM

This is an inspiring occasion. We have come here to dedicate Grand Coulee Dam—one of the mightiest structures man has ever built.

With this dam, man's ingenuity and perseverance have dramatically transformed the energy of a mighty river into a great new source of national strength.

At the foot of this dam is the world's largest power plant. It is already generating more low-cost electric energy than any other plant in the world.

Behind this dam is a reservoir which extends 151 miles to the Canadian border. The water in that reservoir not only generates electricity. It helps prevent floods. And soon, it will pour forth to irrigate thousands of acres of land which are now desert.

Grand Coulee Dam—with its tremendous power and irrigation benefits—is an instrument of our democracy, forged to contribute to a better life for ourselves and our children.

This dam was not built by accident. It is here because men with vision and determination fought for its construction. Men in the State of Washington—many of whom are here today—saw what this dam could mean to the Northwest and to the Nation. President Franklin Roosevelt, whose name honors the reservoir behind the dam, transformed their vision into reality.

BUILT DESPITE OPPOSITION

The dam had to be fought for. It had to be built over furious opposition. You

remember what its opponents said. One Congressman said:

"Up in the Grand Coulee country there is no one to sell power to except the coyotes and jackrabbits, and there never will be." Other opponents of Grand Coulee said it would be a "white elephant." They said it would be of no more value than the pyramids.

We can laugh today at such foolishness. Right now, the generators at this dam are being run at over capacity, straining to meet the soaring demands for power. All about us in the Pacific Northwest—in this land that was called the land of "coyotes and jackrabbits"—new jobs, new industries, new opportunities have been created.

Today, those who opposed Grand Coulee are trying to cover their tracks. They are trying to jump on the bandwagon.

But they can't erase the record. They did not understand then, and they do not understand now, the progressive steps that are necessary to keep our democracy strong, and confident, and moving forward.

The fundamental error of those who opposed Grand Coulee was their failure to understand that the United States is a growing, dynamic country. They saw no need to plan and work for a greater future. The way things were was good enough for them.

But the American people have never been satisfied with the way things have been in the past. Our whole history is a record of eagerly striving to make things better.

One hundred years ago, out here in the Northwest, men and women were opening up new frontiers along the Oregon Trail. They struggled and fought to create farms and cities out of the wilderness.

The opponents of progress would have you believe that the frontiers are closed. They think we should now relax and struggle no more. Those are the men of little faith.

STILL PUSH BACK FRONTIERS

I say to you that the American spirit, which blazed the Oregon Trial, is not dead. Here in the Northwest you are still pushing back frontiers.

There is no better example of that than this great dam. Less than 15 years ago, the energy of the Columbia River poured unused into the Pacific Ocean. It flowed past cities, which were hampered by lack of power, and past farmlands which had been abandoned for lack of water.

In those days, the people of the Northwest made their living primarily from timber and farming. They exported raw material and imported finished goods. They lacked the power needed to process and manufacture their own raw materials.

Yet, through the heart of their rich country flowed the greatest potential source of hydroelectric power in the Nation—the Columbia River system. This area, tremendously rich in natural resources, was stifled, its future was limited, because it was unable to tap its own native source of power.

Today, we are well on the way to harnessing that power. The imagination and vigor of free men have put the Columbia to work.

The results are clear. The Northwest is no longer a backward colony. It is now one of the fastest-growing parts of the country. In the last 10 years the population of Washington and Oregon has increased more than 30 percent.

Jobs—permanent, productive jobs—have been made available in new industries that have been established to use the Columbia's low-cost power. In the last 12 years 11 new plants alone have paid more than $135,000,000 in wages and nearly $50,000,000 in taxes.

Power from the Columbia has not only served industry. It has made life easier in homes and on farms. The use of electricity on homes and farms in the State of Washington is more than twice the national average.

When Grand Coulee was being built, some thought it would hurt other parts of the country by drawing plants and industries from them. Of course, that has not happened.

The plants that have sprung up here were not moved from other States. They are new enterprises, adding to the productive capacity of the whole country.

The growing payrolls of the Northwest have made bigger markets for producers in every State. The products turned out here are needed elsewhere. Nearly half the aluminum of the United States is produced along the banks of the Columbia. This aluminum is used everywhere in the country. A single rolling mill 90 miles from here—at Spokane—is providing basic materials for 600 factories, from Boston to San Diego.

What has happened here is what happens in the case of underdeveloped areas everywhere in our country and the world. Sound, productive investment always makes bigger markets and more jobs.

A PAYING PROPOSITION

Not only is Grand Coulee contributing to the growth and strength of the Nation. It is also a paying proposition from the standpoint of the taxpayers.

When the dam was being built, it was attacked as a colossal waste of public funds. Well, that was a colossal misstatement. The investment in the power facilities of Grand Coulee is being repaid right now, and with interest. And in a broader sense, the entire investment has already been repaid several times over in the increased national wealth it has brought.

We are not stopping our work at this point The Grand Coulee project, itself, is not finished. More power generators are being added. And over the next several years we shall begin to put water on the land below here. Thousands of family-size farms will replace the present sagebrush.

Elsewhere in the Northwest, work on other dams is proceeding. Hungry Horse Dam in Montana, Chief Joseph Dam just down the Columbia from here, and McNary Dam on the Oregon-Washington border, are all under construction. These and other dams are part of the great work that must be done to produce power, promote inland navigation, reclaim land for cultivation and prevent destructive floods.

But even more than this is involved in the development of the resources of this area for solid growth. Forest and grasslands should be conserved and improved. Fisheries should be protected and enhanced. Mineral resources would be reopened and developed.

All this work can and should go forward together. Resources that occur together in nature must be developed and improved together.

This is the goal we are working toward here in the Northwest. It is the same goal for which we are working in other parts of the country.

In the Central Valley of California, we are developing great power resources. With the help of that power, we are redirecting the available water of the Sacramento and San Joaquin Rivers to bring about the most productive agricultural use.

In the Colorado River Basin, we are working to achieve the most sensible uses of the very limited water supply, and to expand the power supply throughout the basin.

Down in the Texas, Oklahoma, and Arkansas area, a number of dams are producing power, and others are being built. In that area also, as in the lower Mississippi Valley, soil conservation, flood control, drainage and navigation work is going forward.

In the Southeastern States, we are moving ahead with the construction of flood control and power dams on the Savannah River, the Roanoke, and other streams. In that area, also, it is necessary to shift land uses to conservation farming and to restore the pine forests.

POSSIBILITIES IN NORTHEAST

The northeastern part of the country has great possibilities for the development of additional hydroelectric power resources. Power from the redevelopment of Niagara Falls and from the St. Lawrence project will be nearly as great as the power out here in the Northwest. It is badly needed. We should construct these projects as soon as possible. And there are also power sites on the rivers of New England which should be developed soon.

In the Ohio Valley, and around the Great Lakes, the principal work that is being done is on flood control, navigation, and soil conservation. There is also much need for reforestation.

The Missouri River Basin is so large it requires consideration of all aspects of resource development. From the high plains in the West to the humid areas of the lower Missouri, this basin presents perhaps the most complex problem of all. The work that is necessary includes extensive development of flood control, irrigation, and power works, as well as increased conservation efforts on crop and range land.

I have left till last mention of the Tennessee Valley. In that valley we have made more progress than in any other. There, the idea of coordinated planning for all resources was first worked out and most completely applied. The Tennessee Valley Authority has been outstandingly successful in its area.

We have worked out a set of recommendations for a Columbia Valley Administration which builds on that successful experience but recognized the different circumstances out here. Take one simple example. In this area, a farmer's right to the use of water is vital to his livelihood, and is protected by State laws. That is the way it should be, and the Columbia Valley Administration I have recommended would have no power to tamper with anyone's water rights.

The private power lobby, and other people who have selfish interests to maintain, say the Columbia Valley Administration would be a superstate. Of course, that is not true. Ask the people in the States in that valley whether State and local governments are stronger or weaker as a result of the progress TVA has brought. Ask them whether they have more or less influence on what happens in their valley with an agency that has its headquarters right there where they deal with it at first hand.

They will tell you that the TVA is the greatest thing that ever happened in their part of the country.

I believe the Columbia Valley Administration is a necessary next step in the sensible, democratic development of the resources of the Northwest. I believe the people of this area think so, too. And when they make their voices heard, I am sure the Columbia Valley Administration will be established.

We have embarked all over the country, on the task of fully developing our resources for all the people. This is a job that will take many years to compete. It will require sound and careful planning.

But it is a work that fires the imagination. We are undertaking to use the resources we have so that they will grow, and not diminish, over the years. We intend that our children, and their children, shall live in a more productive and a more beautiful land than we do.

POSITIVE ACTION NECESSARY

We shall not get the job done, however, by sitting still. We must continue to take positive action. And we shall have to continue to overcome the opposition of those

who do not understand the greatness of our goal, or who fear some impairment of their selfish interests.

We will meet opposition from the private power groups. Many of them—there are, of course, honorable exceptions—do not want the energy of our rivers put to use as power and sold to the people at cost.

We have already met this opposition in building Federal projects. And the people have met the same opposition in localities where they wanted to establish local public power agencies, such as public utility districts and REA (Rural Electrification Administration) co-ops.

This opposition of the private power companies is wrong. It would deny the people the benefit of low-cost power they themselves have brought about through public investment.

I am sure we will continue to overcome this opposition just as we already have done in building Grand Coulee—just as the people already have in Nebraska, in large parts of Washington and Oregon, and in other sections of the country, where they have decided to distribute power through the public bodies and cooperatives.

The benefits of public investment must be passed on to the people whose tax money is being used. Those benefits must not be diverted for private profit. We will continue to fight and win for that principle.

No doubt we shall also have to fight those who think expenditures of resource development are a waste of public funds. They should have disqualified themselves by now. Their fantastic claims about Grand Coulee proved that they can't tell the difference between a waste of funds and a sensible investment.

Finally, we will still have to fight those who imagine that every progressive action is another step down that famous "last mile to socialism." The facts continue to make that claim ridiculous. They called Bonneville and Grand Coulee steps to socialism. Now, I ask you, is private enterprise in the Pacific Northwest stronger or weaker as the result of those dams? Have you lost or gained industries and jobs? Do the people out here have less or more freedom? The answers are perfectly obvious.

It is clear that we must go ahead in every part of the country with our resource development work. And proceed we shall. We shall not be stopped by those who are timid or short-sighted or selfish. We shall not be stopped by discredited claims or by tattered slogans.

Our whole future depends on the wisdom and maturity we bring to bear on our national problems. We are engaged in a great struggle to achieve peace in a world beset with danger and threatened by Communist imperialism. We shall be engaged in the struggle for peace for years to come.

If we are to be successful, we must display the adventurous spirit and the firm courage of our pioneering fathers. We shall not succeed if we follow the advice of those who look backward, sighing for the fancied security of an earlier time. We must have strong minds, ready to accept the facts as they are, and to make bold, new plans based on the facts.

We shall need the same kind of vision that saw Grand Coulee Dam when there was nothing here but desert.

We shall need the same kind of steady perseverance that built this mighty dam over the opposition of men with narrow minds and faint hearts.

With that kind of vision and determination we can build a world in which men can be free under laws of their own making and can live at peace with one another.

Two Hundred Thousand Reported Out

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article under the headline "Two hundred thousand reported out," by George Eckel, appearing in the New York Times for May 13, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO HUNDRED THOUSAND REPORTED OUT

(By George Eckel)

CHICAGO, May 12.—Persistent unofficial reports had it today that railroad officials and the National (Railway) Mediation Board were conferring on a new proposal by the locomotive firemen's union to settle the firemen's strike.

By tonight the strike had thrown an estimated 200,000 or more persons out of work.

The reports were denied by the Board and by spokesmen for the railroads and the union, but they appeared to have some claim to reliability. They originated with responsible railroad spokesmen but were contradicted in at least one case by an equally well placed railroad spokesman.

SERVICE IS INCREASED

While industrial stoppages and lay-offs due to the strike continued to increase, the strikebound railroads reported also increased train service in defiance of the walk-out. Three instances of violence were reported but nobody was injured.

The strike was called by the Brotherhood of Locomotive Firemen and Enginemen against the New York Central west of Buffalo, the Pennsylvania west of Harrisburg, the Atchison, Topeka, and Santa Fe, and the Southern Railway, with 18,000 firemen called out.

It was estimated that about 150,000 of those deprived of work were railroad employees.

Western Pennsylvania was hardest hit by the economic effects of the strike, which brought increasing idleness to railroad yards from Harrisburg and Altoona out to Topeka and Albuquerque.

Twenty-four major mines were closed down in western Pennsylvania, mostly along the Pennsylvania Railroad route. Thrown out of work were 7,500 miners. Daily coal production of 49,000 tons of bituminous coal was halted. Together with an additional 10,000 tons lost in the closing of smaller mines, this volume represents 20 percent of the production of the field.

FISHER LAYS OFF 500

The Fisher body plant at Flint laid off 500 workers at its No. 1 plant tonight. General Motors canceled overtime work for 20,000 employees at four Flint plants.

In Indiana, 4,000 coal miners were idle, and 60 communities in the State were without rail service.

The Southern Railway, which hitherto had not announced any report of the number of employees furloughed, said today that 18,000 had been laid off.

The New York Central first announced, then rescinded the announcement, that its coach streamliner, the James Whitcomb Riley, would resume service between here and Cincinnati tomorrow. The plans were canceled when firemen of the Nickel Plate road threatened to strike if the Riley passed over 18 miles of Nickel Plate track between Templeton and Lafayette, Ind., which is on the Riley's route.

A spokesman for the striking firemen announced tonight that 350 firemen of the Southern's Appalachia, Va., division would be called out on Sunday. He explained that the strike call against the Southern had not been a total call, although this impression had prevailed. He added that 300 firemen of the Southern's St. Louis division, previously unstruck, had walked off the job of their own accord today.

VIOLENCE REPORTED

The instances of violence were as follows:

A bullet was reported to have been shot through the cab of an east-bound Diesel freight train of the New York Central as it left Elkhart, Ind., about 2 o'clock this morning. The train continued. The report was made by George Moore, an assistant road foreman acting as fireman.

In Cleveland, the front wheels of a New York Central Diesel moving slowly through the Collinwood yards were derailed as they passed over a switch held open by a board. D. W. Taylor of the railroad police said it was a "deliberate act of sabotage."

In Knoxville, a group of firemen picketing the Southern said a railway employee had tried to run them down in his automobile last night.

Gustav Metzman, president of the New York Central, sent a letter to the railroad's employees in which he declared that the brotherhood's demands were characterized by an "utter lack of necessity or merit." Citing the fact-finding board verdicts, he said the strike was "against the public interest" and enclosed an editorial from Thursday's issue of the New York Times as representative of the adverse reaction to the strike.

A spokesman for the union said there was "no comment" on Mr. Metzman's views.

The President's Visit to Oregon and Washington

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith two editorials from the Oregon Journal of Portland, Oreg., which is the leading Democratic daily of the Pacific Northwest, on the subject of the President's visit to Oregon and Washington:

COURTESY AND POLITICS

Common courtesy would decree that when the President of the United States visits Oregon the Governor of Oregon would be invited to greet him. Such is not the case in the instance of President Truman's current visit to Pendleton.

The Governor was not even invited to welcome President Truman to this State, Lawson McCall, administrative assistant to Governor McKay, told the Oregon Cattlemen's Association convention at Klamath Falls.

E. B. Aldrich, chairman of arrangements for the Pendleton meeting, told the Journal that no formal invitation was issued to the

Governor. "I told him over the phone, however, that he would be welcome," Aldrich added.

To refresh your memory, Truman is a Democrat and McKay, a Republican.

And this is a nonpolitical tour, charged to the taxpayers.

TO A HOSPITAL COST OF A SPECIAL TRAIN

President Truman, special-training to the Pacific Northwest where he makes multiple dedication of multiple-purpose Grand Coulee on Thursday, hears a growing murmur from the Pacific Southwest as he travels on.

Southern California with growing intensity protests the President's order to evacuate Birmingham hospital for disabled veterans. The directive to move the patients at Birmingham hospital to the naval hospital at Long Beach merely adds to the anger.

Decision of the House Armed Services Committee to abandon its fight to halt the closing of five military hospitals doesn't discourage the campaign to retain Birmingham.

The Birmingham hospital in San Fernando Valley not far from Los Angeles is composed of buildings like those of Barnes Hospital near Vancouver. The Government calls them temporary, explains that maintenance is disproportionately great. It is a hospital of 1,650 beds.

Mayor Bowron, of Los Angeles, has wired the President on his special train that the buildings are good for 25 years. The patients are the wheel-chair brigade. They are victims of all kinds of disabling wounds and injuries received in combat. Some have broken backs. Some are minus arms and legs.

Some are able to reside outside the hospital. They are called out-patients. They have spent more than $2,000,000 on their small nearby homes. They have an enormous claim upon compassion which is not to be found in the evacuation order. Civilians have demonstrated sympathy. The Hollywood movie colony built a swimming pool. It and its building are permanent.

President Truman, making his report to the Nation with a visible political slant, and reviewing western development, aid to small business, and the virtues of his administration, has had his attention called to the luxuriously expensive mode of his transportation.

It is a 12-car special train, to cost about $250,000, charged to the Government because of Grand Coulee dedication.

Suppose—just suppose—that quarter million dollars had been used instead for veterans disabled by their wounds, to keep Birmingham Hospital in San Fernando Valley open for another year.

ITO Charter Is the Worst Document In World History—Socialist Economic Policies and Freedom of International Trade Do Not Mix—ITO Must Be Defeated

---

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, hearings on the bill for the approval of an International Trade Organization Charter have been in progress for some weeks. There are several inescapable facts that Members of this House should know about the legislation:

First. It calls for economic planning on a world basis, under the absolute control of the participating governments. This means that government would control the location of industry, foreign exchange, and the volume of investment. All this is geared to the socialistic concept that it is the duty of government to insure full employment.

Second. Control of international trade as called for under the charter of ITO means the application of exchange controls and import quotas. This is what ails western European countries today. So long as such unsound policies prevail, there will always be a balance of payments problem.

Third. A normal multilateral trade and the free convertibility of currency are not possible under socialistic governments, and the United States should understand this basic principle before it pours more billions down a European sink hole.

Fourth. The British know and realize the incompatibility between planned socialistic economic policies and freedom of international trade. They insisted, against the wishes of the United States delegates, on having articles 6 and 12, 4 (b) included in the charter. These provisions permit, with our consent, a perpetuation of import quotas and a rank discrimination against United States trade. It is obvious that these provisions are very dangerous to the United States.

Fifth. Approval of the charter would imperil the very existence of a free society. Instead of international economic cooperation, our announced objective, it would be a positive victory for economic nationalism. This must not happen.

Mr. Speaker, it does not seem possible that the State Department fails to see the full implications of the pending legislation as it affects our free society. It has the responsibility of withdrawing the bill from further consideration. The people of this country do not want socialism of our domestic economy nor of our international trade.

A Rail Taft-Hartley

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston (Mass.) Herald:

A RAIL TAFT-HARTLEY

The Brotherhood of Locomotive Firemen and Enginemen is engaging in a test of strength with the people of the United States. It wants the power to determine safety standards so far as they affect the employment of their members. To assert that power, it proposes to tie up all the railroads of the country in a creeping national paralysis if necessary. If the present four-line walkout doesn't win them a third man on multi-unit Diesels, they are prepared to strike other railroads in order, and the B. & M. is marked to be one of the next.

In its stark effrontery, this rivals anything that John L. Lewis ever did. If there were any justification on safety grounds for a third man on Diesels, and two Presidential boards have said there was not, the fact should be decided by an impartial agency, such as Congress, the Interstate Commerce Commission, or some special panel of experts. For the firemen to decide their own case and then force it on the country is monopolistic labor in flagrant restraint of trade.

The long record of featherbedding by the rail brotherhoods, usually under the guise of safety, is so well known that the firemen cannot claim any judicial right to decide this one.

If we let the big unions force unnecessary employment, permitting them to frustrate the immense gains of technological advance, we surrender a large segment of the national welfare into selfish hands. It must be obvious that unions must not have this power, must not be able to strike to enforce it.

The Taft-Hartley Act already partially recognizes this truth. It provides that management has the sole authority to say who gets the work. It is illegal "to cause an employer to pay any money for services which are not performed or not to be performed." This does not go far enough to cover precisely the fireman's case, but it is a principle which should most certainly be extended to the railway labor act.

And where does President Truman stand on this? Or is he too busy in his 1950 campaigning to return to Washington to deal with it, especially since the firemen will see his own special along on the way west? In his flat opposition to the Taft-Hartley Act and its anti-feather-bedding provision, has he not encouraged the firemen to strike?

Thanks to Feringa

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of an editorial from the New Orleans States of May 9, 1950, entitled "Thanks to Feringa" as follows:

THANKS TO FERINGA

The Morganza Floodway finally is becoming an actuality. Engineers say it will be ready for efficient operation by January 1953.

This means, if Ol' Man River sticks to his routine, that New Orleans will have pretty close to gilt-edge protection by the time the Mississippi goes on another rampage. Remember how major flood threats have been spaced—1927, 1937, 1945, and 1950?

For this pleasant outlook, New Orleans owes a rising vote of thanks to Brig. Gen. Peter A. Feringa, president of the Mississippi River Commission.

General Feringa took office in January 1949. He saw the need for the Morganza, and went to work. In just over a year he has been successful in arranging for the completion of a needed job that has been years in the planning, or "maybe" stage.

Our gratitude is due also to DeWitt Pyburn, Louisiana's member of the Mississippi River Commission, and to Col. Charles G. Holle, the district engineer. They have done their part well.

Mr. Speaker, all of the people of south Louisiana join with the New Orleans

States in thanking General Feringa and the Corps of Engineers, the Congress of the United States and others who have aided in the beginning of this important project to Louisiana, and we trust that the Congress will make possible the completion of this great undertaking by 1953 as stated by the editorial.

If this project is completed as scheduled it will relieve the annual threat of devastating floods to south Louisiana as it will be possible to take care of all the water coming from the north, and therefore, it will also relieve all of the country north of the Atchafalaya Basin.

Inexcusable Strike

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 11, 1950:

INEXCUSABLE STRIKE

It would be hard to conceive of a strike with less merit, from the public standpoint, than that which has tied up four major railroads. The strike has been called by the Brotherhood of Locomotive Firemen and Enginemen to enforce demands for a second fireman on multiple-unit Diesel locomotives. That demand has twice been turned down by Presidential fact-finding boards on the very reasonable ground that there is little or no work for a second fireman to do. The crippling effects of the strike cannot yet be fully judged, but certainly they will be great. The New York Central, Pennsylvania, Santa Fe, and Southern are all trunkline railroads linking major cities; in many instances they afford the only direct route. A subsidiary effect of the walkout may be seen in the Chesapeake & Ohio order canceling passenger trains out of Washington because they must use Southern tracks.

From the standpoint of the firemen, the issue is twofold: Prestige and job security. There is an intense rivalry betwen the firemen and the Brotherhood of Locomotive Engineers, who also have asked for a second crewman on Diesels but have not pressed their claim. Jobwise, most of the rail unions fear the inroads of Dieselization—for Diesels can haul heavier trains faster over longer distances, and there is a threat of potential displacement of some crewmen.

The fear of fewer jobs is behind much union featherbedding, but the means used to combat that fear are reminiscent of the Luddites, who broke the machines that displaced them. A major factor in declining rail traffic is the high cost of transportation. Diesels give promise of reducing costs and attracting new traffic—but economies can easily be nullified by featherbedding. Yet, increased traffic is the only real guarantor of job security. Is it not time for rail unions and managements to get together and affirm their faith in an expanding economy, meanwhile making some provision for retraining and relocating temporarily displaced workers?

By striking only four lines, the union undoubtedly hopes to avoid the cry that a national emergency exists. But these lines are vital arteries to many parts of the country, and some sort of seizure may soon be necessary. Indeed, we think Congress ought to take another look at the Railway Labor Act, which is predicated on reasonable acceptance of the facts. Compulsory arbitration of rail disputes would have many undesirable ramifications, but it might be inescapable as a means of protecting the public interest—especially against a strike such as this one which seems to have resulted primarily from a union attempt to save face.

Local Public Health Units Bill

EXTENSION OF REMARKS
OF
HON. JOHN E. MILES
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MILES. Mr. Speaker, in recent weeks I have been in New Mexico recuperating from illness. During that time I had the opportunity to do considerable thinking about the health of the people of my State, as well as my own.

Although tremendous advances have been made in medicine in recent years through discovery and development of new methods, new drugs, and techniques, we have not seen a corresponding advance in bringing the benefit of medical care to all the people of this country. There is a great unfilled need in many States, particularly in the field of preventive care for the lower-income families of the Nation.

The Federal Public Health Service and that of the States was instituted to provide this service for our people who could not afford preventive care. The adequate protection of the Nation's health is a duty that our Government owes to all the people. Our present public-health systems for the most part are inadequate.

For 14 years various proposals to meet that need have been introduced in legislative form in Congress. Most of these measures, while meritorious in purpose, have attempted to encompass the entire field of medical and hospital care in a governmental program that would include all the people of the Nation.

I believe that our country should not adopt—and I feel that our people do not want—an all-engulfing, Government-controlled, health program such as the immense and costly British system.

There is a proposal before Congress at this time which I think will fulfill the needs of our people. It calls for an increase and improvement of public-health service in the States through increased Federal aid and cooperation to the States. This proposal is embodied in the Local Public Health Units Act, which has already been approved by the Senate and is awaiting action by the House of Representatives. I am hopeful the House will act on their measure, H. R. 5865, soon.

I should like to read to you a statement which explains just what the passage of the Local Public Health Units Act will mean to the people of New Mexico. This statement is a portion of a letter which I received from Mrs. O. E. Berninghaus, of Taos, N. Mex., who is legislative chairman of the New Mexico Congress of Parents and Teachers:

New Mexico residents would obtain practical assistance in meeting their public-health problems should the Congress enact the local public-health units bill, H. R. 5865, which was passed by the Senate last August, and now awaits favorable action by the House.

Through the Federal grant proposed in this bill, New Mexico would receive an estimated $100,000 to assist in financing local public-health services to benefit all her citizens.

At last report only three counties in New Mexico were sufficiently well staffed with public-health doctors, nurses, sanitarians, and clerks to meet standards recommended by the American Public Health Association for satisfactory local public-health service. This means that approximately 97 percent of our people in New Mexico lack basic public-health protection, even though as a State we have done relatively well in supporting public-health programs, for we rank twenty-first among States in this respect.

New Mexico's death rate for tuberculosis is 53.1 per 100,000, as against the national average of 30; and the State death rate for premature birth is 55.9, as against the national average of 26.7. Furthermore, diarrhea and enteritis, which are not among the 10 leading causes of death in the Nation, and so have ceased to be major national public-health problems, rank eighth among causes of death in New Mexico. Obviously, we cannot conquer public-health problems such as these without satisfactory full-time local public-health service.

Mr. Speaker, I urge you to support this measure. We do not need or want any federally controlled system of socialized medicine. I believe that this legislation, the Local Public Health Units Act, is the best answer to fulfillment of our Government's obligation to protect the health of our people.

The Eyes of the Nation Are Upon Illinois

REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MASON. Mr. Speaker, the eyes of the Nation are upon Illinois today, and upon the big-top circus that is being staged in Chicago. It is a colossal performance. It is attracting no less than 14 governors and 145 Members of Congress. It is to cost a minimum of $150,000 and Uncle Sam—that means the American taxpayers—will foot the bill, because all contributions to the performance—so the letters soliciting subscriptions said—"are deductible as business expenses on your income-tax returns."

Why the three-ringed political circus in Chicago today? The answer to that question is: Ex-Congressman Everett Dirksen, Republican nominee for the United States Senate, who as of today stands better than a 50–50 chance to unseat Majority Leader Senator SCOTT LUCAS, thereby spoiling President Truman's

chances for reelection in 1952. A Dirksen victory this fall would destroy the whole program of the New Deal or Fair Deal and do more than any other one thing to keep America safe from socialism.

The eyes of the Nation, therefore, will continue to be upon Illinois until after the November election.

Mr. Speaker, in support of my contention that the eyes of the Nation are upon Illinois, I include as a part of my remarks a newspaper article entitled "Dirksen and the Big Top," taken from the Christian Science Monitor, Saturday, May 13, 1950:

DIRKSEN AND THE BIG TOP

(By Max Gilstrap)

CHICAGO.—It's as plain to midwest GOP's as the trunk on an elephant's physiognomy.

Astute, hefty, Everett M. Dirksen, Republican nominee for United States Senator in Illinois, sketched it all out on a notebook. "There," he boomed, "is what's behind the Democrats' glittering three-ringed political circus here in Chicago."

He plunked down a big black dot to mark the big top. A mere peek into the tent is enough to tell who's cracking the whip. Only the ringmaster himself could fill the stands and keep three rings lively with the entire Cabinet (minus one), 145 Members of Congress and 14 governors.

It's colossal. It would make Ringling or Barnum twinge with envy and admiration. And Everett Dirksen believes he can claim part of the credit. Of course no self-respecting Democratic performer swinging "through the air with the greatest of ease" would agree with him. After all, what has a circus' main performance got to do with someone carrying water to GOP elephants on the outside?

The fact is, Mr. Dirksen has been doing his job so effectively that one of the circus stars, Senator Democratic Majority Leader Senator SCOTT W. LUCAS, of Illinois, may need all of the help he can get if he is to go on with the show after the fall elections.

Mr. Dirksen lowered his pencil to make six additional dots around the big top. "Look," he said, inscribing a circle to connect dots marked Ohio, Indiana, Missouri, Colorado, Iowa, and Wisconsin. "These are the important political side-shows to be held this fall which the big-top performance is supposed to influence. It's only logical that the Democrats would hold their big show here in the middle."

Mr. Dirksen and other Republicans think the outcome of the senatorial contest in Illinois could decide President Truman's fate if he runs as expected in 1952. A defeat of the Senate Democratic majority leader would deal the Democrats their biggest blow. It could start a trend, they say.

Tousle-haired Mr. Dirksen looks like the Republicans' best bet at the moment. His record as an alert, able Congressman before he resigned in 1949 was outstanding. He's a smooth orator. "Too smooth," a friend said; "he ought to stumble just once." But "stumbling," Mr. Dirksen explains, "becomes a difficult chore for a man who made 590 speeches before the primary election."

He uses all of the pyrotechnics—consciously or not. Out roll seductive tonal qualities. He holds a glass of water suspended preparatory to drinking as his audience sits in rapt, pin-dropped stillness. A sample of his oratory when he gets warmed up was demonstrated at the recent Young Republicans Midwest conference. He excoriated the approach of those in power with: "They propose to level off the farmer with the Brannan plan. They propose to level off professional men with the socialization of medicine. They propose to continue high spending, heavy taxes, and continuing deficits. They propose loans instead of tax relief for small business."

Mr. Dirksen, thus far, has been running against President Truman. His attitude toward Senator Lucas has been a sort of "oh well, after all." His first opportunity to swap verbal blows with the champ comes when he answers the President's Chicago speech 2 nights later at a convention of the Illinois Federation of Republican Women's Clubs in Springfield.

Meanwhile, Mr. Dirksen is bending an attentive ear to the big top. What goes on inside will determine his tactics. That is, all but one tactic, which he said remains constant. "I am determined," he explained, "to stand by principles I am willing to lose for."

Mr. McCORMACK. Mr. Speaker, I call the attention of the gentleman to the fact he is violating the rules of the House by mentioning a Member of the other body. I shall not make a point of order but simply direct his attention to that fact.

The SPEAKER. The time of the gentleman from Illinois has expired; otherwise the Chair might request the gentleman to speak in order.

An Explanation of the Lovre "Grass Roots" Farm Plan

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. LOVRE. Mr. Speaker, today is a great day for me because it climaxes months of efforts on my part to present to the Congress what I feel to be a sound and sensible program for agriculture. I have today introduced in the House of Representatives a self-financing, full parity, farmer-managed plan to stabilize the Nation's agricultural economy.

Mr. Speaker, into this bill has gone the experiences of a lifetime of residence in the great agricultural State of South Dakota. Into it has gone by knowledge of farmers and their problems and the problems which I, as a farm operator, have been confronted with through the years. Also into this plan has gone the advice and the counsel of thousands of actual dirt farmers with whom I have talked, together with the thoughtful opinions of men who have devoted years to a study of the problems of agriculture.

Mr. Speaker, I am proud to present this bill because I believe that it makes sense.

For years attempts have been made to solve the so-called farm problem.

All of these approaches have evolved around subsidies and grants and Government regulation to bolster farm prices and to control price-depressing surpluses. The result has been that billions of dollars have been expended without finding a permanent or sound solution to the complexities that are involved.

I have tried a new approach.

The bill I have introduced today provides for a program to be managed by the farmers themselves. They are its bosses through their elected county committees and State and national boards.

My plan is self-financing because the farmer himself would finance the disposal of surpluses.

The program which I advocate would assure the farmer of full parity of income because it establishes a means of collective bargaining in the farmer's market place. It thus assures a prosperous agriculture.

Mr. Speaker, before I explain this bill, I want to say that, in my opinion, legislation that provides for a prosperous agriculture is not simply legislation for the farmer alone. It is legislation for the benefit of the entire Nation, because history has shown that national income is usually just 7 times gross farm income. That is why stabilizing farm products at a proper level automatically becomes a floor under our national income, our wage level, business profits and the goods we consume. Thus if industry wants profits, if labor wants high wages and many jobs and if Government wants sufficient taxes to balance the budget and reduce the national debt, all of these groups should be among the first to insist upon fair and proper prices for what the farmer produces.

In previous attempts to deal with the price problems of agriculture, the solution has always been to dip into the coffers of the Federal Government and support prices through expenditures of tax money.

I say that it is foolish to believe that we can find a permanent solution to any problem by constantly running to the Federal Treasury for a monetary hypodermic.

I have offered a plan that for once solves an economic problem without using the taxpayers' hard earned dollars for subsidies and grants.

My plan has as its objectives: First, full self-financing, thus ending the use of tax money for subsidies; second, full parity prices at all times for normal domestic consumption; third, administration by the farmers themselves through elected county, State, and national committees; fourth, specific and real protection for the family-sized farmer; fifth, a two-price level the same as any other business uses; sixth, provision for distribution of food to needy people under a food-stamp plan; seventh, encouragement of nonfood commercial uses for surplus crops; eighth, exports on the world market coordinated with United States commitments; and ninth, a coordinated soil conservation program.

The measure I have offered simply makes use of the same old principle that the country merchant uses in the operation of his store. He offers the bulk of his goods to his customers at a price designed to give him a good profit. If he has any left over that he cannot sell, he holds a sale. This is exactly the principle of this "grass roots" farm program.

Here is the way my plan would work: Annually the National Farm Board would predict the amount of farm produce to be consumed in the United States and also that amount available for consumption. If the amount available were excessive—as defined in the bill—a refer-

endum would be held and if two-thirds or more of the producers voted in the affirmative the program would go into effect. This national parity quota—the predicted normal domestic consumption—would be apportioned to the State boards by the National Board and thence to the county committees and finally to the individual farmers on the basis of past production, present capacity and optimum production under good soil conservation practices. The farmer would be assured of full parity on his share of the national parity quota. If the farmer wished to sell more than his share of the national parity quota, he could purchase from his county committee additional marketing quotas. The proceeds received from the sale of these extra marketing quotas would be used by the National Board to finance the disposal of surplus.

Farm surpluses would be channeled into world trade in a manner consistent with the commitments of the United States or they might be distributed to the needy under a food-stamp plan, or through school-lunch programs. Another way that the Board would dispose of surpluses would be through development of new nonfood commercial uses for farm products.

If, at the end of the year, the National Board found that it had collected too much from the farmer for these surplus marketing quotas, the balance would be refunded. Sales of commodities would be governed by marketing certificates which would be controlled by the county committees. Trading certificates or the converting of them from grain to livestock or poultry products would be allowed. Comparative units for feed grains and pork, beef, poultry products, and so forth would be used. As an example, a farmer would be allowed to market his share of the national parity quota either as feed grain or converted into livestock or poultry, or combinations of both.

Full parity loans by the Commodity Credit Corporation would be allowed upon a farmer's quota and also on his surplus. However, to obtain a full parity loan on surplus he would be required to purchase additional marketing quotas from his county committee.

On-the-farm and existing commercial facilities would be used for storage. The National Board, under my bill, is directed to investigate the possibility of using private credit facilities to make insured loans to farmers.

Mr. Speaker, I would like to give you an example of this program in operation as it relates to the food-feed group. The food-feed group are such commodities as corn, wheat, barley, oats, rye, grain sorghums, hay, grass, and other products used for livestock feeding, and hogs, cattle, sheep, poultry, chicken eggs, and dairy products. Let us take the case of Farmer Jones. If the program were in effect the farmer-elected county committee would give Farmer Jones his quota for the year. This quota would come to him in such a form that he could market any or all of the items in the food-feed group. Let us assume that his quota is of an amount entitling him to sell 8,000 bushels of corn. It could also mean a comparable amount of the other items in the food-feed group.

We will assume that Farmer Jones elects to market his quota as corn; the parity price upon which at the time is $1.50 per bushel. He would have sufficient marketing certificates to sell his 8,000 bushels of corn at the market place. If that is all that Farmer Jones had produced, he would have to do nothing more than haul his 8,000 bushels of corn to market and collect the market price—which would be at least $1.50 per bushel.

But let us assume that Farmer Jones produced 9,000 bushels of corn, or 1,000 bushels more than his quota. If he wished to sell this additional 1,000 bushels, he would simply purchase from his county committee sufficient marketing quotas to sell this 1,000 bushels.

Let us assume that the county committee charged him 75 cents a bushel for additional marketing quotas. The National Board might use that 75 cents a bushel to finance a food-stamp plan or it might be used to develop new uses for corn or to export it.

The money the Board had left over from Farmer Jones' purchase of additional marketing quotas would be refunded.

Under the conditions I have just described, Farmer Jones would net at least $1.50 per bushel—full parity—for 8,000 bushels of corn, his share of the national parity quota. He would net only 75 cents per bushel for his 1,000 bushels which was the surplus.

Farmer Jones could also receive a full parity loan on his surplus corn after he had purchased additional marketing quotas.

Under this program acreage controls are eliminated. The farmer himself would control production. It is presumed that production of surplus would be discouraged because farmers would not receive as much for it and would cut down.

Mr. Speaker, I wish to stress one point that is important in dealing with any plan for agriculture. That is the role of the so-called family sized farmer. He is the backbone of America. I call your particular attention to the section of the bill which states:

> It is the prime purpose of this act to assure that existing family sized farms will continue to be independently operated, and to encourage the establishment of additional independent family sized farms.

Mr. Speaker, I believe that is a very important section because it is the little fellow who usually gets hit the hardest by any decline in prices. Therefore any farm plan must be predicated on the family sized operator.

Mr. Speaker, another important provision to which I respectfully call your attention is to the second title of the bill dealing with soil conservation. I believe we all recognize that the Nation's soil is its most valuable resource and realize that the Government must offer technical and financial assistance to promote its orderly development and conservation. I felt this of sufficient importance to clearly spell out the intention of the Congress and direct the National Board to make a thorough study and report its findings.

Through this grass-roots plan, the farmer would be assured of the level of income necessary to meet his cost of production and provide him with the things for himself and his family which he has a right to expect from life under a program managed by himself and his elected representatives without being constantly under the thumb of bureaucratic regimentation and control.

Furthermore, the rest of the American people could benefit from a prosperous agriculture without the financial burden of a heavy drain on the Treasury.

Mr. Speaker, there is an immediate problem which causes me a good deal of concern. That is the problem of the national debt and the financial program of the President which requires this country to engage in deficit spending. We have all sought ways of solving this problem. I call your attention to the fact that there is now between $4,000,000,000 and $7,000,000,000 tied up in farm surpluses—surpluses that are doing no one any good—but which are costing the taxpayers money every day. The plan that I offer provides a method of disposing of these surpluses in an orderly manner and preventing the reoccurrence of similar situations.

This feature alone would save enough tax money to balance the budget this year.

Mr. Speaker, consumers are not happy when they see warehouses bulging with surpluses, bought with their tax money, which are serving no useful purpose in the economic or humanitarian pattern of society. They cannot understand why they should be taxed for such a thing. My plan would solve this dilemma. It would lift the tax burden of useless surpluses from their backs and divert any excess production toward a more profitable and enjoyable life for all of us.

While I am speaking of consumers, I do want to make one point clear. That is that consumers do not gain from low farm prices. They always lose. At the bottom of the depression, although farm prices were disastrously low, the share of the consumers' total income required for food was the highest in a decade. This was because their total income was proportionately lower. In 1938, when farm prices dropped, consumers did not benefit from lower food prices. The shares of their income spent for food remained the same or was higher because their total income had declined in ratio with farm incomes. On the other hand, in 1943–44, although farm prices were at or above parity, the share of consumers' total income required for food was the lowest in history.

The basic reason for a farm program is to protect the farmer, who now is the one person in our modern economic pattern who has little or nothing to say about the prices he receives. He has to take what he can get. To overcome this stumbling block of our complex modern economic structure there must be a farm program. I believe I have a plan that will effectively serve the farmer and his

family and at the same time serve the best interests of the entire Nation.

In approaching any farm program we should strive for a solution that gives the highest degree of free enterprise and the fewest controls. It must be one that will react to the best interests of both producers and consumers. Furthermore, any farm program must be divorced from dependence upon the Federal Treasury for financing. Farmers do not like to be placed in this position and the howl that has gone up among consumers proves that they do not like it either. This resentment is proof of the dire necessity of a program free from the year-to-year whims of Congress and maneuvering by self-centered pressure groups.

As Joseph Davis, director of the Food Research Institute of Stanford University, some time ago said:

> America wants an agriculture that earns its way, instead of being continually and increasingly dependent upon Government props, vulnerable to political shifts, and forced to accept the accompanying regimentation. It wants an agriculture that, proud of its strength, competes in domestic and foreign markets on the basis of efficiency and fair play.

I believe that this program of agriculture should be based around 100 percent of parity for the farmer.

Mr. Speaker, here is why: Our economy can be compared to a large department store. If the store manager prices his products so law as, say, 75 percent of the needed price to operate properly—parity—he will land in the bankruptcy courts. In the same way, if the United States permits its price level to drop to 75 percent of parity, then we lose 25 percent of our ability to consume; we have 25 percent unemployment and national deficits which will eventually force us into bankruptcy.

With about 26,000,000 persons on the Nation's farms today, and millions more whose living comes directly or indirectly from farm production, it is apparent that prices must be stabilized toward a continual flow of new income from farm production. Price stabilization on these crops will also stabilize our credit dollar and the purchasing power of the wage earner.

Whether or not we like large expenditures for foreign aid, defense, and domestic programs, we have to face the hard, cold fact that we must have a high national income to finance such expenditures. I have pointed out that farm income and national income are closely related by a seven-times turn. Therefore, if we as a nation are to meet our obligations, we must have a high farm income.

Mr. Speaker, in these days of the cold war between the United States and Russia, it is desperately important to maintain American prosperity.

Joe Stalin is patiently waiting for an economic bust in this country as the opening crack in our cold-war defense. In the interests of peace we must keep farm income and national income high.

To maintain farm prosperity the farmer must have 100 percent of parity. In other words, he must make enough money so that he can buy what he needs and wants. Give him less than 100 percent parity—or buying power—and you give him that much less buying power.

It is my belief that it is impossible to operate the economy of the United States on a basis of full employment, a balanced national budget, and pay off the national debt unless an average of at least 100 percent of parity is maintained at the market place for agricultural production for domestic use.

Any compromise or influence that reduces farm prices below 100 percent of parity in the market place will reflect the same percentage in the loss of business volume and departure from full employment. The effect on the national income is just seven times what it is on farm incomes.

Mr. Speaker, when I was in South Dakota last fall between sessions of the Congress, I discussed this plan of mine with farmers in 32 round-table meetings. I received many good suggestions and I believe that the farmers who attended these meetings were in general agreement with my objectives.

Mr. Speaker, I do not say that this plan is the sole or only solution to the farm problem. I am positive, however, that its objectives are sound and that it is consistent with the free enterprise and pay-as-you-go system which we like to think of as being typical of the American way. I believe that the proposal I have submitted is worthy of careful consideration by all of us who are interested in sound economy for the farmer and continued prosperity in this great land of ours.

The First Dealer

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston (Mass.) Herald of May 12, 1950:

THE FIRST DEALER

During nearly 20 years of dealism, New and Fair, Americans have forgotten the man in the White House who started this deal business. He was Theodore Roosevelt and his deal was Square. He was a great leader, a great President, and a great Republican, even if he did almost break up the party.

Many of us have forgotten, too, that the later Roosevelt by no means held a monopoly among White House phrase makers. No monopoly either on phrases that could ring with conviction and truth. It was well known among his intimates that the late Franklin Roosevelt had a near hero worship admiration for his illustrious cousin of the opposite party. Throughout his public life there were many evidences of the T. R. influence, not the least of which was his having a deal of his own. They were both country squires of suburban New York. Backgrounds very similar, too. T. R. built a trophy room jutting out from his Sagamore Hill home. Later F. D. R. did the same at Hyde Park. The similarities were superficial or affected. Philosophically, their differences were fundamental.

Franklin Roosevelt could never have believed the following even if he might have said something similar. The words are those of T. R.:

"Business and labor are different sides of the same problem. It is impossible wisely to treat either without reference to the interests and duties of the other—and without reference to the fact that the interests of the general public, the commonwealth, are paramount to both" (1917).

"No republic can permanently exist when it becomes a republic of classes, where the man feels not the interest of the whole people, but the interest of the particular class to which he belongs, or fancies that he belongs, as being of prime importance" (1904).

"I wish to preach, not the doctrine of ignoble ease, but the doctrine of the strenuous life, the life of toil and effort, of labor and strife; to preach that highest form of success which comes, not to the man who desires mere easy peace, but to the man who does not shrink from danger, from hardship, or from bitter toil, and who out of these wins the splendid ultimate triumph" (1899).

"We have inherited and developed a superbly self-reliant individualism in this country. I most earnestly hope that it will not be lost, that it will never be exchanged for a deadening socialism. The only permanently beneficial way in which to help anyone is to help him to help himself; if either private charity, or governmental action, or any form of social expression destroys the individual's power of self-help, the gravest possible wrong is really done to the individual" (1907).

The Nation should be indebted to the Roosevelt Memorial Association for purchasing the Theodore Roosevelt home at Oyster Bay, N. Y., to make of it a national shrine to a man whose high qualities of leadership his country could well use again.

Habana Charter of International Trade Organization Will Not Work—It Is Socialism Applied to Foreign Trade

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an illuminating statement by Mr. Elvin H. Killheffer who attended the Habana Conference as a member of the United States delegation, appointed by the State Department. As a result of Mr. Killheffer's experience at the conference he takes a strong and positive stand against the bill now before the Foreign Affairs Committee. His statement follows:

I attended the Habana Conference as a member of the United States delegation in the capacity of an adviser.

The organizations for whom I speak believe in the concept of world-wide economic cooperation and precisely for that reason oppose the Habana charter. Cooperation means to work together for a common object or objective.

It is claimed that such genuine cooperation is provided in the charter. We deny the truth of that claim.

There can be no genuine cooperation when there is no real agreement as to objectives. That there was no real agreement at Habana is obvious to anyone reading the charter,

which records and provides for continuance of the disagreements.

Moreover, the record as written in the charter is in language so ambiguous as to make certain there will be more and serious disagreement in the future—and I may add that much of the ambiguity is not accidental.

The London draft in article 22, paragraph 4, provided the sure foundation for eventual agreement among members to assist them in developing policies. Even in the London draft it was buried and in later drafts much of it was deleted. This idea was all disregarded at Habana and an attempt was made to force immediate agreement on policies and rules. The attempt was premature because of the lack of agreement on fundamentals.

Looking for a moment at some principal objectives, we find—

Article 20 forbids the use of quota restrictions. That is the United States position. Almost no one else agreed unless and until continuance of the forbidden practice was assured under the exceptions provided in articles 21, 22, 23, and others.

Article 17 providing for continuous tariff reductions is the United States position. Tariff reduction for other countries is meaningless because they can continue the more restrictive quotas, exchange controls, etc.

Article 17 provides for elimination of preferential tariffs. They are not eliminated but are continued under the exceptions of article 16 and new preferences are provided for in article 15.

United States opposes discriminatory practices. The charter in article 23 and elsewhere continues them.

The president of the British Board of Trade told Commons that Britain will use the alternatives provided in GATT and ITO "where by discriminations they can get additional imports." Delegates at Habana declared they would "give due regard" to the principle of nondiscrimination but would practice discrimination nevertheless.

United States and several others, notably Belgium, Sweden, and Switzerland, wanted equitable provisions protecting foreign investment. Other nations did not agree, hence article 12 written by the Australians. Why the United States did not stand and fight for its principles is a mystery to me. Certainly we will never be in a stronger position than when the whole world looks to us for financial aid.

Foreign investment provisions of the charter are written from the point of view of the recipient country. The protection afforded is to such recipient. In the opinion of those intimately concerned, the inducement and protection afforded for the investor is not adequate. The provision begins:

"The members recognize that international investment, both public and private, can be of great value in promoting" (art. 12–1 (a)).

The words "both public and private" are significant. With investment as with facilities, the mere possibility of their availability through government on less exacting terms and perhaps politically motivated, almost precludes satisfactory private agreements.

The recipient country has the right to expropriate or nationalize the investment now or in the future (art. 12–1 (c) (iii)). Resistance was determined and successful to any provision for fair and prompt compensation or expeditious transfer of funds in case of expropriation. To be sure there is provision that members by prior negotiation may secure more favorable terms. But that course is open without a charter.

Remember that members are governments. The trend is clear. If others want controlled economies, that is their privilege, but there is no good reason why we should adopt their concepts or obligate ourselves to provide the resources for their experiments.

The United States is opposed to cartels and chapter V embodies this but with dubious agreement by many delegations, particularly the United Kingdom who fought to prevent more expeditious treatment of complaints.

Moreover, chapter VI embodies the British ideas of intergovernmental commodity cartels. We have some familiarity with these on commodities like diamonds, tin, cocoa, sisal, etc.

We could say the charter is inconsistent in its creation in government hands and in more complete form what it holds to be iniquitous in private hands in any form. Yet the inconsistency resolves itself when we recognize the concept of world wide planned economy which is here outlined.

The United States does not agree with this concept. We know that private enterprise has produced more for more people than any other system ever tried.

The record I have cited is a record of disagreement. In no instance is there genuine agreement.

The most serious disagreement of all concerns a planned versus a free economy. The charter is a catalog of what governments will do. The members of the proposed international bureaucracy called ITO are governments. The charter recognizes state controls and ownership and state trading. This, in turn, requires state planning and all of this is state socialism the antithesis of private enterprise which we in the United States believe in.

There is provision for a whole series of such intergovernmental commodity agreements originally limited to primary commodities in burdensome surplus. That limitation has been removed (art. 56–3). Among the objectives of such agreements is this: "to provide, during the period which may be necessary a framework for the consideration and development of measures which have as their purpose economic adjustments designed to promote the expansion of consumption or a shift of resources and manpower out of overexpanded industries into new and productive occupations, including as far as possible in appropriate cases, the development of secondary industries based upon domestic production of primary commodities;" (art. 57 (b)).

Here we have government agreements which contemplate measures involving shifts of resources and manpower, as well as deciding which productions are overexpanded. It might involve cotton, wheat, lard, tobacco, or potatoes. In making such an agreement, provision is to be made so that there shall be increasing opportunities to supply markets from sources from which such requirements can be supplied in the most effective and economic manner (art. 63 (c)).

It is said that the commodity agreement is the framework or transitory measure affording time for the members to study the problem and arrange to take individual remedial action, hence there is no central planning or managing. That argument is not convincing. Members will study the problem as an ITO group. Assume that a cartel is created. The charter provides for a commodity council (art. 64–1), on which the interested members have representation (art. 64–2). The decisions taken by this council are obviously international and not national. Consuming countries shall also have a voice in the decisions on matters of substance. Their vote shall be equal to that of the producers who want to export the commodity (art. 63 (b)).

The decisions on the vital matters to which I have referred are certainly matters of substance. If then it was decided that cotton is produced most economically by India or Brazil or China, and that United States manpower should be shifted to something else, the United States might find itself a magnificent minority of one. And the decision would not be made by the United States. They would be made by this international ITO.

This is definitely a planned and managed economy. If you still doubt it, look at some of the other objective, such as developing natural resources and the expansion of production of primary commodities (art. 57–(d) (e)). These are not functions of government, national or international, in a private enterprise economy.

I want to call particular attention to a disagreement masquerading as agreement that is of vital interest to our industry.

You gentlemen may recall that it was a Democratic Congress that had the wisdom to recognize the key importance of the chemical industry in the national economy and security. In encouraging the building and growth of such industry it was determined to provide adequate tariffs. World conditions at that time were unsettled and values in foreign lands difficult or impossible to reliably determine. In order to overcome that difficulty and obtain an actual value at which the goods were sold in the ordinary course of trade under fully competitive conditions, American selling price was made the basis for valuation in fixing duties on competitive imports.

Despite charges to the contrary this worked out to automatically reduce the amount of duty every time prices were reduced through increased efficiency and the competition among the many American producers. And the Treasury could and did regularly inspect the books of the American companies to see that the prices were accurately given. Obviously, such checks of foreign records have been and are impossible.

The Habana charter forbids the use of such a value which is an actual one and would substitute as actual value that is defined in article 3 (b):

"'Actual value' should be the price at which, at a time and place determined by the legislation of the country of importation, and in the ordinary course of trade, such or like merchandise is sold or offered for sale under fully competitive conditions."

But this is no agreement at all, for different countries may designate different times and places. The words "at a time and place determined by the legislation of the country of importation" are susceptible of more than one meaning, although each in complete good faith. One country can designate the time and place as the time and port of export. This in essence is what we call foreign value. Another nation can designate time and place of import, thus arriving at some form of domestic value. This is not agreement. It is not a reliable definition, for it can and will be interpreted in opposite ways.

We should not be unmindful of the serious disagreements to come. There is a wide area of decision and interpretation inevitably to be made by the organization. Some are decisions specifically delegated, including releases from or waivers of obligations. The far greater number will be necessitated by ambiguity in language of the charter. It has been said in effect that much of this was intentional, that the charter is only a framework within which the substance will be developed through establishment of precedents and the growth of a body of cases. If this is the case, who will develop this substance? Obviously, it would be the ITO, in which the United States has one vote. It is fantastic to expect the United States to sign such a blank check.

If ITO, through its decisions, will create a body of new international law, it will in effect have legislative powers. That very definitely is an invasion of sovereignty. Moreover it would mean acceptance of administrative law in the international sphere. More government of men—less government under law.

The obligations of the charter are terribly one-sided now because of the exceptions

and escapes for other countries. And if new matters of substance could be introduced through the procedure of interpretation, the charter should be rejected forthwith. Unfortunately, just such procedure was followed at the recent meeting of the Interim Commission in Geneva. By means of interpretation, the concept of monetary compensation was introduced. The charter provides that where the interests of a member are prejudiced, only retaliatory measures for their redress should be resorted to, such as withdrawal of concessions. While the Australian delegate pointed out that the charter was being amended substantively through interpretation, the United States delegate agreed with the interpretation. You can guess the probable target for monetary damages.

A fundamental disagreement running through the whole charter cannot be stated too often. It is the conflict between the doctrines of State socialism and the professed objective of freer trade and exchange among nations. Greater government controls are the very essence of State socialism just as they are the antithesis of freedom and private enterprise.

In the Habana charter the doctrines of State socialism are paramount.

The charter concerns itself greatly with production and employment. For example, article 3 states that "Each member shall take action designed to achieve and maintain full and productive employment." Thus full employment would become an end in itself. This pledge would undoubtedly be accomplished by unbalancing the budget, inflating the currency and imposing exchange controls. But each of these in turn would lead to contraction rather than expansion of international trade which is the supposed purpose of the charter.

Under this chapter the United States would be required not only to take action to achieve and maintain full employment within its own territory, but also to cooperate with other nations through the Economic and Social Council of the United Nations, on such international measures as might be determined desirable to produce the same full employment in all member countries. In view of the widely divergent opinions expressed by Members of the Congress at the time it was considering the Murray full-employment bill of 1945 and the Employment Act of 1946, and the unwillingness of Congress to legislate full employment within the United States, we certainly should not now accept any charter which would commit the United States to international full employment.

If a member's ability to achieve full employment without resort to trade restrictions is handicapped by a persistent maladjustment in balance of payments involving other members, such members respectively shall make full contribution and take appropriate action to correct the situation (art. 4–1). These vague terms must be interpreted by ITO. In a balance of payments situation like that between the United Kingdom and the United States, what is "appropriate action" by one and "full contribution" by the other? Even if clearly defined, it presupposes planned international economy coextensive with the commitments.

The provisions of the charter on economic development are duplications of what was promised as the function of the International Bank for reconstruction and Economic Development. The more recent point 4 attempts to deal with the same thing.

Of course the bank has tried to make sound loans. The authors of the charter provisions are more open handed.

The facilities for economic development and reconstruction are listed as capital funds, materials, modern equipment, technology and technical and managerial skills. Then this obligation:

"Members shall cooperate in providing or arranging for the provision of such facilities within the limits of their power" (art. 11–1 (a)).

These are hardly trivial obligations. What is the limit of the power of government? The facilities described are in the United States privately owned and operated, the very essence of private enterprise.

While the Habana charter is submitted for approval as an executive agreement, I predict that it will be regarded both abroad and in the United States for what it is—namely, a treaty. And as a treaty, it will be the supreme law in the United States and yet no individual has any legal recourse against the decree laws of this international bureaucracy. This is contrary to the rights guaranteed American citizens under the Constitution.

Some proponents advocate ratification, bad as it is, and then improve it by amendment. We say that it is wholly unrealistic to expect to alter a contract in your favor after you have signed it.

It is also suggested that the United States can later withdraw if it is not satisfied. That is not only a poor but also a very dangerous suggestion. Political considerations might make such a step impossible.

Proponents of the Habana charter are still talking in the attractive generalities of the prospectus. But the charter is the contract which either does or does not implement those high hopes. And I say that a careful study of the document shows that it does not do so.

We ask that the Habana charter be rejected as the first necessary step toward a good charter.

Our real choice is between an effort to obtain a charter of limited scope on which there would be genuine agreement and the Habana charter which embodies ideas and practices of state socialism which we in the United States do not want and are under no compulsion to accept.

It is our opinion that if we negotiated a new charter returning to the concept of an organization initially having only consultative and advisory functions, the very exercise of these functions could in time lead to genuine agreement on principles and on the rules stemming from them. But the agreed rules should then be submitted for approval to the legislative bodies of the members. Laws would then be made in orthodox fashion and unless so ratified by legislatures would not become law.

I realize that this is too slow for the world planners, but on the other hand, a mighty oak is not created in a few months or years. Most of the greatest successes any of us know grew from very modest beginnings.

How Safe Is America?

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me before the Nebraska State Medical Association, Lincoln, Nebr., on Wednesday, May 3, 1950:

HOW SAFE IS AMERICA?

Members of the Nebraska State Medical Association, it is a pleasure to be back in Nebraska, speaking before the association which honored me as their president in 1939. After 8 years in Congress, I am about convinced that I know more about the practice of medicine and surgery than I do about the practice of being a Congressman. It is interesting work, because in Congress you are giving service to 325,000 people, and this is not unlike the work you physicians do for your patients, except in Congress we are trying to relieve the economic and social ills of our Government and the world.

It was 25 years ago, this month, that I first gave a talk before the Nebraska State medical society on the subject of Uncle Sam practices medicine. I do not propose to explore this subject at this time. I prefer to group a few remarks around the subject, How Safe Is America? I wish my medical colleagues would remember that in this frustrated and troubled world, we must act, think, and believe in America. You ought to be either a Republican or a Democrat, or a Socialist if you desire, and you ought to vote, but first you ought to be an American. I trust you will not interpret my remarks as being partisan. I merely wish to point out some troubled spots in Government.

It is of passing interest that when I gave this paper 25 years ago, the Federal Government was then spending between three and four million dollars on public health work. At that time we had less than 500,000 on the Federal payroll; our debt was about $16,000,000,000. Today there are more than 2,000,000 working for the Federal Government, and we have a debt of about $260,000,000,000. It cost us about $5,000,000,000 to run all functions of Government 25 years ago, while today it is more than $43,000,000,000, plus a $7,000,000,000 deficit. Indeed the present administration, in 4½ peacetime years, has spent more than 32 Presidents spent in the first 152 years of our existence. We also went through several wars and depressions during our early existence. You should remember that the party in power has a majority of 90 in this Eighty-first Congress. They have the votes to put over anything the administration desires.

I remember when I gave my paper, Uncle Sam Practices Medicine, Dr. Young, who was then at Gering, and later moved to California, as well as Dr. Stark, of Norfolk, both of whom have gone over the Great Divide, suggested that I was a little too pessimistic—that the Government would never go in for caring for people on the scale that I mentioned. At that time none of us ever thought it would reach the spending of this year.

Let's take a look presently at the spending by Government for various forms of medicine and public health. It is more than $3,000,000,000 this year. Of the $3,000,000,000 two billion is Federal money and one billion is State funds. Those entitled to some part of this medical care total about one-sixth of the Nation's population. Active military forces are not included.

The great bulk of State medicine is for 18,250,000 veterans who are entitled to full care if they have service-connected disability. On March 1, 1950, there were 133 veterans hospitals in the United States, with 107,000 beds. At that time there were 99,000 veterans in these hospitals. It was estimated that 63 percent were there because of non-service-connected disabilities. The veteran with a non-service-connected disability must swear he is unable to defray the cost of private hospital care. The remaining six or seven million fall into special classes, such as the 2,000,000 Federal employees, 400,000 Indians and Eskimos; and 700,000 mental cases which generally are a State obligation.

There are 40 Federal agencies which now give some medical assistance to employees and the citizens. There are nearly 8,000 doctors that work full time on the Federal and State payrolls. The Veterans' Administration, in 1949, paid $16,500,000 to private doctors for the care of veterans. About 75,000 private doctors have indicated a willingness to take part in the veterans program

outside of veterans hospitals. Indeed it has been amazing how Federal public health projects grow. The appropriation bill for this year shows a sizable increase for all forms of public health work. It includes poliomyelitis, heart disease, rheumatism, maternal and child health and many new research programs.

There are several measures before Congress, which in my opinion, are a part of socialized medicine. I refer to the examination and treatment of all children in public schools regardless of ability to pay. The social security bill has a disability clause which is socialistic. There is another measure which gives aid to medical schools, medical students, dentists and nurses. We also have the Hill-Burton bill, which has for its purpose making Federal funds available in order to provide hospitals in isolated areas. There is $75,000,000 recommended by the committee. This has been raised to $150,000,000. In my opinion it is time to fold up this program. Many communities are in a better position to build their own hospitals without Government aid. In my district, the cities of Gothenburg, Chappell and Bridgeport have proceeded without Federal aid. Our Government is heavily in debt. We must stop looking to the Federal Government for assistance.

Now it would seem on the surface, that these preliminary remarks might not fit in too well with my subject on how safe is America. I have merely mentioned the growth of the Federal Government to bring home to you the fact that as Federal Government becomes bigger and bigger, you and I as citizens become smaller and smaller. The Government, instead of being our servant, can well become our master. When that happens you lose security and freedom. The course Government is now following may well mean that you can no longer live your life as you see fit, but you will be under the complete control of Government and the alien ideology which will direct your activities from the cradle to the grave.

When we consider how safe is America, we must consider the road which the Government is now following. We have several socialistic programs before the Congress. Of course, in your mind, socialized medicine leads the way. There is still much interest in this program. Mr. Oscar Ewing, and the administration, are plugging hard along, with the left wing organizations to get the program started. It is still very much alive, even though Dr. Henderson, president of the American Medical Association thinks it is not an issue in 1950. I am certain that the question of socialized medicine will be an issue in every congressional district. My opponent in the Fourth Congressional District has already made it an issue.

There is the Brannan Farm Program which is of unquestionable political interest and questionable economic soundness. It would bring about a complete regimentation and control of agriculture. If you doubt it, you should read the 15 pages of penalties in this 87-page bill.

There is socialized housing, and the Spence bill, which is nothing more than a superduper OPA, with all the trimmings.

I want to impress upon my medical colleagues, that you ought to be interested in all phases of legislation which would lead to further regimentation and socialistic trends. You should not forget that there are other measures which are just as socialistic as socialized medicine, and when once adopted, the country will find it difficult to retrace its steps.

My colleagues complain that doctors are not interested in politics and fail to help their friends. Good government goes farther than just an interest in socialized medicine. You have one Member of the Nebraska delegation who, it seems, is for compulsory health insurance. Elect 25 more members like him to the House and I predict the whole socialized program of the administration will be adopted. You doctors better wake up. You had better take an interest in good government and support your friends. You can be a powerful influence in every community.

When we talk about how safe is America, you naturally wonder about the spending of government. I have told you about the amount spent in 4½ peacetime years, more than $190,000,000,000. It is your money. You pay the taxes. The two Frankenstein monsters facing the public today are increased taxes and inflation. Either one of these can destroy the American economy.

In my humble opinion, our Government, banks, trust and insurance companies, who are unofficial custodians of the people's money, should have as their first concern, sound currency. If we continue on the road of reckless spending, with deficits as a way of life, it can lead but to one conclusion, inflation and increased taxes. There are bills now pending before legislative committees which, if passed by Congress, would raise the Federal budget more than $20,000,000,000.

In further exploring the subject of how safe is America, I wish to examine with you the number of subversives and security risks which are now, or have been, employed in the Federal Government. Mr. Peurifoy, the Under Secretary of State, testified before a Senate Committee recently that they found it necessary to fire or let resign 257 employees last year, and that 91 of this group were homosexuals. The Police Department of the District of Columbia estimates that there are about 5,000 homosexuals in the city and 75 percent are employed by government.

I discuss this subject of homosexuality with some timidity. In looking over the literature on this topic, I find that it is seldom approached, even by the psychiatrist, and, being first a surgeon, and second a politician, I find it difficult to explore. I will direct my remarks to their employment in government, plus a brief review of this problem.

Homosexuality can be defined as the attraction for individuals of the same sex to each other. The subject is as old as the human race. It is mentioned in the Bible, was recognized by the ancient Greeks, and is practiced extensively among the Orientals. It is important to note at this point that the Russians and the Orientals still look upon the practice with favor.

Mr. Goering of German fame and General Roehn, who were executed, kept the list of homosexuals for Germany. They also had a list of these individuals in the State, Commerce, and other Departments of our Government. The Russians undoubtedly have similar lists. These espionage agents have found it rather easy to send their homosexuals here and contact their kind in sensitive departments of our Government. Blackmail and many other schemes are used to gather secret information.

The homosexual is often a man of considerable intellect and ability. It is found that the cycle of these individuals' homosexual desires follow the cycle closely patterned to the menstrual period of women. There may be 3 or 4 days in each month that this homosexual's instincts break down and drive the individual into abnormal fields of sexual practice. It has been found that if the individual can be given large doses of sedatives and other treatments during this sensitive cycle, that he may escape performing acts of homosexuality.

The problem of sexual maladjustments are most urgent and still far from a solution. In the Army, several thousand men were discharged because of homosexuality. When caught in the act, these men were generally discharged without honor, which means the loss of citizenship and the right to vote, or to belong to any organization of veterans, or to receive many of the rewards which are granted to those who have served honorably. This is most serious. Many of the homosexuals failed to survive the rigors of warfare and the constant intimate association with men. They were painfully aware of their limitations. The majority were unable to conceal their tendencies and were eventually eliminated with disgrace, and a stigma to themselves, their families, and friends.

Jealousy is never encountered in true friendships. Never is the bond which unites two friends such that the acquisition of a new friend by one is regarded angrily by the other; but quite otherwise is the life among homosexuals. Here jealousy reigns supreme. It is similar to the love of a boy for a girl. Male homosexuals will not share their fairy with anybody. His anger is unlimited for anyone who seeks to possess the object of his love.

The sexual attraction exercised by a man on another male may be apparent in many ways. The homosexual will become excited by the mere presence of some man in a public place. They will often approach that man, even though he is a stranger. On streetcars, intimate advances are made. A taxi driver often finds his fare making indiscreet advances. The true homosexual seeks any kind of contact with the male he adores. He has no sensation whatever in the presence of the most beautiful and seductive female. Her amorous advances to him may even be repulsive.

The Bible apprises us of the fact that when the inhabitants of Sodom consorted physically with the angels who descended to the pious Lot, God, in His wrath, entirely destroyed the city. From here comes the origin of the expression "sodomy." Sodomy is used to designate a certain type of sexual pervert and homosexual.

In the Third Book of Moses (Leviticus), the Lord said to the stranger, "If man lay with mankind as he lieth with a woman, both of them have committed an abomination. They shall surely be put to death and their blood shall be upon them."

Perversion is found at all levels of society. Perhaps more frequently among the higher levels where nervousness, unhappiness, and leisure time leads to vices.

The homosexual takes on many indiscretions. He has a tendency to lie and to lie on all occasions. It is a part of their defense.

Two years ago, as chairman of the Committee on Public Health in the District of Columbia, I sponsored legislation directed at a new legal approach to the sex-pervert problem. There were so many sex crimes in Washington, our parks and loafing places were no longer safe for the citizen. The police blotters of Washington contain the names of many individuals, some prominent, who are repeatedly brought to court for actions of sex perversion. Most of them merely post a $25 collateral and are never brought to trial. Under that law these people may be treated as medical problems, and can receive treatment at the discretion of the court in one of the hospitals of the city. The results are encouraging.

Homosexuals are like birds of a feather—they flock together. Washington has several restaurants and dwelling places in palatial surroundings where these people worship at the flesh pots and cesspools of immoral sex demonstration. Recently the moral squad arrested 40 men in one house, worshiping at the flesh pots of iniquity.

In some respects they are more to be pitied than condemned. Some have a pathologic mind. They might be compared to the kleptomaniac, who must steal, or the pyromaniac, who sets a fire. Seldom a week passes but what Washington and the surrounding territory has several atrocious crimes closely related to sex emotions. It is only recently that the press has given some

freedom to the open discussion of the topic. The subject is still taboo among family newspapers.

It does seem to me that if we are to keep America safe this type of individual ought not to be permitted to serve in key positions of government. The Congress is writing into several appropriation bills a clause which will permit the secretary of a department to dismiss individuals who might be security risks. It always includes homosexuals.

In considering how safe is America we must also look at the report of J. Edgar Hoover and the FBI. They have a list of 54,174 known Communists who are in every State of our Union. These men possess a fanatic loyalty to their masters abroad. They have boasted that for every member of the party they have 10 willing and subservient stooges to carry on the party program. That would mean they have 544,000 people in the United States who support the Communist philosophy.

I have been asked about the McCarthy case. While I believe the Senator has old lists and named individuals who are not now in the employ of the State Department, there are Communists still in Government. It must be remembered that these same individuals, who are now trying to put McCARTHY in a pillory, were the same ones who defended the convicted Mr. Hiss and the 11 Communists in New York. While McCARTHY may have done some temporary damage to the State Department, it is absolutely necessary to expel these communistic skunks from Government positions. Communism is a blue-hued, cancerous growth that has for its purpose the overthrow of our Government.

Last week, Mr. Budenz, who at one time was one of the top Communists in this country, testified before a Senate committee, stating he was giving the FBI an additional 400 names of known Communists in the United States—some still employed by Government. It was the testimony of this same Mr. Budenz that convicted the 11 Communists in New York City.

Indeed, communism has grown since the end of World War II. At that time the Russians controlled about 300,000,000 people. Today it is nearly 2,000,000,000 people.

J. Edgar Hoover reported that while they had examined some 2,000,000 Federal loyalty forms, they had found only 11,403 marked for further investigation and considered subversives. This is rather a small number among 2,000,000 employees.

Mr. Hoover further reported that the Communists have intensified their program. There is still a great danger facing our country from activities of the subversives, who are trying to overthrow our Government.

These people find ways and means of entering the United States legally and illegally. There are more than 3,000,000 aliens in the country today. They come in as stowaways on vessels. They come in over our unprotected borders on the North and South. Last year the Immigration Service picked up and sent back 259,400 who had entered the country illegally from Mexico.

Mr. Hoover reported that there were 4,000 dangerous Communists in the country who ought to be deported. Approximately 100, who are faithful to their foreign ideology have been marked for deportation, but it has been impossible to get permission to ship them back behind the iron curtain. They are permited to roam our country, spewing their venom of hate for all to see and hear. Even the 11 Communists have asked the court for permission to go on a lecture tour. I trust the court refuses the request. Just how safe can our country be under these conditions?

The foreign agents are active in our country today seeking and getting information on atomic research, radar, jet propulsion, guided missiles, and securing topographical maps of our coastal lines, airports, and military landing fields. They gather information on biological warfare and on our industrial and military resources. They work day and night to secure our know-how and send it to the iron-curtain countries.

One of the greatest dangers of communism is the ability of its agents to infiltrate and corrupt various spheres of American life. They attempt to exploit youth, veterans, civil rights, foreign groups, educational and church organizations. They have the greatest propaganda machine of all time.

Mr. Hoover reports they are developing an underground apparatus which will decentralize their operations. They have tripled their Communist Party groups. They no longer carry cards. They have gone underground. These same Communists, pinks, and fellow travelers are trying to destroy the FBI. We can be thankful that we have men like J. Edgar Hoover and his group to help protect this country.

In considering, How safe is America? we must take into consideration that we are spending more than $13,000,000,000 at home in keeping prepared. We are spending another $5,000,000,000 on the Marshall plan and other foreign-aid programs. It should be remembered that 35 cents out of your tax dollar goes for defense and 18 cents for different foreign-aid programs.

I believe we have the top scientists, and the industrial know-how to keep far ahead in technical and scientific developments. The production of the atomic and hydrogen bombs is a reality. The recent development of jet planes, guided missiles, virus warfare and other, yet unpublished and still restricted, work should give us a comfortable feeling that those in charge of our Nation's defense are not asleep at the switch. Naturally, one is disturbed when he finds the President of the United States giving out optimistic reports on foreign affairs, and yet his advisers in the Defense Department informing Congress that conditions are worse now than at any time in the history of our country. They even talk of an early attack launched by Russia. Is it propaganda for more appropriations, or is the condition really serious? Certainly the President and his advisers are getting their information from different sources.

I am convinced that if the American people had knowledge of all of the new inventions and developments, not only for aggressive, but defensive warfare, they would have a comfortable feeling that the Congress and our military men are not leaving a stone unturned to protect our country. The awful destruction of the hydrogen bomb, plus virus warfare are capable of completely destroying civilization. It is my sincere hope that the leaders of the world may find it possible to sit down around a conference table and outlaw these weapons of mass destruction.

Eleven years ago, before this last World War became a reality, in my acceptance address as your president, I said that war then seemed imminent and that physicians must hold themselves in readiness to answer the call to our colors. War did come and I am proud that my profession turned in such a brilliant record in this great conflict.

Some dastardly act by the iron-curtain countries could precipitate another conflict at any time. The medical profession, I am sure, will not be found wanting.

I must also remind you that America has grown great because, fundamentally, we are a Christian Nation—a praying people. Our country has more than 266,000 churches, cathedrals, and synagogues, with more than 70,000,000 members. This brings a strength to a nation that cannot be measured in terms of dollars or material wealth. A Christian nation is a powerful nation.

We also have the know-how of production. Our scientific attainments stand out as a bright, shining beacon, pointing always to progress.

I would remind you that these great developments have been possible because free people, with free minds, have been able to work under our enterprise system. Adopt all the socialistic schemes that are presently on the trestle board of government and you will find that free enterprise—the will of free people to do things for themselves—will be greatly restricted or destroyed.

The medical profession has made more progress in the last two decades than it has made in the previous two centuries. Disease is being conquered. Research is probing the unknown—asking questions and finding answers. Life is being prolonged. Your profession is a part of this great human drama, marching down the road of progress. If we all work together—the citizen and the Government—we can build, not only here at home, but in the rest of the world, a new society which our children will enjoy and cherish because we of this generation have given our best.

Decisions on Southeast Asia

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 15, 1950, entitled "Decisions on Southeast Asia":

DECISIONS ON SOUTHEAST ASIA

The communiqué of the Foreign Ministers of Great Britain, France, and the United States, issued at the conclusion of their conference on Saturday night, is necessarily general in its terms. In respect to the critical area of southeast Asia, whose problems were explored, there is no detailed plan of action given. Possibly that is because of the generality of the declaration and possibly also because there has not yet been formulated one single unified plan to be implemented. Concrete actions, such as the proposed United States aid for Indochina and Thailand and British reinforcement in Malaya, are still not welded together.

For that reason the communiqué will be explored for every sign of agreement in policy, since it is upon the basis of such an agreement that a workable single program can be evolved. According to the communiqué, there was a substantial area of agreement and several specific decisions were reached. They represent a major step forward in dealing with the area:

1. The three western powers agree to encourage and support the newly independent states in the region in their defense against the threat of Communist expansion. This obviously refers to Burma, Indonesia, and the Philippines and certainly in the French view would extend also to the Bao Dai government in Indochina and the new States of Laos and Cambodia. The promise of United States assistance seems to indicate that this country concurs in the French view.

2. The western powers are agreed upon the desirability of regional collaboration to develop the area and to raise standards of living. All governments in the area should work toward that end, it was stated, and

that presumably includes those not fully independent, such as Malaya and Indochina.

3. There was an interchange of information on steps being taken in the discharge of responsibilities. Such an interchange, if continued, can be of the utmost importance and without it adequate planning is impossible.

4. It was decided to coordinate efforts to prevent gun running into the area. An obviously sensible agreement.

5. It was agreed to intensify propaganda efforts directed against Communist imperialism and its false use of genuine nationalist feeling. There is a lot of catching up to be done on this score and some of the informational activity might well be exerted in the western powers themselves as well as in southeast Asia.

These areas of agreement and these decisions do not in themselves constitute a sufficient basis for a vigorous policy of the containment of aggressive communism, nor do they, as they stand, make a solid commitment to defend the area. They do, however, recognize the danger that exists and take some of the steps toward meeting it. They are positive, and not negative, in their character. Upon them much can be built, but there is much building to do and still further foundations to be laid for it.

The Biggest Family Party

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I insert herewith an editorial in the New York Herald Tribune of Saturday, May 6, 1950, entitled "The Biggest Family Party." There were 3,015 in attendance at the dinner held by the New York State Republican Committee which was the second largest dinner ever held at the Waldorf, and the largest political dinner held in the State of New York. It represents a resurgence of the Republican Party in New York.

My colleague, Chairman PFEIFFER, and Vice Chairman Jane Todd did a magnificent job in taking care of the enormous outpouring of Republicans. The large ballroom and the two mezzanine floors as well as three large dinner rooms were all occupied. The dinner was followed by an address by Governor Thomas E. Dewey whose speech on that occasion, inserted in the CONGRESSIONAL RECORD by Senator IVES on Monday, May 8, 1950, capped the climax:

The editorial is as follows:

THE BIGGEST FAMILY PARTY

A remarkable air not only of enthusiasm but of confidence infused the State Republicans as they sat down on Thursday to the biggest family dinner ever held by any political party in our State. Here were the accents of vigor, youth, imagination and, above all, of solid accomplishment. The Governor gave it to them hot. But it was not so much the characteristic sizzling sarcasm which he flung at the Democrats that awoke the response, as the long catalog of concrete achievements—housing, highways, hospitals, disability benefits, educational aids, job opportunity, all provided on a balanced budget with tax rates still held within reasonable limits. This is efficient government in action—efficient government, under an intelligent guiding head, dealing, without too much worry over theory, with the concrete problems of a community as they arise.

None of the biting jibes which Mr. Dewey tossed at the opposition was as effective as the simple and patent contrast between the way things are done in Albany and the way they are done—or too often not done—at the city hall. At Albany for some years we have seen clear and concrete policies pursued with energy and clarity of purpose to definite ends; we have seen at city hall a welter of conflicting political calculation, policies pursued by fits, starts, back-trackings and sudden inspiration, with results that have been sometimes good and sometimes lamentable. New Yorkers, who are dues-paying members of both institutions, can take their choice between the two methods of government. But the Republicans of this State have a record of effective service behind them which entitles them to all the confidence with which they face both the future and their fellow citizens.

So much for the problems of New York. Those of the Nation always loom behind every political development in the most populous and influential State. But the Republican role in the larger stage is bound to turn, in the end, upon the success with which the party demonstrates its competence in those areas where it is in control. Governor Dewey has devoted himself to showing that within the framework of its principles the party can, where it is in power, render efficient service to all the people and provide more of genuine welfare than is actually supplied by the doctrinaire and now rather tired disciples of the welfare state. And it is deeds which count.

Opposition to ITO Piles Up

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, opposition to the charter for an International Trade Organization is increasing. The bill now before the Foreign Affairs Committee should be killed in committee. I include as part of my remarks an editorial that appeared in the Washington Post today:

THOSE "YES, BUT BOYS"

The executive committee of the United States council of the International Chamber of Commerce has added its name to the lengthening list of opponents of ratification of the ITO Charter. Consequently it is now numbered among those "yes, but boys" whom President Truman denounces as economic isolationists. ECA Administrator Hoffman is one of the group's most prominent trustees, and he will, no doubt, be surprised to hear that he is allied with a short-sighted, selfish group that would cut down international trade, force down living standards of other free peoples and ours, too, and let the Communists take over. Perhaps Mr. Truman will be surprised, too, to hear that Mr. Hoffman is a very lukewarm supporter of the charter. Although he dissented from the executive committee position, Mr. Hoffman admitted that he was concerned about various provisions of the charter and realized that there were "very valid objections" to it.

As the council committee points out, many political changes have occurred affecting countries that participated in the drafting of the charter, making it obsolete and unsatisfactory as the basis for an international trade organization. It considers the charter dangerous, because it gives priority to centralized governmental planning of foreign trade, leaves the way open for discriminatory trade practices, and in effect commits all ITO members to state planning for full employment. Another strong argument advanced against ratification is that under the terms of the charter, other nations may discriminate against this country while it is extending most favored nation treatment to all ITO members. Adherence to the provisions of the charter would also make it impossible for the United States to follow independent policies to encourage multilateral trading.

We agree with the council's view that the ITO charter does not meet the needs of the present or the immediate future. Furthermore, the hands of the administration are full trying to create conditions at home favorable to trade expansion and to encourage other countries to abandon restrictive trade policies. Until more progress has been made in eliminating import controls and obstructive exchange regulations, an international trade organization would be comparatively impotent. The chances for establishment of a strong and permanent organization of this kind will be much better if we delay action until the world's trading nations are economically stronger and politically more secure.

As an alternative to ratification of the charter, the council members suggest that the United States take the initiative in establishing a commission on commercial policy under the Economic and Social Council of the United Nations that would be a meeting place for debating important issues "without incurring the liability of the existing charter." It is a proposal well worth consideration.

No Room for Compromise

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 11, 1950:

NO ROOM FOR COMPROMISE

Ever since the First World War the Nation's railroads have been fighting with their backs to the wall against the rising tide of competition from newer types of transportation—the passenger car, the motortruck, the airplane, and the pipelines. This has placed a high premium on the achievement of increased operating efficiency. In recent years the carriers have found that one of the most effective instruments for this purpose was the introduction of Diesel-electric locomotives. Indeed, in the case of a good many roads, the shift to Diesels has just about meant the difference between earning a slight profit and operating in the red.

Since the movement toward Dieselization became general, however, two railroad brotherhoods—the firemen and the engineers—whose jurisdictional rivalry is only slightly less intense than that of a blood feud, have vied with each other to hijack the railroads, as it were, and appropriate for themselves

the economic benefits represented by this costly investment program. When Diesel power was first introduced on the Burlington system in 1934 the locomotives were successfully and safely operated with one man in the cab, an engineer. Shortly thereafter, however, the Burlington was compelled under threat of a strike to add a fireman to its crew. And now for nearly a decade the two unions have been trying to push still further this "packing" of the engine crews, the one demanding a second engineer, the other insisting on an additional fireman.

In 1943 a Presidential fact-finding board found that there was no justification whatsoever for adding either more engineers or more firemen. In other words, the demands were rejected as being purely featherbedding, or make-work proposals. Although nothing had changed in the meanwhile to alter the situation, the firemen renewed their demand in 1947. After negotiation and mediation had failed President Truman named another fact-finding board. Like its predecessor, this board, in a ruling handed down last September, declared that the union suggestion was devoid of merit. Although a Presidential fact-finding board is the court of last resort under the Railway Labor Act, the firemen's union appealed over the board's head to the White House, accompanying the appeal with threats of a strike in defiance of the labor act and the judicial opinion of the President's own appointive board. Yesterday the firemen put those threats into action. Their chieftain, David B. Robertson, pulled 18,000 members of the brotherhood off four of the Nation's key railroad systems in a strike which can only be described as a calculated outrage against the railroads, the Government and the American public.

Although the number of railway firemen affected in this walkout is comparatively small, it is regarded as only a question of time before the strike produces a national emergency, crippling production in all parts of the Nation. This is a walkout which was coldly embarked upon, not in an effort to remedy some injustice, real or otherwise, but to impose by economic terrorism a demand which had been twice adjudicated by the highest railway labor tribunal in the Nation and twice found to be completely without justification. It is a strike to test whether the interest of the community is, or is not, paramount to that of any labor group which happens to find itself in a position to exploit the public to further its ends, however demonstrably unworthy and objectionable these may be. And it should not be necessary to say that in such a test there can be no room for compromise.

An Urgent Amendment

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House I include with these remarks a splendid editorial which appeared in the Il Progresso Italo-Americano on May 10, 1950.

This editorial commends the distinguished and able gentleman from Pennsylvania [Mr. WALTER], chairman of the Immigration Subcommittee of the House Committee on Judiciary. I join in expressing commendation of the splendid work of our colleague from Pennsylvania as chairman of this important subcommittee.

It is highly important that our present Immigration Act should immediately be amended so as to provide that the parents of children now residing in the United States be accorded the same preferential status for entry to this country that children living overseas now have. Such parents should be entitled to enter the United States as non-quota immigrants.

I venture to say that the chairman of the Judiciary Committee of the House of Representatives, the dean of our delegation in the House, my friend and colleague, the gentleman from New York [Mr. CELLER], would favorably act upon such a suggested amendment to the immigration laws.

I wish also to commend the president and editor of the Il Progresso Italo-Americano, Mr. Generoso Pope, Jr., for his splendid editorial which reads as follows:

AN URGENT AMENDMENT

For some time we have been urging that our Government take the necessary legislative steps to permit the entry into our country of a number of immigrants equivalent to the quotas unused during the war. We always felt and continue to feel today that in advocating this measure we are asking for nothing more than simple justice and a warm human approach in the execution of our law as it is on the statute books today. In short, we have not been pleading for a fundamental revision but for a fundamental humanization of our execution of the existing law.

Here we hasten to add that the response in Congress to our proposals has been rather receptive. We did not look forward to unanimous acceptance. Of course, we did not expect to arouse the narrow-minded or bigoted. We realize that there are still some Members of Congress whose social-economic vision is yet to grow out of and beyond the pale of their own district. We understand that it takes time to grow out of the narrow limitations of local community politics, narrow neighborhood interests and approach. But, fortunately for Congress and the American people, there is still hope for an equitable and practicable decision to be made on the not distant future in regard to our appeal. In its handling of the entire question of immigration, the House of Representatives is to be commended and congratulated on having as the chairman of its special subcommittee the capable, earnest, and far-sighted legislator from Pennsylvania, Congressman FRANCIS E. WALTER.

IN THE RIGHT DIRECTION

Though we are hopeful for the future and will continue to work untiringly for the admission into our country of a number of immigrants equivalent to the number in the immigration quota unused during wartime, yet we realize that there are certain lesser phases of the entire present immigration law which need speedy attention and basic revision. We approach all such phases in the same spirit as we approach the major issue of using up the unused immigration quotas. We cannot repeat too often that it is our firm belief that America's best interests and ideals would be most served vis-à-vis Europe if we were to use up the unused quotas.

In the same sense and spirit do we now propose for immediate enactment the following provision as an amendment to our present Immigration Act: The parents of children now residing in the United States should be accorded the same preferential status for entry to our shores that children living overseas now have. These parents are to come to the United States as nonquota immigrants. Of ccurse, as with children coming from overseas, those bringing their parents will have to assume full responsibility for their support so that they will not become a public charge.

Arithmetically speaking, the number of parents who would thus be enabled to come to the United States on the basis of the above amendment to our present Immigration Act may not be large. But the entire question is far more than a problem of numbers. It is much more than a question of arithmetic which confronts us here. It is a human issue that we face. We must meet it in a humanitarian manner. No matter how comparatively few may be the number thus admitted, or how little the misery thus eliminated, our country's demonstration of generosity of spirit and humanitarianism in action can only aid greatly the enhancement of America's moral prestige abroad.

WILL HELP AMERICA

Moreover, such an amendment to the present Immigration Act will also have a wholesome effect on the morale of our citizenry directly involved in and affected by the bringing in of their parents now abroad. There can never be too many humane ways in which the Government can and should lift the morale of our own people. A little consideration by our Government for even a limited number of its citizenry will go a long way toward raising the contentment of all the people in our land.

We sincerely urge every Member of Congress to heed our appeal. We urgently plead with Congressman WALTER to lose no time in introducing a bill which will amend the Immigration Act to provide for parents the same preferential status as nonquota immigrants that children now have. This amendment is to operate in all other respects in the same manner as the present provision covering children does.

We cannot emphasize too strongly that prompt favorable action on our proposal will serve as a timely, positive factor for improving the attitude and deepening the friendship of many peoples in Europe for our country and our Government. In this critical hour when our Nation is battling against the poisonous propaganda of barbarous and despotic communism, the enactment of such legislation will not only increase the number of our friends and augment the already existing friendship for America but will at the same time also strike a hard and telling blow at the Communist slanderers of the American people.

Supreme Court of Great State of California Has One Hundredth Birthday

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. DOYLE. Mr. Speaker, the Supreme Court of my native State of California had its one-hundredth birthday this March 1950.

So many Members of this great Congress are members of the bar of their respective States, I know they will be interested in this fact.

It is undoubtedly a fact that members of the bar who actively practice before our highest courts learn to cherish and

respect the great learning—and also the common sense—of our highest jurists.

Being myself a member of the California State Bar, I am pleased to call to your attention a most interesting article about the California Supreme Court and its first three chief justices, which was printed in the California Centennials, the official news letter of the California Centennial Commission. History records California as the thirty-fifth State and that President Fillmore did, on September 9, 1850, sign the measure admitting this sturdy infant to the Union. However, not until a month later, when the steamship *Oregon* docked in San Francisco, did the Californians know that they had been in the United States of America for a month previous.

How long will it take the residents of Alaska and Hawaii to know the news if they are admitted to Statehood?

The article is as follows:

CALIFORNIA'S SUPREME COURT IS 100 YEARS OLD MARCH 1950

A lawyer, citing authorities, would refer to it as *Smith et al.* v. *People* (1 Cal. 1).

However, no new or hitherto undefined principle of law was established in this case, so it is referred to infrequently, if at all. Actually, only the historian is even mildly interested in this, the first decision of the first Supreme Court of California. For the law set forth concerned a right that goes back to Magna Carta—the right of habeas corpus.

Even so, that right was applied somewhat in reverse. Appellants Smith, et al., were not exactly injured parties. They had engaged in a bit of Indian slaying and tepee burning in the Nappa Valley. But, circumstances being as they were, the sheriff of the district of Sonoma was directed by the Supreme Court of California to admit the defendants to bail, due to the fact that there is no jail or prison in which the prisoners can be kept with security.

The Supreme Court of California, together with nine district courts of first instance, was provided for in the constitutional convention at Monterey in the autumn of 1849.

The three justices of the first supreme court were named by the first legislature, meeting in San Jose December 15, 1849.

By March of 1850 the supreme court was holding its first session in San Francisco—and *Smith et al.* v. *People* was the first case heard and ruled upon.

S. Clinton Hastings was the first chief justice; Henry A. Lyons and Nathaniel Bennett, the first associate justices.

In his preface to volume 1 of the California Reports, Mr. Justice Bennett points out the handicaps under which the first justices of the supreme court labored in their efforts to establish a sound basis for legal precedent in California. Say Justice Bennett:

"All the other State of our confederacy had, previously to their admission into the Union, an established government, on which their State organizations were based. The people of California, however, were driven by extreme necessity, growing out of the political and legal chaos in which they found themselves, to the formation of a State government. A large amount of labor, consequent upon the unorganized state of society, was necessarily imposed upon the tribunal of last resort—the labor of searching for authorities in an unfamiliar language, and an unfamiliar system of jurisprudence; of ascertaining the law as laid down in the codes of Spain, in the royal and vice royal ordinances and decrees, in the laws of the imperial congress of Mexico, in the acts of the republican Congress, in Presidential regulations, in decress of dictators, and acts of proconsular governors.

"Many ordinances and decrees, claimed to have the force of law, had not been printed even in Mexico; and they, as well as all other books upon Spanish and Mexican laws, could be procured only with great difficulty and at great expense, and, indeed, at first they could not be procured at all. In addition to these causes of embarrassment, great doubts were entertained as to the force, as a rule of decision, which the laws of Spain and of Mexico, never but partially enforced in the remote province of California, should have, after the acquisition of the country by the Americans, in the construction of contracts made between American citizens who had settled in California in such numbers as greatly to exceed the native population."

Mr. Justice Bennett's labors did not cease with this task of running down the authorities. During his term on the supreme bench he was high man in production of opinions, turning out almost twice as many as the other two justices combined.

Serranus Clinton Hastings was born in Jefferson County, N. Y., November 21, 1814. He was admitted to the bar in Terre Haute, Ind., in 1836, removing immediately to Muscatine, Iowa, then a part of the Territory of Wisconsin. He was one of the two first Members of Congress from Iowa and served a year as chief justice of that State.

He came overland to California, arriving in August 1849. He served as chairman of a mass meeting in Sacramento to consider a State constitution in 1849, was elected almost unanimously by the first legislature to serve as chief justice. At the close of that term he was elected attorney general of California.

In 1878 Hastings gave $100,000 to establish Hastings College of Law as part of the University of California, and became first dean of the college. He died a millionaire in San Francisco, September 18, 1893.

Henry Augustus Lyons was born in Philadelphia in 1810. He came to California by way of the Isthmus of Panama in 1849, settling in or near Sonora. An unsuccessful candidate for State Senator from the San Joaquin district, he was elected by the legislature to the post of justice of the supreme court. He wrote only a few opinions during his term of office. It was said that he spent most of his time furthering private business interests.

Nathaniel Bennett was regarded by the legal profession as the strong man of the court. Born in Clinton, N. Y., June 27, 1815, he was first admitted to the bar in Ohio and later in New York. He came to California around the Horn, arriving in San Francisco in June of 1849.

He mined in Tuolumne for some months, with fair success, then was persuaded by a friend to join him in the practice of law in San Francisco.

Elected to the first legislature, he served on the judiciary committee, resigning when elected to the supreme court. He worked closely with the legislature the winter of 1849–50 for the adoption of the common law as the basis of California jurisprudence.

Justice Bennett died in San Francisco on April 20, 1886.

Truman and the Hoover Proposals

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal of Saturday, May 13, 1950:

TRUMAN AND THE HOOVER PROPOSALS

President Truman has made a great show of endeavoring to reorganize the executive departments of the Government to promote greater efficiency and economy along the lines suggested by the Hoover Commission.

The truth of the matter is, however, that a considerable number of the reorganization proposals made by Mr. Truman ignore, rather than follow, the recommendations presented by the Hoover Commission.

A case in point is the plan submitted to Congress by the President this week for reorganization of the Reconstruction Finance Corporation and assignment of some of its duties to the Commerce Department.

The Hoover Commission had made a recommendation for a change in status of the RFC but proposed its taking over by the Treasury instead of by Commerce. President Truman, for reasons not yet made clear, prefers that Commerce assume the lending duties of the Corporation which has served its purpose and is now apparently to be disbanded.

A similar case was the President's unsuccessful effort to abolish the office of general counsel of the National Labor Relations Board and to divide its present powers between the Board as a whole and its Chairman.

He included that recommendation among 20 others, many of which followed Hoover Commission proposals, which he submitted to Congress on March 13. The NLRB matter was inserted almost in the middle of the 21 recommendations as No. 12 and the general impression was given out that it was in line with the Hoover Commission's findings.

Such was not the case. The Citizens Committee for the Hoover Report refused to take any stand on plan 12 on the ground that it raised a question of national policy as well as one of organization. Mr. Hoover reported that the specific problem of the NLRB general counsel was not even discussed by his Commission.

Plan 12, of course, was an attack on the Taft-Harley Act. Balked in his efforts to bring about repeal of that piece of legislation, Mr. Truman sought to emasculate it by abolishing the office of general counsel which has been the sole agency to insist upon application of many of the principles of the Taft-Hartley law. The President tried to achieve his goal by including the NLRB proposal in a bunch of executive office reorganization plans that had been suggested by the Hoover Commission.

The Commission headed by former President Hoover embodied some of the best brains in the Nation, including some of the men upon whom Mr. Truman himself relies for advice and counsel. If their advice is not to be followed there was little reason for the Commission to be created.

Hon. Fred L. Crawford, of Michigan, Praised by Michigan Papers for Halting Spendthrift Arizona Project

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. ENGLE of California. Mr. Speaker, the recent action of the gentleman from Michigan [Mr. CRAWFORD] in the Public Lands Committee, which

put the brakes on the Nation's most expensive and infeasible project in central Arizona, was greeted with loud and deserved praise in the Booth newspapers of Michigan. The article appearing on April 28, 1950, in the Grand Rapids Press is as follows:

CRAWFORD'S COMMITTEE ACTION PUTS HALT TO WATER PROJECT

(By William F. Pyper)

WASHINGTON.—An example of what seniority and parliamentary know-how can do in the House of Representatives Friday had far westerners groggy.

Representative CRAWFORD, of Michigan, No. 1 Republican on the House Public Lands Committee, showed Californians and Arizonians how it is done. The result is the central Arizona project, calling for billions in taxpayers' money and for diversion of Colorado River water which had been earmarked for California, has been shelved, at least temporarily.

Californians on the committee who had been hoping for such an action with some misgivings jubilantly credited CRAWFORD with having killed the bill for this session. The next show-down, however, comes June 15.

Passed by the Senate, the central Arizona bill has been before the Public Lands Committee for more than a year. Its chief sponsor is Representative MURDOCK, Democrat, of Arizona, No. 2 Democrat on the committee.

The issue is of vast importance to the Southwest. Southern California years ago entered into an agreement by which the supply from the Colorado River was earmarked. Arizona refused to participate, but within the last few years has developed its project to divert some of the water. It would mean growing communities in California would be without sufficient water and that vast developed irrigation areas would dry up.

CRAWFORD had been expected to oppose the Arizona proposal, but his postponement resolution came as a surprise. It passed, 13 to 10.

What he proposed was that a list of statistical questions be submitted to the Director of the Budget. Pending reply, action is deferred to June 15. The questions are technical, and there remains some doubt the Budget Bureau can come up with the answers in 45 days. But every question is one which taxpayers in Michigan should like to have answered before contributing to the project.

The surprise move evidently hit the committee between the eyes. California supporters grasped it as the delaying action they needed. Arizona backers could hardly fight a move to get the facts.

"The truth of the matter is that we lack the facts," Representative CRAWFORD explained later. "Here is a highly controversial subject and the proponents haven't made their case. Representative MURDOCK couldn't have had his bill reported under the circumstances, and if it had reached the floor, it couldn't have passed.

"While the California people are hailing this action as a victory, I think I convinced MURDOCK and his supporters my resolution gives their bill its only chance."

An Indefensible Strike

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of May 11, 1950:

AN INDEFENSIBLE STRIKE

The strike on five great railway lines comes at the end of a 2-week special truce and after exhaustion of all the processes of delay and mediation provided by the Railway Labor Act. It is not surprising, considering the position of the railway union, that negotiations have thus far been futile. For the union is concerned, not with hours, not with wages or working conditions, but with a simple measure of featherbedding. Twice impartial fact-finding boards have denied the need for a second fireman on Diesel locomotives; but the union continues unremittingly to demand this unnecessary and wasteful addition to the crew. What neither safety nor convenience requires, and what sound operating procedure emphatically rejects, the union insists upon, even at the cost of disrupting a large part of the economy of the Nation.

The conversion to Diesel locomotives has been one of the most hopeful signs in American railroading. The pressing need of improving service and lowering fares and freight rates, to meet competition from other forms of transportation, has found the promise of a real answer in the development of the Diesel engine. Private capital has supplied the necessary investment; the Government has encouraged the conversion. It would be an economic tragedy if the gains thus envisaged were to be cast away by union short-sightedness. Technological unemployment is resisted by labor with an ardor for which the public may frequently have sympathy; but where this resistance takes the form of featherbedding as crude as in the present instance, and where the gains of technological progress are so direct for industry—and in the comparatively short run for labor also—mere obstruction can seem a fatal policy. It is especially so in an area of labor where responsible unionism has long been the tradition, and where a widespread stoppage places such burdens on the public.

The present strike is indefensible. If the union has got itself into a position where negotiation is no longer fruitful, and where only retreat is possible, then for its own sake it will have to retreat.

Editor Has Indigestion—Hope It Is Contagious, by November Becomes Epidemic

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, long, long ago, some here in Washington—it was my privilege to be one of the number—could not stomach New Deal political maneuvering which in those days, according to Democratic committees, used money appropriated for the relief of the unfortunate, to purchase political support.

Unfortunately, when we protested vigorously and continuously, all we got was a handful of mud from New Deal and pink publications and commentators.

But the tide has turned and some courageous editors are not only seeing clearly but writing frankly. An example is an editorial from the Detroit Free Press of May 9, which reads as follows:

OMITTED FROM THE "NONPOLITICAL" TOUR—MR. TRUMAN STEERS CLEAR OF THE MISSOURI "HEAT"

The leader of the Democratic Party is now making a nonpolitical tour of 16 States in an effort to elect a Fair Deal Congress in November.

Accompanying him are 60 or more persons. The cost of this 9-day political junket should be borne by the Democratic National Committee.

But Truman, with studied dishonesty and deliberate untruth, has sworn that his trip is nonpolitical.

Therefore, by this cheap trick he makes the taxpayers finance his circus.

Starting with a bald falsehood, can what he says be considered truthful? It is written in the ancient common law, "Falsus in uno, falsus in omnibus," which still stands in the law books of the United States: False in one thing, false in all.

Among the 32 States which Mr. Truman will not visit is Missouri.

The reason why he will not visit it has been in the news for weeks.

The ghosts of Charles Binaggio and Charles Gargotta might rise from their graves in Kansas City and ask why the President of the United States and the leader of the Democratic Party has not permitted the FBI to clear up the stinking mess that led to their political murder.

Gargotta and Binaggio, two criminal-political racketeers, were shot to death in the First District Democratic Club in Kansas City on April 5, 1950.

They had tangled with the Pendergast mob of which Mr. Truman is proud to be a dues-paying member.

The St. Louis Post-Dispatch points out neither President Truman nor his Attorney General has ordered a Federal investigation of the Binaggio-Gargotta murders.

The Justice Department said, at first, that a Federal grand jury had no jursidiction.

Yet a Federal grand jury had subpenaed both men and intended to indict them.

The Post-Dispatch, a democratic newspaper, continues its editorial indictment:

"Now the Department refuses to order an FBI inquiry, for lack of concrete evidence that the killings were connected with the testimony of the murdered men. Does the Department expect the killers to step forth uninvited, or does it intend to excuse itself for lack of evidence which it will not even permit the FBI to look for?

"Federal justice was obstructed. Federal witnesses were shot down. Will the Truman administration let the underworld get away with bloody defiance of the Government?"

The Truman administration, with its alliance with notorious criminals, has made possible the escape of the gangsters who blasted the county vaults to steal and destroy the evidence of vote frauds perpetrated to defeat Congressman Slaughter, whose purge had been personally ordered by Mr. Truman.

That theft of evidence occurred on the night of May 27–28, 1947. The statute of limitations will make prosecution on the charges involved impossible after the night of May 27–28, 1950.

The Truman administration has had 3 years lacking a few days to clear up this case and bring the criminals to justice.

Just 18 more days for the gangsters to go free on a technicality.

Yet it has done nothing and will do nothing while there is still time.

Whether that administration will do anything to discover and punish the Binaggio-Gargotta killers is in the light of this record a purely rhetorical question.

The answer is: It won't.

It doesn't dare.

Any doubt on this score is resolved by the way the administration has rigged the Senate investigation of crime syndicates and their political contacts.

A real investigation of this underworld network by the Senate Judiciary Committee was proposed by Senator ESTES KEFAUVER, an earnest young Tennessee Democrat who takes his responsibilities seriously.

The administration was thrown into consternation by this nonpolitical suggestion. Senators FERGUSON, of Michigan, and DONNELL, of Missouri, two Republicans skilled in just such prying into the underworld of crime and politics, are members of the Judiciary Committee. They might ask questions. They might insist upon scraping the bottom of the cesspool for evidence.

Administration leaders avoided any such unpleasant possibilities by proposing a special, five-man committee to be named by Vice President BARKLEY for the sole purpose of keeping FERGUSON and DONNELL out of the inquiry. This ruse won only by the vote BARKLEY cast to break a tie.

Senator KEFAUVER will be chairman. The two Republicans will be the innocuous WILEY from Wisconsin and TOBEY from New Hampshire. The Democrats are O'CONOR from Maryland and HUNT from Wyoming who are expected to do as they are told.

The real investigation of the rising reign of criminal terror in the United States has been succesfully blocked.

What else can be expected, when the head of that administration has prevented the 1946 vote frauds in Kansas City from being cleared up in 3 years?

When he declares, with a poker face, that his current vote-seeking jaunt is nonpolitical in order to defraud the taxpayers of its cost?

At Lincoln, Nebr., yesterday, Mr. Truman opened his very first nonpolitical speech with the cliché that "if we are to win through to peace, we must maintain a healthy and strong economy."

A healthy and strong economy cannot be maintained on a foundation of moral rottenness.

Yes, there's an excellent and obvious reason why Harry S. Truman is not revisiting Missouri at this time.

Three paragraphs from Iffy, the Dopester, in the same paper, comment in this way:

A Republican has been elected to Congress from Texas so I guess it is all right to believe in them flying saucers and other strange things that are being reported.

When Harold Stassen said that Harry Truman was the worst President we ever had he must have meant the only one in our history who has deliberately protected well-known criminals. That makes him unique.

Kansas City is getting ready to celebrate its centennial. Will all visitors be asked to check their sawed-off shotguns?

Personally, I have some ideas about the way Mr. Truman's outfit has protected some racketeering labor leaders and gangsters, for I recall very distinctly the hearings I held in connection with the release of the notorious Capone parolees, who, through extortion, took something around a million dollars from the rank and file of a union.

Some of those gangster parolees are still at liberty, through the grace of Mr. Truman's administration.

Perhaps the gentleman who wrote the foregoing editorials will some day get around to support those who desire legislation—and its enforcement—which will protect not only the public but the rank and file of labor unions.

While there is life, there is always hope.

California: A State Full of Younger Folks, Too—Oldsters Percentage Decreasing

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. DOYLE. Mr. Speaker, here is a factual statement from the Long Beach Press-Telegram newspaper of recent date which will bring you and my colleagues in this House of Representatives the down-to-date fact, which is, that my native State of California is being occupied by a healthy, vigorous, youthful population—from other States, too. But, then figures speak for themselves.

CALIFORNIANS YOUNGER

Although commonly believed, the notion that California is a State filled with old people is highly inaccurate, according to figures just released by the Social Security Board. And it is more inaccurate now than it was in 1940.

Most of the States showed a gain in the proportion of their population over age 65 during that 8-year period. California registered a decrease, so it now ranks twenty-second among all the States in that comparison. In 1940 it was eleventh.

The explanation is not that California is failing to attract oldsters. It is that the vast numbers of newcomers during the war and postwar years were workers. They made possible the industrialization of the metropolitan centers. Their decision to stay here after the war made California one of only five States to show a proportionate decrease in the elderly group.

Disregarding the percentages, however, California is still well favored by those who have reached the age of retirement. In 1940 it had 558,755 persons in that category. At the end of 1948 the number was 790,239. The California total, again irrespective of percentages, is topped only by New York, with 1,173,534, and Pennsylvania's 813,718.

In 1900 only 4.1 percent of the Nation's population was 65 or older. In 1940 the proportion had risen to 6.8 percent, and in 1948 to 7.5 percent. This remarkable gain in the number and percentage of elderly people in the last half century may be attributed to advances in medical science and, generally, to higher standards of living.

It has also introduced new problems of economics. The latest survey by the Social Security Board showed that 39 percent of this age group depended on public and private assistance, 34 percent worked or had a business, 18 percent depended on pensions, and 9 percent got along on income from investments.

Theories of the Amerasia Case

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star, Wednesday, May 10, 1950:

THEORIES OF THE AMERASIA CASE

Events in Washington, day by day, indicate that the secrecy of the Amerasia case is going to be broken. We are not relying entirely upon Senator TYDING'S promise that his subcommittee would investigate the mystery. The interest in this 5-year-old State Department secret has grown to such an extent that the public will not be denied some kind of satisfactory explanation.

The gossip about the Amerasia mystery has reached the point where people are speculating on why the State Department hushed the scandal back in 1945.

Joseph C. Harsch, chief of the Christian Science Monitor's Washington news bureau, published three interesting theories recently.

The scandal may have been soft-pedaled, he says, to keep the Russians from learning at the time that their spy ring had been broken and its members were known to our intelligence agents.

Another theory is that it may have been considered impolitic in 1945 to have a Russian spy story breaking in Washington when official relations with the Soviet Union were friendly.
